OPICS - OF - THE

GERMANY'S REQUEST FOR A PEACE-CONFERENCE

THE RUB of the peace-problem is pretty generally recognized to be the almost hopeless difference over terms. and many of our newspapers had expected President Wilson's note to draw from the beligerents such outlines of their demands as would start discussion and lead ultimately to agreement. The Allies say they want restitution, reparation, and guaranties of future security. But Germany's reply to the President states a desire for "a specify assembly of delegates" before terms are disclosed, althora nors are alload of a confidential statement of terms to Washington. This injects a new point of friction. Shall the delegates meet first, or terms be stated first. Is Germany sincerely working for peace, or eleverly avoiding the President's request." Berlin's reply marks "a further step on the right road," affirms the New-Yorker Staats-Zeilung, and proves that "Germany has taken up her position completely on the same ground as President Wilson," in planning for the prevention of future wars. On the other hand, "the German Foreign Office has abruptly closed the door and left no basis for further discussion," declares the New York World with equal conviction. "If there was any doubt in any one's mind as to who would benefit by Mr. Wilson's peace-gesture, it should be abolished now," thinks the New York Tribune, noting how "coolly, skilfully, completely the Germans, in their response to Mr. Wilson's note, have turned that document to their own ends," "Germany's reply to President Wilson's note is a courteous but complete rebuff," in the opinion of the New York Globe. And the Washington correspondents are fairly unanimous in testifying to a growing feeling of disappointment and dissatisfaction in Administration circles. The reasons for this feeling are thus summarized in a Washington dispatch to the New York Herald:

"The Prussian response to President Wilson's peace-note is considered here to reduce still further the chances of peace com-

ing out of the present agitation.

Germany suggests only that which the Entente nations have rejected in advance -namely, a secret conference of belligerents for the discussion of peace-terms in this war. The problem vital to all neutrals, as well as to all belligerents—the problem of future peace and security for the world-is to be postponed until after peace-terms are formulated to end this war.

"Not even in the broadest terms—as to fundamental principles does Germany hint at the kind of peace she would accept. There is no suggestion of neutral interest being considered in 'he conference Germany urges. There is no direct answer given

to the President's plea for a statement of terms and objectives for the purpose of 'frank comparison.'

"Even in German quarters dissatisfaction was exprest and a belief, based upon hope, was voiced that the press dispatches did not give the whole text of the German response. It was hoped that Germany would make a more appealing, more convincing, statement of her readiness to accept a peace which would insure the future peace and security of the world."

The crux of the German note, as officially translated and published in Washington, is in these sentences, the rest being merely formal expressions of good-will and courtesy:

"The President discloses the aim which lies next to his heart and leaves the choice of the way open.

"A direct exchange of views appears to the Imperial Government as the most suitable way of arriving at the desired result.

"The Imperial Government has the honor, therefore, in the sense of its declaration of the 12th instant, which offered the hand for peace-negotiations, to propose speedy assembly on neutral ground of delegates of the warring States.

"It is also the view of the Imperial Government that the great work for the prevention of future wars can first be taken up only after the ending of the present conflict of exhaustion.

"The Imperial Government is ready, when this point has been reached, to cooperate with the United States at this sublime

This, complains the New York Evening Sun, is a reply but not an answer to President Wilson's suggestion "that an early occasion be sought to call out from all the nations now at war such an avowal of their respective views as to the terms upon which the war might be concluded and the arrangements which would be deemed satisfactory as a guaranty against its renewal or the kindling of any similar conflict in the future as would make it possible frankly to compare them." One American view of the situation prior to this German reply is thus epitomized by the New York Times:

GERMANY-" Let us discuss peace."

The Alates-" Not until you have stated your terms; here

THE PRESIDENT -"I urge you to state them."

And in a later issue, the same paper says:

"The German reply to the President's note is eve ywhere considered to be unsatisfactory. It has the look of insincerity. Germany not only states no terms of peace, altho such a statement is what the President requested of her, but, what is much

TERMS: \$3 a year, in advance: three months, \$1; single copy. 10 cents: postage to Canada. 85 cents a year: other foreign postage, \$2.00 a year. BACK NUMBERS, not over three months old, 25 cents each; over three months old, \$1,00 each. SEMIANNUAL INDEXES, Issued in January and July will be sent free to subscribers who apply for them. RECEIPT of payment is shown in about two weeks by date on address-label; subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly, Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF AD-DRESS should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions in-

terrupted and their files broken in case they fall to remit before expiration. Notwithstanding this, it is not assumed that continuous service is desired still, subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: slany persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

worse, she suggests an obviously impossible thing. The Allies will never send delegates to a peace-conference without knowing what terms they are to discuss, and they will insist that among the earlier subjects of discussion be the guaranties Germany is willing to give against future wars. Yet Germany has the effrontery to propose the postponement of that subject until after a peace-treaty has been signed. It would be hard for an ardent friend of Germany to take the view that this suggestion was made in good faith; for the Allied Governments it is too preposterous for consideration."

The United States, affirms the New York World, "most assuredly will not ask Great Britain and France to enter a peace-conference beaten and blindfolded, to learn in the dark what terms a Germany 'conscious of victory' is prepared to impose." So far as the United States is concerned, thinks The World, "the hands of the clock have been turned back to December 18, and the Government at Washington is again confronted with 'a manifest necessity to determine how to safeguard neutral interests if the war is to continue." To quote further from the same paper, which is supposed to be in close touch with the Administration:

"Whatever the reply that London and Paris may formally make to the President, their answer can hardly reopen the door that Germany has so abruptly closed. In the circumstances the American people must turn their attention to the most significant part of the President's note, and give serious consideration to the question of what this country is to do if the war continues, as it will. They may as well face the fact first as last that the situation of the United States may, as the President intimated, 'be rendered altogether intolerable.' What then? An intolerable situation admits of only one line of action.

"So long as there were reasonable grounds for thinking that Germany might be honest in its professions of a willingness to make peace, and that it would state terms which would justify the belief that an unsuccessful war might have produced a change of heart in Berlin, the danger was more or less remote. It is no longer remote. If the war is to go on, the German Government will undoubtedly resume ruthless submarine warfare. Popular sentiment in Germany favors it. The German military authority abandoned it only for reasons of expediency, but in every

ts IT SEAL?

—DeMar in the Philadelphia Record.

German mind is lodged the conviction that unrestricted submarine warfare will so cripple Great Britain that the Allies will be beaten. There is no desire in Germany stronger than the desire to inflict the full measure of punishment upon Great Britain for the blockade, and to starve a powerful enemy that is absolutely dependent upon the sea as a means of obtaining food.

"Ruthless submarine warfare means attacking every ship,

enemy or neutral, bound to a British port and sinking it without warning. When that comes, are the American people to submit or are they to resist by force if necessary?

"It is folly to minimize the danger, for the danger is very real. It is worse than folly to pretend that we have rights if we are not prepared to maintain them. Germany is making preparations for U-boat warfare on a scale never before known, and

- Kirby in the New York World.

those preparations concern the United States hardly less than they concern Germany's enemies."

"The Washington move appears to date to have marred rather than made any peace-possibilities," pessimistically remarks the Boston News Bureau, which is convinced that "some sort of definition of the Teutonie terms is a sine qua uon to any further real or seeming progress." But the Springfield Republican consoles itself with the thought that if the German peace-overtures were a trap, as the Entente capitals believe, the United States at least has not walked into it. Says this Massachusetts paper;

"Assume that the original Teutonic peace-proposals were a trap cunningly set for the purpose of fastening on the opponents of the Central Powers the responsibility for further warfare. The United States also has not been caught in that trap, as it might easily have been. It can never be said that the greatest of the neutrals was indifferent to peace when one of the belligerents definitely proposed peace, and when our national interests were unmistakably on the side of peace. It can never be said that the United States was in the least degree morally responsible for the continuation of the war, after the German peace-proposals had been made—any more, in fact, than the United States was responsible for the inception and the outbreak of the war.

"Whether or not Great Britain and France have been trapt by an astute German diplomacy, it is certain that America has not been; and, instead of reviling the President of the United States, or lecturing him on his criminal blunders in meeting this crisis, his American critics ought to be thanking him for the diplomatic stroke by which he has kept this country spotlessly clean of responsibility for the greatest of wars, either in its origin or its pitilessly prolonged duration. Switzerland sees the wisdom of the American Government's course, even if many Americans do not. The neutrals of Europe are grateful for America's action, whether or not all of them, like Switzerland, dare to be vocal in expressing their high appreciation."

In the Entente nations editorial opinion is virtually unanimous in its conviction that Germany's reply to the President represents nothing but trickery and evasion. "If President Wilson meant that his note should force Germany to state her terms, Germany has countered with this proposal so that she can evade an explicit answer," remarks the London Daily Mail.

"Berlin does not comply with the suggestion to declare the ends for which Germany is waging war," notes the London Morning Post, and The Daily Chronicle finds implied in the German note, "for all its studied politeness," a rejection in advance of any offer of mediation by America. As the West-minster Gazette sees the situation—

"It is Germany who proposed negotiations; it is Germany

who considers herself to be in a superior position; it is Germany who wants to stop the war. Therefore it must be for her as the initiator of these proceedings to define in general terms the basis on which she proposes to negotiate."

And in the London Daily News we read:

"Germany's appearance of military success is utterly illusory. . . . Nothing can be lost by acceding to 'a comparison of views,' and much might be gained, for he who would prefer to secure by war what he could secure by negotiation is either a criminal or an imbecile. We abate no jot of our demands for restitution, reparation, and guaranties. The time must come, sooner or later, when Germany must concede them in full. We are not justified in rejecting an opportunity of testing whether it is nearer than we know."

"AND AGAIN HE SENT FORTH A DOVE -."

-- Knots in the Dallas News.

The German reply, notes La Liberté (Paris), "is silent on the essential point; it evades that entirely. Our enemy declines to unmask her batteries. The trap is more evident than ever, but the Allies will not be caught." And in Le Temps we read:

"The character of the note reveals how Wilhelmstrasse is embarrassed, for it throws not the slightest light on Germany's war-objects nor on her ideas regarding European organization. President Wilson has drawn a blank. The Teuton reply to the President implies the contrary of the overtures in the American note. It declines diplomatically all mediation. It is evident that Germany desires peace, but German peace, which she wants to enforce on her adversaries by ruse in lieu of force.

"Bethmann-Hollweg's conception of a league of nations is to have Germany at its head. This he has given clearly to understand. Is it Mr. Wilson's object to make Germany admit her infamous deeds? It is evident she will not admit them, for if she defined her objects she would definitely close the door of the conference into which she is trying to lure the Allies in order to paralyze their will and tie them down by enervating pourparters. In the face of this edifice of lies the Allies will fight to final victory."

Ambassador Bernstorff's view of his country's reply is in striking contrast to that of most of our editorial observers. In an authorized statement, he says:

"I regard the note of my Government as constituting an

acceptance of everything suggested by President Wilson in his note to the belligerent nations of Europe."

Turning to the German and Austrian papers, we find a prevailing note of optimism. To the Berlin Taglische Rundschau "the determination to bring about an end of the conflict with our enemies in personal negotiations, without the cooperation of neutrals, is very satisfactory," and in the Vienna Fremdenblatt we read:

"The Central Powers contemplate the possibility of the continuance of the war with full confidence, but feel they owe a duty to their people to do everything compatible with their justified interests and terminate the bloodshed if at all possible."

"By our reply," remarks the Vienna Neue Freie Presse, "Presi-

dent Wilson's policy is at once allied with our own." And it adds:

"The Entente can refuse nothing to the Central Powers which they would not also refuse to President Wilson. The Entente no longer face us alone, but also America, with whom we are in full harmony."

The Reichspost of the same city thinks "the fact that President Wilson made his move almost simultaneously with that of the Central Powers shows that he also considers any fundamental change in the war-situation impossible." And in the Arbeiter Zeitung we read:

"The reply of the Central Powers to President Wilson is inspired by the same high idea as their first peace-offer. Conscious of their victories in Roumania, they go their way undisturbed by speeches or writings in which the force that failed on the battle-fields seeks to assert itself in phrases."

WON'T THEY FEEL FOOLISH?

-Bradley in the Chicago Daily News.

TO MAKE ALL OUR BOYS SOLDIERS

THE PROBLEM OF NATIONAL DEFENSE is now before Congress for the first time on its own merits, according to the Chicago Tribune, which is among the journals that indorse the proposal of Major-General Scott, Chief of Staff, that the nation adopt universal service. In some quarters, however, we find stout opposition to the project, the supporters of it, such as The Tribune, held that it is "prevailing because it is just." From Washington dispatches we

learn that Argentina's military system is the model for the universal - service bill being drafted by a committee of the Army General Staff. The design is to keep half a million men under training, with 2,500,000 trained reservists subject to call, and the main feature of the bill, we are informed, is the provision for one year of extensive military instruction for all youths subject to its terms. Allowing for the number exempt for physical disqualifications or other causes, it is expected that there would be available for training 450,000 to 500,000 of the 1,000.-000 boys who reach the age of eighteen each year. A year is set as the minimum period for training, it is said, on the theory that the United States desires army only for defense, Moreover, Gen. Hugh L. Scott explained to the House Committee that while European countries require two years of

HE CAN'T SKE IT.

-Tuthill in the St. Louis Sint.

hard work before turning a man into the reserve, one year will suffice here because of the geographical position of the country. The argument is that there would be sufficient time to give finishing touches to the military education of reservists after war had begun and before invading expeditions could be landed in force. In a broad way, we are further informed, the outline of the General Staff Continental Army plan of 1915 will be followed in distributing tactical units of the reserve into nineteen infantry and six cavalry divisions, and reservists would be liable to two years' service in this force before passing into the unorganized reserve.

Significant of the strong sentiment that favors universal military training, the Boston Transcript tells us, is the countrywide newspaper poll taken by the National Association for Military Training, in which the figures show that 93 per cent. of the papers polled favored the principle underlying such a system and 8712 per cent, favored its application in accord with the legislative program proposed by the association. The Cleveland Leader bids Congress face the task of providing us with universal military training courageously and constructively, "forgetful of traditions but sanely thoughtful of the lessons of the past," and it asks that there be no polities in this work and no pork, but the best "patriotic, constructive national service." The ultra-pacifists have been "silenced and the country is ready for leadership," according to this journal, whose support of the universal military service project is echoed by such other journals as the Chicago Daily News, New York Times, Ecrning Sun, and Tribune, Brooklyn Eagle, Manchester Union, Seattle Times, Philadelphia Public Ledger, Albany Knickerbocker Press, Sioux City Tribune, and Washington Times.

So much for observers that believe in the immediate necessity of universal military service. But their enthusiasm is matched by the vigor of the opposition. Thus a Washington correspondent of the New York Technic tells us that a formidable defense is developing against universal military training and that "the 'fighting pacifists' are lining up organizations of citizens to revolt against such a system, even if it becomes a law, by refusing to undergo training or to pay taxes to defray the cost of training." We are told that the World Peace Association, of Minnesota, is pledged to this program, and that a

telegram to this effect was sent to the American Union against Militarism. Charles P. Hallinan, editor-director of the latter organization, is quoted by the Tribuoc's correspondent as saying that the telegram "indicates a frame of mind which is anything but 'mollycoddle.' It is a frame of mind quite generally aroused among pacifists at the contemplation of universal military training."

A consistent journal of the opposition is the New York Evening Post, which professes the firm belief that any detailed study of the universal-service proposal will show "(1) that it is utterly un-American in its every tendency; (2) that it would be a menace to our democratic institutions; (3) that it is practically unworkable; (4) that it is totally unnecessary," Before the United States makes the plunge into militarism by adding universal service to a great regu-

lar Army and to the second largest navy in the world, The Post suggests that we should be mindful first of the plain indications that when the outcome of the war is settled some of the belligerent nations will be "ready to consider disarmament and the abandonment of universal service." Then we ought to know whether we are to rely upon the second largest fleet and the costliest coast-defenses in the world as a reasonable army; and, thirdly, whether we should have a settled foreign policy into which, if disarmament fails and the American people wish to have a large army and navy, a reasonable scheme of national defense should fit.

Again, The Past argues against discarding the regular Army plan voted last summer until it has been definitely ascertained that it can not be carried out. It names "so able a student of affairs" as ex-Secretary of the Interior Fisher, and quotes his statement before the Senate Committee that the Army can be recruited if higher wages are paid. We are told, also, that the Adjutant-General reports for November a marked increase in recruiting, which leads him to believe that the Army will be up to the required strength by next June, when the next increase in strength is due. Proceeding, The Post speaks of the "many defects and inefficiencies of the Army," and counsels that Congress should build no new "militaristic structure until the existing methods are subject to rigid scrutiny and reform." It is urged also that the National Guard should not be simply "s-rapped," but that the former status of State forces as State troops and not as Federal militia should be restored. Finally, The Post advises a careful study of the arguments against compulsion, for "if we blundered in the basty preparedness legislation of last summer we should take several years at least to thrash

out the issue of universal service." Among other journals that disagree with General Scott and General Wood is the Chattanooga News, which holds that no matter how long we might train officers and men, they would show imperfections akin to those shown by a population in civil life, and it adds:

"There is no magic wand by which soldiers are made. There has been much, muddling by so-called regulars abroad. After all, our best guide in these matters is experience. The wars of the Revolution and of 1812, the Indian wars, the Civil and Spanish-American wars were fought largely by volunteer soldiers. Packenham's 'regulars,' fresh from the peninsula campaign, proved no match for Jackson's squirrel-hunters. There was a time when we boasted that no such soldiers had ever been mustered as those of Lee and Grant. Now we are looking through the glasses loaned us by European militarists. Our minds are disturbed and unsafe.

"The Lord has protected us by the mighty deep, and no doubt he intended that here man should develop the democracy

which militarism as a canker-worm can not destroy.

"Next we shall hear that the militarists demand a military and naval armament as large as that of one of the alliances abroad—say, 15,000,000 men and a \$1,000,000,000 fleet. About that time there will be need of a line of hospitals for the feebleminded from coast to coast."

The Pittsburg Dispotch thinks that the mobilization of the National Guard was welcomed by its enemies in the regular Army as an opportunity to destroy it, and it tells us that unless the people through the President and Congress can compel a change in their policy it is not improbable that it may be destroyed. Yet—

"If it is, what is to be substituted? General Scott's three million and General Wood's four million may be much harder to mobilize on the field than on paper. The National Guard is here. The Government has spent millions training it during the summer. Are all this potential military strength and all this money to be thrown away because regular-Army theorists insist on their prejudices?"

The Richmond Journal also comes to the defense of the National Guard against the reflections east on it by officers of the regular Army. It concedes that the proposed universaltraining bill has distinct must, yet holds that it "must be considered more from the civilian view-point than from the regular Army standard to be successful." In the view of the Chicago Journal General Scott, to some extent, weakens his case for universal training by the enormous number of trained troops which he contemplates, and it suggests that now is the time for the advocaces of a volunteer system to give substantial reasons why they can make their system work. But Washington dispatches inform us that on December 18, General Scott, before the Senate Military Committee, recommended, without apology, that the volunteer system be discarded because "the time has come when this country, unless it intends to avoid war 'at any cost,' must resort to universal liability to military training and service."

He was on this occasion a witness at the hearing on the Chamberlain Compulsory Military Training Bill, against the spirit of which American sentiment is so pronounced, remarks the Anaconda Standard, that it is not likely to pass. Yet, if it were enacted, this journal reminds us, military training would be required of all boys between the ages of twelve and twentythree years except such as may be specially exempt. Thos between the ages of twelve and eighteen would be known as the eadet citizen corps and those between the ages of eighteen and twenty-three would be the citizens' army, and liable to active service at any time. Still, The Standard believes that something must be done to bring our Army and Navy up to the mark in size and efficiency, and it adds that "probably a modified bill, aiming at more general service and designed to render military service more attractive to young men, will meet with sufficient support for passage."

MORE "PORK-BARRELING"

THIS GOVERNMENT FACES "the greatest deficit since the Civil War," and yet it is proposed that more than thirty millions be spent in public buildings, notes the Philadelphia Public Ledger (Ind.), which observes that this is not merely "folly," but rather "a national scandal." Erecting \$75,000 granite structures for post-offices in sage-brush villages is the worst form of pork-barreling, this journal goes on to say, for in many cases the total post-office receipts in such towns are "not a quarter large enough to pay the interest on the cost of the building." No private or corporate business can be managed on "such grossly grotesque lines and remain out of the sheriff's hands," The Ledger adds, and "simply because the Federal Government can inflict taxes without limit is no reason why it should squander the money." This statement is typical of the attacks from various sources on the pending Public Buildings Bill, which at length cheited from Representative Frank Clark, of Florida, Chairman of the House Committee on Public Buildings, a vigorous denial that the bill is a "pork-barrel" measure and provides principally for small towns. A Washington correspondent of the New York Times tells us that Mr. Clark is particularly incensed by an article in The Journal of the American Institute of Architects, which criticizes the bill, and this informant quotes the representative from Florida as saying:

"This bill carries about \$28,000,000 in authorizations, instead of \$35,000,000, as has been promiseuously charged. About \$22,000,000 of it goes to the large cities and cities where there are Federal activities other than the post-office, and only about \$6,000,000 goes to the post-office towns throughout the United States. That is at the rate of \$1,500,000 a year for the post-office towns.

"The last Public Buildings Bill passed was on March 4, 1913, It carried a provision that no town where there were not Federal activities other than the post-office should be entitled to a building until it had \$10,000 postal receipts, nor entitled to a

ite unless there were annual receipts of \$6,000.

"That is the law of the land, and the House Committee has hewed strictly to the law in the framing of this bill. There are a few cases where sites had previously been secured for places with less than \$10,000 receipts for which the bill carries authorizations."

In rebuttal, the New York Times (Ind. Dem.) says editorially that the \$10,000 limit is "utterly unsound," and, what is more, "not observed." We are asked to consider in the bill of 1916 some appropriations for sites alone, with appropriation still to be made for the building. This journal quotes from the measure as follows:

Place and	Amount		Revipts 1915	Annual Rental
Ashlurra, Ga.		\$5,000	\$6,468.82	\$480
The second for the second second second		5.000	4.257 77	220
Baxley, Ga		5,000	6.639.50	408
Hiskely, Ga.	100000 00	6,000	6.327 50	None
Commerce, Ga	THE PERSON NAMED IN	5,000	6,290.89	500
Covington, Ga		5.000	7.001 21	400

The money for the site, continues The Times, is "only a starter," and the the postal receipts may grow, the burden on the treasury is sure to grow.

Some journals arge that the President veto the bill in ease it comes to him to sign, among them the Milwaukee Free Press (Ind.), the Seranton Republican (Ind. Rep.), and the Brooklyn Daily Eagle (Ind. Dem.); and The Eagle reminds us that the usual thing is for the President to "acquiesce in the wholesale distribution of pork." It is difficult for him to do otherwise, we are told, because under the system he "can not reject part we out rejecting all." The Eagle says, moreover, that Chairman Clark, of the Committee on Public Buildings, voiced the sentiment of the majority in Congress when he denounced "the carping criticisms of the program," and it remains for the President "to plunge his arm into the opening of the dike and try to spare the country from inundation."

THE FINAL ELECTION FIGURES

OME STRIKING SIDE-LIGHTS are cast by editorial observers on the complete official returns of the Presidential election which are tabled at the end of this article, Noting President Wilson's plurality of 568,822 in the popular vote, for instance, the New York World (Dem.) reminds us that, "except Ulysses S. Grant, in 1872, after the Greeley débacle, no President from the foundation of the Republic up to 1896 ever stood elected by so great a margin," and this journal adds that only the electoral vote was close. Some peculiar voting is seen by the Buffalo Enquirer (Dem.) in South Carolina, where nine electoral votes were decided in a poll of 61,846 votes for Wilson and 1,808 for Hughes. These figures indicate, the Buffalo editor remarks, that they do not do much voting in the Palmetto State, but if we take the primaries as the real test, it transpires that the South Carolinians take considerable interest in the elections after all. According to estimate, we read, South Carolina has 188,000 qualified voters. In the primary in which Manning defeated Blease for the gobernatorial nomination, 158,000 registered and 138,000 voted. Then The Enquirer quotes this paragraph from the Philadelphia Record (Ind. Dem.):

"The relatively small votes cast at general elections in the South do not indicate a lack of interest. Contests in the Southern States are determined before the November voting... Because of its one-sidedness a Presidential election in the South usually attracts only a minor fraction of voters. When there is a real contest, as at a gubernatorial primary, the voters of the South come out in about the same proportion to their total number as they do in the North, East, and West."

Singling out Ohio for consideration, the New York Evening Post (Ind.) remarks that what happened in that State on November 7 may be put most strikingly by saying that "Wilson broke Roosevelt's record of being the only Presidential candidate to poll 600,000 votes," and it adds:

"The President's total was 604,000, which is 4,000 more than the Republican vote of 1904. The figures become even more impressive by comparison with previous Democratic totals. Wilson polled only 423,000 in 1912, which was a drop of no less than 80,000 from the Bryan vote of 1908. That vote was the high-water mark for Democratic candidates for the Presidency, being 26,000 more than Bryan got in 1896, 28,000 more than he received in 1900, 99,000 more than Cleveland polled in 1892, when he won an elector, and 158,000 more than fell to Parker. Hughes succeeded in polling the full Taft-Roosevelt vote and several thousand more, but his total of 515,000 was 57,000 below that cast for Taft in 1908. Wilson, on the other hand, regained the 80,000 Bryanites of 1908 who 'struck' in 1912, bagged 57,000 of the 66,000 Republicans who also disappeared between those two campaigns, and picked up 44,000 voters who had not gone to the polls in 1908-many of them, no doubt, first voters, since the total vote in that year was the largest polled prior to 1916. Yet Ohio is bounded on the north by Michigan, on the east by Pennsylvania, on the south by West Virginia (and Kentucky), and on the west by Indians!

Of capital interest to editors is the fact revealed by the official returns that neither Democrats nor Republicans will have a majority of the next House necessary to elect a Speaker, and that a handful of independents will determine which side will control the organization. Washington dispatches state that the personnel of the House now stands: Republicans, 214; Democrats, 213; Independents, 2; Progressives, 2; Prohibitionist, 1; Socialist, 1; contested, 2. A majority is 218, and consequently should either Democrats or Republicans win both of the contests, they still would be short of a majority. Moreover, we are advised that, should the Republicans seat both of their contestants and hold their membership solid for their candidate they would need only two independent votes to win the Speakership, while the Democrats would need five. On the other hand, should the Democrats win the contested seats, the Republicans would need four independent votes, while the Democrats could win with three votes. There is no question

about the Democrats voting solidly for Speaker Clark, but there are some signs of strife among the Republicans. Representative Gardner already has announced his opposition to Representative Mann.

The New York Evening Mail (Ind.) considers the lack of a regular majority in Congress "one of the best results of the election" and predicts that we shall see every measure tried out on its merits and not because it is "backed solely by a blindly partizan cry to stand with the 'organization.'"

As compiled by the Associated Press, the complete official returns on the Presidential election show that Wilson received 9,116,296 votes and Hughes 8,547,474, a plurality of 568,822 for Wilson. In 1912 Wilson (Dem.) received 6,297,099; Taft (Rep.), 3,846,399; Roosevelt (Prog.), 4,124,959.

The total popular vote for the four candidates in 1916 was 18.638,871, against 15.045,322 in 1912. This is an increase of 3,593,549, accounted for by the increased population and the woman vote in the new suffrage States. The following table shows the vote by States for Wilson and Hughes:

State	Wilson	Hughes	Pluralities by States
Alabama	97,778	28,662	69,116 W
Arizona	83,170	20,524	12,646 W
Arkansas	112,186	49,827	62,359 W

The vote for Benson, Socialist candidate for President, was 750,000, with eight missing States estimated, against 901,873 for Debs (Soc.) in 1912. The vote for Hanly, Prohibitionist candidate, was 225,101, against 207,928 for Chafin in 1912.

A YUCATAN UTOPIA

ARRANZA'S REJECTION of our plan for withdrawing the Pershing expedition and safeguarding the border leaves the future relations between the two Republies a dark problem, but, while awaiting the solution, it is interesting to note that one Mexican State, at least, is struggling earnestly toward the daylight of peace and prosperity. What has actually been done in advanced government in the Mexican

State of Yucatan, on the tip end of the peninsula jutting out into the Gulf of Mexico, seems more like the Utopian picture of some prophetic novel, aceording to a writer in the New York Times and others, than the simple history of this commonwealth under the governorship of General Salvador Alvarado during the past year and Mr. Modesto C. Rolland, half. administrator for the Governor, exprest his belief to the Times contribntor that "even the United States is going to find things in Mexico worth while copying by and by, after the reform has spread from the peninsular State of Yucatan throughout the Republic, for the program is the same for all Mexico." As one instance of forward-looking legislation, we are advised that in the State's new labor law two articles concern women workers who are mothers or about to become mothers. Thirty days before the birth of a child and thirty days following it is forbidden that women should work, and they must receive their complete salary during this time, and their positions must be reserved for them. Again, in establishments where women who are mothers are employed there must be a special floor, in a state of perfect sanitation, in which they may go to mourish their babies.

But perhaps the most epochal change in Yucatan's new day affects landownership. Except for French ownership in the railroads, all the industries and all the lands of the State were held by about 2,000 wealthy Mexicans of Spanish descent, whose chief industry

was raising sisal and other fiber-plants for rope-making. The
rest of the population, about 300,000, were slaves, and, "in many
thousands of eases, they were slaves on the property which had
been taken from them by fraud. All the communal lands, set
aside generations ago as the property of the people of the villages
which they surrounded, had been confiscated by the big holders."
Mr. Rolland is quoted as saying that "slavery under this system
was as bad as the servitude of the blacks of the United States
at its worst," and, what is more, that—

"All that the 2,000 landowners paid toward the support of the State in taxes for their exclusive use and ownership of something over 70,000 square miles of land was \$50,000 a year. Taxes from the land now amount to \$3,000,000 a year, paid on an equitable basis both by the 2,000 old landowners on their muchreduced holdings and the many thousand new owners on the forty-acre tracts which they received under the provisions of the new agrarian laws put into effect by Governor Alvarado."

Mr. Rolland goes on to relate that Yucatan now has 2,400 public schools in charge of able teachers, both men and women.

There are evening sessions for adults, and the problem is "not to get the people to come, but to get enough schoolhouses and teachers to provide for all who want to come," This is true of both men and women, and we are advised that under the new condition a woman is really a woman, whereas, under the old order, she was "a serf or worse, if there is anything worse." The women of Yucatan have already had their first feministic conference, with an attendance of 3,000 delegates, and the list of things they considered reads "very much like the program.

of any meeting of public-spirited, levelbeaded women in the United States,"

But the great piece of reconstruction work, we are told, has been the redistribution of the land, which was done "without confiscation." From former holders the only land taken away was that held by fraud, and it amounted to "many thousands of acres," Whatever nore was needed to give to the head of every family a tract of about forty acres was bought from the holders, for which they were paid in fifty-year gold bonds at 4 per cent. These small farms were first lent to the people for a twoyear period to see what they would do with them, and no land was awarded except to the man who agreed to work it to the lest of his ability for the benefit of his family. Nor were holdings thrust upon anybody whether desired or not,

Of the 50,000 family heads in the State, 40,000 applied for farms, and "in the two years of probation practically all of them showed themselves fit for ownership." We read that these men are working much better now because they are working as free men and not as slaves. A state agricultural school, with experiment stations in different sections, has been established, where free expert advice is available for everybody. Speaking then of labor legislation, Mr. Rolland is quoted as saying:

"We have minimum-wage provisions and an eight-hour law, compensation for injuries of workmen and provision for their old age. Children under thirteen can not be employed in factories or any other establishment.

Hoys under fifteen and girls under eighteen can not work nights. All places of employment must be sanitary and protected against fire risks, and all machinery must be protected, Compulsory arbitration of labor disputes is provided by law before workers can strike or employers lock them out."

The Christian Science Monitor thinks that the reconstruction of Yucatan will encourage those who believe that in emergencies the unrestricted exercise of arbitrary power vested in one man is essential equally to the success of a private enterprise or the redemption of a nation. This journal goes on to say that Governor Salvador Alvarado has been to his State what Porfirio Diaz was to the Republic of Mexico in the most useful and prosperous years of his régime. Alvarado was a Constitutionalist leader, we are told, and an apt pupil in the Carranza school. For years, in Yucatan, authority had been "divided between the established church, the landed aristocracy, and a United States industrial trust." Alvarado threw his weight on the side of the common people, for he is "a for to all forms of special

HE REVOLUTIONIZED VUCATAN.

Gov. Alvarado is railed a "Socialistic Disspen"

privilege." The church, the aristocracy, and the United States industries all have their rights, but "they must be careful to claim no more than belongs to them." While Alvarado is a firm believer in democracy, yet he is "personally a dictator or a benevolent despot, and the government he maintains is an autocracy," and this journal adds:

"No country was, to all appearances, better governed than Mexico in the early years of the Diaz régime, but when the Diaz régime fell, everything fell with it. Diaz failed to raise the people he governed to the point where they were capable of governing themselves. Let us hope that Alvarado will do better than this. He seems to realize where the great problem of Yucatan lies. He seems to have the inclination to plant the liberty and happiness of the people on a stronger foundation than personality affords. May be have the time to do it."

Modified admiration for the work of Alvarado marks an article in *The Outlook* (New York), by a special correspondent who has been investigating Mexico from Yucatan to the border. As to his treatment of the Catholic Church, for instance, we read that two years ago there were more than one bundred priests and many nuns in the city of Merida alone. To-day there are five priests and no nuns in the whole state. Religious

services are held in only four charches in the state, and they are in Merida, while "priests, nuns, and archbishop have fled, and numeries, convents, monasteries, and churches have been bought or confiscated by the state," But if some fair-minded observers in Yucatan to-day are shocked by certain things the Governor has done to the Church, we are told that they are obliged to praise what this "socialistic despot" has done in other directions. He has helped labor to get its just deserts, yet has prevented it from getting more than its fair share of the profits of industry, and for this reason he is as unpopular with some labor-leaders as he is with the millionaire henequenplanters, who are forced to sell their henequen to the state at the state's price. Again, since Alvarado came out of the north, we are told, all drinks stronger than beer have been tabued, and Yucatan, in consequence, has profited. But Alvarado "can hardly last," according to this correspondent, who tells us that "already his downfall is plotted in Mexico City by bureaucrats who resent his independence." Some day a general will descend on Yucatan with a larger army than Alvarado's and the "quiet man with the smiling brown eyes will go down in the ruins of the Utopia be has been trying to build."

FOREIGN - COMMENT

THE PRESIDENT'S UNWELCOME INTERVENTION

A QUARRELSOME MAN in the thick of a light be has begun to enjoy is apt to resent the intrusion of the well-intentioned onlooker, but when two quarrelsome men are enjoying their fisticuffs the benignant being who attempts an unsolicited interruption is as apt as not to receive a sound drubbing for his pains. While the drubbing is verbal, this

is exactly what our President has received for his humanitarian attempt to bring nearer a conelusion the war that is now devastating Europe. Both belligerents have suspended, for the moment, their reciprocal abuse, and have directed the stream upon the devoted head of the President of the United States. Only in neutral lands does he receive any credit for the worthiness of his motives and the courageousness of his example, Switzerland, indeed, is willing, officially, to follow the trail that he has blazed, while the northern neutrals show an anxiety to do

their part to bring healing to the nations. But it is to the belligerents themselves that we must look for real results, and while these peace-notes will receive from the Governments of the warring Powers the careful consideration that their importance demands, there seems no doubt that they will have little immediate effect. Indeed, the intense popular irritation, as reflected in the press, would tend to show that, at this period of the war, the best-intentioned intervention of neutral countries is apt to embitter the conflict.

The best reception that has been accorded to the President's

note was given in the press of the Central Powers, where a few of the influential newspapers have given the dove a cordial welcome. Forexample, the Berliner Tageblatt and the Berlin Vorwarts might be described as enthusiastic in their praise of President Wilson's action, while two influential Vienna journals, the Fremdenhlatt and the Neue Freie Presse, show a restrained cordiality. Other prominent papers are more eautions; the Frankfurter Zeitung and the Berlin Lokal Anzeiger both prefer to wait until they have seen the reply of the Entente Powers; and the organs of the two most influential political parties in Germany at the present time-the Pan-Germans and the Clerical: -assume an attitude of unqualified hostility. Thus the Berlin Täglische Rundschau writes:

"President Wilson is actuated

HOW TOMMY ATKINS TREATS THE PEACE-NOTES
-Nebspatter (Zarich).

look for real results, and from the Governments of sideration that their insideration that they will have

NEITHEMATY.

"The munition-trade is falling off."

"Then it is time to begin to preach peace."

- Wiener Carlegauren (Vienna).

by vanishing profits on one hand and the fear of submarine warfare on the other hand. He knows that if the German peace-overtures were rejected it would spell sharpened and intensified fighting at sea. The Wilson plan will meet more recognition with the Entente than with the Central Powers."

The Kolnische Volkezeitung, perhaps the most powerful organ

of the Catholic Center party, remarks:

"The game was a preconcerted one. America has put her money in Entente business, and therefore America must try in the interest of her debtors to obtain the best possible conditions so that they may be able later to fulfil their financial obligations toward the United States. For these reasons the United States is out of the question as an impartial mediator, not considering President Wilson, who at every opportunity has shown by his deeds his weakness for England, and who, in the present note, even goes so far as to threaten war, which, considering the whole at-

fair, can only be directed against Germany."

In France, as in all the other Allied countries, President Wilson's somewhat unfortunate phrase about the supposedly identical aims for which the belligerents are lighting has aroused a spirit of hitter criticism. Thus we find Mr. Georges Clemencean, the influential ex-Premier of France, writing in his organ, the Paris House Enchaine:

"The moral side of the war has escaped President Wilson. He puts on the same footing all of the belligerents without asking

for what reason each of them is fighting. Failing to take into consideration these imponderables, he believes himself just when he speaks to all in the same terms. He has not felt that the ends of the war could not be understood in the same way by both sides, and consequently it would seem almost blasphemous to hear it said that 'the objects seem the same on both sides.'"

Many of the Allied editors appear to believe that the President is consciously acting in the interests of the Central Powers, for even that shrewd and discriminating critic, Mr. Gustave Hervé, remarks in the Paris Victoire:

"President Wilson has delivered as full in the chest the greatest blow, most dangerous for the morale of our people reerived since Charleroi. It comes in the twenty-ninth month of the war and when certain elements of our people, less endowed than others with fortified, feel the strain of the war. The blow is more dangerous for us than it is for any of our Allies in the West, whose country has not been invaded as has ours for twenty-nine months."

The London editors see almost eye to eye with their Paris colleagues; for example, Mr. J. L. Garvin, in the widely read Observer, almost echoes Mr. Clemenceau's words when he considers that—

"A memorable mistake has been made at the White House. That mistake jeopardizes all the beneficent possibilities of the rôle which might have been and may still be reserved for the

American President at a later stage.

"There may be more, either of good or bad, in this situation than appears on the surface, but the first thing is to consider the strange and almost inexplicable wrong which Mr. Wilson does to the traditions of his own country, the truth of recent history, and the conscience of mankind when he seems to place Germany and the Allies on the same moral level by suggesting that their motives and their objects are the same."

In a long editorial full of labored irony, the London Times remarks:

"We should have supposed that by this time the irreconcilable conflict between the objects of the Allies and the objects of the Central Powers was plain to all. We share to the full President Wilson's humanitarian feelings. We are even fighting for them, but we see no hope of a just and lasting peace until Prussian militarism has been laid low on the field of battle. The enemy are posing as victorious aggressors in the very document in which they condescendingly summon the Allies to negotiate."

In Russia the President's note has been received in a spirit of polite and amiable rejection, while all the journals agree that the moment of its issue was singularly inopportune. The Petrograd Novoye Vremya can not understand the President's action in view of the fact that he transmitted the German peace-note without comment. The Petrograd Ryetch opines that—

"At such a moment as this counsel can be more bareful than useful. The President supposes both sides are following more or less the same objects. What can the people and governments of the Allies reply after having definitely refused Germany's offer?

"Does President Wilson think the offer has been refused simply on account of a lack of concrete terms, and that if he fills this lack we can consider peace-negotiations? There is no necessity to await terms which we know beforehand to be unacceptable. If President Wilson does not understand that no offers can be mutually acceptable to the Allies and their enemies, we, at least, understand it."

Italian opinion finds representative expression in the Rome Giornale d'Italia, which says:

"Three mistakes are observable in the case of the American note: First, it was sent when the Allies were about to reject Germany's peace-proposal; secondly, it makes no distinction between savages and civilized people; thirdly, it proposes peace twenty-eight months too late.

"To President Wilson's note it is impossible to answer simply 'No.' The answer must demonstrate the just and honest intentions of the Allies, fighting for the defense of liberty and right, against the Central Powers, thirsting for dominion, intoxicated with barbarity, and responsible for the most atrocious aggression ever committed. It is impossible to accept a conference for peace, with a relative armistice, without obtaining from the enemy a sure guaranty that he will not take advantage of the cessation of hostilities to escape making reparation."

The Pope, as a neutral, indorses the President's note and, according to his official organ, the Osservatore Ramano, describes it as "a document showing the honesty, justice, and far-sightedness of the American President." Other neutral opinion, as exprest by the Dutch press, is divided, the it inclines on the whole toward the President. The Amsterdam Nieurs van den Dag writes:

"President Wilson has dared to intercede, therefore we must hope and trust that he has the ability to stay through the storm and drive through his will against the opposition of England, France, Russia, and Italy—and also America—who will hear of no peace without a complete victory for the Allies."

GERMAN REPLIES TO LLOYD-GEORGE

A PROPHETIC UTTERANCE, in view of the lack of cordiality with which Mr. Lloyd-George has received Germany's overtures, was made by the Kölnische Zeitung on December 5. Some twelve days before the British Premier so pointedly refused to enter the peace jack-pot without seeing Germany's openers, the great Cologne organ wrote:

"So long as the England of Mr. Lloyd-George is not conquered, England herself will remain unconquered."

After the British Premier's speech the German editors have come to the conclusion that "the England of Mr. Lloyd-George" at least refuses to "recognize defeat," and that the war must continue until German generals can "make the fact still more evident." The Berlin papers are distinctly annoyed that the leader of a nation in the position of Britain should use such a word as "reparation," which they consider should only be found in the mouth of a victor. Thus the Täglische Rundschau writes, "Reparation could be demanded by England only if ... we had been defeated." Equally indignant are the Berlin papers at the reflection on Germany's honor implied in Mr. Lloyd-George's metaphor about the "noose." The implieation of actual bad faith suggested by the British Premier when he said that for the Allies to enter into negotiations with the Central Powers "is to put our heads into a noose with the rope-end in the hands of Germany" is particularly galling to the Tentonic press. The Berliner Togeblatt remarks:

"One might suspect a curious distrust in his own diplomatic ability, but the true purpose of the invention is to serve as bogy for the peace-loving sections of the states whose representatives might possibly sit around a table and listen to what those of the Central Powers have to communicate. Surely they could gather quite safely at The Hague or any other place. They need not fear that they would be murdered, nor that on rising they would find the doors locked. Where is the noose? Where is the ambuseade? Where is the danger?

"But Lloyd-George points to Napoleon, who always were the mask of the pence-angel when planning new conquests or when his subjects grew tired of war. But you can not compare Napoleon with the nation that kept peace from 1871 to 1914, while England, Russia, Italy, and France all ventured on wars of conquest. Moreover, after they have heard Germany's peace-conditions, the Entente Powers still have the right to reject them."

There seems little doubt that there is some disappointment in the Central Empire at the lack of cordiality with which the Teutonic advances have been received, and there is a certain tone of pessimism in some of the editorial comments. The Berlin Kreuzzelung says:

"We have now learned that our enemies do not want penecebut war to the knife; so we must ahandon all considerations and grasp all the means of war at our disposal."

The Vienna New Freie Presse is Irankly regretful that negotiation can not, as yet, take the place of arms;

"England alleges that she is in the war to save Belgium, Is this impossible by peaceful means, or even difficult? Reparation, in the sense of reconstruction, is possible; in the sense of giving satisfaction it is not."

A neighbor in Vienna, the Fremdenblatt, accepts the inevitable with a certain belligerent grace by remarking:

"After Mr. Lloyd-George's speech the continuation of the world-war is inevitable. Great Britain does not want to end the war until her aim has been attained. This aim Mr. Lloyd-George designated by the dark word 'reparation.' He obviously demands reparation for the fact that the Central Powers dared defend themselves against world-enemies standing under England's command. Fate will be allowed to take its course, and the day will come when Mr. Lloyd-George, shudderingly, will recognize that England, by rejecting the peace-offer, has really stuck its head into a noose with the rope in our hands."

Mr. Lloyd-George was speaking for effect, says the Kolmische

Copyrighted by Maderwood & Colorwood, New York.

A HATTLE IN PROGRESS OVER THE SHELL-SCARRED GROUND.

This remarkable photograph, taken from a French battle-plane, gives a vivid idea of the intensity of shell-fire preceding an attack, the ground being pockmarked with shell-holes. In the upper part of the picture is the village of Soyecourt, recently captured by the French Toward the village are shown the German troops flying before the French, who are but after them. French soldiers are clearly visible running up the trenches and dodging from shell-hole to shell-hole. French bombs are exploding in German trenches and on the field near the village.

Zeitung, and his utterances must therefore be in some measure discounted:

"The language of the British Prime Minister must not be taken too seriously. We are taught this by some reflections on English peace-conclusions in the past, such as that in which she lost the United States, and the peace of Amiens in 1802. There is a limit where the blindest obstinacy finds itself confronted with the impossible, and this limit is being brought nearer and nearer by our submarines. Another possible contingency compelling England to make peace would be the secession of one of her Allies."

An unwonted mirth is found in the staid pages of the Berlin Vassische Zeitung, for the British Premier's statement—that peace is impossible till the aims of the Entente are accomplished—moves it to risibility:

"It is not only improbable, but impossible, that Russia shall take possession of Constantinople and the Dardanelles, nor will Italy ever succeed in incorporating southern Tyrol, Trieste, and Dalmatia. As far as Great Britain is concerned, she will never succeed in destroying German industry or sinking the German fleet. But it is probable that the German armies in France and Belgium will resist every attack, that Poland will never again fall under the Czar's tyranny, that Roumania will be retained as a valuable pledge in the hands of the Central Powers, according to whose desires certain border regulations in the Balkans may take place.

"It is inconceivable that the Entente statesmen should keep their eyes closed to these incontrovertible facts; that they can not see that there are advantages in negotiation which they can never hope to gain by continuing the war. They alone must be held responsible for all further bloodshed." ENGLAND'S THREATENED FOOD—The undeniable fact, that England depends on others for her food places her, say the German papers, at the mercy of the U-boats. Should submarine war be sharpened, we are told, England will soon be on the verge of starvation. Captain Persius develops this theme in the Berliner Tageblatt and says:

"Almost the whole production of the world outside Europe is at the service of our enemies, but does them no good, if, as a result of the shortage of freight-space, they can make no use of it. In Australia, for instance, there are stores of wheat which suffice for the Australian consumption for more than three years, but this great mass of wheat in the colonies is of no use to the mother country. . . . The main causes of the shortage of freight-space are the sinking of numerous merchant ships, the confiscation by the Government for military purposes of a great part of the mercantile marine, the reduced construction of new merchant ships owing to the heavy demands of the war-fleet, and the disappearance of enemy commercial fleets. owing to the war, and of neutral merchant ships owing to losses due to the war—eapture for earrying contraband, running upon mines, and so on. The help which England and her Allies obtained by the confiscation of German and Austrian ships in Italian, Portuguese, and Greek ports plays now no considerable part in view of the losses suffered."

Captain Persius foresees this result:

"We look to the future full of confidence in the efficiency of our submarine arm, which, one may with certainty expect, will constantly increase in strength. We hope that the shortage of tonnage already prevailing among our enemies can be brought, up to the point at which it will be intolerable, and this will surely be of considerable importance for the military situation."

GERMANY'S NEED OF FAT

HE HUMAN MACHINE, like all others, runs upon its fuel, and to-day the lack of one vital fuel-element is said to be impairing the efficiency of Germany's conduct of the war. The serious shortage of all forms of fat in the Fatherland is bluntly emphasized by Field-Marshal von Hindenburg in a letter to the Imperial Chancellor in which that plain-spoken old fighter tells the authorities pointblank that fat has to be secured for the munition-workers or else Germany must look forward to a marked decrease in the output of urgently needed war-material. This letter of the Field-Marshal appeared first in one of the industrial organs of West-phalia, the Bergisch-Markische Zeitung, whence it was copied into the Kölnische Zeitung and other prominent papers. In

THE POOD CRISIS.

"Well, I can't eat the block, and the hatchet is too indizestible."

— Heria (Harrelma).

addressing Dr. von Bethmann-Hollweg, the old warrior first emphasizes the important part the industrial workers are playing in the war:

"Your Excellency is aware of the hugo task which our warindustries face to achieve a victorious outcome of the war. In connection with this work the solution of the labor problem will be the deciding factor. In fact, the question is not overely the numbers of the workers; it is, above all, their individual power of work through sufficient nourishment. The Department of Food Supplies of the War Office has paid most praiseworthy attention to the nutrition of the workers in the various war-industries. For this we should be grateful, but, nevertheless, the War Office can exert only a small influence on the earrying out of the regulations of food-supply; it is needful, besides, to have the unanimous and devoted cooperation of the agricultural authorities and of those under them, both administrative and municipal. It does not seem to me that it is sufficiently realized in official circles that the nutrition of the workers now means the 'to be, or not to be' of our nation and empire."

The Field-Marshal states that munition-workers are to-day in an undernourished condition because the usual supply of fats, both animal and vegetable, has been disorganized, which is due apparently, in part at least, to the British blockade. He proceeds:

"It is clearly impossible that our workers can continue indefinitely to be efficient in their labor if we are not successful in distributing an adequate ration of fat, a ration founded upon common-sense rules. It is reported from the coal-mines of the Ruhr district, from those of the Siegerland as well as from other industrial centers, that it is not yet possible to distribute a ration with an adequate proportion of fat. In the Siegerland, for many months, only an insufficient supply of fat has been available.

"It appears that in the purely agricultural circles of Germany and in the circles of these who control our farming products, the authorities are not sufficiently informed of these things. As regards the farmers themselves, the aim is not only the obvious one of increasing the production from the soil, but the no less important one that these products, and fat especially, should be voluntarily offered to the consumer. Experience shows that State compulsion accomplishes very little, but I promise results from a wide-spread, driving, well-organized propaganda by the leaders of our war-industries and munition-workers."

Calling for vigorous action on the part of the authorities, you Hindenburg concludes:

"All State control of consumption must fail unless intelligent, voluntary cooperation of all classes of the population of cities and country comes to our aid, and unless every German is penetrated with a profound sense that this cooperation is just as much a duty to the Fatherland as the sacrifice of life on the battle-fields of the front.

"I beg your Execllency to bring the gravity of the situation in the most impressive manner possible to the eyes of the Federal, administrative, and municipal authorities, and to call upon them to attend to the proper neurishment of all our workers in the munition-factories; to ask all the strong men of party, as leaders of the home army behind the plow and the reaper, to unite in a common effort to wake the favor Teutonicus in the home, among the peasants, the workmen, and the citizens."

CONSTANTINOPLE FOR RUSSIA

IF THE ALLIES WIN, the reward of Russia is to be the possession of Constantinople and the Straits. Speaking in the Duma on December 2, the new Russian Premier opened has heart to the assembled deputies. According to the Petrograd Novoge Volume, Mr. Trepoff said:

"I can not refrain from touching upon a question which lies close to the heart of every Russian. For more than a thousand years Russia has stretched out southward toward a free outlet on an open sea—the keys of the Bosporus and Dardanelles; Oleg's shield over the gate of Constantinople—these have been the age-long dreams chery-hed in the hearts of the Russian people all through the different periods of the existency.

"Well, those aspirations are ready for realization.

"From the very commencement of the war, wishing to spare human lives, and acting in accord with our Allies, we did our atmost to restrain Turkey from a mad participation in the hostilities. France, Great Britain, and Russia made no effort to get Turkey to enter the war. They only arged her that in her own interests she should remain neutral. At the same time Turkey was given formal assurances and promises guaranteeing her, in exchange for mutrality, the integrity of her territory and her independence, and conferring upon her certain privileges and advantages. But these efforts were in vain, and, blinded by the deceptive promises of the Germans, Turkey attacked us surreptitiously, and thus scaled her doom."

With Turkey thus, by her own act, debarred from any further consideration as a European Power, said Mr. Trepoff, Russin prest her claims:

"The vital interests of Russia are as well understood by our loyal Albes as by ourselves, and that is why an agreement which we concluded in 1915 with Great Britain and France, and to which Italy has adhered, established in the most definitive fashion the right of Russia to the Straits and to Constantinople.

"The Russian people should know for what they are shedding their blood, and, in accord with our Allies, the announcement of this agreement is made to-day from this tribune. I repeat that absolute agreement on this point is firmly established among the Allies, and there is no doubt that after she has obtained sovereign possession of a free passage into the Mediterranean, Russia will grant freedom of navigation for the Roumanian flag, which now, not for the first time, floats in battle side by side with the flag of Russia."

SCIENCE - AND - INVENTION

CHARACTER IN HUMAN FACES

THE OLD SCIENCE OF PHYSIOGNOMY, developed long ago in France by Lavater, has generally been thrown on the lumber-heap by serious students. The no one would deny that a man's character and mode of life are reflected to a certain extent in his facial expression, most scientific men would probably consider it impossible to standardize or measure any such indications. Yet it is asserted by William Foretz Kemble, in an article on "Standardizing the Characteristics of Men," contributed to Industrial Management (formerly The Engineering Magazine) (New York, December) that facial characteristics are utilizable practically by those who deal with men. Mr. Kemble's article, which is one of a series, deals with the general laws that assist us in classifying all sorts of physical characteristics and recognizing the qualities that correspond to them. We have space here only for what he says about faces, To quote him:

"Facial control and lines will tell a large part of the story of mature people, but it is very difficult to lay down definite laws on the subject, and what we have to say will probably be subject to many exceptions, so that the reader must not arbitrarily accept it as the ultimate truth. The labor standardizer should be able to read faces as a preliminary to test work, for it will save much time and money to be able by this method to weed out the very evidently until before applying further tests to the more acceptable.

"First, as to face control: during waking hours the average person keeps the face constantly under certain muscular tensions which more or less reveal his character.

"When asleep these muscles relax, giving the inane expression which most of us have in that state. Very few of us could get jobs if we were sized up in our beds.

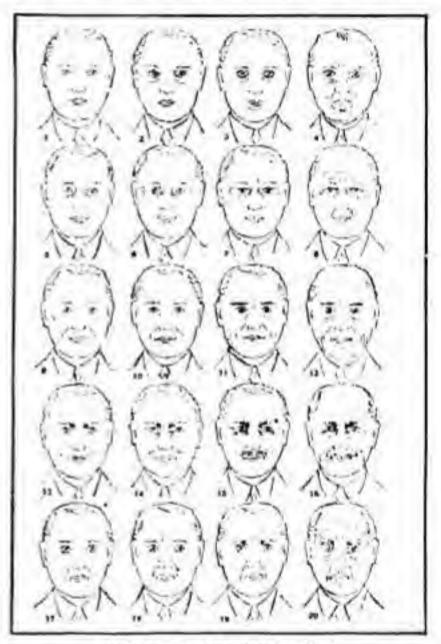

"These tensions in the face draw the mouth into certain fixt lines, hold the cyclids open at a definite width, draw the cyclrows more or less apart or together, and fix the check muscles in various positions. Sustained emotions or thoughts eventually give these muscular tensions a permanent set in our waking hours, and we relapse to the uncharted innocence of childhood only when we lose consciousness.

"These muscular adjustments are so delicate that it is almost impossible to describe them, but people are so constantly subject to our observations that most of us, through many unconscious records on our memory, come to know their meaning. Especially is this so when the emotions eventually leave definite lines in the countenance. We call this ability to read character in the countenance intuition, but it is really the cumulative records of our experience in dealing with people. . . . Most of our memories are so definite that we can use words of quality or dimensions to describe them, but there are a large number of memory phenomena, such as the above, which never assume clear enough shape for such description, and a certain amount of superstition has entered into our conception thereof.

"Before we shall say anything further, let the reader look at the rows of faces to the extreme right of the groups and by intuition, if possible, decide what types of men they indicate and note their characteristics.

"Face No. I (page 13) is what the phrenologists and vocationalists would call the vital, well-nourished type of personality. . . . The changes from 1 to 4 indicate the easiest development for this type, provided it has an easy time financially. The lines under the eyes and lips are not so much creases in the face as bloating and fattening of the leatures, indicating self-indulgence and sporting proclivities. While this man does not let himself go completely, he probably drinks more than is good for him. Faces 5 to 8, inclusive, show an entirely different development. The lines running almost perpendicular to the inner part of the eye indicate thought; the upturned lips show good nature. The lines running from the outer ends of the eyes in 6 show kindliness and a sense of humor. The gradual closing

of the eyes in 7 shows increasing thought, and in 8, with some age-lines added, we have the elderly, kindly, thoughtful, banker type of individual. Faces 9 to 12, inclusive, show still another possible development of the same young man. In 9 responsibility and determination have straightened out his mouth and set his lower cheek-muscles tensely to each side of the mouth. In 10 the dents on each side of the lips show increased firmness, In 11 the jaw has developed the muscular control of a bulldog, and some thought-lines come under the eyes. Face 12 shows the lengthening and aging of these lines and some slight kindli-

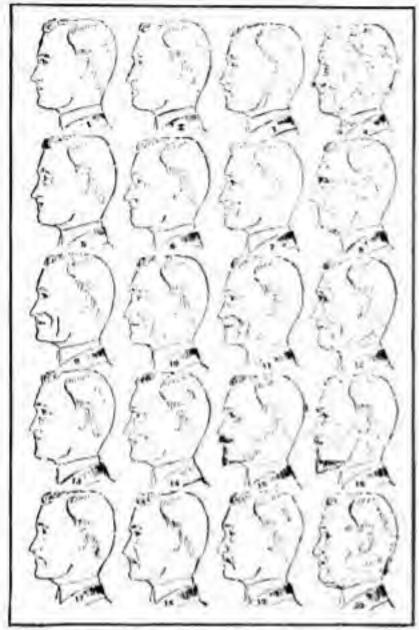

HOW ONE FACE MAY DEVELOP

"The labor standardizer," says Mr. William Foretz Kemble, "should be able to read faces as a preliminary to test work, for it will save much time and money to be able by this method to weed out the very evidently unfit before applying further tests to the more acceptable."

ness each side of the eyes, and we have the elderly, strong, executive type of man, not so thoughtful as face 8, but showing greater responsibility in dealing possibly with the lower types of men, where the former has dealt with the higher. 16 show the same development of determination, but not to such a dynamic extent, since the jowls do not become so strongly developed. This man has control of men, but more mentality as the thought-lines and deepening of his eyes indicate. He has planning ability besides executive force. . . . Face No. 17 begins early to droop around the mouth from pessimism or a bad temper. The little indentation above the nostrils in faces 18 and 19 show cynicism and sneering tendencies and the frown ill-humor. These all increase and age in 20. The lifting of the outer evebrows and the creased forehead in this case show worry, and the lines under the eyes and mouth show indulgence rather than thought. The eyes remain wide open, showing that this man is not a deep thinker. He develops into an irascible, pessimistic, self-indulgent, general nuisance.

"Face I (below) is the undeveloped, angular, pure American type. Face 2 shows bloating, self-indulgence lines under the eyes and lips. Face 3 shows increase in these lines and slight tattening of the lower mose, with a loss of self-control indicated by slightly unknown hair and the need of a shave. Face 4 shows utter loss of any restraining influences and full devotion to impulses. The lips, nose, and eyes have swelled. The lines in the face are aimless, uncontrolled, and fatty, and the bair unknown. The man has become a trainp or drunkard. Faces

ANOTHER STUDY IN FACIAL DEVELOPMENT.

The author confesses that even the best systems of judging men, however, have a high percentage of error.

5 to 8 show how this man goes through the corresponding development of face 8, page 13, only in this case the man becomes a kindly old professor. The differences were attained by the slighter depression of the eyes which comes with age. by a greater use of the eyes, as indicated by the glasses, and by the lines of control about the mouth developed by keeping the boys in order. Faces 9 to 12 show the same executive development in this type of man, as indicated by the corresponding faces on the other page, the only difference being a more pronounced bay-window under the eyes, which often is noticed in executives. Faces 13 to 17 show the development of this type into the professional type doctors, engineers, architects, etc. . . . Faces 17 to 19 show the effect of pessimism and cymicism on this type of man. The linings are much the same as the corresponding numbers in the former figure. Since this type of man is not so well nourished as the other type, the same lines show greater age effects, seeming to indicate a quicker decay. No. 4 has let his senses run loose, while No. 20 has let his emotions run riot, both showing different kinds of human wreeks,"

This interesting discussion of facial lines is certainly reasonable, but the trouble is, as Mr. Kemble himself confesses, that as soon as we have faid down rules for the linings in the face we see these lines in a face where our intuitions tell us that the rules are untrue. He is sure, however, that his findings are true in 50 plus cases. He goes on:

"This discussion is important, since many place absolute dependence on the ability to analyze character by the appearance. We believe such ability should be intuitive with, or acquired by, the labor standardizer; but it has its limitations. The first limitation is fallibility. The man with the highest power we have ever tested in this regard had a fallibility of 2018 per cent., making the maximum average of 79.2 per cent. after also making a calculation for the fallibility of the committee that tested him). The second limitation consists in the range of facial tests, since, after all, only a few of the human characteristics can be read in the face, and those only positively or negatively-not quantitatively. By this we mean that while we may be able, by looking into a man's face, to tell positively or negatively whether he has the intelligence to be a mathematician, we can not thus tell how good a mathematician he is; only a test of some problems will reveal his exact relative ability in rating with other men of his kind, . . . The third licutation consists, as Mr. Harrington Emerson says, in the characteristics of the job. We may be able by wonderful intuitions and training to size up the man, but this gives us few data as to whether he may be litted for a certain job. This fatter has to be analyzed by the law of extremes, or by a man of great analytical power who knows the job,"

AN AWAKENED RUSSIA

A SATION owning uneserventh of the earth's land surface, suddenly out off from its usual sources of supply by a great war, finds itself confronted with the problem of new markets. It has found them, and its purchases are gigantic; but it is auxious to prevent the recurrence of such a condition and is accordingly beginning to prepare for the development of its own natural resources. The result is, as reported by "D. E. J.," in Machinery (New York, November), that Russia has awakened from her long industrial lethargy. In the future she is likely to be a great commercial as well as agricultural nation. Her immense numeral deposits will be mined, great industrial plants will be built, radways will be multiplied. Fuel is relatively scarce, so that water-power will have to be developed and used. Says the writer:

"In matural resources Russia is perhaps one of the richest countries in the world. The Fral Mountains are said to contain about every known metals, while the Alfai and Caucasian mountains, as well as other parts of the Empire, are veritable storchouses of minerals. The the metallurgical industry has been carried on with such indifference that at the beginning of the present century many blast-furnaces and factories were torn down to avoid payment of the remains taxes, so great is the mmeral wealth of the country that in 1911 Russia ranked first in the production of platinum; second in the production of petroleum, ashestos, and manganese ores: fifth in the production of gold; seventh in the production of copper and asphalt; and eighth in the production of iron. It produced nearly all of the world's supply of platinum and approximately one-lifth of the supply of petroleum. The iron ares from south Russia are said to be the finest to Europe, some of the ore analyzing 70 per eent, iron. The gold ores found in the Urals also supply much of the wolframite, osmion, tantalum, and iridium used in the manufacture of electric lamps,

"Several reasons have been given for the poor development of the nation's resources. Among the first are the sparsely setthed condition of the country and the poor transportation systems. Owing to the marshy character of a large part of eastern Russia and the lack of road-building materials, good roads are almost unknown; in fact, much of the marketing is done when the ground is frozen and sleds can be used. Yet so extensive a waterways system was developed early in the last century that by means of canalized rivers and the 1,225 miles of artificial canals, the Baltie and Black Seas, and the Caspian, Baltie, and White Seas were connected. The Ob-Yenisei waterway system, in Siberia, is nearly 3,650 miles long. In proportion to its population and area the railway mileage of Russia is small. The first railroads were built very slowly and were located so as to augment the transportation systems in existence and not as competing lines, with the result that they were not placed in many cases where they aided in the development of the country. About two-thirds of the lines, and those most of the important ones, are owned by the Government.

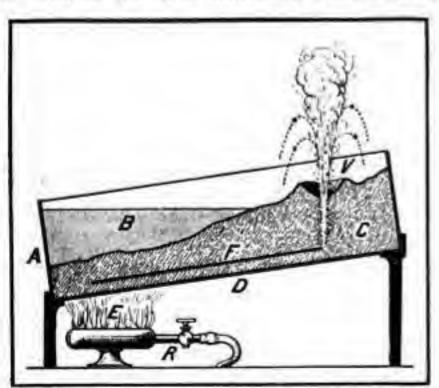

"Because most of the people follow agricultural pursuits, and also because of the inadequate systems of transportation, the buying and selling have been done at long intervals. This has caused the holding of fairs at which the people gathered in immense numbers. It has been estimated that 15,000 of these fairs are held annually, and that their sales exceed \$500,000,000. Of course many of these are small and only of local interest, but some are of national importance and are known throughout the world."

The greatest factor in this tardy growth, the writer goes on to tell us, is now said to be German influence, which has dominated the Russian Government since Peter the Great. The Germans have secured the greater part of Russian trade largely through their willingness to adapt their methods to Russian conditions. In 1913 not only did Germany sell nearly \$15,000,000 worth of machinery to Russia against the United States' \$200,000, but the disproportion runs through all her trade, and German firms even sold to Russia two and one-half times as much American machinery and tools as was imported from us direct. We read further:

"The true reason for the slow growth of Russia seems to have been a lack of fuel and of capital. While the country has many large coal deposits, some of it is of an inferior quality and much that is of good quality has been inaccessible. Railroads are being built to these deposits, so that it is thought the fuel-supply will be sufficient for a long time to come. Plans are being made for the conservation of this supply by making as wide a use as possible of the water-power, of which there is an abundant supply.

"The Russian markets are increasing in size and importance and are demanding better articles than two years ago. During the war several ports have been developed and new ones have been built, necessitating the construction of new railronds, some through territory that heretofore has been inaccessible, Existing roads have also been extended and in some cases rebuilt, and with the increase in the manufacturing plants of all kinds the people have more ready money than ever before. Wageshave been increased in some cases mearly 100 per cent., and in consequence the people are adopting a higher plane of living. Factories of many kinds are being planned and built, some under the direct supervision of American, English, Swedish, and other engineers. The choice of these men, who will largely determine the equipment that will be adopted, is often dependent on the source of the capital furnished for the factory.

"One mistake that is being made in the published descriptions of the Russian conditions is to speak of the changes that are taking place as 'rapid.' Nothing with which the people

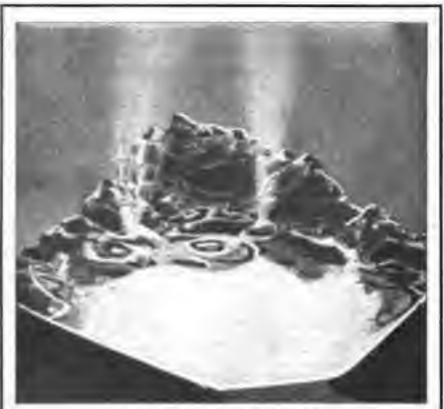

CROSS-SECTION OF THE "EXPERIMENTAL VOLCANO."

of Russia have to do is rapid—quite the reverse. The introduction of modern methods of manufacture, the use of laborsaving machinery, the adoption of comforts such as we have in America, and a voice in their own Government will all be matters of education, and they will be slow; but they are all coming."

ARTIFICIAL VOLCANOES

WILLE FRENCHMEN on the Western front are busy counterfeiting the phenomena of volcanism—with bombs, choking clouds of gas, subterranean and submarine explosions—a countryman of theirs, Émile Belot, has succeeded in imitating nature still more exactly by means of

AUTIFICIAL VILL AND PHENOMENA.

Belof's volcano, showing a crater-lake in the middle; emption in an early stage at the right in a later stage at the left, and a debal exister in the left foreground.

a single agency steam. That the activity of volcances is primarily due to steam from beated sea-water has long been believed by many geologists, the it can not be said to be so universally accepted as to lear the stamp of orthodoxy. But Belot thinks that he has gone far toward silencing all objection by the exactitude with which he reproduces volcanic action on a small scale. Under the heading of "Experimental Volcanism," he writes thus in La Nature (Paris, October 25):

"In a shallow basia about two feet square, we place a wet mixture of sand and clay in such fashion that the side B represents the sea and C the continent. The bottom B is inclined away from the continent. We heat the lower part of the slope as uniformly as possible..., Herause of the metallic conductibility of the bottom we shall have practically an isothermal surface B. At the end of ten minutes or so volcame phenomena begin to show at 1 in the form of fumaroles escaping from a volcame chimney, the material thrown out accumulating to form a crater. The volcano 1 is always near the top of the slope, and we have the paradex of a surface 1 in condition while the "sea" is completely cool at B, just over the heat.

"In nature it often happens that impermeable layers alternate with permeable ones. We may imitate this effect by placing a short of slate F at a little distance from the bottom D; thus several volcances may be produced, in line with the upper edge of the slate. The volcanic action may then appear very far from the source of heat R. We thus realize how linear groups of volcances form in nature, and why some volcances are found at considerable distances from the sea.

"The position and number of the slates may be varied; the volcanic action is always concentrated near the top of the slope. It may be seen that the submarine vapors concentrate or disperse as the impermeable surfaces have the form of a right or an inverted cone. Hence the following law: volcanism is proportional to the steepness of the slopes and to their convexity toward the sea. This explains why islands in the open sea are almost always volcanic and why the Atlantic coasts, being much less steep than the Pacific, are not volcanic."

Mr. Belot imitates tidal waves by placing his slate so that it touches the bottom of the busin at the upper edge, forcing the steam to act on the "sea" at the lower edge. He has produced eraters several inches across, which fill with water and form "crater-lakes" when the heat is removed. He produces "volcanic bombs" of mud, like those formed from lava in real volcanoes, and he has even noticed a phenomenon resembling the "blazing cloud" from Mont Pelée that destroyed St. Pierre, when the steam-column from his artificial crater sweeps the surface obliquely instead of ascending. By covering the whole surface with water he has a submarine volcano, which throws up islands like those off the Alaskan coast. By saturating his water with salt he gets other familiar volcanic phenomena. In fact,

"All who have seen the artificial volcano or the films that Mr. Gaumont, with his generous devotion to science, has made of them, are convinced that the sea is in submarine connection with volcanoes and that the cause that directs the internal vapors of the submarine fissures toward the coast is simply the inclination of the isothermal surfaces."

FRENCH EMANCIPATION FROM GERMAN CHEMISTS

RE WE TO REMAIN DEPENDENT on Germany for the products of commercial chemistry? When the war is over, shall we give up our feeble attempts to fend for ourselves in this field? One would think so, to read the preans of thanksgiving that arise whenever the Brutschland arrives with her small drop in the bucket of our chemical necessities. Whatever we may do about it, however, it is certain that the Entente Powers are trying hard to free themselves from the industrial as well as from the military Octopus Teutonicus. Their economists and scientists in the war of the trenches are effectively working hand in hand with Nivelle, Haig, and Brussiloff. Prof. Alphonse Mailhe, of the University of Toulouse, in the Revue Générale des Sciences (Paris), devotes an illuminating essay to the industrial future of organic chemistry in France. The present state of certain of her chemical industries is by no means to be despised. No country, Professor. Mailhe assures us, can compete with her in the fabrication of chemical fertilizer—she produces annually more than 1,000,000 tons of sulfurie acid, while her soda quota exceeds 300,000 tons. In the organic domain, however, she is, like us, inferior to Germany, altho Professor Mailhe assures us that the greater part of the world's chemical discoveries are of French origin. He says:

"Our progress in electrochemistry enabled us to lower the price of aluminum from \$113 a pound in 1855 to \$1.82 in 1890 and to 34 cents in 1898. The decline in the price of vanilin is still more remarkable: in 1876 a pound cost nearly \$500; it could be bought in 1908 for \$5.

"We were the pioneers in dyestuffs: anilin red, fuelsin, diphenylamin, 'blen de Lyon,' 'violet de Paris,' are French discoveries. The same is true of the perfume industry. . . . The principal cause, according to my views, of that German 'preponderance which had almost reached a point where the whole industrial world was becoming dependent upon the Teutonic output, must be looked for in the antagonism among us,' between the partizans of the atomic theory and its opponents. While Wuertz and Gerhard were vainly making desperate efforts to introduce the teaching of this theory into our schools, it was enthusiastically accepted beyond the Rhine. The Germans, with their tenacity and method, took full advantage of the new theory, and realized marvelous results in the field of dyestuffs. They were not afraid of experimenting with new compounds. Who can belp admiring the indomitable energy with which the Badische Anilia conducted the experiments leading to the manufacture of sulfuric anhydrid and synthetic indigo." The former entailed an effort of five years and an expenditure of nearly \$1,250,000; the indigo experiments lasted fully ten years and cost nearly \$5,000,000. Our chemical companies. with their seant capital, could not think of experimentation on so vast a scale. Germany was aided in her industrial ascent. by the thousands of young and able chemists which her universities, polytechnic academies, and special schools turned out yearly. Léon Vignon, in a recent report, stated that France had only seven chemists and England six to Germany's two bundred and fifty. Some of the German dyestuff-factories employ from one hundred to two hundred chemical experts! Under these circumstances some of our fellow citizens and our friends in foreign countries view with dismal forebodings our prospects of damming the Tentonic torrent in the triple field of dyestuffs, perfumes, and pharmaceutical products."

Taking up these three classes of substances one by one, Professor Mailbe shows that the Germans have not annihilated French industry in any of them. France is still struggling, and the chemical industries that remain are strong and were once preponderant. They may become so again. He tries to tell how in his concluding paragraphs, which we give as follows:

"We need five things to succeed: abundant raw material, sufficient capital, the necessary number of trained chemists, the protection of the law, and, finally, a first-rate commercial organization.

"We have the necessary coal for an annual production of 2,000 ions of pure anthracene, and thousands of factories now busy with the manufacture of war-material will, let us hope, soon be ready for more profitable occupations. Our capitalists ought certainly not to hesitate to invest their money when they consider that the Badische Anilin paid its stockholders in each of the last ten years a dividend of 24 to 25 per cent. The owners of our factories should grasp very quickly the wisdom of their German confrere who, when reproached by a friend with the great number of his spectacled scientists, replied with a smile; What do I care if ninety-nine out of one hundred produce nothing if but one earns for us an annual profit of 200,000 marks! At the end of this war the fateful treaty of Frankfort imposed upon us in 1871, which forced us to treat our archrnemy as one of our 'most-favored' nations, will be replaced by a high protective tariff; and a new patent law will safeguard French genous against unsernpulous exploitation by foreigners, As for the last requirement, a French chemical trust, covering all France and as solidly bound together as the German organizations, will be equal to it. We can produce as smart traveling salesmen as they, we can print as beautiful catalogs and produce as learned a chemical literature as our neighbors. In brief, we have all the elements necessary for a rejuvenation of French chemical industry."

OZONE FOR VENTILATION

N POPULAR PARLANCE the word "ozone" is often used synonymously with "fresh air"; so that the use of ozone for purifying the air of buildings appeals to every one. Ozone, however, is a very definite chemical substance, a form of oxygen, with easily detected properties, including a strong, pungent smell and an irritating effect on the respiratory passages. It is stated by Dr. Felicia Robbins in The Medical Review of Reviews (New York) that the success of ozone-installations in ventilating-systems is due not so much to its chemical effect in eliminating impurities from the air as to the fact that its own pungent smell hides their objectionable odors. As to the direct effect of ozone on the health, she says, it is now generally admitted that this must be infinitesimal, as the ozone never comes into direct contact with the blood, being detained by the organic matter in the upper air-passages, Says Dr. Robbins:

"In discussing the influence of ozone in ventilation, Leonard Hill and Martin Flack arrive at the conclusion that its greatest usefulness lies in its altering effect upon the uniformity of the atmosphere, and the resulting stimulation of the cutaneous and olfactory nerves, as well as the respiratory system. 'There is no evidence that ozone reaches the blood or that it has any other influence on the body.'

"Ozone is altogether powerless to improve the heat and moisture of waste air, which can only be remedied by efficient ventilation, through which the oderiferous substances are removed at the same time. Moist air and dry air vary in their behavior to ozone, especially in regard to its practical utilization. Air that has become contaminated through the sojourn of many people has also become moist; meanwhile, the irritative properties of the ozone are not so evident in moist air, so that larger quantities of the gas may be added than when the air is dry,

with the result that the bad odors are hidden from those who enter such a room. The greater the moisture content of the air, the greater will be the ozone toleration of the inmates. Under these conditions, however, moist air is practically identical with bad air, and for this reason air-ozonization is not desirable from the hygienic point of view because it tends to interfere with the appreciation and renewal of the air precisely when this is most necessary.

"The production of ozone has now become very cheap by means of relatively simple apparatus. The first actual ozone

apparatus installed in a large airduct, used wholly to convey fresh air to various rooms in a large building, was the ozone-generator of the National Air Filter Company in the Chicago Public Library. where the air-supply had been objectionable, and no less than 10,000 cubic feet of air per minute had to be ozonized. The outcome of the test, which began on the first of August, 1910, was highly satisfactory. as the apparatus was found to provide for complete deodorizing of the main reading-room, injecting absolutely fresh, sterilized air at all times, reducing the humidity during oppressive summer days, disinfeeting all books, periodicals, etc., in general use.

"Efficient ventilation should functionate satisfactorily without ozone. When this is needed, the ventilation is imperfect, for air-ozonization is nothing but an emergency procedure for the concealment of odors which the ventilation alone has failed

to remove.

"Ozonization is not identical with purification of the air. In a gen-

eral way, ozone should be employed, if at all, only in low concentration in combination with fresh-air ventilation."

was the cause of the trouble; huts were destroyed and wells disinfected; in all, about four hundred people died. Some four thousand work-people, who had been brought to the place as the result of hard work, decamped, taking with them some 2,000 rupses (\$667) as advances. This was ultimately recovered. After this the place was free and no pains were spared by the authorities to protect the large number of coolies employed. Before they had completed the dam, a heavy flood came, covered the walls and filled the place in which they were working with

the people forbidden to drink of the contaminated stream which

A LAKE DISTRUSTED BY THE SUPERSTITIOUS HINDUS IT WILL BENEFIT.

A MAMMOTH ARTIFICIAL LAKE

REMARKABLE ENGINEERING FEAT was recently accomplished in southern India when the mammoth artificial lake of Marikanave was completed in Mysore -an Indian state twice as large as Maryland, ruled by an enlightened and progressive maharaja. It is eighteen miles long and has an area of thirty square miles. The dam thrown across the gorge-240 feet wide-to impound water that erstwhile ran to waste and is now being utilized for irrigating land that would be otherwise parehed and barren 's 1,336 feet long, 162 feet high, and 15 feet thick. A wen 470 feet long has been built to discharge excess water, which, during the monsoon, is heavy. The work was initiated and finished by Indian engineers, and is a monument to their engineering skill, as it is a credit to the government of his Highness the Maharaja, who furnished the money for it. The object for which the lake has been constructed is thus described in an interesting account that appears in The Modern Review (Calentta):

"The chief object of the scheme is to irrigate the land round about the town of Hiriyur, in the Chitaldrug District—a tract of land which, compared with other parts of the state, is barren. The annual rainfall is only tifteen inches, and in poor years as little as six or seven. The lake would thus prevent a huge amount of water running to waste and provide an extensive area of land with a regular supply, which would thus protect the people during the frequent periods of local scarcity."

It appears, however, that the work has not been completed without mishaps:

"In four months after the operations were commenced the work received a rude cheek, for cholera broke out, a most serious matter among a community of over five thousand persons crowded together in huts. Drastic measures were taken. The sick were isolated; pure water was provided and water. The water and sand were removed and the work of constructing the dam was continued, with little interruption, till the completion. The question of the nature of the stone to be used was decided by searching experiments. It was found that hematite quartitle, which could be obtained at comparatively little expense from the surrounding hills, would serve the purpose admirably. Small stones were used, varying from one-half to eight cubic feet. At first trolley-lines were brought into service, but later a cheaper method—by 'nowgunnies,' or professional stone-lifters—was in vogue, and answered very well. The work continued steadily for several years and the channels for conveying the water were begun, but scarcity of funds necessitated a delay in the work. It was not till ten years had elapsed that the dam was finished."

The writer gives the following details of the completed enterprise:

"The sluices for the regulation of the water are known as Stoney's patent gates. Each vent has two gates and is capable of discharging over 1,000 cubic feet per second, under a head of six feet. The each gate weighs almost six tons, only four men are required to lift them by means of powerful winehes. The water on passing through the sluices is carried back into the river below, and later is caught up and diverted along two large irrigation channels. Its flow is so arranged that when power is needed a considerable fall of water is available.

"The total east of the project was forty-five lakhs of rupees (\$1,500,000). While it was realized from the outset that the scheme was protective rather than remonerative, it is believed that it will ultimately pay at least 3 per cent, on the outlay. If the power can be used for the cotton and other industries which may develop here, this rate will be considerably increased."

The people for whose benefit this mammoth lake has been constructed are very superstitions and expect that evil will come out of it. To quote the writer:

"At the foot of the dam is a small temple, dedicated to the Mari goddess. The inhabitants of the district say that when she discovers how she has been insulted she will burst the dam, and the water, which will rise to the height of the stambha (pinnacle) of the temple of Hiriyar, will be swallowed by the Basaya (a god), on the top."

LETTERS - AND - ART

BARNARD'S "LINCOLN"

IN THE SUGGESTED REPUDIATION of the classics in Germany, treated last week in The Letenary Digest, the Prussian Minister of Education is quoted as recommending that history be taught backward—"From Sedan over Königgrätz, Solferino, and Sebastopol to Waterloo, and so on

to the creation of the world." Elsewhere, too, the classics are asked to step aside in favor of the more immediate interests of to-day. A prominent Ohio jurist is reported by the St. Louis Globe Democrat as saying that a year's study in colleges of the life and writings of Lincoln would be better worth the time than giving it to the campaigns of Casar, the utterances of Roman orators, and the poetry of Vergil." That Lincoln is becoming more than a merely American classic should be noted in the fact that he has since the war began been almost more quoted than any other among English-speaking peoples. He was found by Premier Lloyd-George to have stated better than any other the purposes which actuate the Entente Allies: "We accepted the war for an object, a worthy object. The war will end when that object is attained. Under God I hope it will never end until that time." On the other hand, The Globe Democrat finds that he also uttered words "applicable to the world-situation now," such as, "Fervently do we pray that this mighty scourge of war shall presently pass away."

By a coincidence a new presentment of Lincoln in bronze has just been completed by the sculptor, George Gray Barnard. This statue has been commissioned by Mr. and Mrs. Charles P. Taft for the city of Cincinnati, and now that it has come to public view in New York, and people are somewhat startled at the stark realism of the sculptor's work, Mr. Barnard has printed in

The Evening Sun (New York) the "sculptor's view" of his subject. "An imaginary Lincoln," he says, "is an insult to the American people, a thwarting of democracy." Further:

"No imitation tool of any artist's conception, but the tool

God and Lincoln made—Lincoln's self—must be shown. I found the many photographs retouched so that all form had been obliterated. This fact I have never seen in print. The eyes and mouth earry a message, but the rest was stippled over, to prettify this work of God, by the photographers of the time. Nearing election, they feared his ugly lines might lose him.

the Presidency. So the lines were softened down, softened in cloudy shades of nothingness—this man, made like the oak-trees and granite rocks. To most, the life-mask is a dead thing; to the artist, life's architecture.

"We and future ages have this life-mask to fathom, to interpret, to translate. Art is the science that bridges 'tween nature and man. Sculpture being a science to interpret living forms, bidden secrets of nature are revealed by it. Lincoln's life-mask is the most wonderful face left to us, a face utterly opposed to those of the Emperors of Rome or a Napoleon. They, with the record of a dominating will, self-assertive over others; Lincoln's, commanding self for the sake of others, a spiritual will based on reason. His powerful chin is flanked on either side by powerful construction reaching like steps of a pyramid from chin to ear, eye and brain, as if his forces took birth in thought within, conceived in architecture without, building to the furthermost limits of his face, to the fruits of toil in his wondrous hands hands east from life at the time of the mask by Douglas Volk.

"For one hundred days I sought the secret of this face in the marvelous constructive work of God. Here is no line, no form, to interpret lightly, to evade or cover. Every atom of its surface belongs to some individual form, melting into a larger form and again into the form of the whole, The mystery of this whole form nature alone knowsman will never fathom it. but at least he should not bring to this problem forms of his own making.

"Nothing is easier than to have a molder for five dollars push clay into the mold of Lincoln's face and give it to one ready to open the eyes and stick on hair, smoothing the surfaces and calling out, 'Lincoln.' But art's virtue is

to reveal, not to obscure. It is a power to make plain bidden things. Art is not nature, the mask of Lincoln not sculpture. The mask controls its secrets, Lincoln's life revealed them, as the sculptor must reveal the power and purpose of this wondrous mask."

Copprighted by George sligs Survays

"LINCOLN" FOR CINCINNATI.

After searching long for a model for this statue, the sculptor. George Gray Barnard, found a man with Lincoln's physique in Kentucky, who admitted having been a rail-splitter.

Mr. Barnard recalls that Lincoln, at seven years of age, helped to make the coffin and dig the grave of his mother. "And such a mother as Lincoln must have had made greater his agony, left a memory so vital that through life this giant physically and mentally 'mothered' his neighbors, his State, his country." The feminine in Lincoln is analyzed thus:

"The left side of Lincoln's face is the motherhood side, the right side man's. Beneath the left eye two mountains lie; from the valley between soft light flows a gentle stream; it bursts upon a circular muscular hill in form like a petrified tear through sadness and joy placed there. Then all flow together, turning into a smile at his lips, like a stream through a dark valley of shadows coming to its own into the sunshine.

"People say who saw: 'Lincoln often looked the Christ.'
This face is infinitely nearer an expression of our Christ character than all the conventional pictures of the 'Son of God.' That symbolic head, with its long hair parted in the middle and features that never lived, is the creation of artists, Lincoln's face the triumph of God through man, and of man through God. One, fancy; the other, truth at labor. Lincoln, the song of democracy written by God. His face, the temple of his manhood, we have with us in the life-mask.

"The Olympian Zeus in its remoteness from the life of the people, the life that must be lived, is the antithesis of Lincoln's. In the latter all self-consciousness is effaced, there is no lurking hint that the spirit behind and within was disturbed by the temple it dwelt in. All its lines lead away from self-center. As I wrought at this face façade I was conscious of being gradually drawn back of the face and forever onward. Thought born within this face sprang outward in every direction, in its flight gentle, unending, toward the truth of things, for the truth of things, truth at labor.

"Out of the study of Lincoln's life-mask grew the entire poise of his figure. He must have stood as the Republic should stand, strong, simple, carrying its weight unconsciously, without pride in rank or culture. He is clothed with cloth worn, the history of labor. The records of labor in Lincoln's clothes are the wings of his victory. The 'Winged Victory' of Samothrace was an allegory of what Lincoln lived. His wings were acts, his fields of flight the hearts of men, their laughter, their life, Tradition is he stood 'bent at the knees.' This is not true. Worn, baggy trousers, forgotten, unthought of, honored their history."

Mr. Barnard's desire to tell the truth about Lincoln's form led him to search through two years for a model that should approximate the man be must have been. The story of the man, when found, is this:

"I traveled through the States, North and South, East and West. I advertised and went personally to look at many men. At last, in Louisville, Ky., after a great number had come to me, I found the one I wanted. He was six feet four and one-half inches, and realized as nearly as any other being conceivably could all that we know of Lincoln's appearance. I asked him about himself and he gave this curious account:

"'I was born on a farm only fifteen miles from where Lincoln was born. My father, my father's father, and his father were all born there."

"A study of this man's body showed it to be in harmony with the body of Lincoln. The Greeks had nothing like that. It was a genuine product of American soil, as typical in its way as the Indians. The legs were long, and he had a back that seemed to bend without causing a corresponding cavity in front. I spoke of this to him and he said:

"I have been splitting rails all my life." He was about forty years old. That was the natural explanation of his over-developed back and shoulder muscles. Lincoln had gone through the same exercise and the same result was noted in his form. He was probably the most powerful physical being known to the frontier life.

"I have seen the models of Europe—men of Greece and Italy—symmetrical and beautiful in a classic way; but nothing ever appealed to me like the form of this Kentuckian. It affected the spirit like the passing of a storm through the sky. I am working now on a head that I hope will enable me to carry out this feeling, a head fifteen feet in height. Lincoln is the unveiling of the Sphinx. That ancient figure out on the desert sand meant slavery, mental, moral, and physical. The men of that day were bound in their environment; they saw no end to the problem of life.

"Lincoln stands for clearness, for knowledge. He deals simply with the facts of life, helps his neighbors in their homely tasks, laughs with them. There is mystery in him, but it is the mystery of the spirit brought down and put to the service of men."

EXPLAINING AMERICA TO ENGLAND

MUTUAL ACQUAINTANCE is the future safeguard for peace, particularly between our country and Europe. President Wilson practically said so in these recent words: "The nations of the world must unite in joint guaranties that whatever is done that is likely to disturb the whole

MR. BARNARD WITH HIS "LINCOLNS."

The sculptor, with his original plaster model, beside a study in heroic size of the head of Lincoln made in preparation for the Cincinnati statue.

world's life must first be tested in the court of the whole world's opinion before it is attempted." The fact that these words were thrown on the screens of those theaters which exhibit warpictures made a news item for English papers because of "its fantastic humor," But a writer in The Athenrum (London) uses it as a text for his recommendation that Europe inform itself of that America which is not comprised within the Atlautic scaboard, and which is to a large extent "still pioneer in spiritual life." The its people came from Europe more recently than those of the East, yet their unawareness of Europe is profound. These truths and their accompanying implications are set forth by an American, Gilbert Vivian Seldes, for the Athenaum's readers, who may be taken as Britain's most conservative element. He tells them that America is a highly "industrialized" country, with its commerce done in the spirit of the frontier. "Literary criticism in Europe," says Seldes, "is still more right in taking Walt Whitman as the great prophet of America, in appreciating the open airs of Mark Twain's 'Life on the Mississippi,' than in blaming a

crude and hearty civilization for its neglect of such an exotic as Henry James or as Edgar Allan Poe." We read on:

"That the populations of Europe which come to the United States are not automatically added to the Declaration of Independence and made Americans is a circumstance which Europe knew better than America, one which startled the latter wofully only two years ago. They remain European, but for a variety of reasons they do not make the United States European, they do not resist the pioneer influence. England and France, if they seek alliance with the United States, will not forget to consider the German-American; Germany will remember, for other reasons, perhaps, the Russian, the Russian Jew, and the Pole. But no mistake rould be more grievous than to assign to any foreign-born element that dominant power which must, in spite of all reservations, be given to the American. Of him it must be recalled that, since he is a pioneer, contact is precious to him, but it is certain to be spasmodic, and can never be wholly indepensable. In the States that very contact has ministered to isolation, for the country is unequally developed, and when the need of culture becomes great in the Southwest, there is the Northeast to supply it with all the graces of inid-century transcendentalism. Materially, the development of the country is slowly approaching a level."

If a foreigner had made these generalizations, Mr. Seldes declares, he would have cried out against their recklessness, But, "as a somewhat anxious democrat who sees salvation for his country only in European entanglements," he lets them stand with these reservations:

"There are millions of Americans who do know of Europe, and know its literature, perhaps have some feeling for its traditions. The finer minds establish and continue contacts. There is even the small group which accepts nothing which is not European in manners, morals, or the arts. It is quite possible that the general impression of America prevalent in the south of France, let us say, is no more wrong than the impression of Holland obtaining in the State of Nevada. But it is, in fine, not so much a photograph or a picture of the United States that is wanted as a poster, and the strokes in a poster may be hold if the solors are true. And in the spectrum of American life there is no color which may be truthfully called the sonse of Europe. To the American, Europe is something beyond his life; with its wars and its alliances he has literally nothing in the world to do, and that peculiar sense of a flowing and continuous intimacy which distinguished Europeans three years ago is not the least of the things which he does not understand. There has never been any reason for him to understand. In an elementary geography he has read that 'the French are a gay and frivolous people, much given to dancing and light wines, and he has been satisfied, to these many wars.

"It is this America, and not the small America of international trade or international thought, which will give meaning to an alliance in the future, and it is, therefore, with the emotional risings and fallings of this America since the war began that we must be concerned. The story has been told of the New England farmer who, when he was told that all Europe was at war, leaned on his rake, squinted at the setting sun, and remarked that they had a fine day for it. But such things apart, it was only for the few that the Battle of the Marne became at once the most scrious and the most glorious moment of secular history. It was only by them that the meanings of the war and of its terrible words were dimly apprehended. For America the war is divided into two periods—from the beginning to the Lustania, and from that day to this,"

It is not known, declares this writer, and it would not be understood if known, "how little catastrophic the war has been for America." Reviewing the past, he continues:

"In the early months one can discern faint glimmerings of the sense of tragedy, but except the soul be active there can be no real tragedy, and the war has remained for America a great melodramatic spectacle in which only the ingenuities of hero and villain (as to whom they have made up their minds) brought out the hisses or cheers of the gallery. The thrill of adventure must have been felt. That the sword had been drawn again and shone in the dreadful sun, that men were fighting as they had always fought, was not unnoticed even by the inexpressive and the indifferent. But the immediate business of America became too oppressing; her garden had, after all, to be cultivated. There followed the books, in which she took a slight interest. There followed the crimes of Germany, which settled forever her adherence in the case. She fell, no less than the belligerent world, into the efficiency-worship which will be the most grievous peril after the war. For months ber reaction to the war was in the slang phrase, expressive of admiration, 'You got to hand it to them Dutchmen' (American ordinary for German).

"So far the war had affected the Eastern coast, with which we must be cautious and short. Then the Landona, It was then that the shadow of war fell across the far plains of the Middle West, and a new spirit began to wake in America. Frightened before by the immensity and the dread of the conthet, she had insisted upon a neutrality she hardly felt, for that neutrality must have been active and energetic, and was not. The resterated expression of aloofness from the eauses and the consequences of the war had foundation, but was inspired not by fact, but by a furious intention not to be involved in an adventure for which the country properly felt itself inadequate. Incompetence as well as indifference made America 'fed up' with war-stories long before her time, and it was the slowly contracting circle in which she could move with safety after the Lantania was sunk that brought her to a new consciousines."

A PEOPLE WITHOUT CONVERSATION

been evolved by a nation "without conversation."

This is the ironic situation among ourselves pointed out by a writer in The Dual (Chiengo), signing himself Rene Kelly, "Mere questions and answers never did make conversation," Mr. Kelly observes, going on to quote Dr. Johnson to the effect that "questioning is not a mode of conversation among gentlemen." But conversation such as Dr. Johnson would have approved would be dismissed as the affectation of highbrows, this censor thinks. "Bring together a group of college men, graduates of the same institution but not close friends these, and what do they talk about?" we are asked. And the reply is furnished to hand: "The same things as the tired business man of theatrical disrepute: Sport or women, business or politics in the littlest possible sense of the word." For—

"They share no intellectual interests—unless, perchance, they buppen to be victims of the same profession, in which case their common interest lies in the law, or in medicine, or some such fascination. With the extension of the elective system at American colleges, there has come into being a generation of college-graduates who are as likely as not to be equally ignorant of the classics and of mathematics beyond algebra and plane geometry; who have little or no concept of the rudiments of any science—but who have, it may be, concentrated upon some embryonic subject, like the "science" of economics: a branch described by highbrows as of dubious cultural value and profamely mentioned by such lowbrows as the business men who earn their own livings as being of equally negative practical worth to any one except future teachers of the same 'science' in some quite unpractical university."

The cause of Mr. Kelly's "somewhat fulminant vaporings" is charged up to President Lowell, of Harvard, who said:

"Culture . . . does not mean the possession of a body of knowledge common to all educated men, for there is no such thing to-day. It denotes rather an attitude of mind than a specific amount of information. It implies enjoyment of things that the world has agreed are beautiful; interest in the knowledge that mankind has found valuable; comprehension of the principles that the race has accepted as true."

"Part of this is traism and the rest of it—but no, I must not use that word here. 'A country without conversation,' was a philosopher's word-picture of America, painted for Rupert Brooke when that fiery young poet set out on his world-travels, something more than Iwo years since. And that is a pretty comprehensive damnation of us and our civilization, if we accept Samuel Johnson's dictum that 'The ends of education are three: to develop the moral nature, to train the judgment, and to furnish material for conversation.' President Lowell, for his part, confesses that the reason 'so large a part of general conversation in America relates to the weather, to politics, and to sport, is not so much because these things are intrinsically more interesting or valuable than in other countries, as because they are among the few subjects that every one is familiar with and can talk about."

MRS. FISKE AGAINST REPERTORY

EPERTORY, INDEED!" exclaims Mrs. Fiske as she topples over all such arguments advanced for the salvation of the stage. Against "the star," and "the syndicate," and "the pernicious long run," the only panacea we have had offered us has been the repertory plan. It has been advanced as the single means of saving the actor from himself. Mrs. Fiske does not see it that way at all. "Educate the actor at the expense of the public and dramatic literature!" she exclaims again over the recollection of so many ill-east plays and so many dramas killed beyond hope of resuscitation by inadequate treatment. After being importuned to give out the principles upon which her art is built, Mrs. Fiske has consented so far as to be interviewed by the dramatic critic, Mr. Alexander Woolcott. Her attack upon the repertory is to be found in the January Century, and the ventilation of her views reveals the fact that to her at least the actor is not the petted darling of romance. He must know his business and be able to fill the bill, for "this, my friend, is an age of specialization, and in such an age the repertory theater is an anachronism-a ludierous anachronism." She gives out this:

"I do not know who started the precious notion that an actor needs half a dozen parts a season in order to develop his art. Some very lazy fellow, I suspect. If he has one rôle that amounts to anything, that has some substance and inspiration, he simply can not exhaust its possibilities in less than a year. He can not. Probably he can not even play it perfectly for the first time before the end of the first season. And if his parts are empty and unnourishing, I can not for the life of me see how the mere fact of having six instead of one in a season will avail him anything.

The provincial stock company, which is another fetish in the school of learning the actor's art, is not entirely condemned, but is treated askance: "They might serve their purpose in the young actor's apprenticeship if he would keep reminding himself: 'This is all wrong, wrong, wrong. I can not play Smith while I am memorizing Brown. This does not teach me acting. It teaches me tricks; I am getting a certain case and facility, but it is all wrong.' Instead of thinking it wrong, however, Mrs. Fiske fears he will rather gain confidence and nothing else."

"He starts with the firm touch on the wrong note, and as he grows more and more confident, the touch becomes firmer and firmer. To our great dismay, the false step is taken then with a new and disconcerting air of sureness and authority. In all the theater, my friend, there is nothing quite so deadly as this firmer and firmer touch on the wrong note."

But, objects her interlocutor, suppose he accepts an engagement in New York and has just one part that lasts and lasts and lasts. Mrs. Fiske advises:

"If at the end of the season he has exhausted it, let him resist all inducements to continue. And if during that first season his part does not stimulate, nourish, and tax him, let him study. He may have only one rôle in the theater, but he may have a dozen in his room. A violinist will have an immense repertory before he makes even his first appearance in public. A singer's studies are never done, and I am sure that, if you inquired, you would find such artists as Melba and Caruso still working with their teachers. It should be so in the theater. It should be, Our actors fret if they have to play one rôle month after month, but that is no proof that they are ambitious. They are lazy. Why should there be all this talk of training actors, anyway? If an actor is an artist, he will train himself. . . . If he is not an artist . . . it does not much matter what becomes of him. The sooner he departs from the theater the better."

From the point of view of the audience, Mrs. Fiske is even stronger in her condemnation of repertory, and points her case with Granville Barker, who "not only carried out the repertory idea in his season at Wallack's, but admitted then that he could conceive of no other kind of theater." "Let me tell you," says Mrs. Fiske triumphantly, that "nothing more harmful has happened in the American theater in years than the Barker season at Wallack's"

"Harmful and pernicious. One play, 'Androcles and the Lion,' Mr. Barker produced perfectly. It was a beautiful achievement, and what followed was all the more tragic because he had already shown himself a master of his art—a master. He had shown us how splendidly he could shine as a producer if only he would be a specialist—a specialist like several of our

MRS. FISKE,

Who combenus "reperiory" as a means of educating the actor at the expense of the public and dramatic literature.

"Why, the public, always so easily misled in the theater, had been led this time to believe the Barker production good art, whereas in truth it was bad art, very had. That several of the parts were beautifully acted could not for a moment excuse the fact that, considered as a whole, the performance was atrocious. Yet how could it be otherwise when the two leading parts, Jennifer Dubedat and the title rôle, were completely misrepresented? . . . The audience, for the most part untrained in dramatic criticism, accepted as an example of good art the misrepresentation, the mutilation of a splendid play. So the mischief was worked, and, because of the very conspicuousness of Mr. Barker, ignorance and bad taste were encouraged. For Mr. Barker was more than an ordinary manager; he was a movement."

RELIGION-AND-SOCIAL-SERVICE

THE CRY OF THE BELGIAN CHILDREN

CMPLACENCY need have no further part in our feeling about the relief we have sent to Belgium. The recent revelations made by Mr. George Barr Baker, a member of the Relief Commission, will perhaps help to contirm the comment reported to have been made in Europe on President Wilson's note: "America is geographically 3,000 miles or so away from Europe; spiritually it is 3,000,000,000 miles away." The excitement of feeding Belgium baying worn off, we have coased our ministrations to such an extent that more than 1,250,000 children must be kept just inside the starvation-point in order that the food-supply, insufficient for all, may go round and save all from actual death. The situation is illustrated by a story told by Mr. Hoover, the managing head of the Commission, of things observed by him. We read:

"Mr. Hoover, accompanied by Dr. W. R. Kellogg, went to Belgium during the last few weeks and saw 1,200 of these elabora standing in line in a district near Brussels waiting for their food to be doled out to them. They were all school clubbren, none of them being much over fourteen years. All of them were happy—the poor lit le things had their food tickets in their hands and were facing the pleasant prospect of getting something to cat. Their mothers and others of the women relatives were standing by watching them.

"Suddenly Mr. Hoover saw one of the Belgian women who are working with the Commission step over to the line and drag a child out of it. The child screamed and fought to get back into line, but the woman kindly but firmly forced it to one side. This was followed by other women doing the same thing, which was always accompanied by the screaming protests of the child.

"Puzzled by these extraordinary incidents, Mr. Hoover went to one of the women workers and asked why the children were taken from the line.

"They are of normal weight," she said, 'and can not have a meal to-day. They must wait until their weight is reduced before they may have food—this may be one or, perhaps, two or three days. Only those who are under weight and are facing starvation may have food. There is so little food that only those who need it must may have it."

"Mr. Hoover was astounded and overcome, and asked the woman if it was possible that the children must be really starving before they could be allowed to have a meal.

"Yes, that is so,' she said, sadly. 'We can not feed so many little mouths with so little. If we had the food we would give it to them - but what can we do.' If America would only send it to us we would see that all these little children had at least enough to keep them at normal weight. As it is now, we are powerless, and those who do not show signs of starvation roust stand aside for the less fortunate ones.'

"After this barrowing incident, Mr. Hoover visited the German officials in Brussels and asked them, as a representative of the American people if they would grant him certain minor concessions which might tend to ameliorate the sufferings of these children.

"One of the German officers of high rank turned to him and said: 'Mr. Hoover, you do not represent the American people. All Europe knows that you do not represent them. You come here as one of a small band of eccentric world-citizens who have sacrificed their time and their money to help these people, and out of respect for what you have done and are doing we will grant you these favors that you ask,"

Conditions like these which it seemed impossible to impress on the consciousness of America led Mr. Baker to go to Rome to obtain the Pope's indorsement of a plan to go before the school children and enlist their aid for children like themselves. He tells an interviewer for the New York Times:

"On my arrival in Rome I requested an audience with his Holiness. The Vatican authorities asked me why I, a nonCatholic, should wish to see the Pope. In explanation, I wrote a letter to the Pope in which I reminded him that he was the Vicar of Christ. 'If you are the Vicar of Christ on earth,' I wrote in my letter, 'Then every man, gentile or Jew, Christian or pagan, has the right to come to you to plead in the cause of suffering humanity. I wish to plead for 1,250,000 Catholic children in Belgium and France who are suffering from hunger, discuse, and destitution.'

"I sent my letter, and on the very next day received word from the Vatican that the Pope would see me. He gave me a private and once during the morning in the library of the Vatican.

"When the Pope entered the library I started to make apologies for intruding on him, but he stopt me, raising both hands, and said quickly in French: 'Do not apologize. It is we who are truly thankful to you and those with you for what you have been doing for our little ones in those desolated countries. For nearly two years we have been striving to find some means of relieving their distress, but have not been able to find a solution for this difficult problem. We have consulted all kinds of people, and many politicisms have written to us and called upon us with their suggestions, but you are the first one to ask for our spiritual aid. Please tell me your plans of what you wish to do in America.

"I told the Pope that if every Calbudic child in America could collect and donate 3 cents a day to the succor of the suffering children, the Commission could provide a supplementary meal consisting of a bisent made with lard or fat. This bisent, little as it seems to us in America, makes it possible for every child to love a meal every day, and would prevent their physical degeneration and would in a measure fortity them against cold and disease.

"After listening with great attention to what I had to say, the

We will write an apostolic letter to Cardinal Gibbons and request him to write to every archibshop and bishop in America and have them instruct all their priests to organize the children in their schools to work together for the relief of the helpless little ones in France and Belgium. As a foundation of the fund I will send 10,000 lire to Cardinal Gibbons—this will be an earnest of our intentions. I will also promise the apostolic benediction to all those who take part in this great charity, irrespective of their religion.

America has been regarded by the world as the savier of Reigions. This, Mr. Baker asserts, "was because we were so erary to have the world know that Americans could make sacrifies and were not simply money-grabbers, as the people of Europe believe us to be."

"When we went to Belgium we proclaimed that we would take care of the Belgians, and now we can no longer keep up this pretense. We have given them \$8,000,000—we who are the wealthiest and most prosperous nation in the world—we who have only peace and can devote our energies to manufacturing other things than munitions.

"Compare what we have done with what England and France are doing—both these countries, which are lighting for their very existence. The English Government is giving Belgium \$5,000,000,000 a month, while France is giving \$4,000,000, naking a total of \$9,000,000. In addition the people of Great Britain and her colonies are subscribing \$600,000 each month. Practically every cent of this money is spent in this country for food and clothing for the Belgian and French sufferers.

"The Belgian Government at Havre sends these checks to the Commission because we are the only ones who can get food through the blockade. It exists between \$10,000,000 and \$11,-000,000 a month to fired the 10,000,000 men, wemen, and children of France and Belgium. We must get another \$1,000,000 a month from somewhere to carry on the work and feed everybody. At the present time 3,000,000 of these 10,000,000 are only given a bonk of bread and a bowl of broth each day.

"The men and women do not feel the privation so much, as they are strong, and some of them can get an additional neal now and then; but the children are getting weak and sickly, and the supplementary meal of a biscuit made with lard would sustain

their strength and save them from early graves.

"If the people of the United States will only think of those 1,250,000 children who are slowly starving to death, and will give us but a little of their plenty and prosperity, we can take care of them. If the people here will only help us we can take care of the sufferers, particularly the children in all the overrun countries."

FRANCE'S STRUGGLE WITH ALCOHOL

OT WITHOUT A STRUGGLE will France rid herself of the menace of alcohol. The decision of the Government to prohibit the consumption of alcoholic beverages during the remainder of the war, light wine and beer excepted, has brought into being an organized army within the state to light the measure. The president of the Saloon-Keepers' Federation and the president of the Provision Dealers' Association plead in behalf of 380,000 salocu-keepers, now mobilized and lighting in the ranks, who will be ruined along with the drying up of one source of national wealth. The secretary of the Anti-Saloon League, however, denies that the prohibition measure would injure the saloon-keepers, but would rather benefit them. "as they would get small profit from the double taxes on spirits, while the sale of wine, heer, eider, tea, and coffee will yield handsome returns. The distillers will lose nothing." Mr. Riemain contends, "as their whole output will be taken for industrial purposes,"

France's unwillingness to follow in the footsteps of Russia leads Mr. D. Parodi, in the Revue des Nations Latines (Paris), to read a sharp lesson to the French Parliament for its lack of patriotism, disinterestedness, and foresight in the treatment of the alcohol problem, which has become doubly important on account of the war and its natural sequel, the partial disintegration of the social life.

"The free democracy of France has not the strength to submit itself voluntarily to the iron self-discipline which, two years ago, a rescript of the Czar imposed upon autocratic Russia. We have not learned yet from the danger of death, which memaces our fatherland from without, to defend it at the same time against an enemy not less dangerous, who gnaws at our very vitals. With sadness in our hearts, we remember that memorable session of our Parliament, at the very eve of the war, where all attempts to curtail the sale of alcoholic drinks had been nipt in the bud. All measures taken since August, 1914, by our military administration on behalf of the interdiction of the manufacturing and sale at least of our most dangerous poison, absinthe, were frutrated. In the only war-sitting of our House of Deputies of which it has a right to be ashamed, a certain group of deputies rose to blame publicly a French general who tried to enforce discipline among our voldiers, protecting, at the same time, their health. The saloon-keeper was stronger than the commander-in-chief.

"The Parliament as a whole continues, however, to beat around the bush. Through the law passed by it on July 1st, it weakened eventually the categorical propositions of our Secretary of the Treasury, Monsieur Ribot, to suppress once and for all the privileges so far enjoyed by our brandy-distillers. By the very enactment to restrict their distilling practises to publicly accessible sheds, the fabrication of the poison has re-

ecived its legal sanction.

"Who eares now for the theoretical discussion of the question of the nutritive value of alcohol? All we are interested in is the sad fact that the alcohol imbibed in our saloens in ever growing quantities, by displacing the natural, profitable foods, drains the financial and physical resources of our working classes. We are face to face, not with a chemical but with a social problem of the first order. Well, statistics, nervous pathology, and criminology agree that heroic France, which knew how to defend her soil against the German invader, seems not to have the strength to save herself from her twofold suicidal mania; from collective suicide by restricting her birth-rate, from individual suicide by overindulging in alcoholic drinks."

Mr. Parodi admits that the problem is, in view of the fundamental character of France's political machinery, an exceedingly complex one. The elections are, to a great extent, prepared in the barrooms; the saloon-keeper is an important political factor. Cartoons and puns do not help to solve the puzzle. Moreover, farmers and workingmen need a social center analogous to the club of the bourgeois, "since we have not yet succeeded in doing completely away with the filthy but in the country and the dingy flat in the city, and since we have, further, been unable so far to replace the moral influence of the church and the former attractiveness of the religious festivals by moral agencies of the same or even superior power," With great courage he goes on:

"Let us only be frank and confess a bit of hypocrisy abides even with the organizers of our antialcoholic campaigns. We preach against whisky and its brothers, while we are shutting our eyes altogether to the alcohol in our wine. But let that go. Do, however, our manufacturers of alcohol really believe that they would lose so very much by following the example of their German colleagues, who provide the automobiles and aeroplanes of their fatherland with an effective alcoholic motor-power?"

UNPEACEFUL BRITISH PASTORS

THE USUAL CHRISTMAS TEXT was not employed in such British pulpits as the cables report. Indeed, the sermons were not pleas for "peace on earth," and showed little good-will to the American President, whose peace-message is now being considered by the belligerent peoples. The Canon of St. Margaret's, Westminster, declares that "fealty to Christ has forced us into the arena of this world-war, and that the same fealty makes compromise impossible with regard to the issues which are being decided there." Dr. Barnes, Master of the Temple, reminded Englishmen of "the proverithat the onlooker sees most of the game." "God forbid," he added, "that we should think of the present earnage as a game, yet hope is the key-note of the morn of the nativity, and it is good to feel that the neutrals are right in seeing such changein the temper and ideals of our fors as to herald a prospect of permanent peace." But more charactertistic were the scornful utterances in Westminster Abbey, and the regretful words of London's greatest nonconformist preacher. Said the Dean of Westminster, as quoted in a London dispatch to the New York Times:

"It is true that the President of the United States, after two years of study of the question and innumerable notes, seems to believe that the object of the two groups of beligerents is the same.

"He knows that Germany refused arbitration, declined a conference, and rejected every overture to prevent war. He knows that his own countrymen have poured money like water to assist the destitute and outraged remnants of the little Relgian people, whose treaty rights were violated and whose frontiers were invaded before war was declared. He knows of the infractions of the Hague conventions, which the American people have studiously promoted.

"He knows all the details of the organized atrocities reported upon in strict inquiries. He knows of the sinking of unarmed passenger-ships, like the Lasdania and Acabia, without notice or warning. He knows of the murder of Captain Fryatt, of the nocturnal deportations of Belgians and French into slavery. He knows of German connivance at Armenian massacres, and yet he is of the opinion that the nations who are leagued to disarm this evil demoniac of national militarism have the same aim in view as the perpetrators of these historical crimes.

"President Wilson has either in a fit of mental abstration sent the wrong note, or he had entirely misapprehended the European situation."

With more consideration for President Wilson, the Rev. G. Campbell Morgan declared in Westminster Chapel that the President's "good intentions" are "sadly marred by his most tragic mistake that he has declined to express any opinion as to the moral issues." Dr. Morgan is "terribly afraid lest, judging

from the newspapers, we should be in danger of forgetting that it was for the sanctity of treaties, for the right of nations, and for the safeguarding of freedom that we entered the war." As he sees it:

"To consent now to any peace that falls short of the realization of those high ideals is to admit we were wrong at the first. The Christian Church must not utter a word that suggests there can be such an admission to-day. Far better defeat and death for righteousness than case and quiet by a compromise with false ideals."

JEWISH FAVOR FOR MR. WILSON

RESIDENT WILSON HEARS so much criticism of his peace-letter both from Europe and America that a grateful word must be welcome. Such a word comes from Herman Bernstein, writing for the Jews. "If the neutral nations have suffered untold hardships during this war," he says, "the Jewish people, scattered among all the nations, fighting for all 'fatherlands,' have suffered martyrdom unparalleled even in their long history of martyrdom. Therefore they longed for peace based upon justice and liberty perhaps more than any other nation, and they will hail the President's move with great joy." Mr. Bernstein, writing in The American Hebrew (New York), counts us as more than fortunate that we have at the head of this nation "a man who towers head and shoulders not only above our own statesmen, but also above the trained statesmen of Europe-a man with a great vision, with a colossal will-power, with a burning passion for peace and righteousness, with a profound love for America, and a boundless sympathy for all mankind":

"We have a President whom only history in the coming generations will fully appreciate. For Woodrow Wilson is a new Lincoln, who has brought to the best traditions of American Presidents a genius for statesmanship and an extraordinary familiarity with the world outside of America, a powerful bond of sympathy with all mankind, a heart that feels deeply for the opprest of all nations, a mind that sees far and sees clearly, and a conscience that guides him in all his acts.

"This is the gravest crisis in the world, and America must face the big problems in a large way. No American President has had such an opportunity for service and achievement, and no American statesman to-day could have risen to the oppor-

funity as Woodrow Wilson has risen.

"In the European situation he has succeeded in maintaining a dignified neutrality. This is better known in Europe than in America. I have traveled in the war-zone, in the Allied countries as well as in the Germanic, and have studied the temper of the people on this very question. I can state that while the people in England and France were perhaps displeased with the American policy because it was not as firm toward Germany as they wished, and while the people in Austria and Germany were irritated by the American policy because it was not as sharp and exacting toward the Allies as they desired, this feeling of dissatisfaction and irritation was due chiefly to the fact that the people in all the countries at war are poorly informed through the censored press, and are acquainted with only one side of the situation, through prejudiced and colored sources.

"President Wilson's erowning achievement will be the service that he will render to bleeding mankind through peace-mediation. His sane and brilliant statesmanship will be fully appreciated only after the war. The peace-President has served America best and most heroically by resisting the clamor of the hysterical chauvinists and the temptation and sham heroism of those who urged the plunging of America into the flames that are consuming the best manhood and womanhood and childhood

of European countries.

"President Wilson will write the greatest page in American history; he will lead the movement that will bring about an understanding among the nations of the world which will make it impossible for a few rulers and statesmen to give the sign 'Thumbs down!' like Nero, hurling a continent with millions of human sacrifices into the arena of slaughter.

"Out of the multitude of war-heroes, with their iron crosses and their legions of honor, will stand out the greatest and most glorious hero of them all, the hero of peace—Woodrow Wilson."

THE BANE OF THE MIDDLEMAN IN DIVORCES

THE SIMPLE METHOD of calling the parties into private consultation has ended many a divorce suit and reestablished many a home. This has been the experience of every judge, and the need of such an effort presents a serious problem in social efficiency. A conciliatory agency to deal with divorce cases before they are brought into court should not be "in the nature of a censorship or a rigid regulatory process," think two writers on this theme for The New Republic (New York), Manuel Levine and Raymond Moley, The attempt at such a delicate task ought to be in the hands of some one devoted to this form of social service and connected with the courts. The likelihood of success in such an undertaking is illustrated by a case in point:

"A husband and wife well past middle life had not spoken to each other in many months. All communication had been carried on through the mediation of lawyers. The parties directly concerned were called into the office of the judge, who left them there for a while with the door locked. Stormy wrangling followed. But the voices gradually descended to lower tones, and two hours later when the judge reentered the office the parties were willing to go home together.

"If differences can be settled after legal strife has begun, it is reasonable to demand that efforts looking to a settlement be made in the first instance. It is the part of advanced thought to eliminate community waste by preventing the growth of the antisocial. We save most of the cost of combating disease by seeking to prevent its cause. In like manner we can eliminate

the infection of modern divorce proceedings.

"The wise, worthy lawyer is constantly performing social service by bringing about readjustments before filing suit."

The difficulty lies in the fact that "the element of the profession which handles most of the divorce cases in America owes its very existence to such discord." Therefore, it is an act of folly to expect effort toward peace from that source.

"The more bitter the strife the more ample the profit. The wife consults one lawyer, the husband another. Petitions pregnant with charges and counter-charges are prepared. Trifles light as air are magnified to give the case added seriousness. Society and the law have decreed that divorce must not be granted except for serious cause. Hence, to secure the divorce and to earn the fee, the lawyer compiles a debit account which often works serious and irreparable destruction. Even in those cases where efforts for peace are successful the seeds of future disagreements have frequently been left.

"The lawyer is a middleman. He exists because a mass of technicalities separates the citizen and his courts. Blindly must the average man trust his lawyer to go into the maze and bring him back satisfaction of some desire. Whether he gets it depends less upon the object sought than upon the skill.

of the expert employed.

"Such problems as are involved in the ordinary divorce proceedings require for their solution a branch of the public services which is equipped to investigate and advise. The court as now constituted can not do this. It is equipped merely to decide which of two conflicting expositions of law should be given precedence. Too often the judge is merely a highly dignified referee in a technical game. The court must be equipped to meet the concrete demands of human life. Decisions must cease to partake of the mystic art of an ancient ceremony. It must become a place for the taking of a trial balance in the immediate problem at hand. Justice in order to be worthy of the name should be the determination of the balance in human relationships."

Cleveland has taken the lead in establishing a conciliation court, where small suits are dealt with in an informal way. Lawyers, bondsmen, and other middlemen of the law are eliminated, and the judge acts as investigator and peacemaker. The writers here think that "the process which works for peace in adjusting differences between strangers could, at least, be equally belpful in dealing with the affairs of estranged partners in the business of matrimony."

CURRENT - POETRY

DR. HENRY VAN DYKE'S resignation of his post as United States Ambassador to The Hague may be a loss to the diplomatic service, but the annonneement that he will bereafter give most of his time to literature is good news for lovers of poetry. He has been too busy to write much of late, but he must now have stored up in his heart and brain countless poetic themes. The experiences of the last two years must have imprest him deeply, and the world waits eagerly the literary expression of those impressions. From the December Harper's we take this sad, yet brave song, a song whose lines chime like the bells they celebrate. The climax of the last stanza is admirable.

THE BELLS OF MALINES

August 17, 1915

BY HENRY VAN DYKE

The gablest roofs of old Malines
Are cosset-red and gray and green.
And o'er them in the senset hour
Looms, dark and huge, St. Romboht's tower.
High in that rugged nest concealed.
The sweetest bells that ever pealed.
The deepest bells that ever rung.
The lightest bells that ever sung.
Are waiting for the master's hand
To fling their music o'er the land.

And shall they ring to-night. Malines? In nineteen hundred and fourteen. The frightful year, the year of wo. When it and blood and rapine flow Across the land from lost Liege. Storm-driven by the terman rage? The other carillous have crossed: Fallen is Hasselt, fallen Diest. From Ghent and Bruges no voices come. Antwerp is silent, Brussels dumb!

But in thy bellry, O Malines,
The master of the bells unseen
Has climbed to where the keyboard stands—
To-night his heart is in his hands!
Once more, before invasion's hell
Breaks round the tower he loves so well,
Once more he strikes the well-worn keys.
And sends aerial harmonics
Far-floating through the twilight dim
In patriot song and boly hymn.

O listen, burghers of Malines!
Soldier and workman, pale beginer.
And mother with a trembling flock
Of children clinging to thy frock—
Look up and listen, listen all!
What tones are these that gently fall
Around you like a benison?
"The Flemish Lion," "Brabanconne,"
"O Brave Liege," and all the airs
That Belgium in her bosom bears.

Ring up, ye silvery octaves high,
Whose notes like circling swallows fly;
And ring, each old sonorous beil—
"Jesu." "Maria," "Michael"!
Weave in and out, and high and low,
The magic music that you know.
And let it float and flutter down.
"To cheer the heart of the troubled town.
Ring out, "Salvator," lord of all,—
"Roland" in Ghent may hear thee call!

O brave bell-music of Malines, In this dark bour how much you near! The dreadful night of blood and tears Sweeps down on Belgium, but she hours Deep in her beart the melody Of songs she learned when she was free. She will not failer, faint, nor fail. But fight until her rights prevail. And all her ancient helfries ring, "The Flemish Linn," "God Save the King!"

The Gilbert K. Chesterton school of poetry continues to grow; the author of "The Wild Night" and "The Ballad of the White Horse" has many followers in England and in America. Chesterton's excellent influence is especially noticeable in some of the best work of Mr. Theodore Maynard. To The Poetry Review (London), Mr. Maynard contributes a thoughtful and spirited ballad on the immortal theme of Don Quixote. It resembles Chesterton's "Lepanto"—and to say this is to give it high praise,

DON QUIXOTE

BY THEODORE MAYNARD

The air is valuant with drams
And honorable the skies.

When he rides singing as he comes
With selected dramy eyes.

Of swinging of the splendid swords
And crashing of the pether lords
When Heil makes orelaught with its hordes
In desperate emprise.

Oh, rides along the roads of Spain.
The champion of the world,
For whom great soldans live again.
With Moortsh beards curled—
But all their spears shall not avail.
With one who weareth magic unit.
This hero of an epic tale.
And his brave gauntlet buried.

Clargor of borses and of arms
Across the quiet fields.
Herald and trumpeter, alarms
Of bowmen and of shields.
When doubt that twists and is afraid
is shattered in the last crusade.
Where flaunts the plante and falls the blade.
The cavaller wields.

Altho in that eternal cause
No liegemen gather now.
Nor flowered dames to grant applause.
Yet on his naked brow
All victor's laurels interarratic;
But he no dower can bequeath
But sword snapt short and empty aleath
And errantey and view!

Against his foolish immerace
No man alive can stand,
Nor any giant drive him hence
With sing or clob or brand—
For when his angry bugle blows
There fall unconquerable foes,
Of mighty men of war none knows
To stay his withest hand.

All legendary wars seem hame,
And every tale gives place.
Refere the knight's unsuffied name.
And his remarkle face:
Yea, he shall break the stowest hars.
And hear his courage and his sears.
Heyond the whirling moons and stars.
And all the suns of space?

Josephine Preston Peabody's "Harvest Moon" (Houghton Mifflin Company) contains many poems inspired by the war.—poems expressing, for the most part, hatred of war and especially a sense of the tragedy of woman's share in the war. The title poem and other poems in the volume have already been quoted in these columns.

Not all of this poet's work however relates to the war. We find, for instance, this charming billaby, which in pictorial beauty recalls the colorful ballads of Rossetti, and has a note of human tenderness which many of his verses lack.

CRADLE SONG

BY JOSEPHINE PRESTON PLABORY

1

Lord Gabriel, wilt thou not rejoice. When at last a little boy's Check lies beavy us a rose, And his cyclids close!

Gabriel, when that hush may be, This sweet hand all heedfully I'll undo for thee alone, From his mother's own.

Then the far blue highways paven.
With the borning stars of heaven.
He shall gladden with the sweet.
Hasting of his feet:

Fret so brightly have and cool, Leaping as from pool to pool, From a faughing little tay Splashing rainbow juy!

Gabriel, wilt then understand How to keep his hovering hand? Never shut, as in a bond, From the bright beyond?

Nay, but the it cling and close Tightly as a climbing rose, Clasp it only so aright. Lost his heart take fright.

(Dormi, dormi, to The dask is bung with blue)

11

Lord Michael, wi't not then rejoice When at last a little buy's Heart, a shot-in marmoring boo, Turns him unto thee?

Wilt thou fixed thine armor well— To take his hand from Gabriel, So his radiant cup of dream May not spill a gleam?

He will take thy heart in thrail, Telling o'er thy breastplate, all Culors in his building speech, With his hand to each.

(Direct) durait, fu, Sapphire is the blue, Pearl and beryl, they are called, Chrysquase and cureraid, Sard and amethyst, Numbered so, and kised.)

Als, but find some angel-word For thy sharp, subduing sword! Yes, Lord Michael, make no doubt He will find it out:

(Inemi, dormi, tul.). His ryes will book at you.).

111

Last, a little morning space.
Lead him to that leafy place.
Where Our Lady sits awake,
For all mothers' sake.

Bosomed with the Blessid One, He shall mind her of her Son. Once so folded from all harms. In her strining arms. (In her veil of blue, Darmi, darmi, (u.)

So,—and fare thee well.

Softly—Gabriel . . .

When the first faint red shall come,
Bid the Day-star lead him home,
For the bright world's sake,
To my heart, awake.

America's Great Railroad The Union Pacific

And the Man Whose Foresight, Energy and Genius Made It the Almost Perfect Road

IT is a band of steel, that unites the two oceans, the West and the East, in a great Pacific Union. Sixty years ago, President Buchanan

said: "Without such a road wecannot protect California and our Pacific Coast possessions against invasion." Abraham Lincoln was deeply interested in the construction of this great railroad, advocating it, not only as a military necessity, but because he believed that the building of this national highway, this iron band of commercial union, would keep East and

West united in interest and close communication.

Hence the name "Union Pacific," typical of the permanent, Pacific Union between the East and the West of this country. The UNION PACIFIC was the name appropriately chosen for the great railroad.

The history of this great railroad

is the history of this nation. It follows the natural path from the East to the West. It is within the nation like one of the great

arteries within the body.

And like a great artery, it spreads out as it travels, finally, like a great fan, covering the Pacific Coast all the way from Seattle to Los Angeles.

Daniel Webster said that nothing beyond the Mississippi could ever have much value. That great genius of words would have been surprised could he

have been told that a great genius of deeds would spend hundreds of millions in a few short years improving a national belt of steel, the Union Pacific, carrying on its chief work in that region of which Webster thought so little.

Senator Green, of Missouri, addressing the Senate on April 17, 1858, had said:

(Continued)

"I believe the Pacific Railroad will increase the productive power and wealth of the country millions and tens of millions, although I believe every dollar invested in making such a road will be lost to the stockholders, whether built by the Federal Government or by private enterprise."

It appeared that this prophecy of financial disaster might become permanent reality. The railroad was indeed in bad financial condition when its destinies were first directed by E. H. Harriman and his associates.

He knew that a great engine of transportation, faithfully serving the people and putting service first, could not possibly fail financially or otherwise. For the people reward those who serve them.

Mr. Harriman had faith in the West and in Western people. He appreciated the great natural resources and the spirit of Western

endeavor and inspired others by his faith.

and revision, including double-tracking, shortening the road, ballasting the line with scientific accuracy, and other improvements. In addition to this vast sum there went into the railroad and its development all the energy, ambition, mental power and high aspiration of a great railroad builder.

been actually invested in extensions, branches

The great railroad, as great as the mountains and plains across which its locomotives travel every hour of the day and night, is that Union Pacific.

Thomas Jefferson gave to this nation the territory that it serves, and to which it gratefully acknowledges its obligations, its existence.

James Buchanan was its advocate.

Abraham Lincoln desired it and spoke for it, saying that it would hold the East and the West in pacific union.

Grant and Sheridan policed the building of it-protecting the workers from savages.

Great men planned it in the past; thousands of faithful workers at every station and on every mile of track serve this railroad in the present.

The Union Pacific is one of the great industri-

al triumphs of republican government, the result of individual initiative,

combined

with wise government interest and co-operation. Those to whom its management is entrusted find their greatest satisfaction in the fact that this powerful railroad is a servant of the public, contributing to the nation's health, facilitating circulation of wealth and population, rendering service to the farmer and to the manufacturer-SERVANT OF ALL THE PEOPLE.

UNION PACIFIC SYSTEM-THROUGH SERVICE ROUTES

He set about his task in a manner typical of his character, saying that the first thing was to put money into the Union Pacific.

Since the reorganization of the Union Pacific, in 1897, less than 19 years ago, \$269,700,000 have

This is the first of a series of advertisements which will tell the Story of the Union Pacific and the part it plays in the development of the Nation

Bi-Chloride of Mercury— Carbolic Acid Iodine—

These are the generally recognized germicides. Every one of them is a deadly poison, a constant source of danger in the home, and may be used only by a physician.

Dioxogen

more powerful than any of these in usable strength, is as safe as distilled water for every purpose.

You or your child can use it either externally or as a mouth wash with perfect safety.

Dioxogen destroys disease germs encourages rapid healing and is a protection against infection.

Will you take unnecessary chances or will you have Dioxogen in your bathroom?

PERSONAL GLIMPSES

THE MAN WHO PAID A DEBT IN WAR

ONE of the strangest of the many personal romances which the war has brought is the tale of a man who, dismissed from the British Army by court martial, redeemed himself through service with that most beterogeneous of organizations, the French Foreign Legion. His name was John F. Elkington and he had held an bonored post for more than thirty years, Then, just as his regiment, in the closing months of 1914, was going into the fighting on the Western front, he was eashiered for an unrevealed error and deprived of the opportunity to serve his land.

Heavy with disgrace, he disappeared, and for a long time no one knew what had become of him. Some even went so far as to surmise that he had committed suicide, until finally he turned up as an enlisted soldier in the Foreign Legion. In their ranks he went into the conflict to redeem himself. To-day, says the New York Herold, he is back in England. He will never fight again, for he has practically lost the use of his knees from wounds, But he is perhaps the happiest man in England, and the account tells why, explaining:

Pinned on his breast are two of the coveted honors of France—the Military Medal and the Military Cross—but most valued possession of all is a bit of paper which obliterates the errors of the past—a proclamation from the official London Gasette announcing that the King has "graciously approved the reinstatement of John Ford Elkington in the rank of lieutenant-colonel, with his previous seniority, in consequence of his gallant conduct while serving in the ranks of the Foreign Legion of the French Army."

Not only has Colonel Elkington been restored to the Army, but he has been reappointed in his old regiment, the Royal Warwickshires, in which his father served before him.

In the same London Gazette, at the end of October, 1914, had appeared the crushing announcement that Elkington had been cashiered by sentence of general court martial. What his error was did not appear at the time, and has not been alluded to in his returned hour of honor, It was a court martial at the front at a time when the first rush of war was origining Europe and little time could be wasted upon an incident of that sort. The charge, it is now stated, did not reflect in any way upon the officer's personal courage.

But with fallen fortunes he passed quietly out of the Army and enlisted in the Legion—that corps where thousands of brave but broken men have found a shelter, and now and then an opportunity to make themselves whole again.

Colonel Elkington did not pass unscathed through fire. His fighting days are ended. His knees are shattered and he walks heavily upon two sticks.

"They are just fragments from France."

he said of those wounded knees, and smiled in happy reminiscence of all they meant.

"It is wonderful to feel," said Colonel Elkington, "that once again I have the confidence of my King and my country. I am afraid my career in the field is ended, but I must not complain."

Colonel Elkington made no attempt to cloak his name or his former Army service when he entered the ranks of the Legion.

"Why shouldn't I be a private?" he asked. "It is an honor for any man to serve in the ranks of that famous corps. Like many of the other boys, I had a debt to pay. Now it is paid."

The press of London is unanimous in welcoming the old soldier back into his former rank. One of them, The Evening Standard, contains the account of how he went about enlisting for France when he saw he would best leave London. It is written by a personal friend of Colonel Elkington, with all the vividness and sympathy of an actual observer of the incidents detailed. We are told:

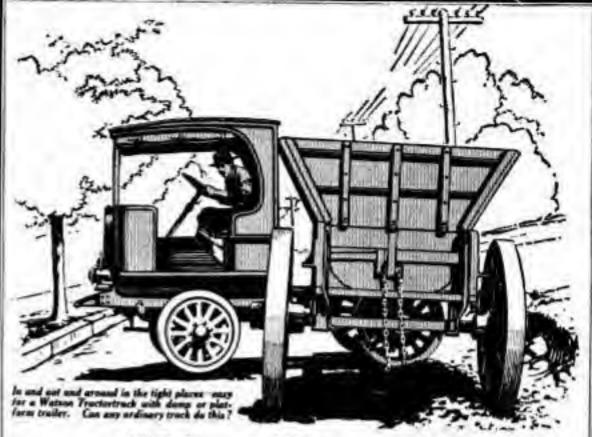

"Late in October, 1914, I met him, his Army career apparently rained. He had told the truth, which told against him; but in the moment when many men would have sunk, broken and despairing, he bore himself as he was and as he is to-day, a very gallant gentleman. He had been eashiered and dismissed from the service for conduct which, in the judgment of the court martial, rendered him unfit and incapable of serving his sovereign in the future in any military capacity. The London Guzette came out on October 14, 1914, recording the fact, and it became known to his many friends. For over thirty years he had served, and for distinguished service wore the Queen's medal with four clasps after the Boer War. He went to France with the Royal Warwickshire Regiment at the outbreak of this conflict. His chance had come after twenty-eight years,

During the first terrible two months he had done splendid work. A moment sufficient to try the discretion of any officer arrived. He made his mistake. He told his story to the general court martial. He vanished—home; and the London Gazette had the following War-Office announcement:

"Royal Warwickshire Regiment,—Lieutenant-Colonel John F. Elkington is eashiered by sentence of a general court martial. Dated September 14, 1914.

He recognized at once, as he sat with me, what that meant. We chatted about various projects, and at last he said, "There is still the Foreign Legion. What do you say?"

Being acquainted with it, I told him what I knew; how it was the "refuge" for men of broken reputations; how it contained Italians, Germans, Englishmen, Russians, and others who had broken or shattered careers; the way to set about joining it by going to the recruiting officer at -; how the only requirement was physical fitness; that no questions would be asked; that I doubted if he would like all his comrades; that the discipline was very severe; that he might be sent to Algiers; that he would find all kinds of men in this flotsam - men of education and culture, perhaps seoundrels and blackguards as well; but he would soon discover perfect discipline.

"It's a Watson!"

When this is said, you have the sum total of all that is worth while in big hauling efficiency. There is no heavy hauling or trucking problem that is not definitely solved by the

Address

Now for a man of his age to smile as he did, to set out on the bottom rung of the ladder as a ranker in a strange army, among strangers, leaving all behind him that he held dear, was a great act of moral courage. We heard of him at intervals, but such messages as dribbled through to his friends were laconie. We heard also he had been at this place and that, and that he was well and apparently doing well. That he had been repeatedly in serious action of recent months we also knew, and then came the news that he had won the covered Middadle Militaireand more, that it was for gallant service. A curious distinction it is in some ways. Any meritorious service may win it; but not all ranks can get it. A generalisation like General Joffre or Sir Douglas Haig may wear it for high strategy and tacties, and a non-commissioned officer or private may win and wear it for gallantry or other distinction. But no officer below a generalisation can gain it. This distinction Elkington won. We all felt he had made good in the Legion, where death is near at all times, and we waited.

To-day's feasile announcement has given all who knew him the greatest pleasure. He has told none of them for what particus lar act he received the coveted medaljust like Jack Elkington's modesty.

But, as soon as he arrived home in England, the interviewers went after him hot and brayy. He found it all very boresome, for, now that the affair was over, he could see no use in talking about it to everybody. A reporter for The Dady Chronicle, however, managed to get what is probably the most satisfactory interview with him and one which shows to best advantage the peculiar psychology of this man who has experienced so many different sides of life. The interviewer, in telling of their conversation, portrays the Colonel as saying:

"Complaint? Good Lord, no! The whole thing was my own fault. I got what I deserved, and I had no kick against any one. It was just 'Carry on!"

Brave words from a brave man-a man who has proved his bravery and worth in what surely were as heartrending circumstances as ever any man had to face. My first sight of the Man Who Has Made Good was as he descended the stairs, painfully and with the aid of two sticks, into the hall of his lovely old home by the river at Pangbourne. It is a house which the great Warren Hastings ones called home also.

Very genial, very content, I found the man whose name to-day is on every one's lips; but very reticent also, with the reticence natural to the brave man who has achieved his aim and, having achieved it, does not wish it talked of.

"And now," I suggested, "you have again got what you deserve?"

Colonel Elkington drew a long breath. "I hope so," he said, at length, very quietly. "I have got my name back again, I hope cleared. That is what a man would care for most, isn't it?"

There is always a place in the Foreign Legion for some one who is down in the world," he told me. "Directly after the court martial, when the result appeared in the papers, I said I must do something; that I could not sit at home doing nothing.

Scientific Management of Trucks Leads to S-V Tires

In scientific management of truck service one tire is tested against another to see which costs least per mile.

This leads inevitably to the use of Goodyear S-V's because accurate records of net cost prove the superior economy of these tires.

As scientific management is becoming more and more common, so the use of S-V's is increasing with remarkable rapidity—1916 sales 132 per cent greater than 1915.

This increase is due solely to the fact that users have found S-V's deliver extraordinary mileage, serving long and faithfully under cruel loads and over grinding roads.

Two hundred and twenty-four truck owners, scattered over the country, report that 700 of these tires had gone an average of 13,704 miles—and many of them were still running.

If your tires do not deliver this kind of service you owe S-V's a test. This is a necessary step in the scientific management of your truck service.

How I Raised My Earnings from '30 to '1000 a Week

The Story of a Young Man's Remarkable Rise, as Told by Himself.

THREE YEARS AGO I was earning \$30 per week. With a wife and two children to support it was a constant struggle to make both ends meet. We saved very little, and that only by sacrificing things we really needed. Today my earnings average a thousand dollars weekly. I own two automobiles. My children go to private schools. I have just purchased, for cash, a \$25,000 home. I go hunting, fishing, motoring, traveling, whenever I care to, and I do less work than ever before.

What I have done, anyone can do—for I am only an average man. I have never gone to college, my education is limited, and I am not "brilliant" by any means. I personally know at least a hundred men who are better business men than I, who are better educated, who are better informed on hundreds of subjects, and who have much better ideas than I ever had. Yet not one of them approaches my carnings. I mention this merely to show that earning capacity is not governed by the extent of a man's education and to convince my readers that there is only one reason for my success—a reason I will give herein.

One day, a few years ago, I began to "take stock" of myself. I found that, like most other men, I had energy, ambition, determination. Yet in spite of these assets, for some reason or other I drifted along without getting anywhere. My lack of education bothered me, and I had thought seriously of making further sacrifices in order to better equip myself to carn more. Then I read somewhere that but few millionaires ever went to college. Edison, Rockefeller, Hill, Schwab, Carnegie—not one of them had any more schooling than I had.

One day something happened that woke me up to what was wrong with me. It was necessary for me to make a decision on a matter which was of little consequence. I knew in my heart what was the right thing to do, but something held me back. I said one thing, then another. I couldn't for the life of me make the decision I knew was right.

I lay awake most of that night thinking about the matter—not because it was of any great importance in itself, but because I was beginning to discover myself. Along towards dawn I resolved to try an experiment. I decided to cultivate my will power, believing that if I did this I would not hesitate about making decisions—that when I had an idea I would have sufficient confidence in myself to put it "over"—that I would not be "afraid" of myself or of things or of others.

With this new purpose in mind I applied myself to finding out something more about the will. I was sure that other men must have studied the subject, and the results of their experience would doubtless be of great value to me in understanding the workings of my own will power. So, with a directness of purpose that I had scarcely known before, I began my search.

The results at first were discouraging. While a good deal had been written about the memory and other faculties of the brain, I could find nothing that offered any help to me in acquiring the new power that I had hoped might be possible.

But a little later in my investigation I encountered the works of Prof. Frank Channing Haddock. To my amazement and delight I discovered that this emineut scientist, whose name ranks with James, Bergson and Royce, had just completed the most thorough and constructive study of will power ever made. I was astonished to read his statement, "The will is just as susceptible of development as the muscles of the body!" My question was answered! Eagerly I read further how Dr. Haddock had devoted twenty years to this study how he had so completely mastered it that he was actually able to set down the very exercises by which anyone could develop the will, making it a bigger, stronger force each day, simply through an easy, progressive course of training.

It is almost needless to say that I at once began to practice the simple exercises formulated by Dr. Haddock. And I need not recount the extraordinary results that I obtained almost from the first day. I have already indicated the success that my developed power of will has made for me.

I understand that Professor Haddock's lessons, rules, and exercises in will training have recently been compiled and published in book form by the Pelton Publishing Co. of Meriden, Conn., and that any reader who cares to examine the book may do so without sending any money in advance. In other words, if after a week's reading you do not feel that this book is worth \$3, the sum asked, return it and you will owe nothing. When you receive your copy for examination I suggest that you first read the articles on: the law of great thinking; how to develop analytical power; how to perfectly concentrate on any subject; how to guard against errors in thought; how to develop fearlessness; how to use the mind in sickness; how to acquire a dominating personality.

Some few doubters will senfi at the idea of will power being the fountaining of wealth, position and everything we are striving for, and some may say that no mere book can teach the development of the will. But the great mass of intelligent men and women will at least investigate for themselves by sending for the book at the publishers' rosk. I am saire that any book that has done for me — and for thousands of others—what "Power of Will" has done—is well worth investigating. It is interesting to note that among the 150,000 owners who have read used and proceed "Power of Will," are such promoted norm as Supreme Court Justice Parker, Will I'm Fang, ex-U. S. Chinese Atthussidor, Lieut, Gov McKeive of Neberoka; Assistant Postmoster-Content Reitt; General Manager Christises of Wells-Farge Express Co.; E. St. Elmo Lewis; Geoverton Arthur Capper of Kansas, and thousands of others.

As a first step in will training, I would suggest immediate action in this matter before you. It is not even necessary to write a letter. Use the form below, if you prefer, addressing it to the Pelton Publishing, Company, 8-A Wilson Block, Menden, Comp., and the book will come by extern small. This one act may mean the terming point of your life, as it has meant to me and to so many others.

PELTON PUBLISHING COMPANY 8-A Wilcox Block, Meriden, Conn.

I will examine a come of "Power of Will" at your risk. I agree to remit \$1 or remail the book in \$ days.

and that as I could not serve England I would serve France. Yes, I did offer my services again to England, but it is military law that no man who has been cashiered can be employed again for the King while the sentence stands. So there was nothing for it but the Foreign Legion—that home for the fallen man,"

Of that strange and famous corps Colonel Elkington can not speak without a glint of pride in his keen blue eyes. Splendid men, the best in the world, he calls them, "and every one was as kind as possible to me." Many there were who had become legionaries because they, too, had failed elsewhere, "lost dogs like myself," the colonel called them; but the majority of the men with whom he served were there because there was fighting to be done, because fighting was second nature to them, and because there was a cause to be fought for. The officers he describes as the "nicest fellows in the world and splendid leaders."

When Colonel Elkington first joined there were many Englishmen included in its ranks, but most of these subsequently transferred to British regiments. He enlisted in his own name, but none knew his story, and often he was questioned as to his reason for not transferring—"and I had to pitch them the tale."

He kept away from British soldiers as much as possible, "but one day some one shouted my name. I remember I was just about to wash in a stream when a staff motor drove by and an officer waved his hand and called out. But I pretended not to hear and turned away.

"I don't think that the men in the Legion fear anything," he said. "I never saw such men, and I think in the attack at Champaigne they were perfectly wonderful. I never saw such a cool lot in my life as when they went forward to face the German fire then. It was a great fight; they were all out for blood, and, tho they were almost cut up there, they got the German trenches."

The time he was recognized, as detailed above, was the only one. At no other time did any of his comrades suspect his identity, or else, if they did, they were consideration itself in keeping it to themselves. Of this recognition and some of his subsequent experiences, the London Times remarks, speaking of its own interview with him:

It was the only voice from the past that came to him, and he took it as such. A few minutes afterward he was stepping it out heel and toe along the dusty road, a

private in the Legion.

Shot in the leg, Colonel Elkington spent ten months in hospital and eight months on his back. This was in the Hôpital Civil at Grenoble. He could not say enough for the wonderful treatment that was given him there. They fought to save his life, and when they had won that fight, they started to save his leg from amputation. The head of the hospital was a Major Termier, a splendid surgeon, and he operated eight times and finally succeeded in saving the damaged limb. When he was first in hospital neither the patients nor any of the hospital staff knew what he was or what he had done. Elkington himself got an inkling of his good fortune at Christmas when he heard of his recommendation for the Croix de Guerre.

"Perhaps that helped me to get better," he said. "The medals are over there on the mantelpiece." I went over to where there were two glass eases hanging on the wall. "No, not those; those are my father's and my grandfather's." He showed me the medals, and on the ribbon of the cross there was the little bronze palm-branch which doubles the worth of the medal,

When he was wounded Dr. Wheeler gave him a stiff dose of laudanum, but he lay for thirteen hours until he saw a French patrol passing. He was then 100 yards short of the German second line of trenches, for this was in the Champaigne Battle, on September 28, when the French

made a magnificent advance.

It was difficult to get Colonel Elkington to talk about himself. As his wife says, he has a horror of advertisement, and a photographer who ambushed him outside his own lodge-gates yesterday made him feel more nervous than when he was charging for the machine gun that wounded him. To say he was happy would be to-write a platitude. He is the happiest man in England. He is now recuperating and receiving treatment, and he hopes that he will soon be able to walk more than the 100 yards that taxes his strength to the utmost at present.

THE PILGRIMAGE OF THE HOLY CARPET

A N old custom, long of religious significance, which may now take on an international importance, is the pilgrimage of the Holy Carpet to Mekka. For hundreds of years, the pilgrimage has been an annual affair, representing the respects of the ruler of Egypt to the keeper of the mosque at the Moslem capital. Now, with the proclamation of the Arabian Kingdom, it is possible that the new ruler will take charge of the mosque at Mekka, and that the pilgrimage from Cairo will metamorphose into an international festival.

In the Kansas City Star we are given a few of the details about this extraordinary function, starting with its inception in the days of Shargaret El-Dorr, Queen of Egypt in the thirteenth century. We learn:

Somewhere in the Arabian desert, skirting the Red Sea, a long caravan of camels, guarded by a convoy of British troops, is slowly mushing through the sands headed for the sacred Moslem city of Mekka. Among the camels is one which is fairly hidden under trappings of silk, with a myriad tassels of golden thread and tiny pendent bells shimmering and tinkling. Beneath those gorgeous silken covers is folded upon the camel's back a "Holy Carpet" which seventy of the most expert weavers and embroiderers in the world have been at work on for upward of a year. The like of that sacred rug has never been seen in America, and if one could be brought here it would sell for a fortune,

This equipage of Oriental splendor moving over the desert is the pilgrimage of the Holy Carpet, and a procession just like it in all respects, except the British guard, has followed the same route annually for the last seven hundred years, until two years ago, when the war interrupted the ancient custom.

Away back in the thirteenth century,

A leaf from the diary of a Cake of Soap

(Being a day's adventure with "Packer's")

BA.M.

THEY started me early this morning, shampooing tiny Ethel. Naturally! Regular shampooing with me means bealthy, beautiful hair in after years. Little Ethel will thank her mother then. Thousands of little Ethels have.

IIA.M.

I'M in demand. Sixteen-year-old Elizabeth's using me—and you can't see her hair for the foam she's raised! Mother knows that particular care now will help Elizabeth's hair safely through a critical time—and make it silkier and softer, too. If all mothers only knew.

3 P.M.

MOTHER says, "Time for my own shampoo, now." So she changes part of me into a beautiful, refreshing lather. She rubs it in. Afterwardashe smiles when she sees the pretty lights I've brought to her hair—and the fluffiness and softness, too! Why not?

530 RM.

FATHER'S home from a dusty train and makes a dash for the bath-tub and me. Father says I'm too good to be used for shampooing only; he likes me, too, as a bathing soap—for use all over.

A little thinner is Packer's Tar Soap at the day's end. But it's conscious of a good day's work well done. All that it asks is that you rub its pleasant, pure pine-tar lather in well 'round the roots. Hair and scalp will respond, never fear. Thousands have proved this for over forty years. Send toc for sample half-cake.

Three-in-One Oil Company New York 42 KAG, Broadway

the Queen of Egypt, Shargaret El-Dorr, made a pilgrimage to Mekka, and a set of rich trappings was made for the camel she rode. She also had made, and took with her, a richly embroidered curtain with which to cover the "Kaaba," the Moslem Holy of Holies in Mekkn. And from that day, until two years ago, the gift of a curtain and the pilgrimage have been repeated once a year by each succeeding ruler of Egypt. Two years ago the desert was made dangerous by bands of people who, taking advantage of the war in which Turkey was plunged, broke out to maraud and rob, and the pilgrimage was deferred. But this year the British Government instructed the commander of its troops in Egypt to give safe conduct to the pilgrimage.

As a matter of fact, the account tells us that the Holy Carpet is not properly a carpet at all, but rather a finely woven curtain. It is made in Cairo under the eyes of the governor, and its tremendous cost is defrayed by rich Moslems of Egypt. When it is finished, and proved by rigid inspection to be quite flawless, it is sent to Mekka by the pilgrimage previously described. Then, we read:

After the curtain reaches Mekka the old curtain which has hung there for a year is taken down and the new one is put up and becomes the veil hiding the mysteries of that place which has been seen by few infidel eyes.

The Kaaba is the oldest sacred shrine in the world. It is generally believed to be the oldest building in the world. It is a cube-shaped building about forty feet square, with the sacred black stone embedded in its wall. This is supposed to have dropt from heaven. Millions of Moslem lips have kissed it in the last thousand years and more, so many that their impress has worn away the surface of the stone.

No one knows how old the Kaaba is, Mohammed says in the Koran that the patriarch Abraham built it. One Arab legend has it that Adam built it, and another says Ishmael dwelt there, At any rate, it was very old when Mohammed founded his religion in the seventh century, and before then it was the shrine of the God Hubal. A year before Mohammed died he made a pilgrimage from his bome in Medina, 250 miles to the Kaaba, imbued with the conviction that the Kaaba, purged of idolatry, would be the most acceptable temple of Allah on earth, and with thousands of his religious followers looking on, he walked seven times around the ancient shrine, and then exhorted his adherents to protect the weak, the poor, and the women, to abstain from usury, to live righteous lives, and closed with: "Oh, Allah! Have I not completed my mission?" He returned to Medina, was stricken with pleurisy, and died Monday, June 8, 632. Many suppose that the prophet Mohammed is buried in the Kaaba, but his tomh is in Medina. Moslems believe be lies stretched at full length on his right side with the right palm supporting the right cheek, the face directed toward Mekka; that beside him rest the two califs, Abu Bekr and Omar, and at the other side of the prophet is an empty tomb for Jesus. The fact, however, is that when the tomb was struck by light-

A NEW Book of Intense Interest

Opening up a startling line of Valuable Facts concerning THE GREAT SOUTH AMERICAN TRADE OPPORTUNITY

THE AMAZING ARGENTINE

By JOHN FOSTER FRASER

The New York Independent says about this book:

"Almost the only good thing we can see about e war is the opportunity it brings for the expansion of American commerce into the inviting fields to the south. But the chief obstacle is that we do not know these countries; we have not even learned the A B C's. Let us begin, then; with The Amening Argentine, for John Foster Fraser is a geographic journalist by profession and is able to play up statistics so they stand out like an electric signboard. a vivid impression of a land where millionaires are made by magic, and there are chances for many more."

Large 12mo, Cloth, Illustrated, \$1.50 By Mail, \$1.62

ning in the year 892, and had to be rebuilt, three deep graves were found in the interior, filled only with rubbish,

The Moslem makes a pilgrimage to Mekka because Mohammed himself imposed upon each one of his followers the duty to make that pilgrimage at least once in his lifetime, to walk seven times around the Kaaba, to kiss the sacred black stone, and to perform certain other rites that were to cleanse his soul of all sin and prepare him to enter heaven. One hundred thousand Moslems from all parts of Asia and Africa make that pilgrimage to Mekka each year. And each year the "Holy Carpet" goes, as it is going now, to cover the sacred Kaaba and protect its wall from the weather,

VAGABONDING BY MOTOR-CAR

THIS is the tale of a man who rode more than a thousand miles in exchange for what totalled to twenty-eight "thank you's." That was his stock in trade, save for a clean collar, a genial smile, and an endless faith in human nature. And out of these he managed to make his way from Fort Wayne, Ind., to New York City, a distance of nearly a thousand miles, mostly over the famous Lincoln Highway.

The man is Charles Brown, Jr., a young Californian who is a student in New York University during the winter. But last summer, after an eventful vacation, he found himself stranded in Fort Wayne, with seven days until the opening of college, more than nine hundred miles away. All he had to do was to get the money for his railroad fare somehow, take a train, and come East. But all that was easier talked of than accomplished. In a recent issue of the New York World, Mr. Brown tells how it was done. He believes that faith in human nature can move mountains, and in his case, if it did not move mountains from his path, it at least moved him over them. He recounts to us:

It was in the freight-yards at Fort Wayne, Ind., on Wednesday morning, October 4, that I conceived the idea of traversing the Lincoln Highway in automobiles to New York City. I was stranded and almost without money, and for several days had been contemplating the chance of beating my way out on a freight,

As the railroad runs, New York City is nearly eight hundred miles distant from Fort Wayne, New York University, where I am an evening student, opening in seven days, and an editorial appointment to keep at the same time, it was a certainty that I must begin moving at once or fail to connect.

While I was sitting near a water-tank I saw an automobile speeding along the road that paralleled the tracks. It was a big touring-car with a large and comfortable-looking seat in the rear. I could not take my eyes off the soft gray cushions. I watched the ear pass out of sight; then my inspiration came.

As I left the freight-yards I counted my money. I had \$4,50.

I went to a barber-shop and got a

Whateverthe need garage, booth, bust-house, office, storebourgerood, cottage, larg, hespital, or factory, there's an Edwards Steel Building for the persons. Write help for descriptive literature and proces.

The Edwards Manufacturing Company 1337-87 Eugleston Ave. Cincinenti, Chie bath, then a shave and a hair-cut. I bought a clean shirt and a collar, also a clothes-brush and a can of shoe-polish, I had my hat cleaned and blocked and a new band put on. Then I found a tailor. While I sat with a blanket wrapt around me, he sponged and prest my clothes. I now had \$1.55.

He was now ready to start for the metropolis, and accordingly he sought from the first policeman he met, directions about the best road going eastward. He was told to travel out East Main Street until he came to the Lincoln Highway.

He found that thoroughfare, and, noting the number of motor-cars passing, decided that it presented the most chances for a "lift" in the direction in which he was going. So he determined to stick to the road, hailing a car or two to help him on his way. He had very satisfactory luck, for he says:

About noon, after walking to the outskirts of Fort Wayne, I saw my first chance coming down the highway. At the steering-wheel of the ear was a longe bulk of a man with tortoise-shell spectacles and coarse black whiskers.

Hardly knowing how I would stop him, I stept into the center of the highway. The next minute, afraid that he would ignore me, I stept back to let him pass, then suddenly ran forward and threw my hands up as a signal for him to stop.

"Are you going down the Lincoln Highway?"

"Yes, down a piece," he replied, stopping his ear.

"May I ride with you until you turn off." "Where are you going?"

I moved close to the ear, which was one of those democratic Fords.

"New York City."

His face registered interest as he swung open the door nearest me. We struck out into the rural section. He was a physician, rushing to a girl patient whose condition had changed for the worse.

The interest increased as I explained my theory that a man, with courtesy and good clothes, could start at any point on the Lincoln Highway and get through to New York City within a comparatively short time by riding in different automobiles. People would enjoy giving him rides. As I was explaining the third time why a man need not earry any baggage on such a trip he slapped on the emergencybrake and told me to climb out, as his interest in my mode of traveling had eaused him to run ten miles beyond his

That night I slept in a barn. The next morning, after I had groomed two horses, a farm-hand brought me a plate of fried ham and potatoes. By six o'clock I was riding on a milk-truck. At nine o'clock an insurance agent invited me to ride with him until noon. In the afternoon I rode in a flivver with a school-teacher whose machine I had eranked. When it grew too dark I stopt at a farmhouse for the night and helped to husk corn,

Until I had ridden on the Lincoln Highway, I did not really know what beautiful country scenery was, Cornfields yellowing in the early October sunshine stretched across Indiana, Ohio, and the western sections of Pennsylvania.

Holstein Cows' Milk Best for Your Home

Von can best insure the quality of your home milk supply, either by keeping purchased Holstein cows or by securing a daily supply of Holstein cows milk. Holstein cows milk is wholesome milk, free from an excess of far, but rich in body building proteins. Physicians who have been progressively sager to investigate, now agree that Haistein cows milk is the best of all for infants, invalids, and convalescents. Holstein cows have grees inherent, constitutional vitality. They are giants in size, vigorous, and proverbially healthy. Incidentally, they hold all world recertle for milk and butterfat production. Holstein cows milk is more easily digested than others, as its fat content is in the form of sensili globules, which form soft, easily braken up carels in the stomach. The large fat globules of ordinary cows milk form hard masses or cards, which are not acted upon easily by the gastric joices. Ask your milkman for Holstein cows milk. If he fails to provide it, send us his mane and we will try to aid you. Send for our free booklet. ** The Story of Holstein Milk."

Beyond came the Pennsylvania mountains, and then the Cumberland valley, rich in her robe of autumnal coloring. New Jersey was a series of panoramas, each more wonderful than the one preceding.

The longest single ride he had was 125 miles; the shortest less than 125 feet. The story of this latter ride furnishes a little comedy in itself, for we read:

It was at a time when I felt very much in need of a ride. The Pennsylvania mountains loomed ahead of me. I was afraid to cross them alone as a practical joker in Pittsburg had warned me that the mountains were swarming with moonshiners who might think me a Government inspector and "plug me full of lead" the first time I turned my back.

I had just put more shine on my shoes and brushed my clothes, when a machine stopt at the roadside. An old farmer and his wife asked me to ride with them.

"Be yer goin' to Bedford Springs, neighbor?" he inquired, as we got under way.

"No, New York City."

The old man started and turned half around with a look of suspicion. His fingers closed tightly on the steering-wheel. The machine swayed once or twice, then slowed down until it came to a stop.

The old man and his wife looked at me. The color had gone from their faces. It was evident that they thought me a doubtful character. The man fumbled at the door nearest me until it opened.

"No, we don't want to ride yer over them mountains. Yer might be"-"A highwayman?" I interrupted.

"I am-a Lincoln Highwayman," During seven days I secured rides in twenty-eight automobiles, walking but a few miles. Some of the people who obligingly responded were: A baker who bought a new car when the price of bread was raised; a Pitraburg steel - manufacturer who will not fill orders for the Allies or for Germany; a music agent who, in order to demonstrate his goods, asked me to give an evening lecture on my travels at his place of business; a general merchant who let me sleep above his store; four ministers who make their parish calls in automobiles; several Ohio farmers; a county newspaper correspondent who intimated that if the price of print-paper continued to advance The Bunner would have to suspend publication; three physicians; a farm demonstrator, and two jitney-drivers.

Democratic people, as a rule, drive inexpensive cars. Those who buy a new car each year invariably trade in their old one. I saw more flivvers and low-priced machines in Indiana and Ohio than in Pennsylvania and New Jersey.

In no instance was I refused a ride by a business or professional man. A physician straining all speed-laws to reach a dying patient or a banker burning up the road to make a directors' meeting by ten o'clock were not in such a hurry that they could not stop for me.

People riding for pleasure or on Sunday had no time or no room for me in their cars. I consoled myself with the reflection that in going after pleasure they lost it in that they missed the pleasure which comes from conversing with a Highwayman.

In Indiana and Obio the people seemed glad to give away rides. In return I assisted in small ways: by watching the

Strathmore Suality Papers

Finding a Paper fit for Packard Automobiles

ONE of the problems that beset the advertising man is to produce printed matter that does its subject justice in appearance as well as in words.

Packard, for instance, wanted a paper for their famous "Ask the Man Who Otom One" booklet that would express the "Refinement" and "Exclusiveness" of Packard Automobiles.

They selected a Strathmore Quality Paper of such distinctive texture, substantial weight and beautiful finish that it is in har mony with the Packard Idea.

They found the paper that was their say.

"Paper Does Express" is the name of a graphic demonstration of Strathmore expressiveness. "Selective Mailings" is another Strathmore publication with an important message to advertisers, great and small. Both booklets are free upon request. Strathmore Paper Co., Mittineague, Mass., U.S.A.

highway signs along the road, reading distigured directions on sign-posts at crossroads, running across a field to inquire of a farmer how to get back on the Highway after a detour, helping repair punctured tires, pouring oil and water into the machine, and tightening loose brakes.

Some day I am going to apply for a strip of the Lincoln Highway. I shall put in an elaborate system of toll-gates and appoint my friends as toll-collectors. Part of the money will be used for the up-keep of the strip, the remainder we shall keep for our own.

The above idea came to me while riding through Pennsylvania from Laneaster to Philadelphia. I gave up counting toll-gates long before the last one was reached. The tolls amounted to about \$2 for a little less than seventy miles. A road association collects these tolls for the up-keep of the Lancoln Highway between Laneaster and Philadelphia.

When I alighted from an automobile at the door-step of the New York University, No. 32 Waverly Place, at 6:30 o'clock, Wednesday evening, October 11, the suspense we over. Great was the satisfaction of baving accomplished what I had set out to do. In no other way could I have gained such a knowledge of the country and the people who have made it,

and are unking it. Best of all, it gave me a deeper under-

standing of human nature.

SPICE OF LIFE

To be Accurate. Chourt "Do you think it would be foolish for me to marry a girl who was my intellectual inferior? " Donny-" More than foolish-impos-

sible,"-Cleveland Leader. Quite Natural.—" Old friends are best." "I know. Still, we all like to make new friends. We can chuck a bluff before

there for a while. The old friends have our member."-Louisville Courier-Journal.

As It Is Nowadays. TEACHER-" If a man gets four dollars for working eight hours a day, what would he get if he worked ten hours a day?"

Jonney-" Ten hours a day? He'd get a call-down from de union."-Century.

Too Truthful? - GROCER-" The boy you recommended won't do at all."

Customere "What has he been up to?" GROCER-" I gave him a notice to stick up. 'All the Delicacies of the Season Will Be Found Inside, and he pasted it on the rubbish barrel."-Tit-Bits.

Mistaken Flattery.-Hr.-" Will you go to the dance with me?"

Sue-"I'm sorry, I can't, But I'll introduce you to a very handsome and clever girl whom you can take."

HE-"I don't want a handsome and clever girl; I want you."-Tiger.

A Suspicion. "Why is George Washington described as 'First in war and first in pence' ?"

'I dunno," replied Senator Sorghum. "I suspect somebody was trying to square him with both the preparedness people and the pacifists." - Washington Star.

Evident. OFFICER (who has "lost touch " with the troops on field-training)-"I say, sergeant, where have all the blithering fools of the company gone to?"

SERGEAST " Shure, an' I don't know, sorr; it seems we're the only two left."-Tit-Bite.

Where Are They?-The man who had made a huge fortune was speaking a few words to a number of students at a business class. Of course, the main theme of his address was bimself.

" All my success in life, all my tremendous financial prestige," he said proudly, " I owe to one thing alone-pluck, pluck, pluck!"

He made an impressive pause here but the effect was rained by one student, who asked impressively:

"Yes, sir; but how are we to find the right people to pluck?"-Philadelphia Ledger.

War-Prices.- A Tommy on furlough ntered a jeweler's shop and, placing a much-battered gold watch on the counter, said, "I want this 'ere mended."

After a careful survey the watchmaker said, "I'm afraid, sir, the cost of repairing will be double what you gave for it."

"I don't mind that," said the soldier. " Will you mend it? "

"Yes," said the jeweler, "at the price." "Well," remarked Tommy, smiling, " 1 gave a German a punch on the nose for it, and I'm quite ready to give you two if you'll mend it."-Tit-Bits.

Pioneer Days .- " Tell me of your early

educational hardships."

"Well, I lived seven blocks from a Carnegie library and we had no automobile."-Louisville Courier-Journal.

His Report,-" Do people ever take advantage of the invitation to use this church for meditation and prayer?" a city verger was once asked.

"Yes," he replied, "I catched two of 'em at it the other day ! "-Tit-Bits.

Got There First .- Mrs. Hicks (relating burglar scare)-" Yes, I heard a noise and got up, and there under the bed I saw a man's legs."

MRS. WICKS-" Mercy! The burglar's? Mas, Hicks-" No, my husband's-he had heard the noise, too." - Landon Saturday Journal.

The New Age .- FOND PAPA-" Well, son, what did you learn in school to-day?"

Son-" Aw, not much, dad. We hadda, couple of two-reelers in history, a threereel travelog in geography, and a splitreel nature-study. They useta give us a wild-West pitcher once in a while but they don't do it no more." - Widow.

Cruel Deception.-" How do you manage to keep your cook so long?"

" My husband has promised her that if she is working for us when we strike oil he will buy her an auto."

"But I did not know you had any oil prospects? "

"We haven't."-Houston Post.

His Preference. - A rather critical old lady once said to Crawford, " Have you ever written anything, Mr. Crawford, that will live after you are gone?"

"Madame," Crawford replied politely, " what I am trying to do is to write something that will enable me to live while I am here."-Christian Register.

Works Both Ways .- Mus. X .- " Bothered with time-wasting callers, are you? Why don't you try my plan?'

Mas. Y .- " What is your plan? "

Mas. X .- " Why, when the bell rings, I put on my hat and gloves before I press the button. It it proves to be some one I don't want to see. I simply say, " So sorry, but I'm just going out.

Mrs. Y .- " But suppose it's some one you want to see? "

Mrs. X .- " Oh, then I say, " So fortunate, I've just come in."-Pittsbury Dispatch.

Ruined the Ruin.-An English nobleman was about to set out for India, and, fearing that in his absence vandals might destroy a picturesque ruin on his estate, he said to his steward: "I want you to build a wall here "-he drew a tiny furrow with his stick around the ruin-" a stone wall five feet high."

On his return home the nobleman started for the spot. When he reached it he rubbed his eyes in amazement. There was the new stone wall, but he could see nothing towering up inside of it. He turned excitedly to his steward:

" Look here, where's the ruin, man? " "The ruin, my lord?" replied the steward. "Oh, that ould thing! Sure, I used it to build the wall with."-Boston Transcript

CURRENT EVENTS

EUROPEAN WAR

IN THE BALKANS

December 20.—General von Mackensen reports that the Russians have taken a stand at the Moldavian boundary, ten miles from the Danube, and that no further German advance is just now being made. Heavy fighting, however, is still reported from the Dobrudja, and in Galicia Russian scouting parties are said to have broken through entanglements and penetrated into Bohorodezany Stare, southwest of Stanislau.

December 21.—The heights of northern Dobrudja change hands during the day's fighting. Near Bachkoi the Russians are at first prest back, but by a counterattack drive the Germans again from the contested positions. Slight Teuton progress is reported from Wallachia, across the Danube, but in the Karpathians the Russians fight their way up several heights in the Dorna Watra region.

The Russian troops, recently moved to the Cerns bend from stations farther west, fail in an attack on the heights east of Paralovo, according to Berlin.

December 22.—The Russian forces in the Dobrudja continue to retreat and are reported near the Danube mouth as the Teutons press ahead and take 900 additional prisoners. A Bulgarian force is driven into Lake Ibolata, in northern Dobrudja, according to Petrograd, and 115 are captured and many drowned. Other points in the Balkans, as well as along the Western front, are reported quiet.

December 23.—London hears that General Sakharoff's retreat leaves all of the Dobrudja except 200 square miles in the hands of the Tentonic forces. Only the Danube prevents the invasion of Bessarabia.

December 24.—Berlin announces that the Russians have been driven from Isakcha, and that German guns are shelling the Russian side of the Danube, in preparation for a drive on Bessaratia. On the Moldavian frontier, to the westward, the Russians storm a peak, taking 105 men and three machine guns.

December 25.—Desperate fighting is re-ported for the possession of the Danube Bridge at Macin, where the Teutons attempt to reach the gate to Brails, on the Roumanian side. In the Karpathians the Russians win a signal victory as they take from the Germans recently lost heights on the Moldavian frontier, cutting many detachments to pieces and taking 226 prisoners.

December 26.—The struggle for Macin still continues, but Teutonic forces approach Braila from two sides, while another force on the Buzeu-Brails railway takes Filipechti. Berlin announces the cap-ture of 5,500 Roumanian and Russian prisoners in the last few days' fighting in the Dobrudja.

WESTERN FRONT

December 21.—Unsuccessful trench-raids are reported from both sides in the Arras sector, after which, in an air-battle, the French bring down four enemy planes, and the Germans report having brought down six Allied aircraft.

December 23.—London announces severe hand-to-hand conflicts on the Western front between British and German troops. In the Vosges Mountains the Teutons raid French holdings and wreck a mine gallery, but are less suc-

cessful in Champaigne, where an attack on the French lines is beaten off.

December 26.—Many artillery-duels take place along the Western front, especially south of Lihons, near Les Bœufs, where a party of fifty Germans is driven off, and in the Guedecourt sector, where the British raid Teutonic trenches with results described as "satisfactory."

GENERAL

December 14.—Dispatches from Berlin state that horse-meat is selling for as high as seventy-five cents a pound, so that maximum prices have had to be fixt for that commodity, which was formerly not included under the meat-card regula-

December 20.—According to London reports, the new Almanach de Gotha lists the nobility fallen in the war as 258 counts, 567 barons, and 1,465 of lesser

December 21.—The Pope hears from diplomatic sources that Austria is near famine, says a dispatch from Rome, which adds that news also reaches the Vatican to the effect that Austria's antiwar activity has reached a magnitude beyond the control of the authorities. Internal political complications are also threatened.

President Wilson's peace-note is accepted gloomily in the Allied capitals, accord-ing to dispatches, but welcomed by the Central Powers, the it is felt that the note will ultimately be rejected by the Entente and that peace will not result.

The small Russian steamship, Skiftet, strikes a floating mine off the coast of Finland and sinks. Fifty-nine are lost.

December 23.—Count Czernin von Chudenitz succeeds Baron Burian as Austrian Minister of Foreign Affairs. He was Minister to Roumania until that country entered the war.

News of additional food-riots in Dresden reaches London. Troops are said to have been called in to aid the police in put-ting down disorder, and 100 women and three policemen are reported wounded.

Berlin announces officially that 320 exiled Belgians have been returned to their homes in response to a number of complaints.

December 24.—A new law barring all luxuries from Austria is promulgated. It excludes all jewelry, chocolates, cham-pagne, southern fruits, furs, toys, perfumery, and musical instruments. Travelers are warned that all jewelry worn into the country will be confiscated at the border.

Pope Benedict praises the Wilson peacenote, as do the Scandinavian countries. The King of England, however, states that the war must be fought out, and the Russian Duma is quoted as favoring a decisive finish before considering terms.

December 25.—On the Julian front the Italians drive Austrian forces from Point 86, southeast of Göritz, which they had taken during a thick mist.

British forces take a Turkish position at Maghdadah, twenty miles from El Arish, with more than a thousand prisoners and a quantity of war-material.

December 26 .- Vienna announces that on December 22-23, four Austro-Hungarian destroyers raided the Strait of Otranto and sank two Allied patrolboats, as well as damaging four other Allied war-ships.

MEXICAN AFFAIRS

December 23.—Persistent rumors are circulated to the effect that Villa has taken

Operate Immediately! But the Money?

HE had never been sick a day in his life, he boasted, and the next week came an attack of appendicitis. The doctor said, "Operate immediately," and his wife went pale, for there was no money in the bank. But in all his pain, he smiled. "Don't worry, my dear, I have taken out an Ætna Policy. Ætna will pay the doctor or the hospital, and send us an income as long as I am disabled."

Be wise, too-now, while you are well-

If you are in a "Preferred" occupation, and under 51 years of age, and pay \$60 a year for an Ætna Disability Policy, you will get:

\$25 a week up to 57 weeks while you are ill. \$25 a week for 100 weeks—nearly two years—if you lose the night of both eyes by disease, or the use of both hands or feet or one hand and one foot by paralysis. Also payment of hos-pital charges up to \$12.50 per week for ten weeks, or for a surgical operation.

Or you will get \$30 a week as long as you are disabled by a railway, steamship or burning building accident. \$25 a week if disabled by an ordinary accident. If you are killed in an accident or lose two limbs or both eyes, you will get from \$5,000 to \$15,000, depending upon the character of the accident and the number of years you have carried the insurance. Half as much for loss of one hand, foot or eye,

Send this reapon and find out about this wonderful policy and all the other Atten Deathlity and Accident Policies—meas lower as a day protects you in case of accident Among all these, there is one that fits you exactly. Temorrow pay be ten late. Send the coupon and find out about it—today.

Are You Prolonging or Shortening Your Life?

THIS is a supremely important question for every one of us, but how many can answer it intelligently? You, for instance, may be unconsciously shortening your days at this moment. There is a new knowledge, the product of modern scientific research, by following which you can prolong your life. It is clearly and practically set forth in "How to Live," by Professor Irving Fisher and Eugene Lyman Fisk, M.D., of the Life Extension Institute, with a Foreword by William Howard Taft. It is the best and cheapest life insurance policy ever issued. Invest in it to-day. It will cost you \$1.00; by mail, \$1.12.

Do You Know the Effect Are You Aware What In- Do You Understand the Reon Your System?

Do you realize what effective easures the excessive amoker or drinker is taking to cut down his period of usefulness, how he lowers his vitality and undermines powers of resisting disease? Have you read the life insurance statiatics on the subject? They are illuminating. This book gives you the cold facts, makes clear the probable physical cost of indulgence, and leaves you to decide for yourself.

Have you ever studied the nutrition problem from this point of view? Do you know which foods are wholesome and which harmful? Are you informed as to the quantity and the variety your system needs? This book will show you how to get real vital value out of every dollar you spend on food and how to avoid poisoning your system by improper feeding.

of Alcohol and Tobacco telligent Eating and Drink- lation of Right Breathing and ing Can Do to Prolong Life? Right Exercise to Health?

Have you ever learned to breathe properly, so as to energize and refresh your whole body? Do you take sufficient exercise of the you take sufficient exercise of the sort that meets your particular requirements? Are you belying your body to eliminate waste products? In this book you will find recommendations that will make you over physically, if properly followed. It will go far towards making and keeping you your.

HOW FAR DOES the MIND INFLUENCE the BODY?

The answer to this absorbinally interesting question will be found in the banks of Paul Dubois, M.D., Prolessor of Neutopathology at the University of Berne, Switzerland, who has made a lifetong study of the subset. This eminent authority approaches the problem both as a psychologist and a physician, yet in a style so clear that it presents no difficulties to the layman. All us books are sane, well-balanced, and instruct with an optimism that will be found contagious.

THE PSYCHIC TREATMENT OF NERVOUS DISORDERS

Translated by Smith Ely Jelliffe, M.D., and William A. White, M.D. In this strong, optimistic book Dr. Dubois discusses the philosephy underlying the position he holds and describes clearly and charmingly the exact methods by which he has achieved such notable success. 8vo, Cloth, 471 pp. Copious Index. \$3.00; half leather, \$4.50. By mail 25 cents extra.

NERVOUS STATES—THEIR NATURE AND CAUSES

Authorized translation by Edward G. Richards. Points out that neurasthenia is not a new disease created by the conditions of modern life, but is due to fatigue brought on by psychic debilities and can be cured by the education of the mind and strengthening of the will. 12mo. Cloth. 75 cents; by mail 80 cents.

OF MENTAL DISORDERS

Authorized translation by Edward G. Richards. A sympathetic and intensely human book, showing how mental disorders are caused by commonplare factors of everyday life, which precipitate the individual into an abnormal state; and how just as these conditions are formed, they can be reformed and normal health regained. 12mo, Cloth. 50 cents; by mail 55 cents.

THE EDUCATION OF SELF

Translated from the latest French edition by Edward G. Richards Charming essays that shed new light on the question of self-control and show that the only true road to happiness lies in moral development. 12mo, Cloth. \$1.50; by mail \$1.60.

REASON AND SENTIMENT

Authorized translation by Edward G. Richards. A designifical and charm-ingly written essay, setting forth when arotiment and when trason abould determine our line of conduct. Will be found specially helpful in directing the minds of parents howard the proper molding of their children's intellectual life. 12mo, Cloth. 50 cents, by mail 50 cents.

THE INFLUENCE OF THE MIND ON THE BODY

Translated by L. B. Gallatin. An intimate and clearly expressed talk on this much discussed subject that every physician, nurse, or layman who is interested in the mutual reactions of mind and matter, should trad with care. It contains a wealth of inspiration and help, and points the way to a healthier and happier life. 12mo, Cloth. 50 cents; by mail 54 cents.

FUNK & WAGNALLS COMPANY, 354-360 FOURTH AVENUE, NEW YORK

Torreon. Carranzistas state that they believe them unfounded, but are inclined to credit the fact that the outlaw, with his band, is marching again on Chihuahua.

December 24.—Washington receives offieial notice that Villa has taken Torreon. No details are included save the fact that many foreigners departed before the city fell into the hands of the outlaw.

December 25.—A report reaches El Paso that Villa has taken San Pedro de las Colonias, northeast of Torreon, with 1,000 Carranzista prisoners.

December 26. It is announced in Washington that Carranza is to be given for tyeight hours to sign the Philadelphia protural. If he does not do so, the Commission will be dissolved.

FOREIGN

December 15.—Copenhagen reports that in the plebisente held to vote on the sale of the Danish West Indies to the United States, 283,694 voted in favor of the sale, with 157,596 against.

December 20,—Ilsia-yi-Ting, Vice-Minister of Foreign Affairs, announces to the Chinese Parliament that China is maintaining strict neutrality and will not, as rumored, join the Entente.

The rebuilding of the destroyed French villages commences as a party of American Relief workers, headed by Ambassador Sharp, lays the cornerstone of the first group of houses to be reconstructed, in the village of Vitrimont.

December 21.—The British Government decides to release 576 Irish rebels who were interned after the rioting in Ireland. Steps are said to be planned to return the prisoners to their homes immediately.

December 23.—In line with recent action in England, the French Minister of Commerce introduces a bill calling for the tilling of all vacant land.

Desember 24.—The Swiss Government adds a note to the American peacemessage, urging the warring countries to discuss terms.

December 26.—Madame de Thebes, noted as a clairvoyant and astrologer, who foretold many of the world-events of the last fifty years, dies in Paris, aged seventy-two.

DOMESTIC

December 20.—President Wilson sends notes to all belligerents, asking them to present terms on which they will consider prace as well as guaranties for the future.

December 22.—In choosing the personnel of the new Government Shipping Board, President Wilson appoints three Democrats and two Republicans. The Board is to control freight-rates in American waters, as well as to organize a \$50,000,000 corporation to build or buy merchant ships.

December 23.—The Board of Arbitration delivers a decision that eight hours or less constitute a day's work, and awards an eight-hour day to the railroad switchmen on the pay-basis of a nine-bour day. Thirteen railroads are said to be affected by the decision.

December 25.—The Federal Reserve Bank of New York receives authority to appoint the Bank of England as foreign correspondent. This is the first instance of taking advantage of the section of the act which allows banks under the system to establish foreign agencies.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no natice will be taken of anonymous communications.

"B. C.," Valley View, Texas.—"Where can I find the following sentence: "Men and women are but grown children"

The LEXICOGRAPHER does not know the quotation as you give it. He knows, however, and finds in Dryden's play "All for Love" met iv. scene 1), the following:

"Men are but children of a larger growth. Our appetites as apt to change as theirs." And full as craving, too, and full as vain.

Chesterfield, in his letters to his son, letter dated September 6, 1748, wrote: "Women then are only children of a larger growth." David Lloyd is the author of the following couplet:

"For men, in reason's sober eyes. Are children but of larger size."

The combination of the two thoughts the LEXICOGRAPHER has failed to find, but during his searches he came across the following lines by Lord Neaves on the "Origin of Species," which may be read with interest:

"Pouter, tumbler, and fantail are from the same MOHECU,

The racer and back may be traced to one horse. So men were developed from monkeys of course. Which nobody can deny.

"G. W.," Salisbury, Conn.—"How and when did the elephant and the mule become the emblems of the Republican and Democratic parties?"

The late Thomas Nast, the carteenist, was the originator of the symbolic animals referred toe The elephant symbolized the docility of the Republicans and the mule the truculence of the Democrats when in harness.

"R. W. E.," Cartersville, Ga,—"I have just had an argument with a friend on the use of the word 'effeminate,' and we want you to settle it for us. He applied it to the riding-costome of a woman in a picture, saying it was 'not effectinate,' and I contend that he should say, 'not feminine."

You are right in your contention as to the use of effeminate. Dr.Fernald, in his "English Synonyms and Antonyms" (p. 240), says: "The word effentingte is always used reproachfully, and only of men as possessing womanly traits, such as are inconsistent with true manliness.

"F. T. R.," Austin, Texas.—"(1) What was the boundary of her kingdom and the exact residence of the Queen of Sheba when she visited King Solomon? (2) How far did she travel? (3) Is it probably true that she bore a son by King Solomon and the present head of the Mohammedans is his descendant? (4) What is his name and title? (5) Did the Queen of Sheba have a husband?"

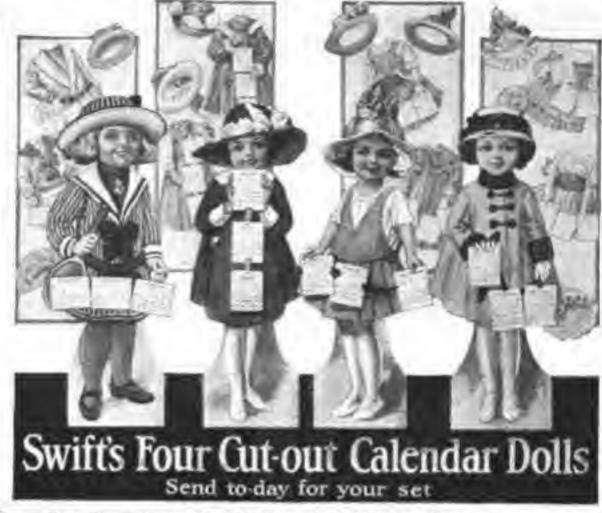

(1) With regard to the Queen of Sheba, so far as the boundaries of her kingdom and her exact residence being known, scholars are quite disagreed as to the locality of her kingdom, some bolding that it was in Ethiopia, others that it was in southern Arabia. (2) If the Queen traveled from southern Arabia, as most scholars believe, she must have traveled about 250 miles. (3) There is a tradition to the effect that the Queen bore a son named Menelik to Solomon, and the Emperor of Abyssinia, Menelik II., has declared himself to be his descendant. (4) The Emperor's title is Negus Negust ("Klog of Kings"). He is not the "head of the Mohammedans," for Abyssinia is a nominally Christian country, its religion is largely adulterated with Judaism and paganism, (5) There is no record of the Queen's having a husband,

"J. A. P.," Meeker, Colo.—"We have just moved to our country place seven miles from the town of Meeker. My wife objects to my use of the phrase, 'I am going to town, and says I should say 'I am going down town.' Which of the two expressions is correct?"

"I am going to town" is correct.

"E. D. C.," Girard, O .- "Which is the proper phrase: 'Walt for he and I,' or 'Walt for him and

The second sentence is correct, as the preposition for governs the objective case.

These big darlings, each with four beautiful costumes - all sisteen richly colored -are more than 18 inches tall, big as live new babies, can stand alone! Each doll is worth 25c. You will say you never saw such unusual calendars, even in the lamous Swift's "Premium" series.

How your children will love them! How their little hearts will thrill with joy, when they dress and undress these big beauties!

You too must be stony-hearted if you will not find yourself smiling every day of 1917 as you look at these winsome little faces, and enjoying each season's change to a gay new costume.

Their Characters and Costumes

Who could resist Dashing Donald, the band-one boy dolf, in any of his three gay sporting suits or his parjeise continue?

Coy Clarabel with her bushful brown eyes, red lips and curly black buit would melt the heart of an icrberg. Nothing could be more

fetching than her red, blue and green continues.

Everyone loves Sweet Sylva for her dewy violet eyes, and hair as golden as her nature. How pretty she looks in her white, rose, blue and sed contumes!

As for Merry Myrtle her brown hair and twinkling him eyes are irresistible. In a pretty blue or pank or tan or scarlet costume she is sweet.

Send for these calendars—daily they will remind you of the rare quality of

Swift's "Premium" Ham and Bacon

How to Get the Calendars-

One doll with four customes forming a complete calendar for 1917, will be sent to any address in the Limited States for 100, in context station; the Trade Mark and of five Souli's "Premium" Observargation cartons, tar—a labels from Swift's "Premium" Stiend Basen carting.

cartiers, or just the Breakfeld Sausage cartiers, or just the Breakfeld Sausage cartiers, or just Matthe Ellion i Soop Wrappers, or just the in Canada weel to runs extra on each doll ordered to pay duty.)

THE STOCKS OF GOLD MONEY THAT THE WORLD'S CHIEF COUNTRIES NOW HAVE

T appears from a recent compilation, printed in the New York Times-Annalist, that the stocks of gold in the principal countries of the world-those engaged in the European War and one, ourselves, not so engaged—are as follows, the amounts being shown first in figures, and then in diagram with the amounts for 1896 added:

	1916	1600
United States		\$577,000,000
France.	1.354.000.000	775,000,000
Russia	1,055,000,000	489.000.000
Germany	714,000,000	675,000,000
United Kingdom .	662,000,000	.564,000,000
Italy	224 0647 060	100,000,000
Austria-Hungary	296,800,000	\$67,000,000
Australia	250,000,000	\$30,000,000

first time, exceeded \$400,000,000, and has steadily advanced until it reached \$470,-000,000 in 1915. Silver production first crossed the \$100,000,000 line in 1880, and in 1893 exceeded, for the first time, \$200,-000,000, making its highest record in 1911, \$292,000,000, and slowly declining to \$232,-000,000 in 1915.

The chief gold-producing countries of the world are South Africa, the United States, Australia, Russia, and Canada, and the chief silver-producing countries the United States, Mexico, Canada, and Peru. In 1915 the gold production of South Africa, including Rhodesia, was \$207,000,000; the United States, \$101,000,000; Australia, \$50,000,000; Russia, \$29,000,000, and Canada, \$19,000,000. Of silver, the 1915 product was: United States, \$39,000,000; Mexico, \$21,000,000; Canada, \$15,000,000, and Peru, \$5,000,000.

The writer of the article in which the table and diagram appeared pointed out that, during the last quarter of a century. the world's production of gold had equaled that of the preceding four hundred years, and that in the last twenty years the amount of gold money in the world had doubled. Meanwhile, the silver output since 1878 had equaled that of the preceding four hundred years, but within the last twenty years the silver money in the world had actually doereased by about one-half. Since the diseovery of America, the world's production of gold had been \$16,500,000,000 in value, while that of silver was \$15,500,000,000 in coining value. In 1896, the gold money in all countries for which statistics were available was \$4,144,000,000, but on January 1, 1916, it was \$8,258,000,000. As to silver money, the amount in 1896 was \$4,235,000,000, but in 1916 it was only \$2,441,000 000. Paper money, of the "uneovered" class, in the same countries, in 1896 was \$2,558,000,000, while in 1916 it was \$8,583,000,000. Other interesting points in the article as to the world's supply of gold money are given below:

"The production of over \$8,000,000,000 worth of gold in the last quarter of a century as against another \$5,000,000,000 in the preceding 400 years has occurred chiefly within the last decade. Down to 1885 the world's gold output never reached as much as \$100,000,000 annually, in 1896 it crossed the \$200,000,000 line, in 1903 the \$300,000,000 line, and in 1906, for the

"Of the \$4,144,000,000 of gold money recorded in 1896, the distribution by principal countries was stated as follows: France, \$778,000,000; Germany, \$675,000,000; United States, \$672,000,000; United Kingdom, \$584,000,000; Russia, \$489,000,000; Austria-Hungary, \$167,000,-000; Australia, \$130,000,000; Italy, \$100,-000,000. For 1916 the stated distribution is: United States, \$2,230,000,000; France, \$1,384,000,000; Russia, \$1,058,000,000; Germany, \$714.000,000; United Kingdom, \$662,000,000; Italy, \$336,000,000; Austria-Hungary, \$296,000,000; Turkey, \$281,000,000 000,000; Australia, \$250,000,000; Argentina, \$229,000,000; Netherlands, \$173,-000,000; Canada, \$170,000,000; Spain, 000,000; Canada, \$170,000,000; \$167,000,000, and Japan, \$143,000,000. The United States shows an increase in the 1896–1916 period of 231.7 per cent., Russia, 116.6 per cent., France 79.3 per cent., Germany 5.8 per cent., and the United Kingdom 13.3 per cent.

"The world's consumption of gold and silver in manufactures and the arts is large and rapidly increasing, that of gold ex-ceeding \$100,000,000 per annum, and of silver over \$50,000,000 annually. In the United States alone the gold used in manufacturing and the arts in 1915 was over \$38,000,000, of which, however, about \$8,000,000 was old jewelry, plate, etc., making our net consumption for this purpose about \$30,000,000 of gold, while that of silver was about \$12,000,000 in value.

"The amount of gold imported into the United States since the beginning of the war is, in round terms, \$1,100,000,000, and the exports in the same period about \$275,-000,000, making the net imports in that

period over \$800,000,000, while the prodnet of our own mines in that same period has exceeded \$200,000,000, thus making the additions to our gold stock since the beginning of the war approximately \$1,000,-000,000.

"Of the \$16,500,000,000 of gold produced in the world since the discovery of America, \$3,830,000,000 was produced in the United States; of the \$15,500,000,000 of silver, \$1,800,000,000 was produced in the United States. The amount of gold in the United States on December 1, 1916, was \$2,741,-669,000, against \$1,887,271,000 at the beginning of the war, August 1, 1914."

THE ASTONISHING INCREASE IN AUTOMOBILES

The production of automobiles in this country during the year ending August 1. 1916, was approximately 1,500,000 cars, or more than double the production in 1915. which was 700,000 cars. In 1914 the output was only 515,000 ears: Lockwood Barr, in a letter to The Magazine of Walt Street, says he believes, from statistics gathered by him from manufacturers, that the output in 1917 may run to 2,500,000 and possibly to 3,000,000 cars. He bases this estimate on figures obtained from manufacturers in reply to letters of inquiry. He asked makers for statistics of their output in the years 1914, 1915, and 1916, with estimates for 1917. Following is a table which Mr. Barr has compiled from these figures. He was not able to obtain his figures from official sources in all eases. Some were gathered from advertisements. newspaper articles, and other sources not official. All such returns given in the table are enclosed in brackets; those not so enclosed are official:

RECORD RAILROAD EARNINGS

Figures of railroad earnings, compiled for the Interstate Commerce Commission, complete for nine months of this year and estimated for the remaining three months, give as the net amount \$1,098,000,000an unprecedented figure. These figures are for all roads whose income was more than \$1,000,000. Interesting comments on them are made in a Washington letter printed by The Journal of Commerce:

"Analysis of the returns for the first nine months shows a startling increase from January to September, amounting to more than 67 per cent. Thus, net income in January, \$64,915,286, had mounted to \$107,910,814 in September, an increase of nearly \$43,000,000. For the first nine months of the year the Commission's figares show that the railroads collected \$2,-654,928,647 from all sources of operation, the chief of which were as follows: Freight,

Same big Saving guaranteed to you!

Nine rooms heated with an UNDER-FEED at one-half the former cost. Not a mere hap-hazard saving; but a guaranteed saving a saving that you, too, can enjoy. Read the letter:

"The UNDERFEED is heating nine rooms and gloss very successful results with about ten tons of saft coal per season. You can always rely on my patting in a good word for the UNDERFEED as it is saving me at least 50'. in my fuel bills each season." (Signed)
Herman W. Koch, 723 Chestnut St., Burlington, Wis.

CUT COAL BILLS DERFEED urnaces and Boilers

The burning principle of the UNDERFEED is that of a condle held right end up. The first strends is always below the thought off, and flater. Due to never smothered or chilled. Smoke, seet and gir-sult valuable heat characters our commond at the pass up through the flame.

Because of this scientific principle, the UNDERFEED burns the cheaper grades of where a hower chickers or porth berned cooks. Clean, uniform, ample

NEW YORK CITY

\$1,875,019,990; passenger-traffic, \$522. 103,907; mails, \$45,348,600; from exprecompanies, \$65,089,474. Incidentals officing- and buffet-car service, operation of hotels and restaurants, sale of vending privileges on trains and at stations, pareel-rooms at stations, demurrage, storage of freight and baggage, telegraph and telephone wireleased to other companies, operation of grain elevators, etc.) yielded \$60,414.597. All other transportation charges yielded \$76,087,611. The last item embraces sleeping- and parlor-ear service, freight of milk, which has virtually an express stvice, switching charges, and the operation

of special trains.

This total, using the first nine months as a basis, will reach \$3,000,640,502 when the year closes, officials estimate, and without doubt will exceed it. Never before in the history of railroad operation have the roads had so great a gross income.

"Expenses have not kept pace with the rapid rise in receipts, altho they have measurably increased. From a total of \$182. 881,260 in January, expenses had increased to \$201,235,394 in September, approx-mately 11 per cent. During that period. receipts had increased from \$260,054,300 to \$324,954,301, approximately 25 per cent. The chief items of expense for the nine months' period, for which returns are available, are as follows: Maintenance of way: \$120,157,526; maintenance of equipment. \$141,740,069; transportation, \$858,973-536; traffic, \$46,679,422; miscellaneouoperations, \$19,964,769; general expenseuncluding administration), \$61,996,428 All operating expenses totaled \$1,744,100.

"On the same hasis, the year's expensewill approximate \$2,346,066,980, leaving net revenue from operations \$1,254,57%, 512. From the last figure, however, much be deducted the railroads' annual taxbill, approximately \$155,625,546, and bad debux down on the books as uncollection revenue approximating \$965,928, a total

of \$150,501,474.

'About 230,300 miles of railroad were in operation during the year. In the first months the total fell below 230,000. During the latter part of the year it exceeded 231,000. Using 230,000 as an average, nturns show that for every mile of road operated in the country the railroads will receive this year approximately \$15,655 a gross receipts, and a net meome of \$4,771. or little more than 30 per cent, of the gro-Compared with previous earnings, not me come for 1916 shows an increase of mon than 52 per cent, over the fiscal year of 1915 50 per cent, over 1914, and 34 per cent. over 1913.

"Wide divergence in receipts among the "Wide divergence in receipts among the roads of various sections is disclosed. overburdened railroads of the East have skinomed the cream of the traffic. The congestion at Eastern scaports and on almeevery Eastern road has spelled, in gluttesidings and slow-moving traffic, a flood of revenue, the like of which was undreamed of even a year ago. For every mile of the 59,200 in the Eastern group, more than \$20,000 has been received in revenue, and every mile has carned a net income of

mearly \$5,900. "While the usual eastward trend of traffic, the great demands of nations at war, and the location of most of the country's factories, munition and otherwise, in the East are attributed as prime causes for this condition, secondary attributes are said to lie in the fact that Eastern roads for the most part have short hauls and traerse densely populated areas. Especially is this noticeable in the revenue from passenger-traffic, Eastern roads with 59,20 miles having received almost as much in passenger-fares as all the rest of the roadin the country put together with a total

of 170,800 miles. The railroads of the South, with 42.60 miles, come next to those of the East m

revenue per mile, with \$11,922, about 58 per cent, of what the Eastern roads reerived. On Western roads the revenue per mile was approximately \$11,217, with net income of \$3,614. The Western roads, however, show a greater net income in proportion to receipts than is shown in any other section. Approximate percentage of not income to gross receipts was: For the entire country, 30 per cent.; for Eastern and Southern roads, 29 per cent.; for Western roads, 32 per cent. The difference is attributed by officials to careful administration and to higher tariffs prevalent in the sparsely settled sections of the West than in the East.

"Western roads also lead those of all other sections in the amount of taxes paid, \$71,263,601, with Eastern roads second with \$62,448,341. The annual taxes of Southern roads are placed at \$21,623,604. Eastern roads, however, contracted mure bad debts than those of other sections, the showing being: Eastern roads, \$145,804; Western roads, \$307,653; Southern roads, \$152,570.

"The figures show that the American people are traveling more and farther than ever-at least on American railways. Beginning with \$49,805,917 in January, the public's monthly passenger-fare ruse more than 40 per cent. to \$70,000,000, slightly surpassing this figure in the holiday months of July and Angust. In the short month of February, passenger-receipts slumped to \$46,618,325. They rose from \$74,253,790 in May to \$61,548,716 when the vacation rush started in June, and to \$70,185,756 at its height in July, receding to \$66.586,-472 in September, the last month for which complete returns are available.

Not withstanding the enormous volume of business landled and the resultant new high level in net meome, officials declare that the car-shortage situation has seriously handicapped the reads in recent months, and that were it not for this and the congestion in the East, the roads would show still greater revenues and income,"

Just a Guess.—An old hen was peeking at some stray earpet-tacks in the yard.

Now, what do you suppose that hen is eating those tacks for? " said Henry.

" Perhaps," rejoined his little sister, " she is going to lay a rarpet." - Tit-Rits,

THE FRANKLIN CAR

WHEREVER you go nowadays and hear men talking motor cars, you will find that one man has just bought the make of car the other has just abandoned.

This means that most buyers are still groping for real standards by which to judge motor car efficiency.

New cars come out, old cars work up new features and "talking points" and so the trade shifts.

Watching all this is the solid group of Franklin owners who do not change.

These men and their families know what they have in the Franklin Car and stick to it. It is the rarest exception for one of them to change and then he always comes back again. Our records show this.

What holds these men? What makes them talk Franklins? Why has the demand for Franklin Cars doubled, and doubled, and then doubled again within the last two years?

Perhaps it is because these men know some things that the average motorist does not know: things about comfort and safety, gasoline economy, tire saving, effortless control, it new mastery of road and teaths conditions.

The man who has driven a Franklin and any other make of car, knows that he can drive his Franklin farther, on longer trips, with less fatigue, with less trouble and at low cost than any other car he ever owned.

The Franklin dealer in your town can prove this to you.

Ask him.

MARMON 34

THE PROMISE AND ITS FULFILLMENT

Here, verbatim, are the unusual claims we made for the Marmon 34 at the New York Show in 1916; that

THIS CAR FULLY EQUIPPED

Will ride with comfort and safety and handle with extraordinary ease over ordinary highways at from 50 to 55 miles per hour. Will accelerate from 10 to 50 miles in less than 18 seconds on any hard level road. Will easily do 65 miles per hour. A car of such refinement in detail as to eliminate incessant attention. A car of great economy in fuel and tires. Seven-passenger capacity, 136-inch wheelbase, completely equipped with spare wheel and tire, gas, oil and water compartments filled, full tool equipment—weighs 3540 pounds. (1100 pounds lighter than any other car of equal size and power.)

The 2500 owners in America and Europe, many of whom are experts, qualified by experience to best know materials and construction, who today back these claims, proves that the Marmon 34 did more than merely fulfill its promises—it exceeded them.

And so at the motor show this year the Marmon 34 need make no more promises. It has been tried. Its promises of last year are now established facts.

WAR APPROACHING A CLIMAX

THEN THE TEN ALLIES SLAMMED, if they did not lock, the door of diplomacy in the face of the Central Powers' request for a peace-conference, what did the act portend for Europe and for the United States? This question lurks behind all the editorial comment on the joint

reply sent to the Teutonic allies on December 30 by the governments of Belgium, France, Great Britain, Italy, Japan, Montenegro, Portugal, Roumania, Russia, and Servia. Will the great war, as some predict, now enter upon a period of greater ferocity and ruthlessness than it has yet witnessed, with features that may drag this nation into the vortex? Or is peace, as others declare, really approaching on swift feet, despite all obstacles? In either case, a climax of the struggle is believed to be near. While conclusive evidence on which to base an answer to these questions is not available, we may examine some of the testimony, official and unofficial, which has led various observers to such different conclusions. The first impression of the German press, as gath-

ered from Berlin dispatches, is that the Entente's reply can only be answered by the sword. "Let Hindenburg answer!" exclaims the Berlin Lokal Anzeiger, which prays that "the hymn of Luther may flame up in all hearts and fire the furor Teutonicus"; and the Vossische Zeitung declares that "after this insulting refusal there is only one answer—energetic fighting until our cold steel forces the enemies' feverish temperature down to normal." "Peace-talk noist now cease," insists the Täglische Rundschau. "The war will continue and the Entente statesmen will not be able to shake off the responsibility for its continuance," says the Socialist organ Varients. In Austria and Hungary also the editors generally interpret the Entente's

reply as a flat refusal to enter a prace-conference. This refusal, declare the Tageblatt and the Neue Freie Presse, of Vienna, ean only be answered on the battle-field; and this view is shared by the A Zest and the Pester Lloyd, of Budapest,

But to balance against

the pessimistic attitude of the Teutonic press, we have rumors, more or less vague, but ostensibly from inspired sources, that Germany is preparing a counter-reply which will "permit a first point of contact in peace-progress." "It is thought in some quarters," says a Berlin dispatch, "that the reply of the Entente will not close the door to the possibility of peace-diseassions." "Those who hold that belief," we read further, "contend that this

would be done either in response to a further invitation from President Wilson to both sides to state their terms simultaneously and confidentially, or, perhaps, through an open declaration of their terms by the Central Powers," "The Emperor and Empress of Austria-Hungary," according to a dispatch from London to the New York Tribune, "have sent a special emissary to the Vatican, urgently requesting the Pope to intervene for peace." THE "WAR-MAP,"

The shaded parts are now in the possession of the Central Powers. The heavy black lines show approximately the present lines of battle.

TERMS: \$3 a year, in advance; three months, \$1; single copy, 10 cents; postage to Canada 85 cents a year; other foreign postage, \$2.00 a year. BACK NUMBERS, not over three months old. 25 cents each; over three months old, \$1.00 each. SEMIANNUAL INDEXES, issued in January and July, will be sent free to subscribers who apply for them. RECEIPT of payment is shown in about two weeks by date on address-label; subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF AD-DRESS should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions in-

terrupted and their files broken in case they fail to remit before expira tion. Notwithstanding this, it is not assumed that continuous service is desired; still, subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as second-class matter. Entered as second-class matter at the Post-office Department, Ottawa, meantime, says a Washington correspondent of the New York Times, "President Wilson is preparing to send a new note to the belligerent Powers in an effort to find a way, mutually convenient to the Entente Allies and the Central Powers, for

BACK TO THE TRENCHES.

- Kirly in the New York World.

an exchange of views on their purposes, with the object of ascertaining whether peace is possible."

Press comment in the Entente nations indorses the rejection of Germany's proposal and expresses confidence in ultimate victory. The London Morning Post quotes its Budapest correspondent's statement that the peace-proposals of the Central Powers are prompted by "the knowledge that relief must come within six months from the present time at the outside if internal troubles of the most serious character are to be avoided," since "in Austria-Hungary the available stocks of food will not even last for six months." In other words, if this testimony is correct, Austria's supplies of wheat and maize will be exhausted two months before the earliest of her new crops can be harvested. "When that time comes," this correspondent affirms, "peace will have to be made on any terms." To quote further:

"The feeding of the Army is the main concern of the Central Empires, not that of the population, as may be imagined; yet even this can not be managed for more than another six months, even allowing for the fact that the Austro-Hungarian forces behind the front are on half rations and that very soon, in all probability, the men on the Western front will fare no better.

"Under these circumstances, the Central Powers have but a very limited time in which to bring about an understanding as regards the conference itself. The people are already desperate, and the troops may become desperate, too, as soon as they experience on their own persons the borrors of the present food shortage."

"Germany is eaving in, and will come down with a terrific crash," declares P. M. Van der Klei, who has just returned to the United States after a fourteen months' sojourn in Germany. But Mr. Van der Klei adds, in an article in the New York Evening Sun;

"Germany is starving, but Germany has faith—faith in herself. The firm belief of the German people in their invincibility is helping them to endure hardships and privations that no other race would endure. The German people want peace. But the German people still believe that they are victors. The majority of the German people still believe that it is in the power of their Government to obtain peace at any time, and they actually wonder why their Government is not a little more magnanimous to their enemies. Will their Government tell them the truth?"

England's official spokesmen do not belittle the difficulties that still lie before them. "During the next few months the democracies of England and France are going to be tested as never before," declares Arthur Henderson, of the British War Council, who goes on to say:

"We are not only fighting against material forces which are highly organized, but we are engaged in a great spiritual conflict upon the result of which depend all our ideals. . . . I can not tell you how many months and what sacrifices stand between us and victory."

And Earl Curzon, another member of the War Council, is quoted in a London dispatch as saying:

"It seems likely that well into another year, perhaps longer, must we continue this dreadful tragedy that is turning the world into hell and wrecking the brightest promise of nations. Our spirit can not falter, since an inconclusive war or a patched-up peace means for us not only humiliation, but destruction."

From Paris comes a prediction that the Germans "will strike a desperate blow" on the Western front, possibly through Switzerland, in February. But the Temps declares that "the French and British, with a great numerical preponderance, will not wait till it pleases the enemy to choose his time and place of attack." And there seems to be a general belief among the war-correspondents that the Entente Allies are preparing to take the offensive on an unprecedented scale on this front as soon as weather conditions permit.

The reply of the Ten Allies to what they characterize as the Central Powers' "pretended propositions of peace" begins with a protest against "the two essential assertions of the note of

Copyrighted by the International News Service.

THE REAL BAR TO PEACE.

-McCay in the New York American.

the enemy Powers that pretend to throw upon the Allies responsibility for the war and proclaim the victory of the Central Powers." Declaring that those two assertions suffice to "render sterile all tentative negotiation," the Entente reply, which is dated Paris, December 30, goes on to say:

SHE MUST WALT FOR HELP

-Bradley in the Chicago Italy News.

"The Allied nations have sustained for thirty months a war they did everything to avoid. They have shown by their acts their attachment to peace. That attachment is as strong to-day as it was in 1914. But it is not upon the word of Germany, after the violation of its engagements, that the peace broken by her may be based.

"A mere suggestion, without a statement of terms, that negotiations should be opened, is not an offer of peace. The putting forward by the (German) Imperial Government of a sham proposal lacking all substance and precision would appear to be less an offer of peace than a war-maneuver. It is founded on calculated misinterpretation of the character of the struggle in the past, the present, and the future."

As for the past, it continues, "the German note takes no account of the facts, dates, and figures which establish that the war was desired, provoked, and declared by Germany and Austria-Hungary." To quote further:

"At the Hague Conference it was a German delegate who refused all proposals for disarmament.

"In July, 1914, it was Austria-Hungary who, after having addrest to Servia an unprecedented ultimatum, declared war upon her in spite of the satisfaction which had once been accorded.

"The Central Empires then rejected all attempts made by the Entente to bring about a pacific solution of a purely local conflict. Great Britain suggested a conference; France proposed an international commission; the Emperor of Russia asked the German Emperor to go to arbitration, and Russia and Austria-Hungary came to an understanding on the eve of the conflict. But to all these efforts Germany gave neither answer nor effect.

"Belgium was invaded by an Empire which had guaranteed her neutrality and which had the assurance to proclaim that treaties were 'scraps of paper' and that 'necessity knows no law.'"

The reply goes on to say that the "war-map" of Europe on which Germany bases her claim to the rôle of victor "represents nothing more than a superficial and passing phase of the situation and not the real strength of the belligerents." As for the future—

"the disasters caused by the German declaration of war and the innumerable outrages committed by Germany and her allies against both belligerents and neutrals demand penalties, reparation, and guaranties. Germany avoids mention of any of these."

After characterizing Germany's overtures as "a calculated attempt" to impose "a German peace" by creating "dissension in public opinion in the Allied countries," by stiffening public opinion in Germany, and by deceiving and intimidating public opinion in neutral countries; and after declaring that these overtures "attempt to justify in advance in the eyes of the world a new series of crimes—submarine warfare, deportations, forced labor, and forced enlistment of the inhabitants against

their own countries, and violations of neutrality"—the ten Allies formally "refuse to crossider a proposal which is coupty and insincere," They repeat their declaration that "no peace is possible so long as they have not secured reparation for violated rights and liberties, the recognition of the principle of nationalities, and of the free existence of small states; so long as they have not brought about a settlement calculated to end once and for all forces which have constituted a perpetual menace to the nations." The reply ends with a recital of the wrongs suffered by Belgium at the hands of Germany,

This reply, most of our editorial observers agree, does not but the door to peace. "In spite of Berlin's indignation, the door to peace has not been closed by the answer of the Allies," says the New York World, for "if Germany is sincere in the desire for peace, there is still an opportunity for the Imperial Government to state its terms, and to state them in such a manner that they can not be ignored." "That," it adds, "is what Berlin will do if the original proposal was made in good faith."

"Germany wants peace, but she wants it at once," declares The Fatherland, a German-American organ published in New York. "She wants it now on reasonable and humane terms, or a year from now on whatever terms she may deem fit to impose," according to this authority, which predicts that if Germany has not got the peace she wants before the last of February "she will embark on a new phase of submarine warfare on a titanic plan." To quote further:

"She will not break her pledges to the United States. She will not sink without warning ships regarded as merchantmen under international law. It should be remembered, however, that ships armed beyond certain minimum requirements must be considered as war-ships. If Germany could sink almost half a millon tons of merchant shipping in one month while strictly adhering to her pledges, how many more will she be able to sink when she formally declares a submarine blockade of Great Britain? A delay of three days in the invasion of Belgium cost the Central Powers Calais and Paris. Germany will not repeat her mistake, for delay in declaring a gigantic submarine blockade of Great Britain may cost her the war."

That the success or failure of Germany's peace move is a matter of more than sentimental concern to the United States is an aspect of the situation emphasized in many editorial pages. A correspondent of the New York World reports that the formula "peace with the world or war with America" is gaining popularity in Germany, and a Washington dispatch to the New York Journal of Commerce recently reiterated the statement that "President Wilson's note to the belligerents, as well as being a move for peace, was also intended to point out that the position of the neutrals was becoming intolerable." "We may have to crawl or fight," remarks the Chicago Tribune.

A BILLIONAIRE YEAR

A BILLION DOLLARS in railroad profits, nearly eight billions in total foreign trade, three billions in the yield of our mines, and fifteen billions in national bank resources are some of the staggering figures that our financial writers discover as they set down the record of 1916. Yet fear seems to cloud their hopes as they look ahead to changes that may follow the war and may bring our glittering prosperity crashing to the ground. The stagnation of two years ago is not forgotten. From that condition, recalls the Boston News Bureau, the year 1915 was one of recovery and of war stimulus, while the year 1916 has witnessed its "full, extraordinary development, measurable in almost every field of enterprise—manufacturing, mining, merchandise, traosportation, finance, and

speculation." We are advised, moreover, that this activity resulted not only from the demand of war from the outside, but is to be accounted for also by the "removal of threat of foreign competition, in this and many neutral markets, which gave an unexampled free play to growth of domestic prosperity." The Chicago Herald recalls the Roman emperor who prayed fortune to drive a golden nail in a lucky moment for him, so that it might be made everlasting, and thinks that, no doubt, "something of the same feeling surges up in the railroad bosom at the contemplation of the highly satisfactory results of operations for the year just ending." Also, there is no reason, this journal tells us, why the general public should not share in this feeling, because railway prosperity is intimately connected with the prosperity of the whole country, and "they rise and fall together." From the

report of the Interstate Commerce Commission we learn that more than one billion dollars not income was carned by the railroads in the year 1916, and that the huge total is the "peak of prosperity" in the history of our transportation, and stands more than one-third higher than the total of 1913, hitherto the banner year. The statistics gathered by the Commission are complete for nine months, and are made the basis for calculation for the entire year. In Washington dispatches we are given these impressive figures:

"For the first nine months of the year the Commission's figures show that the railroads collected \$2,654.829.647 from all sources of operation, the chief of which were as follows: Freight, \$1,875,019,990; passenger traffic, \$522,103,907; mails, \$45,-348,600; from express companies, \$65,089,474; incidentals—dinings and buffet-ear service, restaurants, and the like—\$60,414,597; and all other transportation charges, \$76,-087,011. The last item conbraces sleepings and parior-car service, freight on milk, which has virtually an express service, switching charges, and the operation of special trains.

"This total, using the first nine months as a basis, will reach \$3,600,640,502 when the year closes, officials estimate, and without doubt will exceed it. Never before in the history of railroad operations have the fonds had so great a gross income.

Expenses have not kept pace with the rapid rise in receipts, although they have measurably increased. From a total of \$182,-881,269 in January, expenses had increased to \$203,235,394 in September, approximately 11 per cent. During that period,

receipts had increased from \$260,054,306 to \$324,954,301, approximately 25 per cent.

"On the same basis the year's expenses, it is estimated, will approximate \$2,346,066,990, leaving net revenue from operations \$1,254,573,512. From the last figure, however, must be deducted the railroads' annual tax-bill, approximately \$155,625,546, and bad debts—down on the books as uncollectable revenue—approximating \$965,928, a total of \$156,591,474."

In some quarters we find appreciation of this showing tempered by a certain mood of question, as, for instance, when the New York Journal of Commerce asks whether our railroad conditions are "normal." The roads can not expect present traffic conditions to continue indefinitely, this journal points out, and when business "slows down" and export trade becomes normal, the carriers may have less to do and, of course, will lose corre-

> spondingly in their carnings. But a graver danger seen by this journal is stated as follows:

> "The necessity of submitting to a situation in which expenses and wages are practically raised by Governmental action, while rates are lowered through the same agency, would be somewhat alarming in any event, but becomes particularly trying at a time when capital costs are rapidly moving upward. This is the real abnormality of the railroads' position, and it points to the existence of a difficulty which is only temporarily relieved by handsome traffic receipts.

"In view of these circumstances, those who point to the present prosperity of the carriers as a reason for burdening them with a permanent charge in the shape of inflated wage-bills, on the one hand, while crippling their revenue-carning power on the other, are not able to make out a very good defense of their position."

But the New York World believes the danger of the railroads is their "apoplectic condition."

is their "apoplectic condition," and reminds us that they have recently been on the verge of a breakdown, due to a congestion of freight traffic too great for their facilities. To carry out the medical metaphor, The World adds, "they are suffering from a hardening of the arteries resulting from their failure to maintain an equipment clastic enough for the new strain put upon it." What "starving" has been done, The World goes on to say, has been "keeping additions to equipment at a minimum that dividends might be fattened," and it concludes that the "cost of the mistaken policy may be found by estimating how much greater the bill of net would have been if the railroads had been prepared."

As one indication of the volume of traffic carried by the railroads we have a compilation by the National City Bank of New York showing that in 1916 we set the world's record for exportation of manufactures. The highest export record ever made by Great Britain, the world's largest exporter of manufactures, was two billion dollars in 1913, the year preceding the war. In 1916 our manufactured exports exceeded three billion dollars. Prior to the war the United States ranked third among the nations in exporting manufactures; Germany was second and France fourth.

Our present financial status is officially sketched in the report of the Controller of the Treasury, John Skelton Williams, who places the resources of the national banks, on November 17, at the aggregate of \$15,520,000,000, the largest in the country's

WANTED A PIN.

Starrett in the New York Tribune

record. This figure, as we read in a Washington dispatch to the New York Times, exceeds by \$1,000,000,000 the combined resources of the Bank of England, the Bank of France, the Bank of Russia, the German Reichsbank, the Bank of Italy, the Bank of Spain, the Bank of the Netherlands, the Bank of Denmark, the Swiss National Bank, and the Imperial Bank of Japan, and in the same dispatch Controller Williams is quoted as saying that "the national banks of the United States for the first time now report a surplus and undivided profits exactly equal to their capital stock." Furthermore, for the first two years "under the operation of the Federal Reserve system the increase in resources of the national banks of this country has been more than twice as great as the total increase shown for the five-year period preceding the inauguration of the Federal Reserve system, that is to say, from November 6, 1909, to October 31, 1914." In crediting the prosperous banking conditions to the new system of reserve banks, the Controller of the Currency takes "an optimistic view," according to the New York Journal of Commerce, which admits the new system has been useful in connection with our commercial expansion, and adds:

"Without it there would probably have been a good deal of confusion, lack of needed cooperation, and much greater cost and loss in the unwonted development and expansion with which banking had to deal. Before there was no effective coordination of banking facilities and their adaptation to changing requirements. The occasion has been a useful test of the new system and has served to indicate within a short period what changes are needed to strengthen it. There will be occasion for another test under wholly different conditions when the strain of the war is over."

In another field, the mineral industry, this country also records 1916 as its biggest year. The report of the Geological Survey, issued by Secretary Lane of the Department of the Interior, shows an increase in production of 25 per cent. over 1915, or a total value of three billion dollars. Minerally speaking, we were found in "a thorough state of preparedness," according to the New York Sun, which points out that—

ing, we were found in "a thorough state of preparedness," according to the New York Sun, which points out that—

"CALL THE WAGON!"

-Brinkerhoff in the New York Evening Mail.

"Europe made a great draft upon all our natural resources, and especially upon our mineral output. This was not confined alone to the two most important minerals, iron and copper, but to the minor products, zine, lead, platinum, and many of the rare elements. Every one of the Rocky Mountain States showed a large increase in production, while Alaska contributed more than fifty million dollars to the general total, an excess of 50 per cent, over any previous year. The Secretary cites the fact that the mines of five States—Arizona, Idaho, Montana, Nevada, and Utah—paid more than one hundred million dollars in dividends.

"A product which was not so entirely dependent upon foreign consumption, but which has nevertheless shown a wonderful increase in output, was cement. The great demand for this material and its use, far in excess of any previous year, in constructive work, furnish an index of the general business of the country."

The Sun also notes in the report an important 30 per cent. gain in by-products, such as coke, benzol, and other valuable chemical substances, which "would seem to be a step toward the solution of some of the perplexing problems that the war brought to us," The report sets forth a "most encouraging condition of national independence," this journal goes on to say, and proclaims the fact that "never before were the metals better utilized or extracted with less waste."

But the "miracle" of 1916, which is dismissed with a sentence in the annual report of the Secretary of the Treasury, is that "we have been transformed from a debtor into a creditor nation." So writes the financial expert of the New York Tribuse, who tells us that this is "not the opening of a new chapter" in our economic history, but the "beginning of Book II," and he explains that—

"A creditor nation is one that has capital to lend. When the war began there were five of these—namely, Great Britain, France, Germany, Holland, and Belgium. All the others were borrowers, including the United States. We had borrowed in Europe more than any other people and sent each year great quantities of goods and gold to pay the interest on the debt.

"Now American capital is being loaned on all five continents. The United States dollar is a more important unit in

THE NEW TENANT.

1917-"It's pretty bad, but I'll try to clean it up."

-Marcus in the New York Times.

RINGING OUT 1916.

international exchange than the English pound sterling. Toward the end of the year Reginald McKenna, formerly Chancellor of the British Exchequer, said the buying power of Great Britain and her Allies was limited by the rate at which wealth in pounds sterling could be converted into dollar exchange. Partly to expedite that process, the Bank of England, hitherto the most aloof of all financial institutions, entered into financial relations with the New York Federal Reserve Bank. The money center of the world, the it be so only for the duration of the war, has shifted to New York."

As dubious evidence of "good times" we have the statement of Bradstreet's that there were 16,498 failures reported to it during 1916, which is a decrease of 13.3 per cent, from the preceding year, and of 1,6 per cent, from 1914, but an increase of 13.3 per cent, over 1913, and of 75 per cent, over 1906. Finally, in a survey of the year as a whole, the Boston Christian Science Monitor observes that it can not be determined now "whether the crest of the present prosperity has been reached," and it holds that "there should be no material recession or depression following the establishment of peace, if proper safeguards are employed to maintain the world's commerce."

BUSINESS AFTER THE WAR

IN TIME OF WAR PREPARE FOR PEACE is the cautionary editorial message of sundry observers, especially those of the financial press, as they forceast readjustments in the world's trade that will follow the end of hostilities. This country and other neutrals will no longer enjoy a kind of warmonopoly, such as has been their fortune for two years past, and the New York Commercial and Financial Chronicle says "we have to-day a challenge to American ingenuity and business foresight to heed the summons of the hour and prepare for a new day in which old things will largely have passed away." This financial authority informs us that pressure from various directions is already being put upon Congress to provide for this new industrial and commercial situation, the there is a good deal of doubt as to just what the situation will be. To try to pierce the yeil of uncertainty, we are asked then to consider the main present and future industrial and economic factors in the warring countries. First, there is organization both for production and for competition, much developed by the exigencies of the war. Then there is the problem of labor, continuing cheap in comparison with ours because of the introduction of women and their unexpected efficiency. Thirdly, there is increased production coupled with lower cost and probably some accumulation of stocks in certain directions. How, then, shall we cope with these factors?

"The situation before us is to be met first of all by open doors. This is clearly the primary condition. In the long run, we can only sell to those from whom we can buy. Trade, or exchange, is the fundamental condition of commerce. Where industry needs development, some other means should be found than by shutting out those who have something to sell, or making it difficult to secure free exchange, Good highways, highly efficient railway systems, an abundance of swift and cheap transportation over all seas, will have a greater importance to us than ever in the past. Free acress to the markets of the world and open doors in all nations will be of prime importance even if to secure them we have to throw our own doors open. It will be discovered that the best protection for industry, as the most honorable, is to demand the best and to strive to provide for every man both the means of producing the best and a market for his product. The path of prosperity for America should certainly not be fear of what others may have to sell, or to have our place in the world hedged in on any side by closed doors."

Particular stress is laid by this journal on our need of organization, a quality that is being understood in a new way by the belligerents, who will be sure "to carry it into every department of their industrial and commercial life." Hitherto we have been content largely with seeing organization applied in certain great industries, but now it has become "a vital truth, and must be thoroughly studied and universally applied." In line with this journal's thought on organization is the utterance of Mr. Frank A. Vanderlip, president of the National City Bank of New York, who is reported as saying in an address in Chicago:

"State socialism in Europe may develop problems—the like of which have never concerned our minds. We may have to meet collective buying, state-aided industries, forms of governmental cooperation with business quite outside our range of thought. Governmental control of ocean-borne commerce and novel factors in international finance will be subjects for national consideration. Indeed, there may ultimately come out of the great war changes in forms of government that will have profound and world-wide influence."

The first effect of peace, notes the January Bulletin of the National City Bank of New York, will be a shifting of the demand from war-goods to peace-goods. An enormous amount of work will be required in Europe to restore industrial order, and in other countries to make up for the time that has been lost. There will be a great outlet for agricultural implements, we are told, and for machinery of various kinds, "to make up the loss of man-power." The shipping industry will have a loog program ahead of it, which will be an important factor in the steel market, and there is every reason to believe that the railways of Europe will need new equipment. The demand for our raw material, such as lumber and the metals, and for agricultural products will be strong, while the reduction of the number of meat-animals that has occurred in Europe will require years to replace, and the loss of horses "threatens to interfere seriously with farm operations." These are some of the prolonged effects of the war. Moreover, "there is work which ought to be done in this country, and which is delayed by the high costs now prevailing. In one immense field it is known there has been failure for ten years to keep pace with the country's development, and that is in the improvement of railway facilities, particularly at the terminals."

While the New York Journal of Commerce scoffs at the idea that there will be any surplus of goods over domestic needs when the warring countries are at peace to be "speedily dumped" upon the American markets, it holds that, on the other hand, not for a good while will there be a large demand for our products after that for war-supplies falls off, because there will he "a seriously impaired power to pay for them." Our exports to those countries, we are told, are sure for a time to be even less than before the war, and the building up to a new, normal level will be slow at first. Considering the stimulus to action received in France and Great Britain during the war, this authority notes, and the bringing together of forces and cooperation for the largest results at the lowest cost, it is probable that the economic power of these nations will be "permanently increased," and they will soon become "stronger than over in the competition of the world."

A revised tariff is looked upon by some of our financial authorities as a first line of defense when peace comes. This is "fundamental," according to George M. Reynolds, president of the Continental and Commercial National Bank of Chicago, who, in an address before that city's Association of Commerce, said in part:

"The tariff question is intimately related to the labor problem. We can not allow too much of the cheap-labor commodities of Europe to come in after the war. We are in danger of serious labor disturbances when the high-priced men have to go back to normal salaries,"

Of like mind is George W. Perkins, of New York, who bases his plan of peace-preparedness on two lines, which he lays down in an interview in Collier's Weekly, as follows:

"In the first place we must have a Federal tariff commission.

It can not come too quickly. It should be in constant session,

studying both our tariff and the tariffs of all other countries studying and acting from a scientific, and never from a political, point of view. Such a board must be permanent, non-partizan, expert, with the broadest possible powers.

"The other thing that should be done at once is the creation of a Federal incorporation act. Through transportation, through electrical communication, we have completely outgrown the boundaries of our separate States, with their weak and contradictory corporation laws. Just remember this thing,"

CARRANZA'S "LAST CHANCE"

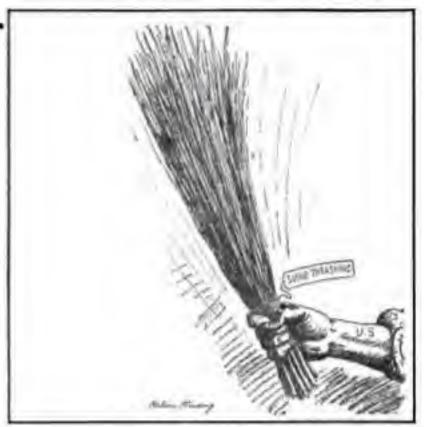

N THE NOVEMBER ELECTION, Mr. Wilson received 9,116,296 votes, and 9,116,296 voters, approximately speaking, would, the Springfield Republican thinks, probably say to him to-day, "Give Carranza another chance." But there are editors who do not believe the First Chief deserves another chance. He has rejected the protocol drawn up by the Mexican-American Commission providing for the withdrawal of the Pershing force with certain mild conditions, and he has shown either weakness or bad faith, they think, by allowing Villa to regain power in northern Mexico. Mexico, the Nashville Banner now fears, can only "be made to respect the rights of the United States through fear of this country's superior power." Why, protests the Detroit Free Press, "one would think that Washington was dealing with a great European Power and trying to clean up some delicate and dangerous situation; whereas it is only engaged in putting over a trivial matter that ought to be ended by a sharp ultimatum with a sting in it." But President Wilson does not seem to be preparing to follow such advice as this. The well-informed correspondent of the New York Times at Washington expects to hear it announced before very long that the American forces in Mexico will be

THE PROVERBIAL PREACHER'S SONS.

—Darling in the Des Moines Register.

voluntarily withdrawn, that Henry P. Fletcher, the American Ambassador to Mexico, will soon be ordered to his post, and "that despite the inability of the Joint International Commission to arrange a troop-withdrawal agreement satisfactory to both Governments, the Commission may be kept alive to consider other questions, no final decision to be reached on these questions until after the troops have been withdrawn." Since "Carranza's position is a delicate and a difficult one," the New York Journal of Commerce believes "our Government can afford to be patient."

MEXICO'S DISSENT NEED.

- Harding in the Brooklyn Eagle.

And this thought is thus developed in detail by the Springfield Republican in the editorial already quoted:

"General Carranga's position regarding the Pershing expedition is this: Its prolonged presence in Mexico steadily weakens the de facts Government, already recognized by the United States, because the Villistas represent to the Mexican people that Carranza is indifferent to the occupation of Mexican territory by a foreign army; or is incapable of securing its retirement. That Villa's gain in military strength in the past two months has been due more or less to the popular success of such an appeal to Mexican patriotism is wholly probable. Granted the right of the United States, in the first instance, to pursue into Mexico the Villa bandits who had attacked Columbus, N. M.—and no one in this country condemned the pursuit-there is a good case for our Government in demanding guaranties from Carranza regarding the adequate policing of the Mexican side of the border before withdrawing Pershing's forces. But the fact is that paper guaranties would be worthless,

"It is also a fact that if Carranza should sign a protocol recognizing the right of the United States troops to remain forty days in Mexico before marching back across the border, he would expose himself to attack by his enemies at home for conceding the principle of a legal invasion of Mexico by foreign military forces, in the absence of express treaty stipulations conveying to the United States such a privilege. In Mexican domestic politics this is a very important point for the de facto Government to consider, altho from our American point of view the legal principle of unqualified sovereignty, to which Carranza clings so tenaciously, utterly collapsed under the strain of actual conditions and necessities when the Columbus raid took place.

"The present conditions are such that rather than indirectly promote the fall of Carranza's Government, the Administration should go to the extreme of concession and withdraw Pershing's forces from Mexico unconditionally, in accordance with the defacta Government's representations concerning the seriousness of its position. It is perfectly clear that such a concession can not be wrung from the President of the United States by coercion; Carranza is helpless against the Pershing expedition. It is a concession, however, which evidently needs to be made in order that the Carranza Government may be given every possible chance to maintain itself in Mexico and solve the problem of the Mexican revolution.

"The border can be protected without keeping Pershing in Mexico. The regular Army is now considerably larger than it was last spring, and it will increase gradually in size; there are Guard regiments also available. The precedent set by the Pershing invasion of Mexico will be sufficient to determine the Government's future course in dealing with serious border-raids. The immediate thing to do is to give Carranza all the chance he believes himself entitled to; and to that end it may be hoped that the President will send Mr. Fletcher as Ambassador to Mexico City immediately after sending orders to General Pershing to come home."

This advice is based on the most friendly feeling toward Carranza and the most optimistic view of his prospects. But the Philadelphia Record, a supporter of the Wilson policies, is losing its faith in the Carranza regime. The de facto Government, it declares, "is gradually disproving its right to be regarded as a Government." What, it asks, is the next step for our own Government to take? The Record does not presume that the United States has any intention of conquering Mexico and setting up a Government of its own. "Nor is it probable that the United States will make a common cause with Villa to overthrow Carranza and set up Villa in his place." But two courses of action are open if it becomes "impossible to do anything more with Carranza":

"One is to reenforce Pershing and set him free to hant down the handits wherever he can find them. That would involve us in war with Mexico if Carranza should resist our troops. For six months Pershing has been standing still while diplomacy tried to settle the boundary difficulties. The United States might increase Pershing's force and wage war on the bandits, and any forces that cooperated with them.

"Or we might recall Pershing to the vicinity of the border, and establish our own patrol through northern Mexico, say, within fifty miles of the border. Our interest is limited to the maintenance of peace along the houndary. We might do that without any agreement with Carranza, or any other factional chief. We could keep the fighting, whatever there is of it, on Mexican soil instead of ours. We could keep our troops within, say, fifty miles of the border, which would be substantial evidence that we were not trying to conquer the country.

"Either course means fighting, but it does not mean conquest or invasion of Mexico beyond the distance necessary to secure our own territory from invasion. Either would be a far more moderate program than the effort to overthrow the de facto Government and set up something in its place."

Speaking as a consistent opponent of the President's Mexican policy, the New York Evening Mail suggests a more drastic program. It laughs at the President's faith in the revolutionary leaders in Mexico, whose only motive is declared to be "a passion for power, for plunder, and for lust." As a sheer matter of self-interest, to say nothing of Mexico's needs, we must see to it that a stable Government is set up in the neighboring Republic. Mexico's bandit-revolutionists and her 13,000,000 Indians can not, in the Evening Mail's opinion, create a Government. But Mexico has had three dominating forces which "developed Mexican civilization" and "made Mexico what she was in the days of Diaz." These were:

"First, the Spanish conquerors of years ago; secondly, the Roman Catholic Church; thirdly, invested foreign capital. . . . The contrast between conditions in that land while those three influences dominated and conditions throughout the Carranza-Villa period marks the difference in the ultimate results of the two kinds of Government."

Sooner or later, we are told, this country must identify itself with one kind or the other. Now, "Mr. Wilson has chosen the side that has meant murder, destruction, idleness," But, protests The Evening Med, "he must not be permitted to establish such a region firmly in power by the use of American dollars," In short, says this editor: "For a Carranzista Mexico, not a dollar! For a real Mexico, millions!"

FOREIGN - COMMENT

WHAT THE ALLIES MEAN BY PEACE

THE SLASHING INDICTMENT which the ten Allies bring against the Central Powers in their reply to the Teutonic peace-note is but a prelude to much harsher things, if we can judge from more or less inspired articles appearing in the French and English papers. One thing seems indicated, and that is the determination of the Entente to fight on until a positive decision is reached, and their confidence in final victory is only equaled by the similar certainty on the part of their adversaries. From every quarter this note of determination to continue the struggle is sounded. In the Russian Duma, Professor Milukoff, the leader of the Constitutional Democrats, thus voiced the popular determination to overthrow the German forces both within and without the Empire:

"We must say loudly that we won't give up the fight until our aim is reached. The moral support of the entire nation will give weight to our decision. In the interior, as elsewhere, a complete change is necessary before the objects mentioned in the Emperor's ukase can be achieved."

The views of London are as emphatic as those of Petrograd, for we find The Evening Standard writing:

"It is now quite time that beligerents and neutrals understood the true situation. The Allies believe they can inflict very shortly a crushing military defeat on Germany. She will then be offered peace on the lines of restitution of Alsace-Lorraine, relinquishing of her spoils, the loss of her colonies, and the payment of suitable indemnities, while her allies will have to meet the minimum demands of Russia and Italy."

More detailed is the summary of what the Allies intend to do when, to quote the words of Sir Hedley Le Bas in the Westwhich we find set out in the London Spectator. This influential weekly, which so often voices the views of the English governing class, is not, in any sense of the term, an inspired organ; none the less it has a curious habit of foreshadowing with remarkable precision the position subsequently taken by the Government. The Spectator sketches these stiff demands:

"The peace-terms are to start from the status que before the war, thus including the evacuation of the whole of northern France, Belgium, and Luxemburg, and of all lands taken from Servia, Roumania, Russia, and Montenegro.

"Alsace-Lorraine is to be restored to France. The Danish portion of Schleswig-Holstein is to go to Denmark; and Posen, Polish Prussia, and Austrian Poland are to be added to the new subkingdom of Poland which the Czar has pledged to create.

"The Slavs of Bosnia, Herzegovina, Dalmatia, Croatia, etc., are to be created into a new kingdom.

"Bohemia to be an independent state,

"The Roumanian section of Transylvania is to be added to Roumania.

"The whole Austrian Tyrol, plus Trieste, Istria, and other portions of Austria which are Italian in blood or feeling to be added to Italy.

"Turkey to yield Constantinople and the Straits to Russia.

"The Armenians to be put under Russian tutelage.

"The Arabs to be freed, while Syria, Asia Minor, and Mesopotamia are to be under external protection guaranteeing tranquillity.

"The German colonies to remain in the bands of the Entente. Moreover, a money indemnity for the ruin Germany has done in Belgium, France, Servia, Montenegro, etc.

"Regarding shipping, Germany to make reparation in kind for all ships of commerce destroyed ton for ton, neutral shipping to

PEACE—"This year, however, I will not be kept out."

—Die Muskete (Vienna).

"Germany after the war will be at peace and, with folded arms, will be borne upon the shoulders of her present enemies."

-Nory Satirikon (Petrograd).

TWO DIVERGENT PEACE-PROPHECIES.

WHAT HALTED THE SOMME DRIVE.

On the Western front the British have found "General Mud" a more formidable adversary than the Germans. Describing the conditions faced by the Canadian troops, Mr. Philip Gilds. the war correspondent writes: "Away behind them . . . stretched eight miles or so of quagmire, through which on dry days our armies had fought since the beginning. It was that great hat the field churned up by shell-fire and mine-explosions during four months and more of ceaseless bombardment, and now all simp and glutinous in a series of swamps. What had been an hour's walk on summer days became a weary and difficult trustee in winter, and then men floundered between the shell-holes and the mud-hills like just souls in informal darkness. The question of getting up supplies to the fighting over became a vital problem."

be replaced only after all the demands of the Allies have been satisfied.

"The German Navy to be handed over and distributed among the Entente nations.

"As a guaranty against future war, the Allies are to insist upon the democratization of the German Government.

"The Kiel Canal to be neutralized, under an international non-German commission, including the Entente countries, the United States, and other neutrals."

In Germany some such terms are evidently expected, for the Frankfurter Zeitung, as if in rejection of them, writes:

"If peace-terms are concluded to-day, the Entente Allies must renounce all their plans for conquest and Russia must give up her idea of conquering Constantinople, the Balkans, Galicia, and the parts of Prussia inhabited by Poles. France must renounce Alsnee-Lorraine and Servia must give up the idea of taking over the southeastern part of Austria-Hungary. The Entente Powers must agree to furnish certain guarantes and make certain frontier rectifications on behalf of Germany and her allies, especially in the east and southeast. Great Britain must, perhaps, even grant freedom of the seas."

Stringent peace-conditions seem to have occupied the Allied mind for a considerable time, for as far back as October last the London New Statesman, whose attitude is usually benignantly pacifist, thus outlined the Allies' terms in striking agreement with those set forth by The Spectator. They run:

"I. Germany to agree to a stringent limitation of her military and naval armaments for a number of years in order to give the Allies the opportunity of reducing their own military and naval burdens.

"2. Frontiers to be modified as far as possible in accordance with ethnographical divisions. Alsace-Lorraine to pass to France; Istria and the Trentino to Italy. The Austro-Hungarian Empire to be broken up into its national components. Constantinople to be controlled by Russia. Poland to be a semiautonomous state within the Russian Empire, and to include Posen and Galicia, but not Danzig.

"3. The German Colonies to be retained by the Allies under a scheme securing that all dependencies which can not be colonized by white men shall be governed primarily in the interests of the inhabitants, with equal trading rights for all nationalities.

"4. Belgium to be fully reinstated and indemnified by Ger-

many, with 'compensation for disturbance.'

"5. No other indemnities to be demanded by the Allies except in respect of actual damage suffered. Damage to merchant shipping to be made good in kind,"

THE SOMME DRIVE ENDED

AGREAT BATTLE SYMPHONY, the first notes of which sounded at the beginning of July and whose last discords died in the middle of November." Such is the epigrammatic summary of a German officer who had seen Britain's "Big Push" begin and end. The Somme Drive, which cost Great Britain over half a million men, was heralded as the great effort of the Entente to break through the German lines and drive the invader from the soil of France. If this were the real aim of the Allies, the drive must be counted as a failure, but Field-Marshal Sir Douglas Itaig, in his dispatch summarizing the whole campaign, claims a victory for the Allies. He says that there was a threefold aim in view, and that each one was successfully accomplished:

"The object of that offensive was threefold: To relieve pressure on Verdun, to assist our Allies in the other theaters of war by stopping any further transfer of German troops from the Western front, to wear down the strength of the forces opposed to us."

The first object of the drive was a success. It is a matter of record that the German assault on Verdan, a long and costly operation, stopt almost immediately, and the French have won back, with comparative case, terrane which cost the Central Powers many valuable lives. The second object of the drive may, perhaps, be counted a failure, for the Teutonic forces were sufficiently powerful not only to meet the full force of the Allied attack, but also to transfer sufficient troops to conduct a vigorous and successful Balkan campaign. As regards the third object, Sir Douglas Haig writes:

"The third great object of the Allied operations on the Somme was the wearing down of the enemy's powers of resistance. Any statement as to the extent to which this has been attained must depend in some degree on estimates. There is, nevertheless, sufficient evidence to place beyond doubt that the enemy's losses in men and material were very considerably higher than those of the Allies, while morally the balance of advantage on our side is still greater. During the period under review a steady deterioration took place in the morale of large numbers of the enemy's troops. Many of them, it is true, fought with the greatest determination, even in the latest encounters, but the resistance of even larger numbers became

latterly decidedly more feeble than in the early stages of the battle. Aided by the great depth of his defenses and by frequent reliefs, which his resources of men enabled him to effect, discipline and training held the machine together sufficiently to enable the enemy to rally and reorganize his troops after each fresh defeat. But toward the end of the operations, when the weather unfortunately broke, there is no doubt that his power of resistance very seriously diminished."

Once again Nature has proved that she is stronger than man, and, despite superhuman efforts on the part of the Allies, and especially of the Canadian and Australian soldiers, to whom their German adversaries have paid generous tributes, she has brought the battle to a standstill. How she did it let Sir Douglas Haig tell:

"We had at last reached the stage at which a successful attack might reasonably be expected to yield much greater results than anything we had as yet attained. The resistance of troops opposed to us had seriously weakened in the course of recent operations, and there is no reason to suppose that the effort required was not within our powers. . . . Unfortunately, at this juncture, very unfavorable weather set in and continued with scarcely a break during the remainder of October and the early part of November. Poor visibility seriously interfered with the work of the artillery, and constant rain turned the mass of hastily dug trenches into channels of deep mud. The country roads, broken by countless shell-craters, rapidly became impassable, making the supply of food-stores and ammunition a serious problem. These conditions multiplied the difficulties of attack to such an extent that it was impossible to exploit the situation with the rapidity necessary to enable us to reap to the full the advantage we had gained.

Sir Douglas Haig refuses to admit that the drive has ended; he says that "bad weather has given the enemy a respite." The Big Push will be resumed, but victory has already been won, he avers, and the German Army-

"despite all advantages of the defensive, and supported by the strongest fortifications, suffered defeat on the Somme this year. Neither victors nor vanquished will forget this."

TIPE SOMME OFFENSIVE.

ENGLAND AND FRANCE IN THE SQUIRREL-CAGE-" What think you, brother, shall we not soon reach the Rhine?"

- C Lustice Blatter (Berlin)

Commenting on the Field-Marshal's report, the London Morning Post writes:

"What is the lesson of the Somme? There are many, but the moral with which we are chiefly concerned to-day is that the battle was scarcely ended-indeed, it is not ended yet-ere Germany asked for peace. Haig tells us 'the enemy's power is not yet broken, nor is it yet possible to form an estimate of the time the war may last before the objects for which the Allies have been fighting have been attained,' but he adds that the 'Somme battle has placed beyond a doubt the ability of the Allies to gain those objects.

"In these simple words, which must resound in German ears like thunder, lies the whole explanation of the German proposals. Therefore all that the Allies need to consider is whether or not Germany will concede the objects for which the Allies are fighting or will prefer to continue to resist until her resistance is broken. It follows also that any suggestion made on the part of neutrals that a compromise might be effected is, in fact, an attempt to spare Germany, and as such is a violation

of neutrality."

The German view of the campaign is found in a wireless dispatch from the official Overseas News Agency, which runs:

"The battle of the Somme has come to a standstill at the moment when Germany has reached a temporary superiority over the war-implements of the Anglo-French at this place.

"In order to quiet public opinion in Entente countries concerning the failure on the Somme front, the Entente press endeavor by the publication of the oldest incidents of the Somme battle to give the impression that the battle is still going on favorably for the Entente. Since no new successes can be reported now, the old ones are reported again and again, and the superiority

in artillery and aviation is pointed out.

"The fact that Germany's artillery is at least equal to that of the Entente, while she is superior as to flying-machines, is proved by the figures published daily concerning the number of hostile machines shot down. The increasing strength of Germany's war-industry is illustrated by the fact that Germany is not only successfully resisting the combined Anglo-French offensive forces on the West front, but simultaneously has concentrated an attacking force and artiflery on the Roumanian front." .

THE RETURN JOURNEY. LITTLE WILLIE- This II want a lot of explaining -Punch (London).

WHAT THE SOMME DRIVE ACCOMPLISHED.

GERMANY AND THE NEXT WAR

O LASTING PEACE appears, whatever may be the official views of the Government, to enter into the calculations of some of the captains of industry in Germany, at least if the views of Dr. Walter Rathenau are typical. As the head of one of the greatest electrical industries in the world, the Allgemeine Electricitäts Gesellschaft, popularly known as the "A. E. G.," Dr. Rathenau occupies high rank among the commercial magnates of the Fatherland, while his genius for organization is such that, since the war began, the

UNCONQUERABLE.

"As long as Michel wears these Bismarck boots, no power on earth can pull him down."

—© Kladderadaisch (Berlin).

task of mobilizing industry has been committed to his charge by the Government. Under these circumstances, Dr. Rathenan's atterances acquire special significance, and it is somewhat of a shock to find an article from his pen in the Berlin Lokal Anxeiger, in which he discusses the need of industrial preparation for a future war, which he apparently regards as inevitable, He says:

"We began the war a year too soon. When we have secured a German peace we must begin at once a reorganization upon a broader and firmer basis than ever before. Establishments that produce raw materials essential to the Army most not only continue their work, but enter into it upon lines of increased energy, forming thus the kernel of economic Germany in preparing in the economic sense for the next war. We must carefully calculate in advance, in view of lessons learned in this war, what our country lacks in raw material or essentials of raw material, and secure immense reserves to remain unused until a day in the future. We must organize as genuine an industrial mobilization as we had a military mobilization, Every technician or semitechnician, enrolled or not in the list of mobilized, must be empowered through official credentials to take charge and direction of a given establishment upon the second day following a new declaration of war. Every establishment manufacturing for commercial purposes must be mobilized also and understand officially that upon the third day after declaration of war its entire abilities are to be devoted to serving the Army upon demand.

"It must also be determined in advance just what quantities.

and sort of essentials such establishment can furnish the Army in a given time. Each establishment also should be required to furnish a detailed list of workmen who can be dispensed with, these alone to be mobilized in the military sense."

While preparations must be made at home, Dr. Rathenau would have the diplomats of the Fatherland busy abroad in order that some of the experiences of this war may be obviated in the future. He writes:

"We must finally establish some definite commercial understanding with nations outside Europe that will offer them advantages to be duly specified in detail whereby these nations, as neutrals, will find it to their direct disadvantage commercially to trade or sell munitions during war to either ourselves or our enemies. We can afford to offer such conditions ourselves. And finally, when the next war comes, it must not be a year too soon."

These frank utterances from one of the leading capitalists of Germany have produced in France a marked reaction against peace, and we find that brilliant French author and academician, Mr. René Bazin, using Dr. Rathenau's article as a text for an impassioned appeal to the United States not to insist too strongly on peace-proposals at the present time. Mr. Bazin writes:

"Here, in a nutshell, is what Allied Europe has long understood, and what has not been truly understood in the United States save by a relative few.

"It is the reason why the war would be continued for ten years if necessary by France, England, and their allies. It is the reason why nothing short of the 'knockout' will serve. It is the reason why any talk or effort for peace would be ill received, even if backed by the best of motives and official sanction from the greatest of neutrals, or the smallest, or all the neutrals collectively.

"The war-cloud that hung over Europe for thirty years prior to August, 1914, must be dispersed finally and forever. The intolerable conditions prevailing must be finally made impossible of repetition. The horrors and miseries, the suffering and privation, the whole gamut of evil that no single individual can understand through reading the writing of another, that must be seen, felt, experienced through the senses to be grasped even in the least sense, must never again be a worldly portion.

"This will only be possible through making war against war until a humane peace is the reward. It would be as impossible under a German peace as would a railway-journey to Mars."

AMERICA'S FOREIGN TRADE—The gigantic strides that America has made in foreign commerce have excited no little comment and some uncasiness among the European nations, The views exprest in the Manchester Guardian show how American progress is regarded by one of our greatest trade rivals:

"Few people appreciate the magnitude of America's commercial progress during the war. This year her foreign trade will amount to \$8,000,000,000, one-fifth of the whole foreign trade of the world. Her foreign trade in 1916 is half again as great as in 1915 and twice as great as in 1914. No doubt, higher prices have their part in this expansion, but it is noteworthy that 60 per cent. of America's exports in the current year are constituted by manufactures. America has been penetrating into markets left vacant by the warlike preoccupations of the belligerents; she has been lending money broadcast to neutrals as well as to belligerents; she has been and is organizing corporations for pushing American commerce and industry and finance in foreign countries.

"No doubt when peace comes she will have to meet a revived and severe competition, but she will face it better equipped
in certain important respects than nearly all her rivals. She
will have a currency neither inflated nor depreciated; only
England among the belligerents can now say the like. She
will, under the supervision of the Federal Reserve Board, have
a banking system not heavily loaded with paper not readily
realizable. She will have a great amount of capital available
for investment and an ample margin for the extension of credit
both to her own business men and to the outside world. These
advantages, coupled with American tenacity of purpose, fertility of resource, and talent for organization, will assuredly
make the United States a very formidable competitor in the
markets of the world."

SCIENCE - AND - INVENTION

THE DOG AS A MENACE

OOL-PRODUCERS are waging a wide-spread and determined fight against what they term "the menace of the dog." The sheep, they say, are "too good for dog-meat." Sheep-raising means a welcome increase of both the food-supply and the clothing-supply, with a consequent drop in prices. But sheep can not be raised where there are dogs, and dogs are non-producers; they consume food and increase the supply of nothing valuable. Not only so, but flocks of sheep are a valuable agent in the reclamation of waste and cut-over lands. All live stock tend to keep farms from reverting to the wild state, and sheep are foremost in performing this service. Therefore the shepherds ery "Down with the dog!" Their representative, Robert M. Carrons, a recognized authority on the sheep industry and a leader in the fight against eanine rapacity, states his case in Town Development (New York) as follows:

"Some years ago Washington County, Pennsylvania, was the greatest wool-producing county in the entire world. Statistics and official records show this. The history of the sheep business in this county is the history of clean farms along with some other desirable and wholesome consequences. To-day Washington County, Pennsylvania, is far from being the banner wool county of the world, and it is to be regretted that conditions have so far changed as to make a return to sheep and flock husbandry in this section a matter of doubtful propriety. And, in discussing the utility of sheep in the reclamation of waste land I wish to show the menace to this great industry of such value to the human family.

"That great menace to the sheep industry is found in dogs. The future of the sheep industry in Washington County, Pennsylvania, is dark, not that sheep would not pay with the present demand for and price of wool and mutton, but because they can not be protected from the ravages of the dogs which roam over the hills of this and many other counties where once sheep were the mainstay of life and prosperity.

"Conditions which make possible the recurrence of such tragedies are what deter the farmers and landowners from again embarking in a forlorn enterprise. As long as the danger of wholesale destruction of his flocks threatens, the prudent and compassionate man who remembers hesitates at the risk.

"When we consider that 20 per cent, of the earnings of labor are spent for food composed of animal products—including meats, eggs, butter, milk, and cheese—and another 20 per cent, for clothing classed as animal products—shoes and wearing-apparel into which wool enters—one would imagine that any endeavor or pian to increase the production of the food- and clothing-supply would be hailed with boisterous delight by the laboring people. But such is not true. Those who complain most bitterly about hard times and the high cost of the things they cat and wear are the last persons to encourage a change by helping to surmount the obstacles to more and cheaper supplies.

"Every dog, owned by rich or poor family, eats, and what he cats, while in some cases it is of little value, costs somebody something. Statisties which have been collected show that to feed a dog costs the owner, or some one, on the average, thirtyfour dollars a year, Thus, in Washington County, Pennsylvania, alone, the twenty thousand dogs which have practically put the sheep industry out of business constitute a tax upon production of \$680,000 per year. And this does not take into account the vast, inestimable loss to the farmer population which the keeping of these semidomesticated wolves makes certain, because of the universal custom of unrestraint under which dogs live. This does not take into account the diseases which dogs in their wanderings pick up and earry from place to place, from family to family diseases such as hog-cholera and the foot-and-mouth disease among animals, which have cost the country millions; and diseases such as diphtheria, searlet fever, measles, and the like which have taken heavy toll of life among the people. This does not take into account their filth and contaminating presence in all public places, in business bouses, and in groceries and meat-markets where 'Rab and his Friends' are frequently in evidence. This does not take into account rabies and the risk from this incomparably dread disease."

The time has come for a reaction, Mr. Carrons thinks. There should be a law to relieve the condition that makes sheep husbandry so great a risk that few farmers have the heart to undertake it. Our future existence, he explains, depends upon the conservation of our lands, upon the preservation of their fertility. No system of farming so surely accomplishes this purpose as that which contemplates the keeping of live stock. He goes on:

"By force of necessity we are left but the one choice—to graze as much of our land as possible, producing as much gain to the careass of the grazing animal as is possible during the summer months on pasture, and if no other way appears in each individual case, market before the feeding season or winter.

"Sheep, by reason of their natural aptitude to eat or browse on the rougher vegetation that other animals would reject, make the ideal grazing stock for a region where such growth abounds, They will clear up and convert such lands into clean grass-lands in a surprizingly short time. Some of the goat breeds, Angoras in particular, have been greatly advertised for their excellence for the same purpose. Investigation of these claims, however, seems to indicate that the different breeds of goals are no better rubbish-destroyers than sheep, generally speaking, and with the added advantage in favor of the sheep that the profit from the keeping of goats does not equal that from the sheep. Lately some attempts have been made to popularize the breeding of so-called fur-bearing sheep. The 'fur' is really the young lambskin, called 'Persian Lamb' by the trade. The younger the lamb the better, for within a few days the curl deteriorates, Consequently the lamb must be killed before its flesh is of any

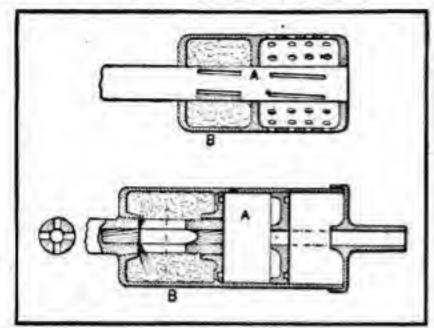

"It does not appear to us that with our conditions any change from the old-established breeds of sheep that are acclimated to our locality is necessary or advisable. We presume no breed equals the Merinos for herding in large flocks, and even they do better not to be excessively crowded.

"For cleaning up quickly a clearing or farm run wild with worthless and trashy vegetation, nothing we know of equals a flock of healthy sheep of that class—dollar for dollar of expenditure they will outdistance the employment of men with seythes or grubbing-tools. And in addition the sheep convert the trash they cat into wool and a fair quality of mutton—entirely too good for dog-meat.

"The cut-over and waste lands need the sheep to reclaim them. The sheep need protection from the dogs, which to-day have nearly paralyzed the wool industry in many parts of the country. That is the whole situation in a word, and it seems to me that commercial organizations or individuals who seek to save the land and its richness for the upkeep of the human family should bear in mind and take steps against the menace of the dog."

HOW TO USE OLD CANALS—For many years a number of American cities, says Engineering News (New York), have suffered from the nuisance of abandoned canals—not only obnoxious as open sewers, but even worse than useless because their boatless waters took up useful ground in the busy areas of the town. It goes on:

"Now several of these communities are finding, or hope to find, a use for these deep water-filled cuts by draining the canal and using the bed for rapid transit or railway-lines. In Cincinnati the proposed interurban entrance is on the Miami and Eric Canal there; in Syracuse the old Eric Canal bed will certainly in time become the route of the New York Central through the city to replace the tracks which now are the most disgraceful example of municipal disfigurement in the country; in Rochester the Eric Canal will soon be turned into new channels, permitting the use of its bed for a street-railway route. The combined advantages of ridding the city of a nuisance and of

MAXIM SILENCER: TWO BECENT FORMS.

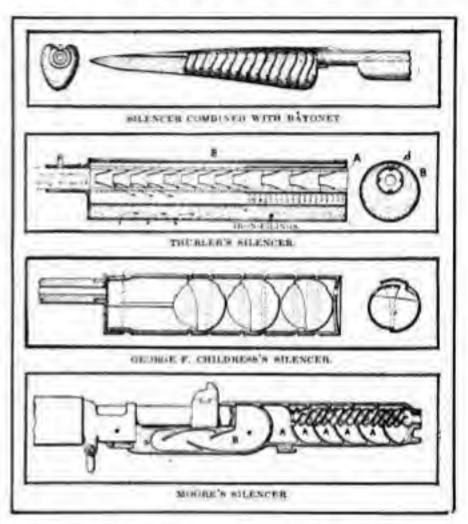

obtaining ready made a deprest railway-terminal or rapidtransit route are of such importance as to recommend the procedure to any city now saddled with an unused canal."

UNHEARD AND UNSEEN ARTILLERY

Lose Without Being Seen: to hear without being heard—these, says Nicolas Flamel, in La Nature (Paris, November 25), are the two greatest factors of tactical success in military operations. How can armies make use of them when the very weapons that they use are both conspicuous and noisy? In particular, says Mr. Flamel, an absolutely silent and invisible piece of artillery would fill a long-felt want. So far as smoke is concerned, that has been practically eliminated by the use of smokeless powders, con-

sisting of nitrated organic material with no mineral salts. But it is not so easy to make a powder that shall be "flashless" as well as smokeless; and at night it is the flash, and not the smoke, that betrays the whereabouts of the gun. The flash has been lessened, tho not abolished, by the Germans, by mixing alkaline salts with the powder. All sorts of substances, Mr. Flamel tells us, have been tried—vaseline, alkaline soaps, opalates, and resinates—but with no better result. In general, decreasing the flash augments the smoke, and vice versa, so that this method of getting an invisible discharge is not promising. A better way may be to dilute or cool down the inflammable gas that issues from the gun just behind the projectile and produces the flash. This would have to be done in about '/we second, but Mr. Flamel thinks it might be accomplished by breaking flasks of earbonic gas at the proper instant. A device that was intended to abolish smoke, flame, and noise all at once was announced by a Frenchman named Hurnbert, about fifteen years ago. His idea seems to have been to entrap the gas from the gun in a series of chambers. The most perfect development of this idea is found in the modern Maxim "silencer,"

which consists of a tube 4 to 6 inches long by 1 1 in diameter, fastened to the mouth of a firearm. The illustrations show the interior arrangement and give an idea of how the gas is slowed down in its exit, so that when it finally gets out it produces little or no disturbance of the atmosphere. The Maxim silencer has assumed successively several different forms. A similar device has been invented by Bordenave, a Frenchman, and others have been devised by Genshow in Germany, by Childress, Thurler, King, Moore, and others. Some of these abolish flash as well as sound. Some are intended to be used with light artillery or machine guns, but apparently none of the larger types has been practically successful. Says Mr. Flamel:

"Both our machine guns and those of the Germans carry masks that hide the flash, but the characteristic detonation has by no means disappeared.

"The problem of the flash is most interesting for cannon of long range. In the evening, or at night, two observers, by noting the time, may, with regulated chronometers having illuminated dials, locate a battery. Three observers can do so without any timepieces. But it is of especial interest to reduce the noise of firing. The powerful voice of the gun may put courage into the soldier occasionally . . . but its repetition causes nervous depression, as does the bursting of shells.

"The ideal would seem to be to have on one's own side a line of invisible, silent guns, while on the side where the shells are falling is a zone of death and smoke. . . . On one side would reign a relative calm, while the enemy's lines would be turned upside down by explosions, shrapnel, and uproar."

HAECKEL'S CONVERSION TO MILITARISM

THE FAMOUS GERMAN BIOLOGIST and philosopher, Ernst Haeekel, in the second edition of his "History of Creation," published in 1870, just before the Franco-Prussian war, exprest himself severely with regard to the effect on civilization of what he termed "military selection," by which the finest examples of the youth of a nation

are marked out for slaughter, while the unfit are exempt. It is pointed out by Professor Caullery, of the Paris Sorbonne, writing in the Revue Scientifique (Paris, November 11-18), that in subsequent editions these passages were successively emasculated, and finally supprest. Professor Caullery asserts that these changes marked the conversion of Haeckel to militarism. Whether or not this is true, the German philosopher's former pacifist views and his subsequent unwillingness to father them are of considerable interest. Here is one of the strongest passages quoted by Professor Caullery:

"This infamous militarism, the cancer of contemporary Europe, has assumed an absolute and unprecedented preponderance since universal military service, a republican institution, has been united, forming the most monstrous of hybrids, with the permanent army that serves absolutist and dynastic

This passage, and others like it, were ent out in the third edition (1872), issued after Germany's victory. Following it, Hacekel goes on to express himself as follows in a passage that was left in the third edition, but had met its fate before the book reached the sixth:

"If any one should dare to propose to put to death at birth, as the Spartans and the redskins did, imperfect infants of whom a miserable existence could be surely predicted . . . our self-styled humanitarian civilization would rightly give a cry of indignation. But this same humanitarian civilization finds it quite natural that with each explosion of war . . . hundreds and thousands of the most vigorous youths should be exposed to the chances of battle! And why, I demand, is this flower of the population thus massacred? Generally, for ends that have not the slightest thing in common with the aims of humanity and which should be removed from the path of every really civilized people-in many cases for purely dynastic interests, which have nothing to do with the real happiness of the nations that have been hurled against each other."

Not only have these denunciations of militarism been cut out of the late editions, but in them Hacekel forbears entirely to criticize "military selection." Instead, he inserts a new passage condemnatory of what he calls "clerical selection," as "dangerous and devastating," acting through clerical celibacy and the influence of such institutions as the Spanish Inquisition, "which carefully eliminated all the noblest and best charactors." Professor Caullery notes, as a matter of interest, that the edition containing this matter was issued (1875) at the time of Bismarek's Kulturkampf-his conflict with the Catholic Church: and he says:

"Haeckel-always a propagandist-thus went to the rescue of the Bismarckian policy of the day. The German intellectuals always love to put themselves at the service of the Government, and this is probably another example of the fact."

The writer also notes that Haeckei's French translator, Mr. Letourneau, has paid no attention to the changes in the German editions, so that the latest French editions still contain the attacks on militarism. Professor Caullery found in the Sorbonne library a copy of the French edition of 1903, on whose margins an enthusiastic student had written the words "Bravo, Hacekel!" thrice repeated, not realizing that he was cheering an opinion whose author had discarded it thirty years previous. Whether our readers accept Caullery's opinion that Haeckel basely betrayed his real scientific views to curry Government favor, or whether they believe that the

> change represented a real advance in Haeckel's opinions, resulting from mature thought, or perhaps from the logic of events, there is undoubted interest in the alterations.

PROF ERNST HARCREL, Whose early attacks on "infamous nsilitarism" were omitted in later editions of his works

SECRET WIRELESS

THERE HAVE BEEN many instances of hidden wireless plants, hard to find for the same reason that the needle is hidden in the baystack-one doesn't know exactly where to look, and a thorough search takes impossibly long. But when the searcher runs across the needle he recognizes it at once. So a wireless plant, once met with, has been recognizable at once by its long aerials, considered absolutely necessary to catch the electric wave in its passage. In some of the huge plants these aerial wires may be miles in length. Now, however, we are told by an editorial writer in The Electrical World (New York, December 16), the idea of using small, concealed serials, with extremely sensitive radio receiving instruments, seems to have occurred to a number of experimenters. He writer:

"In the laboratories of the Bureau of Standards, United States Department of

Commerce, such combinations have been developed to the extent that the reception of signals is possible from the powerful continuous-wayo transmitters in Germany, four thousand miles away. When the loop aerial is used, it becomes feasible to determine the direction from which signals are coming; with two loops at right angles, and a variablephase receiving-transformer, rapid measurements of hearing can be made. At Union College there has also been some work done in the development of these small receiving-aerials. Messages from stations all over the United States have been received, according to our reports, and there is said to be less difficulty from atmospheric and other interference than when the usual tall aerial is used. Manifestly, if small wire arrangements, located within doors, can be used with equal effectiveness, in place of the tall structures usually resorted to, considerable economies of installation and maintenance should result.

"So far as has been disclosed, there is no radical change in the indoor aerials now under test as compared with those tried in past years. The amount of energy abstracted from the passing electromagnetic wave is small when considered in its relation to the power which would be developed by the same wave in a high antenna-wire. In spite of its feebleness, however, the received impulse can now be utilized to produce an indieation, because of the availability of recently developed vacuumtube amplifiers. Signal effects, so weak as to be entirely lost by the radio receivers of five years ago, can now be built up

to sufficient strength for easy telegraphing.

"The vacuum relays are particularly suitable for use in conjunction with small aerials, for the tiny absorbing systems are not subjected to the severe atmospheric impulses which play havoe with amplifying receivers as ordinarily used. Thus it is possible to take advantage of high powers of magnification and to secure signals of commercial intensity without too much trouble from stray interference. As a whole, the indoor antenns appears to be distinctly practical; and the opportunities it offers for concealment should make its use of marked military value."

SHALL WE GIVE UP MEAT?

O, replies Miss M. Helen Keith, assistant in animal nutrition in the University of Illinois. Writing in The Scientific American Supplement (New York, December 2) under the heading "Is Vegetarianism Based on Sound Science?" she briefly reviews theories and results on the

subject, and concludes that man prospers best on a mixed animal and vegetable diet. This, of course, may be correct, while it is also true that many of the human family injure themselves by excessive meat-eating. Miss Keith freely admits this, while asserting that we may injure ourselves as effectively, the in a different way, by not eating any meat at all. After quoting Sarah Bernhardt, Senator La Follette. Rodin, the French sculptor, and Wu Ting Fang, in praise of a purely vegetable diet, and giving their personal testimony as to its effects in their own cases, she goes on:

"Such testimonials as these are good, as far as they go. There is little doubt that many a person who has abused his body by overeating. or injudicious cating, would be much benefited by inflicting upon himself severe restrictions as to the amount, the kind, and the time of his cating. Testimony comes, however, also from others who have found that for themselves the attempt to live on the vegetarian

diet has resulted, sooner or later, in a series of ailments and an impaired nervous condition. These cases are less likely to be heard from than the others. A statistical comparison of the testimony on both sides of the question, with statements as to the details of the condinous of the subjects, would be of interest.

"The physiologists and nutritional chemists have generally put it about this way: Altho proteins, carbohydrates, fats, and salts are found in both classes of food, meat is par excellence a protein food, and the cereal grains and other vegetable produets are earbobydrate foods. Fats and oils are abundant in both kingdoms; but, as a matter of fact, those which have been most used as foods are of animal origin. Proteins, carbohydrates, and fats are all used by the body for the production of heat and muscular energy; proteins also serve a specific need as building material in replacing the wear and tear of the body. Since all are present in vegetable foods as well as in animal foods, it is possible for a person to subsist on food of either type to the exclusion of the other; but a large use of meat means a large amount of protein, and the question of the liberal use of meat involves the much-discust question of the desirability of a high-protein or a low-protein diet. As is more and more fully realized of late years, this last question of the protein requirement needs to be settled more on the ground of quality than of quantity, and until much more information is gathered

with regard to just what proteins are of greatest value to the animal body it will be best to advocate a rather liberal allowance of protein, selected from as wide a field as may be. It is generally recognized that a large excess of protein is undesirable, and a diet made up entirely of meat could be endured only by those living in the arctic regions and under strenuous exercise. On the other hand, a vegetable diet generally has so low a protein content that a large bulk of it must be eaten in order to secure

a sufficient supply of

protein."

When food is scarce, the greatest drain on the physical well-being is due to insufficiency of proteins. A certain amount of these must be given with the food, or the body must break down its own tissues to get them. A man weighing 156 pounds contains about thirty pounds of protein, or 20 per cent. of his live weight. If he is starving he loses five parts per thousand of his protein store daily. To prevent this loss, proteins from animal sources are more effective than those from plant sources. The writer gives the following data from Rubner's laboratory, in Berlin, to show the lowest amounts of protein of the different. kinds which, with an abundance of carbohydrates and fats, may suffice to keep the body from loss of protein:

Meat protein ... 30 grams Milk protein 31 Rice protein 31 Potato protein., 38 Bean protein..., 54 Bread protein... 76 Indian-curn pro-

tein 102

"The numbers show that of this list much larger amounts are required of the bean protein, the bread protein, and the Indian-corn protein than of the meat protein or the milk protein.

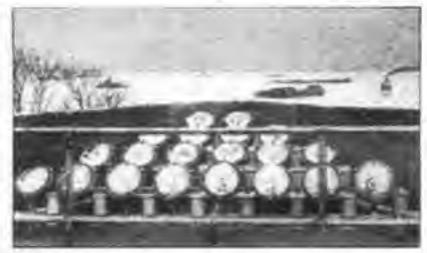

Such observations as these show plainly the advantage of animal protein over vegetable proteins in the extreme emergency. Another observation which has repeatedly been made, and which shows the advantage of the animal proteins, is that in general they are much more nearly all absorbed from the alimentary tract than are the vegetable proteins. There is considerable waste in the use of plant proteins. . . . The animals that habitually live entirely on vegetable products are provided with means for reducing this waste. They can digest cellulose and they have lengthened intestines. Man is not so provided.

"Some of the vegetable proteins are complete in themselves, but the presence of the shoddy necessitates the purchase of a larger order of corn or wheat, for instance, than would be necessary of meat or milk. If one is to confine oneself to a vegetable diet, therefore, it is advisable to provide a liberal and varied supply of protein, unless one wishes to reduce the body protein. As judged by these considerations it is much safer to include meat, milk, and eggs in the diet.

"Furthermore, during the last few years there has been brought out some positive evidence of injury resulting from an exclusively vegetable diet. In one set of experiments such effects were observed in several species of mammalia, even when

BOW "LIBERTY" IS LIGHTED.

The location of projectors on statue-ramparis and neaf-by mofs is shown at the left. At the right is one of the groups of projectors

the diet was made up of mixed cereals, legumes, and fresh vegetables. If fresh beef, ox-liver, eggs, or milk were added to the vegetable diet, the health of the animal was protected. In animals that died as a result of an exclusive diet of vegetable substances there were signs of pathological conditions in the central nervous system and in the alimentary canal, and of histological changes in the organs. The experiments seem to demonstrate that the mixed diet supplies elements the lack of which in vegetable products may cause injury to vital tissues.

"The general conclusion to be drawn from the scientific evidence is, therefore, that the meat-free diet is not as safe as the diet containing meat. While in many respects the food constituents from animal and vegetable sources are altogether equivalent and replaceable, and while it is undoubtedly possible for some people to live in perfect health and comfort on a well-regulated diet selected from vegetable sources, with the addition of milk and eggs, the selection of a suitable variety from these limited sources requires special care in the choice and probably special attention to the manner of preparation. It may be said emphatically that the narrow restriction of the diet to cereals leads to serious injury."

LIGHTING OUR MONUMENTS

ITE SUCCESSFUL FLOOD-LIGHTING of the Statue of Liberty in New York Harbor, carried out as a feature of "electrical week" in that city and to be continued as a permanency, has suggested to the writer of a leading editorial in The Electrical World (New York, December 9) the propriety of illuminating in similar fashion other great monuments marking significant events in our national life. The illumination of buildings by the beams of powerful search-lights thrown directly upon them, instead of by light-sources disposed upon the buildings themselves, has been more or less familiar for some years; but the possibilities of the method were perhaps not fully realized until its skilful employment at the Panama-Pacific Exposition at San Francisco in 1915. Says the author of the editorial mentioned above:

"The lighting of the Statue of Liberty in New York Harbor last week is representative of the possibilities of earrying out a program which lends distinction to such a project. We have all too few such great symbols in our history about which our ideals of Americanism may cluster and which the magic brush of electric light may recreate nightly. There is a patriotic opportunity for the artist and the engineer. Painting great pictures with the sky for a background and electricity for a brush demands an appreciation of the fitness of things which can not be attained by grouping a few spot-lights. In such undertakings an art sense of proportion and final effect must be coupled with the technical knowledge of appliances, of color values, of the reflecting characteristics of surfaces, and of the sources of energy available.

"While it is evident that the technical illumination-features are only a part of a program to light other monuments, the part the electrical interests played in the lighting of the Statue of Liberty indicates that they may well take the initiative in other localities. The conception of lighting the Statue of Liberty, for example, was that of an electrical man. It is significant that the electrical energy was most satisfactorily arranged by connecting with the mains of a great central station, and that much of the success of the public presentation of the plan, which was promoted by the New York World, has been credited by that enterprising journal to the electrical interests. This example of cooperation should not stand alone."

In the same paper (December 23) Messrs. R. F. Casbutt and H. H. Magdsick give some interesting particulars regarding the lighting of the New York statue. They say:

"In designing the lighting installation for the Statue of Liberty the purpose was merely to render the work of Bartholdi visible at night so that the conception which the sculptor had wrought into this monument might be seen and felt by the ever-increasing numbers of people. No effort was made to create a spectacle or brilliant effect, possibilities for which are always at hand with modern electric illumination. The problem, therefore, became largely one of providing the necessary quantity of light for the various parts of the statue and pedestal, of directing this light efficiently, and of making the installation as unolstrusive as possible.

"Any system that might be devised for flood-lighting the statue would, of course, be only an approximation of the ideal, imagnored as the placing of the sources is limited almost entirely to locations well below the statue and pedestal itself, a condition which might easily result in grotesque lighting effects. To avoid these, it was necessary to provide many light-sources, distributed among a number of locations, and thus give the necessary flexibility by varying the brightness of the different parts to produce the modeling desired.

"The flame of the torch was originally executed in metal. Some time after the erection of the statue part of the metal was removed and replaced by a band of glass, behind which light-sources were placed. The contour was left somewhat angular.

"In planning the present new lighting installation it was determined to reconstruct the flame so that every part of it might be luminous. With the cooperation of the American sculptor, Gutzon Borglum, the original contour of the flame was restored. Steel ribs were forged to these lines and were installed to strengthen the structure; sheet bronze completed the surface. The metal surfaces of all parts of the flame were then cut away in small sections, six bundred in all, leaving strips of somewhat more than one inch in width for attaching glass. Each of the metal sections was replaced with a piece of amber cathedral glass bent to the same contour and secured by springelips and non-hardening putty, rendering the work water-proof and at the same time resilient to wind-stresses. Several densities of amber glass were employed, distributed according to their position in the flame.

"Of the total light generated by the lamps employed in the projectors, it is estimated that about 30 per cent, reaches the surfaces of the pedestal and statue. The resulting average intensity of illumination is more than 10 foot-candles, but the distribution varies greatly with the requirements of the various parts. The average coefficient of reflection for the entire monument is of the order of 20 to 25 per cent., so that the statue and pedestal become a light-source of about 6,000 candle-power. The light issuing from the torch ranges from 4,000 to 5,000

candle-power."

LETTERS - AND - ART

A "WAR-LORD OF LAUGHTER"

AMONG ALL THE WAR-LORDS one would not look to find a "War-Lord of Laughter"; but this title has been earned by Bruce Bairusfather, whose war-cartoons, that have made all England laugh, were briefly noticed in these pages last summer. To these he has lately added a book called "Bullets and Billets," and his whole war-philosophy, revealed by pen and picture, shows no tolerance of such "nonsense" as "the purifying and uplifting qualities of warfare." Indeed, "he sees it for what it is," says Mr. Holbrook Jackson, editor of To-day (London), "a nasty business of mod and blood

and other unspeakable things, and he makes his laughter mainly out of the sturdy plack and will to endure of these rankers who are determined to see it through, despite their grousings and their discomforts," Like all great humor, Bairnsfather's is "allied to tears.". "He makes you laugh at the most desoluting things. not because they are laughing matters, but because of their curious juxtaposition to rather bewildered human beings who are surprized to find themselves swept into this maelstrom of destruction." We see here some of his evocations by peneil:

'The most difficult of all artistic achievements is the creation of character. And just as Dickens created Mr. Micawher and Rudvard Kipling Sergeant Mulcaney, so Bruce Bairnsfather has given us Old Bill and Our Bert, the two characteristic Tommics of the early days of the great war. Once having made the acquaintance of these gentle-

men in khaki and mud, they become friends for life. Old Bill is the type of the hardy veteran who has been 'out since Mons,' and Bert is the raw recruit who has yet to learn the tricks of the trade. They are both unforgettable. The former, with his walrus mustache, cutty-pape, and Balaklava belief, and the latter, with his smooth upper lip, falling jaw, and dangling eigaret, finding his surprize and anxiety always up against the superbly cynical aplomb of Bill. What, for instance, could be more typical of the peculiar cockney humor of so many of our fighting men than the picture of Bert, arriving in the trenches and pointing to what looks like a roughly fashioned doorway in the earth, and asking Bill, 'Is this right for 'eadquarters.' to be told - 'Yes, change at Oxford Circus!" Or the laughter-provoking pathos of the two heroes leaning up against some sand-bags beside a shattered cottage, and saying. ''Ow long are you up for, Bill?' 'Seven years, 'Yer lucky-I'm duration.' There seems to be a subtle hint here as to the probable length of the war! And I always like the trench picture illuminated by star-shell, with the veteran leaning up against the parapet with a piece of bread on the point of his bayonet in the process of being toasted at a hattered fire-bucket. The novice appears with, 'Is this 'ere the Warwicks?' 'Nno,' says Bill, with characteristic scorn, 'Indenburg's blinking light infantry.' But surely the most masterly

and also the most popular of Bairnsfather's pictures is that of Bill in a shell-hole and shells and devastation bursting around him, saying to his affrighted companion, 'Well, if yer knows a better 'ole, go to it.' Thus does Bruce Bairnsfather turn tragesly into laughter. As Mr. Vivian Carter says, 'Bairnsfather has been the unsolicited and unexpected laughter-maker-in-ordinary to the forces of the British Empire at war a volunteer laughter-maker, who combined laughter-making with fighting, and extracted mirth and drollery from the most horrible situations ever endured by man.''

Not unlike his drawings is the vignette of his first night in

the trenches. Most writers would see here an opportunity for pathos; but Second-Lieutenant Bairnsfather thus began his romantic life in the mud of Flanders;

"Here we were, now weller than ever, cold as polar bears, sitting in this hygroscopic catheomb at about 2 a.m. Welonged for a fire; a fire was decided on. We had a firebucket it started life as a insmnt-tin a few bits of damp woul, but no coke. 'We had some once, I'm sure! Why. of course, we built it into the dam! Down came the dam, out came the coke, and in came the water. However, we preferred the water to the cold; so, finally, after many exasperating efforts, we got a fire going in the bucket. Five minutes' bliss followed by dis-The fire-backet proceeded to emit such dense volumes of sulfurous smoke that in a few moments we couldn't see a lighted match. We stuck it a short time longer, then one by one dived

snakes when you pour water down their holes. Time now, 3 a.m., No sleep; rain, water plus smoke. A board meeting held immediately decides to give up sleep and dugouts for that night. A motion to try and construct a chimney with an entrenching tool is defeated by five votes to one. . . . Dawn is breaking—my first night in the trenches comes to an end."

Men of twenty-eight have not accomulated a great store of biographical data for their admirers, but Mr. Jackson passes on these:

"He was one of that numerous galaxy of British men who,

"He was one of that numerous galaxy of British men who, without any external persuasion, linked up at the beginning. He was 'in it' from the early days of Armageddon, and before the expiry of three months from the fatal 4th of August, he found himself, a second lieutenant, sludging about in the mod of Flanders. He is now twenty-eight years old and a captain of his regiment. The fact which will surprize people most is that his name is a real name, and not a pseudonym, for he is the son of Major Thomas Bairnsfather, of the Cheshires, who is acting as District Recruiting Officer at Stratford-on-Avon, where the family has lived for many years. The Bairnsfathers are military folk, and Bruce was born in India. As a boy he was brought to England, and, like the laurente of Tommy

CAPTAIN BRUCE BAIRNSFATHER.

This "commercial angines makes" is besterf upon in Landon as "the humaring surveys of the war. his Old Bill and the Bert and "their sand-boxs plums and apple-join builty and Johnson oles" have become part of English war conversation.

Atkins and the Army, Rudyard Kipling, he was sent to the famous school at Westward Ho, which everybody knows is the scene of Kipling's school-days and the scenario of 'Stalky & Co.' He inherited the artistic sense from his mother, who is a painter of considerable ability, and his earliest sketches are memories of his Indian experiences. These facts and many others are recorded by Mr. Vivian Carter, editor of The Bystonder, who 'discovered' this remarkable artist, and in whose paper the now famous 'Fragments from France' have appeared for many months."

In his book, Captain Bairnsfather tells how the "Fragments" came into being. The old eraying to draw came back to him in 1915 while he was "living" in the wreck of a Flemish cottage in the village of St. Yvon:

"I didn't fight against it, and began by making a few pencilscribbles with a joke attached, and pinned them up in our
cracked shell of a room. Jokes at the expense of our miserable
surroundings they were, and these were the first 'Fragments.'
Several men in the local platoon collared these spasnes, and
soon after I came across them, muddy and battered, in various
dugonts near by. After these few sketches, which were done
on rough bits of paper which I found lying about. I started to
operate on the walls. With some bits of charcoal I made a
mess on all the four walls of our back room."

FRANCE'S SMALL LITERARY OUTPUT

TWO BOOKS ONLY have appeared in France during the past year having "enough life in them not only to live, as the literary phrase goes, but to be on a par with the extraordinary life we see on all sides." These two, according to Abbé Ernest Dinnet, are the novel "Gaspard," by René Benjamin, and the other a very short collection of warpooms by Paul Chaudel. "Gaspard," of which we gave a fuller account some time ago, is the story of a snail-vender in the Rue

BEAL STMPATHY

"I wish you'd get something for that cough o' yours. That's the second time you've blown the blinkin' candle out."

THE PROPERTY DATE

"Thuck us out that hig or bombs, many it's under your 'end "

- Hairn-lattier in the London Busineder

de la Gallé, who goes to war, is wounded, and comes home again. "Not only the slang, but the bouquet of it, baffles both description and translation," says the Abbé, "It is such a vivid piece of literature that undoubtedly it will be used as a document by future historians with as much reason as 'La Chartreuse de Parme." The pulls, he adds, "lives in those rich pages, unblurred by any interference of literary or poetic embellishment." Claudel's poetry is of the war, but shows "reality reflected by the patriotic civilian's imagination and sympathy." In accounting for the fact that the war's contribution to real literature is so small in France, the Abbé declares, in The New Wilness (London) that it is "evident that the men who might write about the war generally could not, and that those who could write about things which did not pertain to the war dared not." Wy read:

"For a long time the answer to the question, What about French literature? had to be the well-worn witheism at the expense of Orlando's mare—it was dead and gone, and nobody appeared to resiscitate it. The younger men were at the war, and many of them were soon reported killed. Behind Péguy and Clermont, whose trace in French literature was growing every day more visible and may not begin to wear off for a number of years, a long list of writers who had given more than promises could be drawn up. Their friends or rivals are still fighting, and it is only occasionally that one of them reappears, like René Benjamin, with some bone gone and a yellow ribbon to replace it.

"With the older generations—the academicians, we may call them, for we could not mention twenty writers worth naming who do not belong either to the Academic Française or to the Goneourt Academy—the disappointment at not being able to act, that is to say, fight, and the longing to do something, resulted in activity which can not be called literature. Some, like Mr. Brienx, who spends all his time with blind soldiers, went in for what is called le toward à l'arrière; others, like Mr. Capus, Mr. Lavedan, Mr. Donnay, Mr. Bourget, Mr. Bazin, and, above all, the unconquerably energetic Barrés, devoted themselves to journalism, and it is both a joy and a pity to see the results; finally, not a few of them proceeded to die; Mr. de Mun, Jules Lemaltre, Faguet, Hervieu, Claretie, Roujon, Mr. de Ségur, Mr. Mézières, and Francis Charmes. It is no wonder, therefore, that the literary activity of France second for a long time to be nil. In the early months of the present year, I studied the Tublettes Bibliographiques for 1915. Eight hundred volumes—to eighteen thousand in average years—had been published, and they were largely reprints and technical works. It was evident that the men who might write about the war generally could not, and that those who could write about things which did not pertain to the war dared not."

In France, as everywhere else, we are assured, the demand for great works is now much larger than the offer. "To the expert as well as to the amateur it seems unthinkable that great events should not be accompanied by great books." The romantic movement tried to answer to this natural demand not always successfully, as we see:

"The wars of the Revolution, the wars of Napoleon, were heroic deeds which demanded a heroic expression, and the straining of the Romanticists after sublimity was frequently apt

THERE ARE TIMES WHEN PRIVATE LIGHTFOOT FILLS ASSOLITION CONVINCED THAT IT'S GOING TO BE 4 WAR OF EXHAUSTION.

— Bairnsfather in the London Bustander.

to result in turgidness. As a matter of fact, most of the literature concerned with the two extraordinary decades which followed the first great modern arming of 1792—Hugo's military poems more than everything else—is now unpleasantly connected in our minds with histrionic associations, and it is an ordeal to hear an actor or, above all, an actress, strike up in the approved tone:

Or, en milhuit cent neuf, nous primes Saragosse,

or, Eylau, c'est un pays en Prusse.

"There is too much in all this that is the desceration of a noble, popular craving by professionals indifferent to the consequences, and with some people the reaction is strong. I was only a schoolboy when I chanced on a short poem, which I have more than once tried to find again since, in which Voltaire shows in one brilliant flash all the daring and recklessness of the soldiers of his day, with the gory battle-field as a background, by dashingly describing glory as wearing a black cockade. I saw a great deal more through those few agile lines, with their faint echo of long-silenced bugles, than in more modern poems which deafen us by the drumming of their rimes.

"Certainly it can not be denied that war means reality and a multitudinous chance for gifted individuals to gather the experience on which the best part of literature is founded; we know that there can be endless variety in the expression of the monotony of fights; that the same battle can be made interesting by a hundred narrators so long as new figures appear in it, and that a version of 'La Chartreuse de Parme,' by Alfred de Vigny, would be well worth reading. We are also conscious of an ocean of emotions, many of them of the noblest description, beating around us, and all of us who ever attempted to put two rimes together wish ourselves poets."

THE SOUL OF ROUMANIA

THE TRAGEDY OF ROUMANIA is painted by the revelations of its folk-lore, which show it surrounded by aliens in race and widely different psychological traits. Their descent, according to their claims and the implieations of their name, is from the ancient Romans. Their folklore, as is shown by a writer in L'Opinian (Paris), differs widely from that of neighboring peoples like the Servians and the Greeks. The legends of Roumania have, so we are told, been lately collected by Demetrius Theodoresco from the lips of an old functor, Petron Cretzonl Cholean, whom he met by chance. This man, the son of slaves of Braila, was utterly ignorant of the art of writing, but he was gifted with a prodigious memory richly stored with the songs and the tales of both town and countryside. Theodoresco took pains to cultivate the friendship of the ancient minstrel, not an easy task, since his origin made him suspicious of trickery. "When Theodoresco finally proposed to him that he should visit him at Bucharest, he debated long before accepting the invitation. A vague fear that he would be put in jail for crimes which he had not committed made him besitate until the moment of departure. Finally, he decided and came to the Roumanian capital, where he was comfortably lodged and served with excellent food and drink. Cholean's fears were definitely dissipated in this hospitable atprosphere. He felt happy and began to love his host. Nothing then prevented him from singing what he phased, since he found himself in the midst of friends. After his repasts, like a rhapsodist of the 'Biad.' he recited poems or chanted old airs."

When this happy state of affairs had been reached, his host profited by it to make a collection of more than fifty thousand verses, which in all probability would otherwise have disappeared, according to Mr. Léo Claretie in a newly published work, entitled, "Contemporary Intellectual Roumania." Theodoresco's collection includes "Colindes" (songs of Christmas and New Year), "Cantice Cetranesci" (ballads), "Doma," "Horas" (songs to accompany dances), "Bethlebems" (mysteries of the Nativity, played by marionettes), and funeral incantations. We read:

"It is the register of the Roumanian soul. Its joys, its sorrows, its hatreds, its aspirations, its heroic impulses—all are captured forever in this great ancestral book."

The writer then quotes the following charming extracts:

"One time there happened what had never happened before and will never happen again. There was a young girl in a village of the mountain who was stopt by the flowers as she passed them; and the flowers said to her; 'Stay with us, O Sister.' And in the morning the sun said to her, 'Give me thy tresses that I may mingle them with my own, and when I spread them over forest and plain, none shall be able to distinguish between my tresses and thy tresses.' And the river said to her: 'Cross my waters, and the very stones shall not be able to tell the lightness of thy feet from the lightness of my waters!'

"But the maiden listed not to the flowers, nor to the sun, nor to the river with its stones and its waters. She would not dance with the stars, nor mingle her locks with the tresses of the son, nor dip her bare feet in the river that called to her. "The young girl desired only love. 'It is love that I want,' she cried. 'I wish for love. . . . If thou wilt wed me I will give thee my lips. Art thou come, thou, whom destiny has pledged me? Come to my arms—come, that I may give thee the honey of my mouth.'"

The writer here calls attention to the marked difference between the Roumanian folk-lore and that of Servia or Greece in this primitive literature of love.

"Desire, the cult of the voluptuous, is the dominant theme of the love-poetry of the Roumanians. In Greece or in Servia, contrary to the current prejudice, love is above all a matter

of the imagination. Among the Moldos-Valaques it is the thrills of the body. This sentiment of desire is very simple, even chaste, and hardly to be called indelicate. Listen to this plaint of the forsaken laoutar: 'When she departed, leaving me alone in the garden, I planted the seed of a flower in the print of her foot; I watered it with my tears, and it blossomed. But her hand never plucked it. The forget-me-not is withered, I have east it upon the road: thus, doubtless, has she torn from her heart the memory of me.'"

This remarkable collection is said to be as rich in the poetry of heroism as in that of love. Particularly numerous are the songs of hatred against the oppressor. In the present state of hostility they have a startlingly modern note. Witness the following:

"Hungarian with the short cloak, do not tarry in Moldavia. Return to thine own land to gobble fat and rub thy walls with garlie to keep off ghosts,

"Hungarian with the long mustache, I have called on Death to pursue thee, on flame to burn thee, on the cross to hang thee. La hara! May I dance to the flames of that fire.

"Hungarian, thou mad dog, thou hast made me suffer; the time has come to avenge me, Formez la hora!"

A GOOD WORD FOR SLANG

of elegant virtue" are the sworn enemies of slang. They tell us, so Mr. Max Eastman declares in The New Republic, that "we use a slang word merely because we are too lazy to think up the 'correct' word." Mr. Eastman, however, turns the words back upon the utterer and declares this casual and sweeping generalization to be merely "a result of indolence in these professors." Had they given "a moment's studious examination to the subject-matter" they would see that "even among practical slang words the expressions which fill that hasty purpose of ignoring dis-

eriminations are exceedingly few, that fully half of the practical slang makes a new and valued discrimination in the child's environment, and that, moreover, more than half of all slang is not practical at all, but vigorously poetic in its intent, supplying a new creative word for a thing, or a quality, or a mood." We get herewith some examples and discriminations:

"The words 'bluff' and 'crib' and 'flunk,' for instance, are entirely practical. They are important items in the technique of school life. 'Muff' and 'hunch' are as ingeniously fitted into the mechanism of social life as any words. They are skilfully formed instruments.

"Pussyfoot," on the other hand, is a verb of poetic quality. "Up against it" is more subtly so. "She's a gloom," he's a butter-fingers, 'a flannel-mouth," have a heart, "start something," 'put your foot in it—these expressions are all keenly poetic, and they are strong. Of course, like all poetry that becomes established, they lose after a time their original vigor and come to be used automatically and with stale perception.

But in that they do not differ from literary words, and the very fact that they are continually being changed bears witness to the power and prevalence of the motive which gave rise to them.

"Professors ought to warn their pupils against using any expressions without discrimination and too habitually. But this is not warning them against slang, it is warning them against deadness. Indeed, in the evolutions of baseball slang is to be found a most perfectly magnified example of the lively minded person's determination not to use any expression after it has grown habitual. This poetic striving, mingled with a certain exaggerative humor, is what makes our baseball dialect grow more and more unintelligible to a layman. At first we say

MAX EASTMAN

Who finits "poetic striving" in our baseball lingo and poetic intent in slang-

that the pitcher is nervous. But that is a worn-out expression. 'His feet are not on the ground'—that too, however, is stale. 'He's up in the air.' But that again becomes copied. 'He's chasing the kite,' 'he's aeroplaning his emotions,' and so on, until some perfectly unintelligible gibberish results, and we go back to the practical adjectives and begin the cycle again.

"The determination of certain restaurant clerks not to name any dish by its practical name is worthy of any poet's emulation. 'A dozen raw oysters,' orders the customer. 'Twelve alive in the shell,' shouts the clerk.

"'An order of rump steak, rare,' says another. 'Slab of moolet him chew it!'

"Dante has just this manner of indicating the thing by its attendant circumstances. 'I am one who left off singing hallelujahs,' is Dante's way of saying, 'I am a messenger from heaven.'"

For those not too refined to think, says Mr. Eastman, it must be evident that the technique of vividness here is the same, altho the thing to be imagined is of so different a quality.

RELIGION-AND-SOCIAL-SERVICE

JUSTICE AS THE TRUE PEACE-BASIS

T THE MOMENT CRIES FOR PEACE are variously heard throughout the world, Dr. George Brandes, the eminent Danish critic, advises us that the "trouble with a peace-treaty is that it does not at all guarantee peace." In support of this contention be cites in the January issue of Vanity Fair (New York) the calculation of Victor Cherbulicz,

showing that from the year 1560 per to 1860 A.B. the world achieved eight thousand treaties, each of which lasted on an average a little longer than two years. If national security were to be assured by treaty or by war, the War of 1870-71 would have permanently settled the question of Alsaer-Lorraine, but security is only obtained "when both parties consider the settlement just," Such a solution does not, of course, satisfy "military beroes or political difettanti," but only "rational human beings," and they, fortunately, will soon be in the majority in the world. Dr. Brandes avows a "real and not entirely unjustified hope" that in the end common sense will readly rule the world, which is to say, that the "irresistible logic of things will prove stronger than the wild agitation of politieal famaties," and he proceeds:

"From a few words I recently wrote in a Norwegian magazine—in which I exprest a doubt as to this being the last war on earth, and hinted that the madness in Europe might fail to usher in a reign of true justice—several newspapers have concluded that I consider it hopeless to struggle against war. Indeed, that I look upon war as a beneficent force,

"I merely remarked that human nature evolves, but only very slowly, for the better. Man is by nature but a higher sort of beast of prey, an evolved ape. But this remark does not imply that I believe bumanity will never be able to rid itself of war -or of the passion to prey. Yet one thing is certain. The methods which the European nations have been using of late will not bring them very much mearer to their

"The Allies claim, in chorus, that their object is to crush Prussian militarism. But as surely as two and two make four.

militarism can not be crusht by militarism. All attempts to do so have been fruitless insane even. But there is no reason to infer that militarism will never be eradicated. Merely that it will be accomplished in a totally different way."

By way of illustration Dr. Brandes asks us to consider a few connected links of progress achieved by humanity in the past. As one of these he recalls that religious fanaticism was once a scourge on the earth just as frightful "as rabid patriotism has been in our own day." Christians and Mohammedans murdered each other for centuries, and the "fruitless Crusades were of so-called religion." We no longer declare war for the sake of religion, and it is inconceivable in our day that Philip IL. should have ravaged Flanders because its inhabitants were Protestants, yet Dr. Brandes observes parenthetically "this does not, of course, necessarily imply that Flanders of to-day is any better off." We read then:

"As we all know, religious fanaticism has only given way to national madness. But if we have finally succeeded in knocking the teeth out of the religious lunaties, we may at least conceive of the possibility of eventually knocking the teeth out of the fanaties who go to war merely because of national

"Among certain races and in certain countries we have seen

the most stubborn and deep-rooted conventions of honor entirely overcome. Few institutions, for instance, were as soundly entrenched in the world as the duel. It was founded on some of the finest instincts in humanity; on hatred to injustice, on honor, on aristocratic traditions, and personal profe. In the eighteenth century the dust still flourished among Anglo-Saxon nations, as well as among the Latins, Germans, and Slavs. It is still ineradicable in Germany and France, but in Great Britain and in the United States it is as dead as it is in the Scandinavian countries.

"And if ducling could die a natural death, why can't we predict the death of war. Hat just as the duel could not be explicated by decapitating duelists, as Richelien attempted to do, so militarism can not be uprooted by munitions and

construction.

"What a multitude of prejudices had to be removed before the duel disappeared! Such scorn and derision as met the man who refused to challenge one who had insulted hou! What a school for courage, honor, and personal dignity the duel was said to be for thousands of years! And yet, quietly, unobtrasively, it has been climinated and forgotten by the most civilized nations in the world,

According to its particans, its disappearance should have weakened the moral fiber of men; generated cowardice and a pleferian mode of thought. Yet no man in his senses considers the Americans or the English less manly than the French or the Germans.

"In a few small and slightly civilized communities the disappearance of the duel may, for instance, have increased the impudence of the press. Newspapers are now, perhaps, more circumspect when an offense may call forth a challenge. In larger communities, however-in England or America, for instance-men have not lost their honor since the duel disappeared, nor has life, on the whole, become less

thrilling or noble. Nor has decadence increased; nor idealism diminished. The disappearance of war would not be more fatal to the majatenance of the highest ideals of life than was the climination of the duel."

Nevertheless, Dr. Brandes is ready to admit that war gives birth to something besides horrors and atrocities. It reveals heroism and abnegation in men, but "this does not justify our worshiping it," and be calls attention to the fact that-

"A fire gives to confageous firemen an opportunity to show their bravery and endorance; but no one praises fires, least of all a blaze whom destroys an entire city. Appalling epidemies give conscientions doctors and brave nurses an opportunity to display heroism, forethought, intelligence, quick-wittedness, and many other virtues; but no one sings hymns of praise to cholera or to typhus. Poverty and misery often give rise, in men, to charity and generosity. Yet no thinking person would argue that the display of these qualities justifies starvation.

DR. GEORGE BRANDES. "If doesing could die a natural death."

"I wish that men would realize that true progress comes from other sources. Great thinkers, good men, noble thoughts, high ideals, intellectual achievements, patient scientists, and the undimmed truth—those are the forces that make for true progress; those are the forces which are worth more in a country than all forces of race hatred, of militarism, of aggressive strength, of organized brutality."

THE CHURCH'S DUTY TO THE STAGE

RITERS AND PRODUCERS of "becherous and slimy plays" have been picked out for especial denunciation in the Bishop of London's campaign against vice in the British metropolis. But the British theatrical profession resent the loose employment of such phrases. The eminent English actor, Mr. H. B. Irving, in an evening becure at the Church of St. Martin's in-the-Fields, replied that such plays as the Bishop describes "do not pass the censor; and if a play in any way answering to that description has found its way upon the stage, it has been a very rare occurrence, and has generally met with the fate it deserved." And Mr. Irving would say further, in answer to such criticism, that "in point of actual deceney the English stage always has been, and is, the most decent in the world. That is to a large extent because the public has made it so. Let those who would cornet anything amiss in our theaters go to the theaters for themselves, see the undesirable things, point them out clearly and unmistakably. But do not make loose and general charges not founded on actual experience, as the Bishop of London has done."

Mr. Irving spoke in one of a series of fectures on Church problems being given at St. Martin's in-the-Fields, and his topic was, "The Amusement of the People." Besides replying to the Bishop of London and the rest, he asked Church people to deal more kindly with the theater, to recognize its necessary place in life, and to help it to realize its highest ideals. People, he said, as quoted in the London Dudy Telegraph, "must be amused, just as they must be fed and clothed." The Church recognizes that need in realizing that its own service must be attractive, that "the preaching must be, if possible, stirring and exciting—even in the gloomiest religious the hell-fires to which the sinful were assigned must be made to flame brightly." The actor thus paid his respects to the Puritan Sabbath of old—and New—England:

"Our present attitude toward Sunday amusements is both illogical and hypocritical in character. Cinematograph theaters are allowed to be opened on Sonday on condition that they give some comparatively small portion of their proceeds to charity. But if, on a Sunday, in a cause purely of charity, some our wants to play a play of Shakespeare's, or even a little dualog of a most harmless and innocent character, it is fortudden. However beautiful or elevating the play and its purpose, however conspicuously a work of genius, it must not be acted on Sunday, while anything in the way of roaring faree or lurid melodrama is allowed to be exhibited at einematographs under the cover of a modest contribution to charity. What are you, as a Church, going to say to insincerity of this kind? To judge from the utterances of the Bishop of London and others, the Church would seem to be easting about to find some point d'apper on which to fix itself to meet our changed conditions.

"Our Allies, the French, are a nation of Saldath-breakers according to our lights. Are they any the worse for it, tried in the furnace of a bloody war? Does the dismal day our Sunday means in our great cities, idle, dreary, and unattractive—does that form of day do us any good? Are prayer and devotion in the morning entirely inconsistent with harmless amusement in the afternoon? Will your churches be any the fuller for shutting the theaters? Is religious observance inconsistent with mirth and jollity?"

The artistic side of the question of the Church's relations with the theater is closely connected with the moral side, in Mr. Irving's opinion. The speaker alluded to the modern youthful distaste for "highbrow" entertainment, the dislike for anything serious or intellectual. He asked: "Is the amusement of the people to become purely frivolous; are the great plays that once held the stage for all classes of the public to become the enjoyment of the few? If so, then great drama and great acting will cease to be.

"The steady growth of every form of lighter and more frivolous entertainment has, no doubt, been intensified by the war—
but what of the future? Are we going to be more spiritual or
more material after the war? You, of the Church, are probably asking that question more anxiously than I am. But
there is a spiritual side to the theater as well as to religion.
If the primary object of the theater must always be to amuse
and intenst, yet it can interest in such a way as to elevate
men's minds and make them think of something higher and
nobler than the mere trivialities of life. The power of the
stage in this direction is beyond question. Now, if the stage
is to show people the facts of life, it is obvious that it can not
show those facts truly if it deals merely with what is cheerful
and frivolous, and shows nothing of the tragedies of life that are
going on around us.

"And the Church can do something in recognizing first of all that the amusement of the people is as natural and wholesome a necessity as their health or spiritual welfare. Your concern is not only to see that such amusement be clean and decentthe public will to a great extent look after that for themselves -but you will be doing stage and public a real service if you strive to rescue this particular form of amusement from becoming merely trivial and mane, if you help to give it the power and the means to earry out its higher purposes. Remember that never has the public been catered for in the way of amusement so prodigally as to-day, and that prodigality will certainly not get less as time goes on. You can not hope to stem the tide. Take it at the flood, and try your atmost to guide at least a part of it into worthy channels. So you will be serving, I believe, not only the cause of art, but indirectly the cause of religion."

A NOTABLE YEAR IN THE CHURCH

THE PAST TWELVE MONTHS in the religious world are memorable for the donations to churches and the progress made toward greater unity. Such is the commont of a writer in the New York Herold, who, reviewing the year 1916 in which every event was influenced by the European War, finds that the "result was increased gifts of money and lives to missions and a deeper and more practical interest in the propagating of the Golden Rule at home and in Christian lands abroad." He notes also that a great stride forward in the temperance movement was made when four more States went dry at the elections in November, so that now there are twenty-three States in the "dry" column. In this connection we learn from the report of the Board of Temperance of the Methodist Episcopal Church, that—

"The Territory of Alaska, by a 5 to 3 vote, exprest itself in favor of probibition on November 7, 1916, but it is necessary that Congress put the policy into effect, as that body reserves the right to begislate on the liquor question for Alaska. Utah, by action of a pledged legislature, will pass a prohibition law, to become effective August 1, 1917. Florida, also by pledged legislative action, will submit a prohibition amendment to the Constitution to be voted upon in the general elections of 1918.

"Wyoming has a legislature pledged to prohibition submission, but the details of its action are not determined. New Mexico is expected to vote upon the question in 1918. The Democratic primary of Texas has instructed the legislature to submit the question to be voted upon July 28, 1917. Minnesota has a substantial dry majority in its legislature, and will probably to alex in 1918.

"It is practically assured that Kentucky and Nevada will vote upon prohibition, but the time is not certain. Nevada will almost certainly go dry, and the result in Kentucky can not be predicted. In Missouri and Indiana strong effort to induce the forthcoming sessions of the legislature to enact statutory prohibition will be made. Iowa, with statutory prohibition, will, by its legislature, submit prohibition for the Constitution for the second time, as is required by law before it may be voted upon."

In evidence of the growth of Church unity, our Herabl informant points toward the merging of the two great branches of the Methodist Church, North and South, and he recalls that last winter commissions of all American Protestant churches met at Garden City, L. I., for the first time, and adopted a general platform on which it recommended that the World Conference on Faith and Order proceed. We are reminded also that Pope Benedict XV. sent a letter to the commissions, assuring them of his "deep interest and prayers."

Adverting to pension funds, the Herald writer informs us that the fund of the Episcopal Church amounted to more than \$3,500,000, and there is every indication that it will reach the goal of \$5,000,000 by March 1 next. The pension fund of the Presbyterian Church climbed to \$5,250,000. Furthermore, millions of dollars were collected in the United States to aid warsufferers, and we are told that the Jews alone have sent more than one million dollars to their brethren on the Continent, The Presbyterian, Episcopal, and Methodist Churches have kept their pastors on the continent supplied with funds to distribute, and the Catholic Church, through its Peter's Pence collection and its gifts to the Society for the Propagation of the Fuith, has endeavored to make good what has been necessarily stopt by the countries at war. As an instance of the increase in gifts for missions, the writer mentions one million dollars raised by the Southern Baptist Church for added equipment to its foreign-mission stations in numery of Adomiram Judson, the first Protestant missionary to Burms. Again, a nation-wide campaign was launched to secure \$300,000-a large proportion of which is pledged—for the Judson Memorial Baptist Claurch in Washington Square, New York, to make it a national memorial to the late Rev. Dr. Edward Judson, who founded it for foreign-speaking Americans. Looking forward, we are advised that a notable event of the religious year to come will be the world-wide celebration of the four hundredth anniversary of the Reformation.

GIFTS OF GROUP INSURANCE

HRISTMAS WAS MARKED THIS YEAR by great emphasis upon a practically new form of social service-"group insurance." These policies have been bought on a large scale and presented by employers to their help "as a means of showing their good-will toward their men." The motive back of the act may either be "the extraordinary generosity occasioned by the great prosperity of the country" or, perhaps, "because employers everywhere feel the necessity of doing something for their men to counteract the high cost of living, and to meet the various problems of employer and employee." Some insurance companies regard this form of insurance as likely to take as firm a hold as workmen's compensation has done. The score of States which now contemplate introducing into their legislatures bills for compulsory social insurance will find the choice between this and group insurance forced to an issue. The rise of group insurance in America dates from 1912, says an editorial writer of the New York Econing Post, and he finds it significant that "it has followed directly the spread of workmen's compensation acts."

"The first of these was the Federal Law passed in 1908, and the first State act to go into force was that effective in New Jersey in 1911. By the beginning of the current year thirtythree States and Territories had compensation laws in force. This notable spread of legislation which has awakened employers to the soundness of the principle of certain forms of social insurance is admitted by insurance companies to be the chief factor in opening the new field. As it has become evident that compulsory accident insurance is of general benefit, it has become evident also that forms of insurance not covered by the compensation laws would be beneficial also. Large classes of workers, through thoughtlessness, lack of urging, or slight physical disqualification, will fail to provide life-insurance for their dependents. It is an axiom of insurance that the proportion of the insured in a definite labor group is in inverse ratio to its wage-status, and a wise employer will make provision for the insurance of the lowest-paid and better-paid together. By the taking out of group insurance, rates impossible where agents have to be maintained to visit each individual can be obtained. Men with slight ailments will be included with those perfectly sound, for the companies are confident that no deception is being attempted by men seriously diseased. Most group insurance is offered either in the form of simple life-insurance, or with more claborate policies providing life-insurance, disability provision, and annuities for declining years, and the employer may pay all or merely part of the premium. In any case, group insurance is designed rather to supplement than completely to displace individual insurance."

There are difficulties in the way of a successful application of group insurance, particularly in its penetration among the lower strata of wage-carpers. We read:

"This country has not been favorable soil for such cooperative insurance bodies as the Sociétés de Secours Mutuel which in France enroll over 4,000,000 people and in Belgium a balfmillion. Our unskilled workmen of foreign birth will be hard to reach in group insurance because slow of understanding, and too inclined to change employment. Yet some employers have cosayed the task. One Passaic manufacturer, whose workers are chiefly unbettered Poles, Hungarians, and Slave, writes encouragingly of his experience. At first 'they did not understand what the benefits were, and as for some time after it was installed we had no claims, they had no means of learning. but after two or three cases occurred, where the benefits began to accrue, I assume that it formed a topic of conversation, and in the last six months I have noticed a material change for the better in the tendency of the men to remain in employ.' And it is encouraging to note that group life-insurance in the companies in which it is codest to apply has stimulated the study of such subjects as old-age pensions, or accident-compensation benefits outside the lines laid down by law. In institutions previously possessing pension systems it has had an influence in leading to improvements.

"There is reason to believe that some insurance companies pin faith to group-writing as a means of heading off compulsory health-insurance legislation. . . . But if group insurance does stop the agitation, it must be because it comes to include pretty well the whole field of workers earning less than \$1,200

a year."

Mr. W. G. Curtis, president of the National Casualty Co., of Detroit, outlines in *The Insurance World* (Pittsburg) certain objections to the bill for compulsory health-insurance proposed by the American Association for Labor Legislation. These results, he imagines, would follow if the bill were enacted into a law:

"It could not be enforced without aid of police power.

"It could not reach and serve more than 25 per cent, of the people coming under the law.

"It would destroy the spirit of independence.

"It would establish Socialism.

"The State would collect a tax of \$5 to effect a saving of \$1. "The wage-carner would be forced to pay \$9.60 to save \$4.80.

"If the 33,500,000 wage-earners could be brought under the law, it would mean that 3,350,000 would become diseards, because of age or physical condition.

"It would furnish political employment or remunerative asso-

ciation for 250,000 politicians.

"It would ereate carrier funds, that would be controlled or exclusively administered politically, to the amount of \$150,000,-000 annually.

"It would permit a small percentage of the doctors to control
most of the industrial practice.

most of the industrial practise.

- "It would apparently exclude all but allopathic practitioners.

 "It would interfere with religious liberty, because it would force medical examination of, and compel medical treatment of, Christian Scientists.
 - "It would establish paternalism.
 "It would ereate class distinction.

"On November 18, President Wilson, in addressing a delegation from the American Federation of Labor, warned them against class distinction. He said:

"What I have tried to do is to get rid of any class division in this country. The worst thing that could happen to America would be that she should be divided into groups."

"The initials S. I. may stand for Social Insurance in the bill, but if such bill became the law they would then stand for Social Injustice," 

The New Way

Speedy—Neat—Thornugh
One Operation Suffices

Beech-Nut Found a Better Way To Write Checks

YOU sign your name and lay down the pen. One check written —little effort—only a few seconds gone. But multiply that effort and those seconds by the number of checks your concern sends out every week! Consider the time spent on the check register or whatever other records you keep! Do you see the need for making out those checks and records most quickly? And with no duplicated effort?

The result of giving check writing and records careful thought is well illustrated in the case of the Beech-Nut Packing Company. Mr. F. E. Barbour, Secretary, tells what they were able to save, as follows:

"One of the biggest advantages we have secured in connection with our accounting work is in the writing of our checks. We use one of the Elliott-Fisher Machines almost exclusively for writing our checks and check register. Before installing the machine it was necessary to write the name of every individual to whom we issued a check, four times. Now we only write the name once and distribute payments on our check register, all at one operation. One clerk writes 400 checks in 8 hours and distributes the amounts to the various columns in the check register."

You write checks. Elliott-Fisher Machines can save money for you as they did for the Beech-Nut Packing Company. A talk with an Elliott-Fisher accounting specialist will show you how, and it does not place you under the slightest obligation. Telephone the local Elliott-Fisher office or write to Elliott-Fisher Company, 132 Elliott Parkway, Harrisburg, Pa.

A Complete Line of Automobiles All New Values

From your point of view this announcement is most important.

For herein we set forth the achievement toward which this company has aimed for the last eight years.

This achievement in a word is the completion of our gigantic organization to a point where we could make and market a complete line of automobiles under one head.

One executive organization,

—one factory management,

—one purchasing unit,

—one sales expense,

—one group of dealers,

plan, produce and sell the
entire line.

Buying power is concentrated. Costs are distributed over all these cars. The savings are tremendous.

As a result we are producing cars of exceptional quality and marketing them at unusually low prices.

Every car is built to a rigid standard of performance, comfort and appearance.

The new Light Four at \$665 is a striking example.

It has good style—built low with harmonious and full sweeping body lines. It is a beautiful car in every sense of the word.

The motor is powerful, quiet and of sturdy construction. The turning radius is short. The car has a quick acceleration and is built to tour safely and comfortably from the Atlantic to the Pacific.

And with all these good qualities it rider brautifully. The
soft cushions, the long and resilient cantilever rear springs,
the large tires (31x4) and the
proper balance in construction absorb all types of jolts
—the choppy cobblestone,
the cuppy macadam, and the
heavy ruts and thank-youma'ams of American highways.

Yet this is but one of the new Willys-Overland values.

Never before have the economies of vast production been available for buyers of every class of car.

And the Overland Policy of greater production, higher quality, lower price is exemplified in every model and type.

The Willys-Overland Co., Toledo, Ohio Manufacturers of Willys-Knight and Overland Automobiles

REVIEWS - OF - NEW - BOOKS

In deference to some hundreds of requests from subscribers in many parts of the country, we have decided to act as purchasing agents for any books reviewed in Tue Livenaux Dours. Orders for such books will be reafter be promptly filled on receipt of the purchase price, with the postage added, when required. Orders should be addrest to Funk & Wagnalls Company, 254-160 Fourth Arc., New York City.

LIVES OF BOOKER T. WASHINGTON

Scott, Emmett J., and Stowe, Lyman Beecher. Booker T. Washington: Builder of a Civilization, Illustrated. Pp. 331. New York: Doubleday, Page & Co. Boxet, \$2 net. Postage, 12 cents.

Hiley, B. F. The Life and Times of Booker T. Washington. Illustrated. Cloth, pp. 301. New York: Pleming H. Revell Company. 41.50 net. Postage, 12 cents.

In a Foreword, Robert R. Moton, who succeeded Booker T. Washington as principal of Tuskegee Normal and Industrial Institute, says that the first of these volumes was "prepared by the two people in all America best fitted, by antecedents and by intimate acquaintance and association with Dr. Washington, to undertake it." Mr. Scott was Washington's secretary for eighteen years: Mr. Stowe is the grandson of Harriet Beecher Stowe. Their "Authors" Preface" disclaims the word "biography" as applied in the ordinary sense to their work. In his book "Up from Slavery," they tell us, Booker T. Washington gave his own story until fifteen years before his death; and this volume takes up the record there left off, reciting it, however, in chapters, each of which is complete in itself. Another Proface follows, by Theodore Roosevelt, who says that "Booker T. Washington was a great American. For twenty years before his death he had been the most useful, as well as the most distinguished, member of his race in the world, and one of the most useful, as well as one of the most distinguished, of American citizens of any race."

The subtitle of this book may seem too comprehensive in its credit until the book is read. "Builder of a Civilization," in a country already civilized, sounds like hyperbole. But here was a race numbering millions, when Booker Washington's labor bogan, which required much that it had not. There were many so-called "colored schools," and a few of them had done good work, within their limitations. When Tuskegee was modestly started it did not promise to differ largely; and for a time it did not challenge public attention more than its predecessors. It appeared rather like an extension of Hampton Institute, which, under General Armstrong had become famous; but Armstrong was a white man, and such recognition as he had won went to the white man's credit. Then suddenly, fourteen years after Tuskegee began, its black founder made a speech that made him distinguished. It was at the opening of the Cotton States and International Exposition in Atlanta, in 1895. From that hour both South and North acclaimed him as the leader of his race. In the South his view of the negro, socially, was accepted; for in that speech, holding up his outspread hand, he had said: "In all things that are purely social we can be as separate as the fingers, yet one as the hand in all things essential to mutual progress."

For "mutual progress" Washington labored with an eye single to national honor and racial development all the

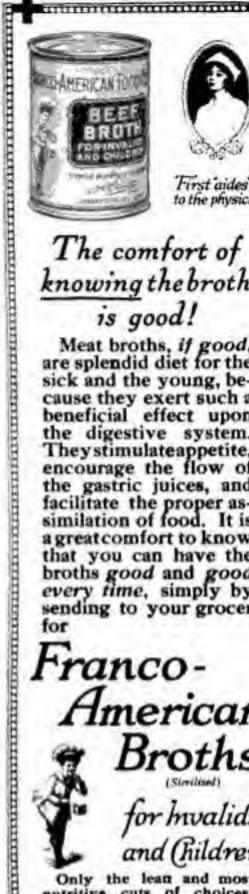

remainder of his life. What he did, how he did it, who helped him, and what came of it all, these twelve chapters tell, entertainingly and instructively-yes, and with an inspiration that should be widely diffused for national benefit. He did not always escape criticism; but it came chiefly from those who did not understand him. Some who bonored him were criticized more severely than was he. Yet, in States most outspoken against negro progress, whites yied with the blacks in their enthusiasm over his addresses; and all over the land, before all londs of great organizations, his voice was beard in pleas for negro education and citing facts to prove its wonderful results. A great number of these are presented in this memorial volume.

A biographer may properly have a pardonable pride in his subject. Dr. Riley, the evidently apologetic lest he betoo critical, has erred on the proper side, for there is hardly a word of criticism in With stendy seriousness has his book. traces Mr. Washington's career from start. to lamented finish, neglecting no opportunity to set before the reader the height of the difficulties which lay in his path, the unswerving persistence with which he faced and mastered them, the tactful, sensible program by which he endeavored to advance his race. Thus, of the books now available, this is the one to read for information as to who Mr. Washington was and what he tried to do in the strenuous years of his unselfish life. Yet, as a biography of the kind Mr. Washington deserves, this falls somewhat short, Dr. Riley hardly permits us to see Mr. Washington for ourselves. With the exception of the Atlanta speech, there is hardly a word from him. Searce an anecdate from those who knew him, worked with him, learned from him, shows us how others thought of him or adds local color to the seene of his labor. Not from the first-hand judgments and experiences of his contemporaries but from Dr. Riley's generalizations has one to gain one's impressions of the man. The author's smooth and polished sentences flow on, often making the same point-such as the post-bellum conditions in the South-many more times than need be. Indeed, his almost constant characterization of Mr. Washington runs the risk of becoming a gentle panegyrie rather than remaining a biography. One knows that one is in the presence of a genuine and remarkable man whose quality commands one's admiration, but one would like to see him more directly and thus more vividly.

IN THE REALM OF THE PERVERT

Healy, William, M.D., and Mary Tenney Healy. Pathological Lying, Accusation, and Swin-diling. A Study in Forensic Psychology. Pp. 286. Boston: Little, Brown & Co. \$2.50 pct. Postage, 12 cents.

and Criminology." While not pleasant reading, it is more important than many volumes that are. There may be many cases where the administration of justice must require an understanding of the types of personality and of behavior here considered, altho it reflects upon human character to concede that such types may

come into any home.

"Pathological lying" is defined in the Introduction as "falsification entirely disproportionate to any discernible end in view, engaged in by a person who, at the time of observation, can not definitely be declared insane, feeble-minded, or epileptie." Such lying rarely, if ever, we are told, centers about a single event; it represents a trait rather than an episode. Twentyseven "eases" are given in illustration, after two chapters of "previous studies." The most of them are of young girls, and the range of their lying, accusation, and swindling is painfully wide.

"The pathological liar forms a species by himself," further says the Introduction; but how, when, and why, the lying began, in many of the "cases." does not indicate "species" but perverts, caused in common ways. The subject of pathological lying was first definitely brought to the attention of doctors and lawyers by the studies of Delhrück, who made claborate and exhaustive investigations of the lies told by five patients covering a period of years, and came to the conclusion that their form of falsifying deserved a new and separate name. Later German writers have held by

his terminology.

The conclusion seems irresistible, after reading this book, that pathological liars owe their tendencies, more often than otherwise, to prenatal conditions or characteristies. Nothing is said about eugenies, we believe, in all these pages, but they should prove a good argument for that science. taken as a whole. Properly endowed by parentage equipped for its holy task and high privilege, it is hard to believe that the mental and physical predispositions herein set forth would have appeared. When they do appear, if appear they must, how

shall they be freated?

Dr. Healy is a well-known investigator in the field of juvenile delinquency, and sits with the Judge of the Juvenile Court of Cook County (Chicago), Ill., where he sees annually some two thousand delinquents. Mary Tenney Healy has shared his opportunities and his labors. Their observations may have special value in stimulating the study of "defective" manifestations along the border-line of insanity and crime where mental disturbances are noted and abnormalities of conduct cause trouble for society.

SOME OF THE LATEST FICTION

Bacon, Josephine Daskam. The Madness of Philip. Illustrated. Pp. 223. New York and London: D. Appleton & Co. \$1.25. Postage, 10 cents.

This is a reissue, by request, of a book that helped to establish Josephine Daskam Bacon's reputation as a delineator of childhood. It has been out of print for some time. Philip is a natural little youngster with the naughty instincts and lovable traits of many little boys, to whom life presents some weighty problems and some irresistible impulses of mischief. He is described in kindergarten games, at dancing-school, where a pretty little doll of a girl reconciles him to an otherwise disagreeable hour, at pienies, and at

Dix, Beulah Marie. Blithe McBride. Pp. 238. New York: The Macmillan Company. \$1.25. Postage, 10 cents.

This is a pretty tale of the seventeenth century which depicts a fascinating little maiden. Blithe-in-Tribulation McBride. who, altho brought up among a gang of thieves and pickpockets, in Archer's Lane, had been taught by her "granny" to be decent and clean and to remember that her mother was a good woman. The opportunity for escape came at last, and she embarked on the ship Trial, as indentored bondwoman, the only twelve years old, and came with others to the Massachasetts Colony. On shipboard she had an opportunity to do good and make friends. But even there she found evil influences at work. Inspiring love and trust by her manner and inherent womanliness, she becomes involved in varied viciositudes and passes through adventurous and dangerous experiences. Imprisoned for thievery she escapes in time to rescue her mistress's little girl from the Indians. With a mysterious resemblance to a daughter of the house, poor little Blittle cherishes high hopes of her parentage for a while, but finally learns that happibess sometimes comes out of disappointment. It is an appealing story, presenting a loyable character even if a little overdrawn, and holds the reader by thrilling situations, mystery, and a happy ending.

Braguumis, Julia D. A Man of Athens. Pp. 165. Baston and New York) Houghton Mifflin Company, \$1,50. Postage, 12 cents.

This new novel by Madame Dragoumis is timely, representing, as it does, Greece under war-conditions (in the late Balkan War and describing, with the authority of a native Greekwoman, the social and diplomatic life of the country, the Greeian point of view, and the enthusiastic patriotism of the people in a fight against oppression. Greek society seems strangely metropolitan like our own. The novel, whose background is modern Athens, does not tax our power of mental adjustment. The author has charm in description and elever character delineation. Accustomed to the feverish and complicated modern novel, our minds constantly grasp at certain episodes as probable forerunners of dramatic mysteries and involved situations but, in each case, that possibility disappears and the story moves forward along direct lines, with dignity and wholesome heart interest. Theodora Douka, the daughter of a diplomat, and her father's constant companion, has acquired the selfpossession of the well-born. While visiting her uncle in Athens, she falls in love with and marries Metro Philippides, a distinguished professor, the of peasant origin, but her father refuses his recognition and Theodora is broken-hearted and constantly erayes her friends' love and presence. Metro's wonderful devotion is taken for granted until the breaking out of the Balkan War, and then Theodora realizes that, in her blindness, she never fully appreciated him. There are many interesting characters that play an important part in the development of the plot, but through and above all shines the steady

Both Tires Are Goodyear Cords

Contrary to an impression more or less widespread, the Ribbed tread is not an infallible identification of a Cord tire.

The tread, as a matter of fact, has little to do with the separate and peculiar advantages the Cord tire affords it is the shield upon the warrior, that is all.

We use two types of tread on Goodyear Cord Tires—All-Weather and Ribbed—and the basic tire-structure in both cases is the same. Both types surface a Cord tire affording all Cord tire advantages.

The All-Weather tread, which is our own design, we have found particularly effective on rear wheels.

Studded with big, rugged, cleancut blocks, it grips the earth like a panther's paw, exerts the maximum tractive effort, and offers obstinate resistance to side-slip or skid.

Its double-thick construction grudges even slow wear to the thrust and drag of starts and stops, and in connection with the powerful carcass, prevents most punctures.

The Ribbed tread we use, of European design, has no pronounced non-skid virtue, and we recommend it rather for use on front wheels.

It is particularly advantageous there, in that its narrow ground contact makes steering easy. Like the All-Weather tread, though not quite to the same extent, it is thicker than is the rule, hence it also wears longer and prevents punctures better.

Both Goodyear treads have a part in the superiority of Goodyear Cord Tires, but the major causes of that incomparable performance which sets them apart from other types, spring from a deeper source —from sharp differences in principle and construction.

Goodyear Cord Tires are made of thousands of tightly-twisted longfiber cords, densely strong, built up into a carcass layer by layer, without cross-weave.

These cords are surrounded by pure

rubber, and the layers are insulated one from another by a substantial cushion of pure rubber. The cords move freely in the tire without contact or friction, and their multiplied strength is knit to the unhampered elasticity of the rubber itself.

The result is a tire amazingly strong, surpassingly resilient and astonishingly efficient.

Because of their unusual flexibility, Goodyear Cord Tires reduce gasoline consumption and engine effort, increase acceleration and car speed, defend car and occupants from strain and road-shock.

Because of their unusual strength they yield more mileage, greater ease of riding, wider freedom from trouble, delay and inconvenience.

Because of their quality they are higher-priced—and better.

light of Metro and his innate grandeur. To the reader, it is a disappointment that Michael Douka, selfish, heartless, and self-opinionated, was ever allowed to enter the family circle. His conduct throughout is inexcusably brutal, but others make up for his misdeeds.

Hardy, Arthur Sherburne, Helen. Pp. 315. Boston and New York: Houghton Mifflin Company. \$1.35. Postage, 12 cents.

This is an attractive novel, in which are compared, consciously or unconsciously, French and American customs and instincts; French and American manners; French and American love-making; and French and American grandmothers, Helen, or Helene, was the orphaned daughter of an American father and a French mother, who, with her brother Jack, a likable chap, lives with her paternal grandmother, of unsympathetic and repellent disposition, and is very conscious of her dependent position. Then Mr. Fearing comes from America with news that an uncle has left the children a fortune, of which he is the manager. At this point life takes on new possibilities for Helen. Fearing determines to take Jack to America. There are some genuine experiences in which these two figure, but Helen goes to Paris with a lovable countess who is a real friend, and becomes a comfort to her other grandmother. We are introduced to diplomatic life in France and pretty episodes with Helen's French lover. The dramatic and tragic experiences that lead up to the solution of all problems make interesting reading.

Howells, William Dean. The Leatherwood God. Pp. 236. New York: The Century Company. \$1.35. Postage, 12 cents.

Leatherwood Creek in Ohio, the author's native State, was a settlement of pioneer Americans, primitive and positive, willing to fight for their beliefs, religious or politieal. To this settlement came Joseph Dylks, a scoundrel and religious imposter. It was not long before be proclaimed himself "God" and found plenty of fanaties to worship and believe in him, just as in the case of Joseph Smith, Brigham Young, Schlatter, Dowie, and many others. Mr. Howells's knowledge of the environment and the actual occurrences described, which took place during his childhood, fitted him peculiarly for his task. A plot lay in his mind many years before it grew into a story. The story is episodic and religiously psychological, and it is true; but the value of it lies especially in the characters, not only the imposter himself, but Squire Braile, philosopher and scoffer, whose comments are always wise and humorous; also in the Reverdys, a shiftless couple next door, who are incessantly borrowing. In the history of the rise and fall of the "God" none are finer than his deserted wife and the lovable "Joey," or red-haired Jane, whose intensity and adoration died hard. The thought that stands out from the background of religious fanaticism and imposture lives in Squire Braile's comment to Dylkes himself: "Why, you poor devil you're not in any unusual fix. There isn't a false prophet in the Old Testament that couldn't match experiences with you. That's the way it's always gone: first the liar tells his lie, and some of the fools believe it, and proselyte the other fools, and when there are enough of them, their faith begins to work on the liar's own unbelief, till he takes his lie for the truth."

Lloyd, Edward Mostyn. Tum Anderson, Dare-Devil. Pp. 415. Boston and New York: Haughton Mifflin Company. \$1.50. Postage, 12 cents.

Here is a "boy's book" with a vengeance, and one likely to captivate grown-up boys, for it is full of startling contretemps, mysterious adventures, swift and daring action, experiences fraught with danger, and wonderful episodes. Tom Anderson, of "Oxheart," a young Virginian, whose father and brother, "Troupe," are fighting in the Revolutionary Army, is at home with his aged grandmother, his sister "Dare," and the household servants, when suddenly he becomes involved in events which tax his seventeen-year brain (and our credulity) to the utmost, but, in spite of youth, relying on himself and his Indian comrade, Unaka, he is kidnaped and dyed to look like a half-breed. We follow him through bairbreadth escapes, deeds of violence and danger, battles with treachery and deceit, combats with smallpox, tornadoes, and enemies of all kinds. He is imprisoned, sold as a slave in the West Indies, suffers shipwreek, and barely escapes hanging as a murderer, but finally wins and returns at the end of the war to his home and loved ones. The story, it is claimed, is based on facts, sometimes strange, also on history, and contains enough material for several lives. It is what boys call a "thriller," and is well written except for the irritating frequency of reiterated prophecies, such as: "had he only known,"
"little dreamt be," "could he only foresee," "had he only suspected," etc.

Lagerisi, Selma. The Emperor of Portugallia. Pp. 323. New York: Doubleday, Page & Co. \$1,50, Postage, 12 cents.

It is no longer necessary to dwell on Selma Lagerlof, celebrity as a winner of the Nobel Prize and participant in other unusual literary honors, since all readers share that knowledge as well as appreciation and admiration for her work. Her erestive and imaginative genius is superlative. There is usually a mystical beauty in her stories which have given them the name of "Fairy Classics." This novel is largely concerned with Jan of "Ruffluck Croft" in relation to his daughter, "Glory Goldie Sunnyeastle," from the day of her birth, through the vicissitudes of peasant limitations, her absence from home, and the terrible consequences to her father of too deep a love and a consequently fevered and unsettled mind. The author has the power to make us sense the almost supernatural bond between father and child, so that we understand the pathetic concentration of Jan's devotion on the one thought which unseats his reason. There is a thrilling appeal to the human heart in this story and a deep appreciation of the limitations and intensity of the lowly mind. As in all foreign literature, methods and motivation are unusual, but they stimulate the mind to alertness and eau not fail to convince readers of Miss Lagerlöf's beauty and power as a writer.

Twain, Mark. The Mysterious Stranger. Bustrated by N. C. Wyeth. Pp. 151. New York and London; Harper & Brothers. 32. Postage, 12 cents.

This is one of those books especially prepared for the holiday trade, binding, paper, and illustrations being all of superior excellence and attractiveness. It is, in a way, a fairy story, with astrologers, spirits, and all the occult powers and forces in operation, but, through it all, runs, for the analytical thinker, a thread of philosophy, a theory of eternal verities, and this text: "Life itself is only a vision, a dream."

To three lads, playmates, in Austria, in 1590, came "the Mysterious Stranger," a handsome youth called "Satan," who pervades the book and has the power to become invisible, to create, to destroy, and to change destines. In the guise of a story many deeply significant statements are made. Boys are taught that our blind prayers spring often from the most solfish desires which, granted, would lead to still deeper shame and suffering. "You people do not suspect," says the author, "that all of your acts are of one size and importance, but it is true. To snatch at an appointed thy is as hig with fate for you as the conquering of a continent." Again. "sanity and happiness are an impossible combination. No same man can be happy. for to him life is real and he sees what a fearful thing it is. Only the mad can be bappy, and not many of them." Once more, "against the assault of laughter nothing can stand." There is a regular. well-developed story here, but hest of all are the illuminating comments on the hosbles of a race, which has "the moral sense" and set does horrible things, and "bristal" ones, because brutes do no such though Such evil deeds are lorown, not brotal.

Mayefield, John. Muftitude and Solitude. \$1 30. Postage, 42 cents.

In judging a book like this, it is necessary to bear in mind that "it was lirst published a good many years ago" and to make allowances for its immaturely, its lack of cohesion, and its about transitions of place and subjects. The author evidently had a purpose to build a story around the African "sleeping sickness. and was well informed on that subject. but it was not so easy to make the story spontaneous or pleasant reading. Roger Naldrett was unsucceeded in his draina, 'A Roman Matron," and failed to see his love, Ottalie Faviertt, who was drouned before he reaches her home. So he decides to devate his broken life to the conquest of this horrible discuse, and went to Africa with her cousin, Lannel. The chapters dealing with revolting details of the disease are full of scientific terms and deductions. So are the most convincing parts of the book. As a story, it is not attractive, nor is it satisfactory, except in illustrating a phase in the development of an author. who has "made good."

Roberts, Charles G. B. The Secret Traffs, Illustrated, Pp. 212, New York, The Macmillan Company, \$1.35 Postage, 12 cents.

Every one who is interested in the great outdoors is familiar with the works of Charles G. D. Roberts. Any one who reads his books for the first time has a stimulating treat in hand. In this collection are stories of boar, dog, boll, ragle, egret, own, and rabbit. The author makes one feel the irresistible torce of nature. He weaves a fanciful story about strange and dramatic facts in the lives of furry and feathered tribes. Each story is interesting, sometimes tragic and thrilling, and so eleverly constructed that the reader scarcely realizes that the scenes are doninated by beasts or birds, even when humans figure in them. His nature descriptions are exquisite and graphic. The episodes described illustrate customs and traits of different animals so subtly that we absorb edifying truths unconsciously while reading for entertainment. Never didactic, Mr. Roberts charms by his picturesque narrative and his absolute familiarity with his subject.

Standardizing Machine Shops

The necessity of economical production in our factories is more and more apporent. The war will end sometime, and what then? At best, a struggle for commercial and industrial impremises in which the carriers, old time methods that made money in spite of waste will be frozen out.

All manufacturers must watch to stop leaks, to reduce waste. Waste of material and labor, in rejections, can be cut down by using accurate gages. Until they are introduced, no sliop can effectively stand-

proue metal work.

Yet when really achieved, interchangeability of parts has magical effects on probis. By means of limit gages, standardized interchangeability of metal parts is assured and a boy can do the work of inspection. The method lowers cost of manufacture, spends up assembling, improves qualityin short, replaces guess-work with scientine precision.

AMERICA FIRST

Enters a new business at \$100,000 a year

The Board of Directors of a gigantic wholesale grocery concern had gathered to select a new president.

A keen, broad-minded director arose and said: "I know the man we want." He named the president of a great National Bank.

"What!" cried one astonished director, "what does a banker know about our business?"

"This man knows more than just banking," was the answer. "Banking, like wholesaling, is only one phase of business. man is not limited to any one field. He knows all the departments of business-finance, economics, organization, selling, accounting." They discussed the matter from all standpoints. Finally they unanimously agreed to get him if they could.

The banker accepted the presidency of the wholesale grocery concern at a salary of \$100,000.

In a surprisingly short time he had completely reorganized the whole concern,

New, well-planned office short cuts replaced the old, roundabout methods.

Means of shipment and distribution were completely revolutionized. And today this company is reaping the benefits of the changes made in the form of increased dividends amounting to hundreds of thousands of dollars,

The inspiring success of this banker in a business totally new to him, was the result of his broad busi-His greatness lay in his knowledge of ness training.

URRENT

R. CLINTON SCOLLARD shows VI wisdom in drawing material for his stirring ballads from the rich treasury of American history, especially that of Revolutionary days. Many of these poems have been collected in "Ballads Patriotic and Romantic" (Laurence J. Gomme). Patriotic themes should not be given over fully to the song-writers of the musical comedies; they deserve the attention of poets of ripe culture and true eraftsmanship. Here is a famous episode admirably treated; "Wayne at Stony Point" is one of the strongest ballads we have seen for many a day.

WAYNE AT STONY POINT

BY CLINTON SCOLLARD

This is a tale to tell your sons Of the craggy steeps that lie Where the tides of Hudson sweep and swing South by the Ferry of the King. And of those who did a dauntless thing On the noon of a night gone by.

Twas Washington sat in his tent, And he scanned a writing well; And it was thus that the writing rau-"I, Anthony Wayne, am ever your man; If you'll but plot, if you'll but plan, I'll storm the heights of Hell!"

The General smiled his slow grave smile That boded the forman III; And, as he bent his head and wrote, The lyric trill of the tawny throat Kept time, now near and now remote, To the scratching of his quill.

For it was the heart of the summer-time, And the Highlands surged away. In gleaming billows of verdure drest, Great of girth and broad of breast. Vale on vale and crest on crest. I nder the golden day

It was the heart of the nummer-times, Suspense filled all the air. For armed men lurked amid the trees About Torn Mountain's rugged knees, And where Dean Forest swayed in the breeze Back from the Mount of the Bear!

And they were men of the north and south, Hand on resolute band. Men of the Massachusetts line. Men who had fought at Brandywine. Men stanch as the Carolina pine, And the flower of Maryland.

'Twas Anthony Wayne sat in his tent With his band cupped for his chin, His thoughts afar when an ensign flew From the rocky peak of a Point be knew. When a messenger, clad in buff and blue, From the droop of the dusk strode in.

He gave the leader a swift salute, As he stood there, heel to heel; "A letter, sir!" and the eyes of Wayne Lit as the skies do after rain. And his heart was tuned to a martial strain As he broke the letter's seal.

"To-morrow," he read, "at the noon of night, Be this the day and the hourt" And his laugh rang out as the laugh of one Who sees, with the first bright beam of the sun, The chrismal crown of glory won, And the dawn of victory flower.

Morn on a sickle beach of sand That a swerve of the Hudson made; And line on line, and rank on rank, Under the dip of the shelving bank, Powdered and shaven, fore and flank, The troops upon parade!

"Forward!" then through the stealthy noon They marched at a measured pace; The woodland paths at a swinging stride They trod, and Donderberg's frowning side. Till they came, at the edge of the twilight-tide. To the vale of Devil's Race.

Then each man shaped him a white cockade That the plan might have no flaw, While the hours crept by, and naught was heard Save only the breath of a whispered word. Or the frog's low creak, of the breeze that stirred O'er the bay of Haventraw.

No beacon shone in the vast of the vault And there was no bugie blown. When out from the shroud of beech and pine-Onward they moved in a silent line, And the General gave them the countersign-The fort's our own! our own!"

It was file by left and file by right, And a narrow file to the fore, And there was Feblger, gallant Dane. Fleury and Hutler, hold and vain. And over them all "Mad Anthony Wayne," The chief of the fighting corps.

Through the strangling grip of the marsh's mire-With never a pause they prest. And the the seemd of the forman's fire Rang like the strings of a buttle-lyre, Higher they sought their way and higher Till they won to the cragged cryst.

Hand to hand, and brand to brand. They grappled, with grisly scars, Till the hanner that stood for the king and crown From the peak of Stony Point came down. And there floated the flag of new renown-Our flag of the Stripes and Stars.

The smitten sere by a fourtling ball As they upward charged from the fen-Through the flame-rout murk of the midnight pail. And the clamor and stress of the conflict-thrall, Bear me on!" was their leader's rall; "I would die at the head of my men!"

But not his to die, and he heard the ery From bastion and breach back thrown, A sound that echoss and triumphs still From the crest of that memory-haunted bill. The exultant cry, with its olden thrill-"The fort's our own!-our own!"

Our owe! ay, every league of land From the east to the western main! Our own! - and may we never forget. Till the light of Liberty's sun be set, His dauntiess deed, and our deathless debt To men like Anthony Wayne!

The two lyries below are excellent examples of Mr. Scollard's artistry. The first is splendidly pictorial, and shows Mr. Seollard's mastery of a difficult classical rhythm. The second is a glowing piece of Eastern magi., most musical and most colorful. Mr. Scollard's artful repetition of the beautiful word "Lebanon" has much to do with the charm of the poem,

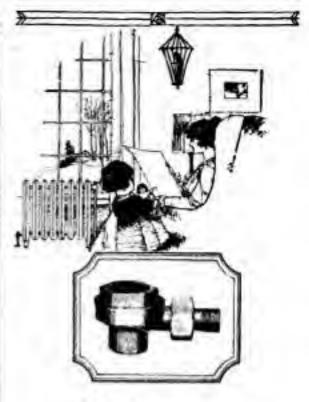

THE "ETERNAL PRESENCE"

BY CLINTON SCOLLARD

I have watched the glow on the morning sky-line When the kindling spring from out of the palm-

Came, with lift of lutes and with touch of timbrels. Winged as the swallow.

Summer I have seen o'er the fertile learn-lands Spread its gleaning gold and its burnished amber-Harley, wheat, and rye in the soft winds waving. Hipe for the reapers.

Make your Radiators Behave

RADIATORS equipped with a Dunham Radiator Trap (pictured above) cannot hiss or pound. It does away with the cause of radiator noiseair and water. Eliminating these from the radiator reduces coal consumption. All the heat in the vapor is utilized. So costly coal is conserved.

The trap is only one of the several exclusive features of the Dunham Vapor Heating System. Each is vital. Each is a distinct and radical achievement that makes for utmost comfort and unexpected economy. With minimum attention, the Dunbam-heated home will be cozily warm each hour of the dayevery single room.

The Dunham Vapor Heating System assures you of any desired temperature at any hour in every room. Dunham Heating, of course, costs more to install than does an old-fashioned system. It is worth it in comfort, low maintenance expense and durability.

Dunham Heating is all explained in our remarkable little book, "The 3 H's." The reading of it will point the way to more comfort with less coal. This book is yours for the asking.

6. Burroughs Direct-tn-Ledger Posting in the office of H. Wilenaky & Sons Co., Atlanta, Go. This was the final step in an interesting development of accounting methods. (See pictures and explanations below.)

No Hide-Bound Methods in the Wilensky Leather Business

When Jake Wilonsky employed as borokkungur, he had made another long atride ahead, but the biggent temproreor flits sow form (See No. PERSON. 6 abere-

Jake Wilensky is a chip o' the old block. Otherwise he couldn't have convinced his father of one improvement after another, leading from the high stool in the dark corner to the Burroughs Ledger Posting Machine in the present completely equipped accounting department.

His father built up a big business on honesty and sagacity from small beginnings in the little shop, where one old yellow-page ledger held all the accounts - and Jake was bookkeeper.

How Jake Began

Jake hegan with a pencil. He had to be very persussive even to get a loose leaf ledger and to keep it in pen and ink.

He acquired a typewriter for his business letters by inducing his father to give it to him for a birthday present,

So he managed one way or another to adapt his department to the rapidly growing business. he wasn't satisfied.

As Jake says, truly, "You can't half-sole and heel an old-fashioned system forever."

A Brand New Method

So he gave the accounting department a brand new method that took care of current requirements and was strong enough to carry the business along the up grade of steadily increasing sales a bookkeeper and a Burrougha Ledger Posting Machine.

That was the biggest improvement of all Jake had introduced but it required the least persuasion because his father had come to recognize the economy and efficiency of labor-saving and error-proof devices.

Burroughs Direct-to-Ledger Posting had the books up to date, trial balance out and statements mailed on the first day of the first month after the machine was installed.

It used to take the bookkeeper until the 6th or 8th of the month to get a trial balance; and statements didn't go out until the trial balance was completed.

Business grew to fast that Jake had to get a storonyrapher to help bitm with his correspondence.

i. This typewalter was whirthday present that saved Jahn a Int of Climes.

2 And the nest improvement added was a loose last fedger which he posts with pan and

Burroughs Direct-to-Ledger Posting Simplifies Accounting Problems

Accounting costs are cut in two. What's more, the bookkeeper has half of each day for other important work—watching credits, getting cost figures in department sales, and so on.

How it is Done

H. Wilensky & Sons Company use five card ledger boxes fitting special compartments in the safe. They post accounts receivable, notes receivable, accounts payable and notes payable to different card ledgers.

The card is slipped into the carriage of the machine and items posted direct from posting mediums. Cash received is posted from slips from the cash register drawer, which include checks by mail; customer's ledger from salesmen's orders, on which distribution of the charge is made by departments; accounts payable from invoices. They also use an interesting control sheet, showing cash register data, cash summary, balance of cash sales drawer, bank balance, summary of charge sales, purchases, etc., making a complete recapitulation of each day's business. This is used as a check list in posting, and in checking entries on the control journal, and is then filed for reference.

Why it is Better

Burroughs Direct to Ledger Posting cuts out useless operations—dipping pen into ink, blotting, entering dates and ciphers, complicated motions of fingers and so on. The operator depresses the right keys, touches the operating bar and the machine prints the item directly on the ledger leaf. This saves time—and hence money.

The machine adds and subtracts automatically. The accounts are therefore always balanced. Accuracy saves the time otherwise lost in looking for errors. The daily balance is invaluable to the credit man.

Statements are also made on the machine, with the same automatic accuracy and saving of time.

Last, but not least, the bookkeeper has time for other important work. He can make his job bigger by taking advantage of the daily figure information that the Burroughs machine makes possible—information that enables executives to run a business on knowledge instead of guess-work.

I have walked with autumn down through the orchards.

Where lay heaped the fruit with its veins of crimson.

Globes that vied with all of the lines of sunset, Harvests ambrosial.

Winter I have known, with its shroud of silence, Vestal, virginal, clad in its arctic ermine,

When the midnight brightened the frosted sky with

Torches auroral.

Just the shifting sands in the Year's great hourgiass.

Turned by Time who works at the Master's bidding.

Where we mark, if we look with eyes unclouded, The Eternal Presence!

THE WINDS OF LEBANON

By CLINTON SCOLLARD

The winds blow out of Lebanon adown the slopes and valleys.

The golden winds of Letunen, the blue day long. And over olden Lebanon above the cestar alleys

The mighty sun goss marching to the echo of their song!

The winds blow out of Lebanon from vine and myrtle clows.

The silver winds of Lethnon, the blue night

They bear the scent of cinnamon, they bear the scent of roses,

And the host of stars goes marching to the echo of their song!

The winds blow out of Lebanon with ne'er a sound of chiding.

The wooling winds of Lebanon, the whole year long:

The winds blow out of Lebanon, where love has its abdding,

And my heart is ever marching to the echo of their song!

It is well for a poet to know how to make use, occasionally, of proper names that are musical and rich in tradition. Kipling understood this thoroughly when he was doing his best work, and so did James B. Dollard when he wrote "The Little Irish Villages." In "Things As They Are" (George H. Doran Company), Mr. Berton Braley gives us this spirited geographical versifying.

NAMES OF ROMANCE

BY BERTON BRALET

Around the good world's wide expanse Are places great and small, Whose names fair tingle with romanco-And I would see them all: There's Cairo, Fez, and Ispahan, Bangkok and Singapore, And Trobizonde and Cagayan, And Rio and Labore.

There's Sarawak and Callao, Algiers and Kandahar. Khartum, Rangoon, and Tokyo, Bombay and Z About the name of each there clings Enchantment's golden veil, The wonder of strange folk and things," The glamor of the trail!

For some are north and some are south And some are cast and west, And some are curst with heat and drouth And some with balm are blessed; But Capetown, Rhodes, or Disco Bay, Shanghal, Seville, or Rome, Their names come singing down the way

To tempt me forth from bome, Their magic's ringing down the way, To lure me forth from home!

Very complete and useful".

PERSONAL GLIMPSES

MUD AND THE SOMME DRIVE

WHY, after spending hundreds of thousands of lives on the drive in the Somme Valley, the Allies appear to have abandoned the campaign, is made clear in recent dispatches from Cyril Brown to the New York Times. That whirlwind of fire and slaughter, where regiment after regiment was swallowed up in a quicksand of disaster as ground was gained inch by inch, has been announced by Berlin as practically a German victory. The reason for this is plain; the Allies started out for Bapaume. They did not get there. They ceased trying to advance. Result: their defeat.

But the true reason, if we are to credit Allied sources, hearing their side of the story, why the drive stopt, was-mud. There was mud everywhere in the fertile valleys, soil churned up by gun-fire into mud waistdeep. Consequently, the British and their Allies determined to wait, we are told, until the end of the wet season before resuming the attack. Berlin denies this, and only the return of spring can decide which source of information is correct.

In another part of this number is reproduced an illustration of the battle-region, showing graphically under what abnormal conditions the fighting was conducted. And we have Mr. Brown's vivid account of the attack on Warlencourt and its subsequent loss to the Teutons again as a specimen of the inferno that raged over the possession of a few square rods. Mr. Brown writes:

Perfect peace broods over the Somme. The chief of staff of a guard division piloted me to Bapaume, the unattained goal of the six months' British offensive, for which, according to the German estimate, they paid with more than five hundred thousand easualties, almost rivaling the toll of Verdun.

Peaceful as the grave, dead and deserted, this pretty little French town, of whose vanished charms the German Somme fighters speak with sentimental regret, is to-day the most complete and pitiful collection of ruins I have seen exhibited on a dozen fronts-a monument to the efficiency of the new British artillery. There is no denying the fact that the British can shoot, particularly with their heavy calibers. A saunter through the silent streets (we were the only pedestrians, for the natives had been removed to the rear for safety so soon as the Germans realized that the British meant business at Bapaume) revealed that not one building had escaped that terrible typhoon of British steel and fire. Nor even have Bapaume's famous catacombs gone unscathed, the heaviest shells splitting the business buildings and deserted homes wide open, and then passing through the cellars and earth into the mysterious underground passages for which the Somme region is famous.

Curiously, Bapaume in ruins is stronger than it was intact, and the Germans, working overtime, particularly in the last five

non-fighting weeks, have turned Bapaume into an inland Gibraltar, seemingly impregnable if anything could withstand the irresistible modern machinery of war. The rubbish and wreckage of homes and stores added themselves admirably to conversion into the citadel of as powerful a field-fortress as German industry and technical thoroughness can produce. Still theoretieally threatened with envelopment on the left bank, Bapaume has been, and is still being, fortified against every point of the compass-insulated against the near-by British by very many wrappings of extraordinary trenches and broad girdles of barbed wire, with every evidence that the fortifying process will be continued all winter. perhaps till spring, perhaps indefinitely. New defensive lines are being conjured out of the ground overnight in a rather hastily improvised form, then they are being built out at the rate of about two a week.

Just how many fortified layers infold Bapaume may not be told, but I passed through more than twenty on my way to the first line, and the last was stronger than the first. Startling was the difference between these newest model German lines of defense and the best they were able to show me in August, or even October. What then seemed trench perfection is puny compared with the 1917 models of field-fortifications, which contain all the modern improvements and novelties suggested by five months' experience in resisting an irresistible offensive. Yet the German leaders are unwilling to commit themselves to the positive statement that Bapaume can not be taken if the British want to pay the price. They are hard-headedly rather calculating on selling it dearly should the British make a bid for it to-morrow or next spring, and are prudently preparing for the eventuality of having to part with it, as the rearward network of main defensive lines extending back to the Belgian border

One's impression is that Bapaume is not physically unattainable; that it is rather morally untakable; that the British will shrink from paying the fancy price which the Germans are now able to exact for this one-time town of six thousand inhabitants, already heavily mortgaged with blood.

The British lines, from which this huge price is demanded, are less than two miles from Bapaume at the nearest point. Yet, since November 14, they have been unable to gain an inch of territory. In speaking of the last Somme attack, Mr. Brown remarks:

I was told in the field how the choicest troops of the British army, the veteran colonials, were hurled, as a climax of the great Somme offensive, against the flower of the German army, the young guard before Bapaume, in a last desperate effort to break the German front and reach one of their goals of the five months' offensive. On the sixth consecutive charge of unprecedented ferocity, even for the Somme fighting, the Australians finally broke through the thin German line and swept on over the Butte de Warlencourt. With victory almost in the grasp of the assailants, the young guard rallied, one company heroically sacrificing itself but plugging the break in the front with its dead bodies while the guard reserves came up and turned the tide. The Australian wedge of the British offensive was smashed and rolled back. The Butte de Warlencourt.

THE UBIKO MILLING CO. was in imperative need of a new structurea serious fire having entirely destroyed an old grain mill. Ubiko turned at once to Ferro engineers, and the day following the fire told them to go ahead. Construction proceeded right on the heels of the drafting room. Just five months and six days from the time of the building's conception, the concrete roof was poured complete and the Company had a new mill-

FERRO CONCRETE BUILDING

-a building unsurpassed for fire resistance, unrivalled for permanence—the best kind of insurance against future interruptions of business and consequent loss of profits and customers.

But behind this remarkable record of

design and construction is the confidence which Ubiko placed in the Ferm organizationa confidence gained, in part at least, from experience with Ferro on a previous contract.

Ubiko knew Ferro and knew Ferro Concrete

What Ferro engineers have done for The Ubiko Milling Co. and for many prominent concerns in this country, they can do for you. If you are considering a big building contract-factory, warehouse, office building, or similar structure —let us send you our book, "Building Your Building Right," It tells

you what Ferro Concrete Buildings are; it explains our Ferro profitsharing contract, a form of contract which will surely interest progressive executives.

One Agent Bought An Automobile With His Commissions

Another paid off a mortgage, another went to college. And so thousands of men and women have been able to increase their incomes and buy the things they wanted through the Oliver plan.

We are looking for ambitious men and women to represent us by acting as agents for Oliver typewriters. Through our national advertising in the big magazines we receive thousands of inquiries, many in your community. We want you to go and see these people and demonstrate the merits of the Oliver typewriter to them. We offer you a complete course in salesmanship, giving you the advantage of experience of our other agents. Frequently we send our representatives to help agents, and the amount of your commissions depends upon the amount of time you wish to give to this work. Many of our agents earn more than the salaries they get from their regular occupations. You may do the same. Experience in salesmanship is not essential. You can bandle an agency even if you are engaged in some other business.

The new Oliver "Nine" is a quick seller, and thousands are being sold. In fact, we are increasing our manufacturing capacity greatly because of the increasing demand. Many of the biggest concerns in the country use Olivers throughout their businesses. Over a half million are now in use. If you want to turn your spare time into dollars now is the time to find out whether your territory is open. Let us know your qualifications and how much time you can devote

to this work. We will then outline our proposition and tell you whether or not we are satisfactorily represented in your community. Applicants taken care of in the order received. We are allotting territories daily. Act at once, Don't let someone get ahead of you. Oliver Typewriter Co.

Oliver Typewriter Company 1430 Oliver Trapewriter Bldg Chicago

I want to know more about an Oliver agency, as I believe I could handle one successfully.

on which hung the fate of Bapaume, was recovered. This, the Germans say, was one of the most dramatic incidents of the war, and no less important because, according to the German leaders, it was chiefly the final defeat of the Australian divisions that broke the heart of the British offensive.

There was still much of the ghastly about the scene of this last death-struggle as I walked out from Bapaume to the first German line. To reach the Butte de Warlencourt it was necessary to go all the way across the desultorily fire-swept open country, the sprinkling British shrapnel searching blindly for the German rearward lines of communication, the smaller caliber English eannon making sudden surprize onslaughts against favorite points in the bollow behind the Butte where German reserves were suspected of lying. The British heavy-ealiber mortars and howitzers were chiefly worrying the front trenches, but bad observation conditions and a high wind that made airplaning impossible prevented effective artillery fighting.

There was no cover available on the route, for all the approach trenches had been drummed to muddy chaos, now frozen solid, by the terrible British preparatory cannonading. The blood-soaked Butte de Warlencourt looks absurdly insignificant to have played a historic rôle and to have been the final curtain of the first battle of the Somme. It is not even a hill-just a long-drawn-out and very slightrolling rise - but quite sufficient in this otherwise flat terrane to enable its possessors to overlook and dominate the English lines.

A few hundred yards behind the first German line, according to the narrator, lies the brook Apere, a slender streamlet ambling along between the stumps of shredded willows, while further back is the village of Warlencourt, the only vestige of civilization to relieve the monotonous panorama of hideous destruction. Of the country around this heap of ruins we read:

As far as the eye and field-glass can see, the face of the earth is shockingly scarred with the smallpox of drum-fire, one shellhole near the other, these craters frequently coalescing so that the German soldiers have difficulty in threading their path through the earthly labyrinth kicked up by a million giant moles. This stretch of the Somme front probably represents the limit of ravagement inflicted on the long-suffering earth by human agency, the chief of staff of an army group estimating that the British had lavished five million shells in fourteen days on the front of one German corps alone.

A bitter wind now blows over these fields of death. "The region ahead of us as far as Pozières and Thiepval is one vast graveyard, where the dead mostly still lie without decent burial, lost in the mud, and now frozen in," said my informant. "During the hottest phase of the battle, only too often the living were forced to lie among the dead. The mud during the last serious phase of the Somme battle was indescribable, and many thousands of wounded must have perished by drowning in the mud.**

He also spoke of the devastation of the ground itself. "Nothing will grow here for years to come," he said. "The French peasants who return after the war to till the once fertile soil will have a hopeless

GMC Trucks-Built For Hardest Hauling

What is it that makes GMC Trucks superior? What accounts for their greater pulling ability—the consistent, dependable service they give—the low operating cost—the low upkeep?

It's their practical, common-sense construction, their simplicity, their correct design every unit built with a factor of safety, and easily accessible.

That's it. It's the way GMC Trucks are built that makes them superior—from the standpoint of owner and driver.

Because of their simplicity and accessibility, GMC Trucks can be readily cared for by the average driver. Maintenance cost is unusually low—repairs and replacements practically negligible.

You can buy GMC Trucks knowing confidently that they are fitted for the work—knowing that they will withstand the hardest kind of use—more than that, you have the assurance that with reasonable care they will render dependable service and operate profitably

For the performance of thousands of GMC Trucks in hundreds of various lines of business in all parts of the country stands as visible evidence of what GMC Trucks can do. Records of their performance in a business similar to yours, enable you to determine accurately what they will do for your business.

The GMC Line is Complete

There are GMC Trucks of the proper size and type to meet the requirements of any business—six sizes in all—34 to 5-ton capacity—chain and worm drive.

If you now operate motor trucks—or are considering motor trucks for your business—we urge you to see the nearest GMC dealer or communicate with TRUCK HEADQUARTERS. Investigate the GMC line.

task. The shells have torn and tossed up the barren clay from below, burying the fertile top-soil. But in addition the French peasant who attempts to plow here where death has plowed will do so at the risk of his life. The ground is full of unexploded shells which are likely to go off when the plow strikes them. And the peasant who hopes to sow and reap here will be constantly turning up the remains of the dead and will gather a harvest chiefly of shellfragments. This unfortunate land, harrowed by the British offensive, will not be green again for a decade to come."

This was the scene of the last death-struggle before the drive was stopt. Its story. according to Mr. Brown, is simple as a rural epitaph, and conveys as much of a lesson, Of the fighting, he says:

The Butte de Warlencourt was held by a guard division—the same which I had seen reviewed by the Kaiser on the Somme in August and now sent in to save Bapaume and give the quietus to the British offensive. "We haven't lost a foot of ground since we have been here," its leader remarked proudly.

Against the Prussian Guard three British divisions were flung—the First Australian, Second Australian, and Fourth Australian, while the Fiftieth English Division was also opposite the Guard, but did not attack. The Fourth Canadian Division supported the Australians on the right.

After seventy-two hours of maddening drum-fire, that literally obliterated the German lines and elapped a lid of fire and steel on the hollow between the Butte de Warlencourt and Bapaume, through which no reserves, or food-, or ammunition-carriers could squeeze, the first storm of the Australians broke at eight o'clock in the morning. The mud was more than knee-deep,

The first wave of Australians shuffling slowly up the slippery mud straight toward the Butte was mown down to a man by the few German machine guns that had survived the wreek of drum-fire. Wave after wave followed and was mown down until the first attack had bled to death, A second, fiercer, more powerful storm followed at 11 A.M. This time the Australian waves followed faster and thicker than the few machine guns could mow them down, but the mud saved the heavily outnumbered Prussian Guard. The Australians, wading almost to the waist, could not get at the Guard lying in the shell-holes that had once been trenches.

Unable to advance, unwilling to retreat, the Australians knelt in their tracks, heroically, without so much as a bush for cover. and cold-bloodedly fired at the Germans who crawled out of their shell-holes to meet them. Then, said the participants, was witnessed such a spectacle as was never seen during the war, the Imperial Guard and the Australians kneeling in the deep mud, barely thirty feet apart, unable to come to grips and firing at one anotherthe strangest fighting ever seen on the Somme or anywhere else.

A third Australian attack, equally hopeless, followed at 1 P.M., a fourth at six, and the last at one o'clock in the morning. And in this last drive the Australians conquered the mud and broke the German line in the center on a front of four hundred yards. To the right and left the thin line of the Prussian Guard reeled back. The left wing, losing the chalk cliff, rallied from

the shock, regained the Butte and cliff, and held firmly thereafter. But the center was gone, all officers and non-commissioned officers hurling hand-grenades to the last gasp, dead or wounded.

With nothing to stop them this side of Bapaume, the Australians advanced on the line Eaucourt-Le Barque through the four-

hundred-yard gap.

Then the iron discipline of the Guard saved the most critical situation of the Somme Battle. The right and left wings of the Guard were sent back at the points of the gap, machine guns were turned about face and fired into the backs of the Australians, victoriously advancing on Le Barque and Bapaume. The Australians, finding themselves attacked from the rear and suffering previous losses, stopt their triumphal march, the Guard reserves which were hurried up effectually barring any chance of their further progress.

The last and ficreest main battle-day on the Ancre ended with the Australians holding a narrow-based salient into the front of the Guard, from which they were thrown out again two days later. The status quo was thus restored. Bapaume was saved, and the first battle of the Somme was definitely

ended.

So the pursuit of the active campaign came to a halt. When it will begin again is, as previously noted, unknown. But at the cessation of the advance the German forces appear to have taken heart, the they realized that it was not as clear a victory as they might have hoped for. An officer of the staff of Prince Ruppreeht phrased his view of it. "It died of exhaustion," he said. "The fighting continued until both sides were completely out of breath. Only to-day one side stands with its mouth open and the other with its mouth closed."

On his own behalf, Mr. Brown adds:

Like giant gladiators who have grappled until they fell and staggered apart from sheer physical exhaustion, the armies on the Somme stand facing each other, punting for breath, both claiming the victory on points, and preparing themselves for the next round of the struggle.

Just when the wrestling in the bloodsoaked Somme arena might be resumed no German leader or staff-officer would undertake to prophesy. They said it might be to-morrow or perhaps not until spring, but that the resumption of hostilities would find the German armies fit and ready and in better shape in respect to infantry, artillery, and air-services, than at any previous stage of the combat.

I found a unanimous belief that a second struggle would break out on the Somme, the Crown Prince's artillery specialist voicing the opinion of the whole staff when he

"The English are too stubborn and thick-headed to see the hopelessness of their

offensive and give it up."

Certain signs indicate that the French and British will not make their next and greater effort until spring, such as the fact that the British are taking over part of the French line on the Somme, yet the Germans are, nevertheless, preparing against the eventuality of a resumption of the offensive in the more immediate future.

"The Somme offensive was a great battlesymphony, the first notes of which sounded

TIMKEN DETROIT AXLES

If we had just this one chance to talk to you-If this were the one Timken-Detroit advertisement you would ever read-What message would we give you?

We could not tell you the whole story of motorcar axle importance; but we should certainly emphasize seven facts that every motor-car owner should know and remember:-

- Human safety comes first in motor-car construction, and in respect to safety, the nales are beyond question the most important parts of the car.
- A motor-car axis must be better than "good enough." It must exceed the stated requirements of the car builder in capacity to carry loads, transmit power, and stand up to the shocks and stresses of travel.
- The axles must fit the car, and the car must fit the axles. The axle builder must see to it that his axles are of ample size and capacity to do the work required of them and that they are properly engineered and built into the car. The car builder should see to it that no radical increases in weight or horsepower are made after the type and size of the axles have been decided upon. For if radical changes are made it may jeopardize the owner's safety and satisfaction. In other words, axle builder and car builder must work together for a common principle.
- The axle builder must be able to anticipate the future. He should not wait for new conditions or for his customers to demand new types and improvements in construction. He should be continually striving for something better than the best he can do today and be the first to urge its adoption. He should make constant progress toward better design and quality.
- The car owner must have assurance that the axle builder will continue in business. Thus, he knows that every part and piece of his axles can be furnished for replacement if the need ever arises. And that assurance can be given only by an old, established and successful organization.
- Building motor-car axles is a task for a specialist; for to meet the requirements already mentioned will take all the experience. engineering ability, manufacturing equipment and financial resources of an entire organization, who will give it their exclusive attention. Thus, the axle builder, with his many customers, acts as clearing house for the combined experience of the whole industry.
- Continued use is the test of axle build. ing leadership. It is years of continued use by many of the ablest and most successful of motor car builders, it is the high average of satisfactory performance in hundreds of thousands of cars, that finally tests the soundness of the axle builder's principles and practice.

In all this we have not mentioned Timken Detroit Axles by name. If this were our one chance to talk to you, we we should devote it wholly to explaining what kind of axies we nonestly believe you should have, whether made by us or by any other axle builder who can qualify under all of the foregoing principles.

at the beginning of July and the last discords died in the middle of November."

Thus an officer summed up the combat as he distinguished three general phases, or movements, of the symphonic struggle: First, allegro, lasting the first ten days, during which the Allies surprized and almost overwhelmed the Germans by the magnitude of their preparations, gaining more ground in those ten days than in the following five months; secondly, when the Entente tempo changed slowly from "enormissimo" to maestoso as the Germans brought up more and more heavy artillery and more and more infantry in a never quite successful effort to restore the equilibrium; lastly, a short, final funeral march of the offensive, with the equilibrium restored.

Taking up the reason for the lull in affairs, Mr. Brown notes especially from information gathered at the headquarters of Crown Prince Rupprecht himself:

I gathered that some of these factors responsible for cessation of activity were the present powerful array of German heavy artillery, the loss of ascendency in the air, and the exhaustion of the British infantry and ammunition-reserves.

This makes it seem likely that the British offensive will not be resumed until the British can draw together still greater masses of artillery, store up still more stupendous stores of shells, and fill up and rest up their worn divisions. The German officers think it is not a physical impossibility that the British may be able to surpass all their previous efforts, but so, also, can the Germans, and the slight margin in favor of the British to-day is likely to shrink every day, it is felt, as Germans race them in massing artillery and ammunition on the Somme.

There is, moreover, a physical limit to the number of shells that can be fired and the number of guns lined up on a given front. The British batteries are already planted so thickly that the addition of very many more would be suicidal, the Germans think. Then, too, it is said that the British can only increase the violence of their next artillery performance by using heavier calibers, not by increasing the number of the guns.

In September, General von Gallwitz's chief of staff estimated for me that the British and French fired approximately half a million shells in one great battle-day on the Somme. This record was surpassed in October. One of Crown Prince Rupprecht's artillery-experts said it was difficult to estimate the total number of shells fired during the entire Somme Battle, but he thought that the French and British had probably expended over twenty million.

It was regarded as significant of the weakened strength and spirit of the Franco-British offensive that altho after a long spell of bad weather to-day was beautiful fighting weather. The British attempted no attacks, the the hard-freen ground favored the use of their "tanks."

According to German military opinion, the tanks, after scoring some good early successes, due to surprize and novelty, proved a sorry failure in the long run. One of the first tanks appearing on the scene succeeded in getting in the rear of the German lines. Repetition of this has been avoided.

In September the German leaders were still puzzled as to the best way of coping with the tanks. At that time General von Gallwitz said: "The effect of the appearance of this modern version of the Trojan horse was unusual. We must educate our men on how to fight them."

He indicated to me in confidence the method of defense, which has since been worked out in all details and has proved effective.

According to British prisoners, many wrecked tanks lie back of the present British front. The Germans credit the British with still having over one hundred serviceable tanks, old and new, in readiness back of the line.

THE IMMIGRANT AS AN ASSET

WHY does the immigrant emigrate?
In a letter printed in The American
Machinist (New York, November 9) under
the above heading, Jan Spaander, of Brooklyn, N. Y., thinks that deliberation on this
question might induce a kinder attitude
toward our new citizens from abroad. He
writes:

If the average American had a clearer insight into why people from the other side come here, he would not be so overbearing; he certainly would not tease, look down upon, and often shamelessly underpay, the "greenborn." He would not insist upon harsher entrance-rules; he would join the editor of The American Machinist and other broad-minded men in elamoring for more night-schools to teach English and to give instruction in the history and ideals of this great country. The good-will thus shown would be the finest example of beautiful Americanism, and it might cause the immigrant to be less suspicious. It even might make him (I said "him," not "you") willing to assimilate.

The last sentence may seem strange to you, but is it not stranger to hear that most immigrants look down upon the American coworker? The childish way in which the latter treats the foreigner, who lacks mentally nothing but a second language, forces the immigrant to regard the American as not altogether up to standard. The underestimation of the immigrant is mainly caused by the distorted ideas Americans have concerning living conditions in various European countries. These conceptions are based on out-of-time tales and on ridiculous womenlabor stories, which as a rule are "substantiated" by photographs.

Living conditions in several European countries are by far better than in America, and labor laws and sanitary conditions here are backward indeed compared with those of most white men's countries. This can be proved by figures and facts. To understand the immigrant, the American must get rid of the idea that it was hunger that drove him across. The actual, main reasons for immigration are Wanderlust, compulsory military service, and above all the existing class distinction, unbearable to any free-born man. That is why the immigrants are the best, the most courageous, the most advanced of the "class" they come from. My statement is backed by the many admirable qualities of the American. He is the immigrant's child. Above all, the immigrant couples are unselfish. They give up, knowingly, all that is dear to them; they offer their whole future to give the children a chance as they invariably put it.

Train for This Big Job At Home By Mail

Give yourself a chance to "get about"—to better your position in the world. The LaSalle Home Study Course in Higher Accountancy will prepare you for a permanent position in a new profession—for a position that needs you wants you. Just think of it! There are only 2.00 Certified Poblic Accountants in America. Yet there are over half a million firms that require the acretices of Expert Accountants. The field is truly unlimited; the demand many times greater than the supply the salary far in encess of that surved in other fields. With these facts before you cannot afford to hold back.

Be An Expert ACCOUN

With our training, you can readily qualify for the position I Auditor, Certified Public Accoun-ant, Expert Accountant be an important facts in the conduct of any business.

Small Cost—Easy Terms
Our course is under the personal supervision of william Arthur Chair. Ex-President, National Association of C. P. A. Examiners, Ex-Secretary, lillinois blate thourd of Associations, and other experts who rank among the highest. We grepare you from the ground up at small cont and some years you from the ground up at small cont and somewhater training secondary to your individual needs, from the simplest bookkeeping principles to the most seven accounting problems. We will give you whatever training, instruction or review on the subject of bookkeeping you may personally theed—and without any astrona penas to you.

The LaSalle Guarantee

We give you a written guarantee that shoold you fall to pass the Certified Public Accountant's examination hold in any state, we will give you special instruction and help—without subject and instruction and help—without subject and entire amount of toldion, according to our Guarantee lead if disastisfied upon completion of course.

Our big free book tells the whole story. Explains state examinations, regulations, subjects paid expert accountants, etc.—also gives complete information regarding the course. Take the first step toward greater success by mailing the coupon NOW—today.

THE BUCCANEERS. An open-date story of the black flag in business, by Hanny M. Hvor. 12mm, cloth, 216 pages. \$1.20 ust. Funk & Wagnalis Company, Pubs., New York.

Neurology

For The Physician

Here is a new edition of a standard work—thoroughly
revised and considerably enlarged, to include all revent
advances in neurology and be completely up-to-date.

Diseases of the Nervous System

by H. Campbell Thomson, M. D., F.R. C. P., the famous authority on this subject. He presents here all the main facts of Neurology in a concise and readable manner. There are 38 big chapters, each treating clearly a different phase of the study, and about 125 valuable photographs and diagrams. In revising this work, the author has increased its size by 70 pages, and added a number of new illustrations. The new material contains chapters on The General Functions of the Brain: The Enumination of the Higher Functions of the Nervous System by the Apolication of Experimental Psychology: The Paths of Infection of the Central Nervous System; etc., These chapters greatly increase the scope and value of the board; 570 pages; \$2.75 set; by mail, \$2.91.

Cloth bound: \$70 pages; \$2.73 net; by mall, \$2.95. Funk & Wagnalls Company, 354-60 Fourth Ave., New York

THE SPICE OF LIFE

What the Music Did. - Following the musical program Mrs. J. T. Brown read an article on "Personal Devils." Seventeen were present. The Boone (Iowa) News-Republican.

Tempora Mutant. - Mr. Goodleigh-"Her age really surprized me; she doesn't look twenty-eight, does she?"

Miss Snappe-" Not now, but I suppose she did once."-Candle.

Turn About.—He was about to propose, but before doing so he wished to make sure she was a competent girl. So he asked her: "Can you wash dishes? "

"Yes," she said sweetly. "Can you wipe them? "

He didn't propose: - Record.

The Difference. "Blessed are the meek," quoted the deacon, in reproving the backslider, "for they shall inherit the earth."

"They may inherit all right, deacon," said the irreverent one, " but somehow or other they never seem to get possession." - British Weekly.

Added Offense, Convint Justice "Ten and costs for reckless driving."

Youxu Moronist-" Listen, Judge! We were on our way to your office to have you marry us."

Justice-"Twenty and costs, then. You're a darned sight more reckless than I thought you were,"-Judge.

Merely Incidental. - HOTEL VISITOR (coming from bathroom) -"Here, I've been ringing for you for ages."

CHAMBERMADO "Which bell, sir?"

VISITOR -" The bell over the bath." CHAMBERMAID "Oh, we pay no atten-tion to that bell, sir. That's only put

there in case any one feels faint."-Punch.

No Objection.-When Governor Head was in office in New Hampshire, Colonel Harrett, of the Covernor's staff, died, and there was an unseemly scramble for the office, even while his body was awaiting burial with military honors. One candidate ventured to call upon Governor Head.

" Clovernor," he asked, "do you think you would have any objections if I were to get into Colonel Barrett's place?

The answer came promptly. don't think I should have any objections, if the undertaker is willing."-Tu-Bits.

Sent It Home.-Over the garden-fence the conversation had suddenly turned acrimonious.

" An' if yore boy, 'Erbert, ties any more cans to our pore dog's tail," was Mrs. Moggins's stern ultimatum, "e'll ear about it, that's all. Oh, an' per aps you've done wiv that saucepan wot you borrowed

" 'Krbert," asked Mrs. Grubb shrilly, " wot 'ave you bin doin' to Mrs. Moggins's dog?"

" Nothin', ma!" replied the small boy, unblushingly.

"There!" said his mother triumphantly. " An' you returned 'er saucepan yesterday, didn't you, dearie? "

Sent it back by 'er dog!" said 'Erbert calmly. - Chicago News.

R

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalla New Standard Dictionary is consulted as urbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"A. W. P.," New York, N. Y.—"Can you say where the words attributed to Abraham Lincoln by the Premier of Great Britain, the Rt. Hou. Lloyd-George, are to be found?"

The words to which you refer, which we cite below, were delivered in the course of a speech at a Sanitary Fair, held in Philadelphia, June 16, 1864. See the "Complete Works of Abraham Lincoln," Volume II, page 534, "Speeches, Letters, and State Papers." "We accepted this war for an object, a worthy object, and the war will end when that object is obtained. Under God I hope it never will end until that time."

"E. R. A.," Altoona, Pa.—"(1) Will you kindly distinguish between incredible and incredibles. Are they perfectly interchangeable? If not, what is the best usage? (2) Do you know of any such person or character as 'Theophrastus Such'?"

(i) The dictionary defines "incredible" as "Beyond or difficult of belief, as being extraordinary or improbable; bordering on the impossible or approaching the marvelous; as, incredible speed." It defines "incredulous" as "1. Distrclined or slow to accept as true; withholding or refusing belief; disposed to criticize or object; skeptical. 2. Characterized by or manifesting incredulity; as, an incredulmes laugh." Theophrastus Such is the principal character in George Eliot's "The Impressions of Theophrastus Such."

"C. H. J.," Washington, D. C.—"Will you be good enough to advise me whether the following sentence should take the singular or plural verb?—
'You should satsify yourself that John Smith and John W. Smith are one and the same person."

Are is correct because the subject of the verb is plural—John Smith and John W. Smith.

"S. L. C.," Evanston, III.—"(1) What was the subject-matter of the last four amendments to the Constitution, and the dates of the same? (2) Why does a ball remain stationary on a level surface and roll on an inclined surface?"

(1) The last four amendments to the Constitution were: (a) July 28, 1868. (1) Due protection for citizens secured against unjust State legislation. (2) Representatives among the several States according to their respective numbers. (3) Those who have been guilty of rebellion disqualified from office. (4) Validity of the public debt asserted. (5) Congress to have power to enforce these provisions. (b) March 30, 1870. (1) Universal suffrage declared. (2) Congress to have power to enforce this. (c) February 25, 1913. Congress to have power to tax incomes. (d) May 31, 1913. (1) Senate to be composed of two Senators from each State, elected by the people thereof, for 6 years, and each Senator to have one vote. The electors in each State must have the qualifications requisite for electors of the most numerous branch of the State legislatures. (2) The executive authority of each State to issue Writs of Election to fill vacancies. (3) The amendment not to affect the election of any Senator chosen before it comes into effect. (2) A sphere can not remain at rest upon an inclined plane because its center of gravity is then located outside its base and the consequent loss of equilibrium tends to generate motion in the direction of the lowest point of the Assuming that the inclined plane is represented by the hypotenuse of a right-angled triangle whose opposite side is in a horizontal position; then the line drawn from the center of the sphere to its point of contact will be perpendicular to the hypotenuse of the triangle. But the force of gravity is exerted downward in a vertical direction, and the center of gravity of the sphere is identical with its center. Since the vertical line drawn from the center of gravity does not coincide with the line from the center to the base of the sphere, the force of gravity will be exerted to generate movement in the direction of a line drawn from the base to the intersection of the hypotenuse and the vertical line dropt from the center of the sphere.

"Mailing Done In One-tenth the Time"

Read the Letter

"We have been using one of your addressing machines for the past three (1) years; the results are entirely satisfactory in every way. We find that we can address our mailing list in one tenth the time that it formerly took. We have no trouble of any kind with the machine."

(Signed) Emanuel Blanc. Distributer of Victor Talking Machine Company's Product, 2795-2799 Broadway, New York, N. Y.

If you have a mailing list, large or small, be sure to read the letter shown at the left.

It shows how you, too, can reduce time and expense by using a DIREX-ALL for addressing, billing, listing, and all similar work now done by hand.

And we can show you hundreds of other letters just as interesting—some from concerns in your own line of business.

With every DIREX-ALL goes our guarantee of time and money saved through its use. The DIREX-ALL does all that any other addressing machine will do-has advantages that no other has. It is the only addressing machine with the typewriter ribbon principle, and one piece metal plates.

Wonderfully easy to operate. A boy or girl can do it all. The plates that do the imprinting serve as index cards.

Whatever your business, whatever your line, whatever your location, write today for free book, "Doing the Day's Work Better." It shows the particular DIREX-ALL made for your use, and tells how it will save time and money for you-guaranteed!

Write to our nearest office today.

VESTMENTS-AND-FINANCE

THE IMPROVED INVESTMENT POSI-TION OF RAILROAD STOCKS

URING the rapid declines and partial proveries, of stock prices in Wall Street when the peace-exchanges were passing between the great Powers, new attention was drawn to the improved position of railroad stocks as investments. The rapid and, in some cases, marked changes, in the period referred to, occurred largely in industrials and notably in the so-called nunition stocks. Railroads in general were much less affected, while what are known as standard rails, and notably the best of these, were affected scarcely at all. Pennsylvania, for example, moved considerably less than a single point. In such stock as Great Northern preferred, Delaware & Hudson, Chicago & North Western, Atchison, and Louisville & Nashville, changes were larger than in Pennsylvania, yet these were not moved more than one or two points during a period when changes in industrials were so great as to lead men to describe the action of the market as "a prace-panie." The result was that railroad issues for a time found greater favor among investors as well as among some speculators than had been the case for several weeks. For hitherto, practically since the war began, the industrials had proved more inviting, the rails meanwhile being quite neglected. A writer in Financial America recently said of railroad stocks under latest conditions:

"Prominent railroad men, as well as bankers who are actively identified with many of the large railroad systems, maintain that railroad stocks are cheap and afford an excellent medium for the employment of funds, not on a war-, but on a peace-basis. It is recognized that, irrespective of the ultimate outcome of the European War, commercial conditions in this country are most satisfactory and are likely to so continue for a considerable period of time. As an indication of the confidence entertained by bankers and railroad men in the outlook for the carriers, attention may properly be directed to the recent announcements of new financing by such companies as the New York Central and the Chicago & North Western railways. Both of these roads have determined upon a policy of offering stockholders the privilege of subscribing to additional stock to provide fresh funds for future needs. Other roads are expected to take similar steps in the not distant future.

"Some of the railroad companies have resumed dividend payments, while others have increased their rates in this respect, and there are strong indications that further developments of this character. will take place in the coming year. Union Pacific is one of the roads the to make a more substantial distribution to its common stockholders next year. Had it not been for the unusual condi-tions in the railroad world, which developed as a result of the aggressiveness of operatives with respect to the eight-bour day and the subsequent enactment by Congress of the universal eight-hour law for all the railroad brotherboods, it is asserted by some that the Union Pacific would have increased its dividend or declared an extra before this.

"In iron and steel circles, as well as the equipment markets, it is stated that the railroads are making more extensive

purchases than for several years. During the first three weeks of November the purchases of cars and locomotives, both for domestic and foreign account, were larger than for any full month of November during the past twelve years. Considerable significance attaches to this development because November is always the largest month in the year in this respect. Another element in the situation which is particularly significant is that the prices paid for rolling-stock purchased this year in November ranged from 75 to 150 per cent. higher than those ordinarily prevailing.

Railroad earnings continue large and would be much greater were it not for the shortage of cars universally throughout the country. The lack of rolling-stock has acted as a restraining influence on business activities generally, because an adequate supply of rolling-stock at all times would have permitted manufacturing operations on a more extensive scale, while deliveries of finished products would have been greatly facilitated. These are all factors which are of prime importance to the railroad situation.

HOW THE DIAMOND TRADE HAS THRIVED IN THE MIDST

OF WAR

During the years immediately following the panie of 1907, the diamond trade all over the world suffered severely. It was not until early in 1914 that it felt itself to have been once more established on a good basis. Then came the European War. which caused another sharp reaction. All the leading nines in South Africa found themselves compelled to suspend operations in 1914, since the demand for dismonds had suffered an almost complete collapse. With the progress of the war, however, and the making of new fortunes, especially in this country, the trade once more has thrived. Following are interesting points in relation to this matter as printed in a London letter to the New York Times Annalist:

"Instead of the anticipated trade depression, the war has been accompanied by world-wide industrial activity, disadvantageous to the beligerents who have to pay, and of great benefit to the neutral nations who receive,

"The revival wrought a great change in the fortunes of the De Beers Company, whose annual accounts for the year ended June 30 last have just reached this country from Kimberley. The sale of diamonds was nearly four times the value disposed of in the previous twelve months, apart from a large revenue derived from the sale of stocks on hand at the end of June, 1915, and, instead of a loss exceeding half a million sterling, as in the preceding period, the directors are able to present to the shareholders a profit of about one and a half millions. Dividends were entirely suspended during the initial year of war. so that the preference payment, being cumulative, fell into arrear, but the direc-tors have already met the preference dividend for eighteen months to December, 1915, calling for £1,200,000. They still had in hand at the end of June last, £628,840, inclusive of the credit balance of £289,264, brought into the accounts.

"It may be noted also that not only the De Beers, but the two other prominent South African producers, the Premier and the New Jagersfontein, have revived a good deal of their former glory."

Winning the Human Race

Far above all other prizes is the one supreme prize,—the implicit confidence of the public. This coveted honor must be awarded to the Continental Motor. Again and again it wins that greatest race of all,—the contest for public favor.

The Continental Motor is built for speed, but not alone for speed. It is built for endurance, but not alone for endurance. Primarily it is built to give lasting and complete satisfaction to the motoring public.

That it has done so is attested by this impressive fact: more than 150 manufacturers use it in one or more models of their automobiles or motor trucks. By their consistent choice, confirmed by that of the buying public, they have awarded it the prize for all around efficiency,—the proud title of "America's Standard Motor."

CURRENT EVENTS

THE EUROPEAN WAR

IN ROUMASIA

December 27 .- In a five-day battle the Russian forces near the Moldavian border are routed and Rimnik Sarat, in northern Wallachia, falls to the Teutons, with 9,000 prisoners, twentyseven machine guns, and other booty. In the Dobrudja the Teutons report progress in the campaign on the bridge - head at Maein. The Russo-Roumanian forces begin a northward retreat.

December 28.—The Teutons capture 10.-000 Russians in the retreat from Rinnik Sarat, including all prisoners taken to date. In the Dobrudja, the Central Powers take some of the defenses of the Maein bridge-head, while to the east of Macin, Turks and Bulgars take Rakel, Braila is represented as being gradually surrounded.

December 29.—A larger German cordon is stated to be drawn around the retreating Russian forces in Moldavia, as an attack on the retiring truops is planned in the mountains. The Teutome forces report making progress toward Torgu Okna (from which they are ten miles distant), and also state that they have taken 1,400 prisoners,

December 30.—In a lengthy hattle on the Moldavian line, the German-Bulgar forces continue to push back the Russis Roumanians along a 250-mile front from the mountain passes to the Danube. At one point the Tentons are reported twenty miles southwest of Brails, and also drawing close to Foesani. Petrograd admits the withdrawal of Russians before the onelaught.

December 31.—Russian resistance in Moldavia is reported crumbling along the entire 250-mile front, as the Teutonic forces break through it in many places. The Bulgars break through the outer defenses of Macin, across the Danutefrom Braila, which is reported under constant fire. In the mountain passes, the Russians slowly retire, giving up Solymtar Height to the Tentons, together with other minor positions.

January 1.—Bulgar forces storm the Dobrudja line, pressing back the Roumanian troops, while at the same time Tentonic forces advance in the Karpathians, and along the Screth a considerable Russo-Roumanian retreat is forced. The Tentons reach the bridge-head at Macin, according to admissions from London,

January 2.—Soveja, northwest of Foesani, is taken by the Tentons, revealing a penetration of eight miles into Moldavia at this point by the invaders. To the northward, the Russians are prest back on both sides of the Oituz Valley, and the Germans take a ridge in the Trotus sector.

January 3.—The Russo-Roumanian forces are driven back until they stand on the line of the Sereth as a great battle is in progress to determine, possibly, the fate of the entire Eastern front. The Entente forces are driven out of practically their last footbold in the Dobrudja as Marin falls, and Jijila is taken by the Central Powers,

WESTERN PRONT

December 27. German fliers report a victory on the Western front as mine Entente airplanes are brought down in a single day's lighting. The British authorities report a successful raid on

Teutonic trenches between Lens and Loos, with much damage done.

December 28.—Extra heavy bombardment is reported from the banks of the Meuse in the Verdun sector. The Germans attempt an attack on Hill 304, but are driven off by the French, according to dispatches from London.

French aviators drop a quantity of bombs on the railroad stations at Montmédy and Pierrepont, as well as on factories at Thionville and Joeuf, on the blastfurnaces at Rombach, Hagondange, and Neukirchen.

December 29.—The French line near Verdun is pierced as the Germans take positions on the slope of Dead Man Hill, with 222 prisoners. French attempts to retake the trenches are set down as unsuccessful.

December 30.—In spite of repeated French attacks to recover ground lost at Verdun, Berlin reports that the recent German gains are still being held. A greater part of Mort Homme Hill is still in Teutonic hands.

December 31,—The Paris War Office states that the French took 78,500 German prisoners at Verdun during 1916.

January 1.—The Crown Prince's forces attack the recent French gains east of Chambrettes Farm, at Verdun, in an attempt to regain ground. Despite their strength, the attackers are reported by Paris to have been driven back by disastrous gun-fire.

HENERAL

December 23.—The British shipping press state that only 435 out of 3,600 steamers have been lost due to the German campaign against British shipping. The value of cargo lost is set at 0.49 per cent. of the total.

December 27.—Minor successes for Russian forces operating against the Turks in Asia Minor are reported from Petrograd, as it is stated that Attman, near Lake Van is taken and the Ottoman troops, pushed back at several other points.

London bears that Greece is demobilizing her army, in accordance with promises made to the Allies, and that the work progresses satisfactorily.

December 28.—British scaplanes cut off Turkish communication in Asia Minor, between the operating Turkish Army and its supply-base on the Bagdad main line, by destroying the Chicaldar Bridge, on the Damiltan River.

December 30,—Paris states that the Allies have driven the Austrian troops out of Meschishta, near Lake Ochrida.

Berlin states that during November, German U-boats destroyed 138 hostile merchant ships. This 314,500 tons loss brings the Allies' total tonnage loss for the war up to 3,636,500 tons.

December 31.—The latest and most drastic demands made by the Entente on Greece are reported to ask guaranties and reparation of such nature as disbanding all forces north of Corinth, prohibition of reservists' meetings in the same territory, release of all persons arrested for high treason, apologies to the Ententeministers, and similar measures.

January 1.—The total of British easualties, as announced from London, for December, is set at 36,350. The total losses to the British since the start of the Somme offensive are given as 520,017.

January 2.—Allied captures of prisoners on all fronts in 1916 total 582,723. In this are included 78,500 Germans taken by

A Really Important Contribution to the Literature of the Stage

Sixty Years of the Theater

By JOHN RANKEN TOWSE, Forty-three Years Dramatic Critic of the "N. Y. Evening Post"

A book which appears to lovers of the strige and good literature. It covers a wide group of men and women who interpreted the great and popular roles during the past half century. Mr. Towie writes about them with familiar freedom—as a dramatic critic of his age and rank may well claim the right to do.

The book contains almost too portraits of stage celebrities including Edwin Booth, Henry Irving, Ellen Terry, Lawrence Harrett, Adelande Nedson, Charlotte Cushman, Mary Anderson, Madame Modjeska, Sarah Bernhardt, Ada Rehan, Tommass Salvini, Fanny Janacs, hek, Joseph Jetterson, Fanny Davesport, Fogar L, Havenport, Lester Wallia k and many others who are still active or nearly togotten.

the French, 40,800 taken by the British 11,173 Bulgarians and Turks taken in Macedonia, 52,250 Austrians taken by the Italians, and 400,000 Germans and Austrians captured by the Russians.

January 3.—Berlin asserts that the Entente has lost 196 war-ships, aggregating 759,-430 tons, since the beginning of the war.

From Rome comes the announcement that Italian troops have captured 42,000 Austrians and 200 guns on the Italian fronts in the last four months.

FOREIGN

December 27.-Fearful of a tight moneymarket, the British Government orders all banks in Argentina with British capital to receive no more gold from the United States.

December 29.—German postal authorities announce the definite establishment of a submarine mail-service to the United States, Central and South America. East and West Indies, China and the Philippines. Mail, for which extra postage charge is to be made, will be sent by the submersible Deutschland and her sister ships.

December 30.—The coronation of Emperor Charles and Empress Zita of Austria as King and Queen of Hungary takes place in Budapest,

December 31.—The [Island of Newfound-land enters upon the "dry" list at mid-night. In addition to intexicating liquors, a long list of patent medicines are also banned.

The National Allied Relief Committee purchases the birthplace of the Marquis de Lafayette, in southern France. to be fitted for a museum, similar to Mount Vernon, as a shrine for American tourists.

January 1.—Turkey declares herself free from the suzerainty of the great Powers of Europe, and announces her entry as an equal into the council of completely independent nations. Germany and Austria recognize this step.

January 3.—Semiofficial reports from Berlin announce that the year's yield in bread-corn exceeds the harvest for 1915 by 1,500,000 tons, which largely offsets the deficient potato-crop. The increase in cattle is set at more than 400,000 head, and that of pigs at more than 4,000,000. Additionally, the Roumanian booty increases the supply of fodder considerably.

DOMESTIC

December 25.-Henry F. Farny, noted as a painter of Indians and Western life, dies in Cincinnati, aged seventy-one.

December 26.—The German reply to President Wilson's peace-note is re-ceived in Washington. It proposes an immediate peace-conference, but does not state Germany's terms.

More than 50 are reported killed in a tornado in Arkansas, as much damage is done in the central part of the State.

December 27.—Complete official returns show that the vote east for President Wilson in the recent election was 9,116,-296, while that of Mr. Hughes was 8,-547,474. This gives the reelected President a plurality of 568,822.

The Farm-Loan Board announces that banks are to be established at the following cities as centers: Springfield, Mass.; Baltimore, Columbia, S. C.; New Orleans, Houston, St. Louis, Louisville, St. Paul, Omaha, Wichita, Spokane, and Berkeley, Cal.

December 28.—Carranza presents a new plea to the United States, seeking a

modification of the protocol as drafted by the American Commission. The recapture of Torreon by General Murguia is also announced, but no details are included.

December 29.—President Wilson learns that the Entente sweepingly rejects the Teuton peace-proposals. The reply from the Allies is expected shortly in Washington.

President Wilson signs the Ferris Bill, opening 640-acre homesteads in the West for grazing and stock-raising purposes,

The Railroad Brotherhoods refuse to consider a test case on the Adamson Law and announce their decision to strike if the act is not put into operation on January 1.

December 30.—The Entente reply to the German pence-proposals is received in Washington. It declares the proposal of the Central Powers to be not a sineere peace-offer, but a calculated warmaneuver. The general aims of the Allies are summarized, with repetitions concerning reparation and guaranties against further hostilities.

United States District Judge Vaughan, at Honolulu, hands down the decision that Filipinos are ineligible for naturalization, as being not white, nor of African descent, nor native born.

Dr. Hamilton Wright Mabie, editor, essayist, and critic, dies at Summit, N. J., aged seventy-one.

January L.—President Wilson receives word from Berlin that the German Government regards the Allied reply to be a bar to further discussions of peace. It is then averred that Germany is united on a determination to fight to a finish.

Charm in Women, Men and Cars

If your friends all looked alike, dressed alike, acted alike, and talked alike, they would become intolerable. Monotony is the death of friendship and of interest in life.

he charm that men and women have for each other is in their un-likeness, their distinctiveness, their individuality. Enjoyable human contact needs freedom from deadlevel similarity in friends and their equipment. We admire individuality in homes, in gardens, in dress, and in motor cars. And all of us commend the taste and good form of those who have a sense of the beautiful in these things.

Happy is the owner of a splendid motor car designed expressly to his personal taste, a car that distinctly belongs to him. To create for you precisely that most desirable car is the Winton Company's purpose. Our artists and artisans are at your service, prepared to supply body style, color harmony and appointments just as you would have them. It is our happiness to make your wishes come true. Simply telephone or drop us a card.

Closed Cars \$3000 and up. Open Cars \$2685 to \$3500.

TOPICS - OF - THE - DAY

WHY THE WAR MUST GO ON

OT PEACE, but a sharpening of swords and a stiffening of the resolve to fight on to victory or the bitter end, would seem to be the chief result of President Wilson's efforts to hasten the end of the war in Europe. The simultaneous appearance of Germany's note to the neutral Governments, Premier Lloyd-George's Guildhall speech, the Allies' response to our President's suggestion that the belligerents state their peace-terms, and the separate response of Belgium, "all make it clear" to the New York Journal of Commerce "that there is little chance at this time, or for an indefinite time to come, of bringing about peace between the Powers that are shaking Europe with the most terrific war in history," And the New York daily but speaks the mind of most of its contemporaries, and echoes the judgment of the experienced press correspondents in Washington and London. Any one, thinks the New York Tribune's representative in the British capital, who reads the Allies' note carefully must be convinced that "it is impossible to stop the war now." In the same way, Mr. S. H. Evans writes from Washington to the same paper of the prevailing belief that "the door to peace is closed." True, the Allies have outlined their terms, as the President asked, but in pro-Entente circles, we are told, "nobody expects that Germany, in her present state of mind, will even consider" such conditions. The German view, according to this correspondent, is that "the terms stated in the Allies' note are ridiculous. More could not be asked if the armies of Great Britain and France were pounding at the gates of Berlin. Every last German in the world would fight for ten years on bread and water rather than submit to the 'preposterous' terms submitted in the note of the Allies to the President."

The Allies' formal reply to the President's note of December 19 was given out for publication in our papers of January 12. It opens with an expression of friendship for the United States and a tribute to the sentiments inspiring the President's action. The proposal for a league to enforce peace is greeted with favor, "but a discussion of future arrangements destined to insure an enduring peace presupposes a satisfactory settlement of the actual conflict." And the Allies believe "that it is impossible at the present moment to attain" such a peace. They feel it their duty to challenge in the "most friendly" way the analogy drawn by the President between the two groups of belligerents. "This analogy, based on public declarations of the Central

Powers, is in direct conflict with the evidence," and President Wilson in alluding to it "did not, of course, intend to adopt it as his own." After mentioning some of the "crimes" of the enemy, the note thus meets the President's desire "that the belligerent Powers openly affirm the objects which they seek by continuing the war":

"The Allies experience no difficulty in replying to this request. Their objects in the war are well known. They have been formulated on many occasions by the chiefs of their divers Governments. Their objects in the war will not be made known in detail with all the equitable compensations and indemnities for damages suffered until the hour of negotiations.

"But the civilized world knows that they imply in all necessity and in the first instance the restoration of Belgium, of Servia, and of Montenegro, and the indemnities which are due them.

"The evacuation of the invaded territories of France, of Russia, and of Roumania, with just reparation,

"The reorganization of Europe, guaranteed by a stable settlement, based alike upon the principle of nationalities, on the right which all peoples, whether small or great, have to the enjoyment of full security and free economic development, and also upon territorial agreements and international arrangements so framed as to guarantee land and sea frontiers against unjust attacks.

"The restitution of provinces or territories wrested in the past from the Allies by force or against the will of their populations.

"The liberation of Italians, of Slavs, of Roumanians, and of Tcheco-Slovaques from foreign domination.

"The enfranchisement of populations subject to the bloody tyranny of the Turks.

"The expulsion from Europe of the Ottoman Empire, which has proved itself so radically alien to Western civilization.

"The intentions of his Majesty the Emperor of Russia regarding Poland have been clearly indicated in the proclamation which he has just addrest to his armies.

"It goes without saying that if the Allies wish to liberate Europe from the brutal covetousness of Prussian militarism it never has been their design, as has been alleged, to encompass the extermination of the German peoples and their political disappearance. That which they desire above all is to insure a peace upon the principles of liberty and justice, upon the inviolable fidelity to international obligation with which the Government of the United States has never ceased to be inspired.

"United in the pursuits of this supreme object, the Allies are determined, individually and collectively, to act with all their power and to consent to all sacrifices to bring to a victorious close the conflict upon which they are convinced not only their own safety and prosperity depend, but also the future of civilization itself."

In the Name of God the Father

Do not ignore the solemn appeal to the American People on pages 136 and 137. Turn to it now. It will stir every heart. Instant action is imperative.

The Belgian note, received at the same time, asserts Belgium's desire for only such a peace as would bring her, "as well as equitable reparation, security and guaranties for the future." It also "serves to show the difference between the cause of the Allies and that of the Central Powers," says the New York Times, alluding to these two sentences:

"The President seems to believe that the statesmen of the two opposing camps pursue the same objects of war. The example of Belgium unfortunately demonstrates that this is in no wise the fact."

Premier Lloyd-George's Guildhall speech of January 11 was a part of the launehing of a gigantic new British loan. He told his hearers, and through them the British people, that if the British Army were given the necessary support "they will cleave a road to victory through the dangers and perils of the next few months." Of the peace-proposals, he said:

"The German Kaiser a few days ago sent a message to his people that the Allies had rejected his peace-offers. He did so in order to drug those whom he could no longer dragoon. Where are those offers? We have asked for them; we have never seen them. We were not offered terms; we were offered a trap baited with fair words. They tempted us once, but the lion has his eyes open. We have rejected no terms that we have ever seen. Of course, it would suit them to have peace at the present moment on their terms. We all want peace; but when we get it it must be a real peace."

The Allies, declared Mr. Lloyd-George, have definitely deeided, and have made the decision clear in the replies to Germany and the United States, "that even war is better than peace at the Prussian price of domination over Europe," and that when the time comes to rebuild the Temple of Peace "it must be on the rock of vindicated justice."

On the day of Mr. Lloyd-George's speech representatives of neutral Powers received a note from Germany, calling attention to the Entente Allies' refusal to enter into peace-negotiations, answering Allied denunciation of German aims and methods by noting shortcomings on the part of the accusers, and by calling their sincerity into question. The German Government protests against the "calumnies" that have been published, and declares that it made "an honest attempt to terminate the war and open the road for an understanding among the belligerents." But—

"The hostile Governments have declined to accept this road.

Upon them falls the full responsibility for the continuation of the bloodshed.

"The four (Teutonic) allied Powers, however, will continue to struggle in quiet confidence and with firm trust in their good right until a peace will be gained which guarantees to their nations their honor, existence, and liberty of development, which to all nations of the European continent gives the blessing of cooperation in mutual respect and under equal rights, in common work for the solution of the great problems of civilization."

Thus the Teutonie'resolve to continue the struggle matches that displayed by the Allies in their reply to President Wilson. Early editorial comment emphasized the failure of peace-hopes. To comply with the Allied terms, remarked the Baltimore Sun, "Germany must throw over her ally, Turkey, consent to the relinquishing of Austrian territory to Italy and the Balkan nations, restore all captured territory, and pay big indemnities." This is "a pretty stiff order," and "gives small hope of peace in the near future," "If these demands are to be insisted upon by the Allies," says the New York American, "there will be no peace until one side conquers the other or both sides fall exhausted." The American calls the note "a truculent and bitter reply," which "does not even refrain from veiled insult to the President of the United States,"

Yet papers which have in the past defended President Wilson almost as consistently as the Hearst dailies have attacked him, find the Entente reply most satisfactory as far as the President is concerned. The New York Times hopes the President's critics will see how great a service he has rendered the world by "eliciting from the Allies this full and candid statement of their purposes." The Springfield Republican welcomes the reply as "explicit to a degree far surpassing any previous pronouncement" and in this respect "much more satisfactory to the United States than was the reply of the Central Powers."

Similarly, the New York World finds in this "first clear and comprehensive statement put forth by either side," a "complete justification of President Wilson's action." Germany, notes The World, "has asked for peace as a victor, but even as a victor it has declined to disclose the terms upon which it would consider peace." As for the Allies' actual terms, it goes on to say:

"In at least two minor respects they are wholly immoral, in that they contemplate the seizure of territory that never belonged to Italy and Roumania in order to pay the bribes that those two eminently sordid Governments exacted as their price for entering the war on the side of the Allies. But in many other respects they touch the highest point of idealism that has been reached in the international politics of Europe, and in certain instances they constitute a veritable emancipation proclamation."

These demands, says the St. Louis Republic, "only apply the principles of the Declaration of Independence." The New York Herald calls them a "new Declaration of Independence in behalf of civilization." The Allies' reply, declares the Washington Post, "is the only answer that could have been made by nations which are conscious of their power to win and inspired by an undying resolve to punish the Power that has devastated Europe and to expel another that has made southeastern Europe a bell on earth." Contrasting the Allies' and German replies to President Wilson, the Providence Journal remarks:

"The Allies are willing to publish their terms because they have the ultimate power to enforce them. . . . The relentless logic of the situation is betrayed in Berlin's careful avoidance of details. Germany will accept whatever terms she is compelled to accept. Now that the Entente nations have made known their terms, the only question is to what extent Germany is willing to pay for her violation of every consideration of honor, humanity, and international morals. There is a persistent and growing conviction that she will soon be willing to make concessions which six months ago would have appeared incredible."

The concessions, however, as the New York German Herold thinks, will not all come from the Toutonic side. The Allies "know there will be much reduction by bargaining" from their demands. Says this German-American daily:

"The note of the Allies will find an answer from the German side. This answer will be moderate, for Germany is conducting no war of conquest. Apparently, then, there will come an answer from the Entente: and so it will go, we hope, with address and counter-address, until a basis is found on which the restoration of Europe will be possible."

But at the German Embassy in Washington, we read in the correspondence of the New York Times, the note was received with a real feeling of disappointment, and a conviction that the Allies have tightly closed the door to peace. At the same time, says this correspondent, there is a grain of comfort for Germans in the thought that while peace is farther off than ever, their enemies have strengthened the arms of the Central Powers, for—

"The Entente's attitude will arouse the allies of Germany and make them more than ever determined to fight to a finish. The German idea is that while the people of Germany may take note of the assurance of the Entente that 'it has never been their design to encompass the extermination of the German peoples and their political disappearance,' the nations allied with Germany will find in the note the expression of a purpose to cause their territorial and political disintegration, and this will impel them to fight harder."

MR. GERARD'S "OLIVE-BRANCH" SPEECH

AFTER-DINNER SPEECHES are notoriously of soporific influence, but the one delivered by James W. Gerard, American Ambassador at Berlin, in that city, on January 6, has had a most awakening effect, we gather from the press, on editors here and in Europe. Two days after it was cabled to this side the State Department requested from Mr. Gerard an exact report of his remarks, yet Washington dispatches advise us that the only reason for the Department's action was because there was doubt of the accuracy of the

version of the speech as published through the Overseas News Agency. The Department's request might seem to indicate a pleasurable impatience to read a peculiarly fine piece of oratory, but few if any take this happy view of it. Some, in fact, think our Ambassador's glowing culogy of the Hollweg administration came a little too near being a slap at Tirpitz, Reventlow, and the other advocates of ruthless U-boat warfare, who are just now out of power. Later word by wireless from Berlin confirms the correctness of Mr. Gerard's utterances as reported, and we read that they were heartily applauded by Germans at the dinner, are cited with approval by the newspapers, with few exceptions, and, furthermore, that the Associated Press is informed they were "welcomed in high quarters." The occasion was the banquet of the American Association of Commerce and Trade, of Berlin, when, according to the dispatch of the Overseas News Agency, Arthur von Gwinner, Director of the Deutsche Bank, likened our Ambassador to the "peace-dove of Noah's ark," and Mr. Gerard is reported as saying:

"Never since the beginning of the war have the relations between Germany and the United States been as cordial as now. I have brought back an olive-branch from the President—or don't you consider the

President's message an olive-branch? I personally am convinced that as long as Germany's fate is directed by such men as my friend the Chancellor and Dr. Helfferich and Dr. Solf; by Admirals von Capelle, Holtzendorff, and von Müller; by Generals von Hindenburg and Ludendorff, and last but not least, by my friend Zimmermann, the relations between the two countries are running no risk."

The Philadelphia Public Ledger (Ind.) thinks that, "making every allowance for the amenities of the dinner-table," the remark that Mr. Gerard had "brought back an olive-branch from the President" seems to be "still another gloss upon the President's note to the belligerents, and a rather disquicting one at that," and this journal adds:

"The obvious interpretation is that the note was written for its effect in Berlin; that it was, in fact, as has already been intimated, an attempt to evade the serious issues between the United States and Germany and to second the German call for peace. Cordial relations secured in so humiliating a fashion can hardly be a subject for congratulation."

Among other dailies that are severe in their criticism of the Ambassador's speech, as reported, are the Springfield Union (Rep.), which calls it "an unfortunate break," and the Boston Transcript (Ind. Rep.), which says it is "dangerous fiction," and "works an injustice to Americans, because it misrepresents them, and to Germans, because it is apt to deceive them." The view of journals more moderately disposed may be summarized in the expression of the New York Times (Ind. Dem.),

"THE PEACE-DOVE OF NOAR'S ARE."

Ambassador Gerard is compared to
one of the famous birds of history
by Germans anxious for peace.

which believes that "probably Ambassador Gerard said nothing"
that would at all warrant the deduction of some German journals
that there has been a change in opinion in this country about the
war. And the "very diversity" of German comment "creates
the presumption that his speech was one made up of expressions
of politeness and courtesy appropriate to the occasion and
quite devoid of any serious international meaning."

A Washington correspondent of The World, which is held to be in close touch with the Administration, tells us that officials of the State Department insist that the request for a report of his speech from Ambassador Gerard must not be construed as

> indicating displeasure because of the alleged utterances, and this informant goes on to say that they seemed to believe that—

> "Mr. Gerard had merely uttered a few pleasantries in replying to the good wishes of his American friends and the German officials.

> "The one thir g which officials of the State Department did was to impress inquirers with the fact that Mr. Gerard was not speaking for this Government, the White House, or the State Department.

> "The Administration has repeatedly insisted that the President's note should not be interpreted as a peace-proposal of any sort. It is believed here that Mr. Gerard made no reference to the note which will not be found to have been in necord with the President's view of it."

> Turning to the foreign press, we hear from Count Reventlow in the Berlin Tages sectury that "in mentioning names Mr. Gerard has involved the highest German military commands in political questions and the clash of rival opinions in a manner never to be expected from a foreign ambassador in the midst of a great war," and he adds:

> "In saying that so long as certain men retained their positions there would be no danger of unfriendly relations, Mr. Gerard's words must be completed thus; 'But if other men come who do not suit us, then—,' The threat is unmistakable."

Representative of a less frenctic German mood is the Berlin Lokal Anzeiger, which says that "there are, unfortunately, too many people in Germany who regard as degradation any result achieved by yielding, and who belittle anything not gained with the fist. Meanwhile, the number of Germany's enemies has so increased that it is desirable to build 'golden bridges' for those real or would-be enemies who manifest a desire to revise their earlier opinions." Then, in defense of the shipment of war-munitions, this journal observes:

"It must always be recalled to the German 'Yankee-haters'
that their standpoint is legally wrong, that the Hague convention
distinctly permits neutrals to make deliveres of ammunition, and
that Germany's representatives in that convention expressly
opposed changing this clause."

Among British dailies we find the Manchester Guardian saying that "evidently Mr. Gerard is anxious to support the Chancellor and his associates against the attacks of the von Tirpitz elique and wild annexationists . . . because he thinks the triumph of the opposition would mean very serious trouble between Germany and the United States. It is important that the English people should understand the angle at which Mr. Gerard stands." But the Liverpool Post remarks:

"A conscientious neutral, a conscientious American neutral, who is obliged to give public utterance to such sentiments, if he is obliged, while the *Lustiania* crime still cries for atonement and neutral ships are at the present time being wantonly sunk by the half-dozen at the behest of the 'excellent statesmen and leaders,' is to be pitied."

TO STOP LEAKAGE INTO DRY STATES

A DECISION establishing, as it says, "the all-reaching power of Government over liquor," and, as many editors note, cutting off the "bootlegger" from his source of supplies, enabling prohibition to exercise its mandate over the home as well as over the saloon, and generally making it possible for a State to be "dry" in fact as well as in name, was handed down by the United States Supreme Court on January 8, when that tribunal affirmed the constitutionality of the Webb-Kenyon

Law. By a significant coincidence this came almost simultaneously with the passage by the Senate of two important antiliquor measures, one making the District of Columbia dry, and the other prohibiting the transmission of liquor-advertisements through the mails into States which prohibit such advertising. The Washington correspondents expect both these to become laws. The Webb-Kenyon Law, passed in 1913, prohibited the importation from one State into another of liquor"intended to be received. possest, or in any manner used" in violation of any law of the State into which the liquor is being imported; but it was virtually not in operation, the Boston Transcript explains, pending the Supreme Court decision on its constitutionality. Now that it has come, the decision is

hailed by editors and Washington correspondents as marking the beginning of a new era in the prohibition movement in the United States. But while all agree that the immediate effect of this ruling is, as the counsel for the Antisaloon League says, that "the States may now prohibit the possession, receipt, sale, and use of intexicating liquor and not be hampered by the agencies of interstate commerce," there is a wide divergence of opinion as to what the ultimate effect will be. On the one hand, the champions of prohibition predict that with this powerful weapon their drive against the liquor forces will acquire a new impetus; but, on the other, the spokesmen for the liquor interests argue that as a result of the Supreme Court's decision many States now nominally dry will soon return to the ranks of the "wets." Thus a counsel for the Wholesale Liquor Dealers' Association is quoted in the New York Times as saying:

"In my opinion the result of this decision will be that many States now nominally dry will go wet within the next five years. This decision will prove the greatest possible cheek to the movement for national prohibition. The reason is that those advocating national prohibition have continually contended that there could be no real prohibition in any State under existing laws, because of the facility with which liquor could be imported into dry States. Their chief argument has been that no State, no matter how great a majority of its voters desired it, could actually go dry. But now that the Webb-Kenyon Law has been declared constitutional, it puts an end to that argument.

"Any State that really wants to go dry now can go dry. The Webb-Kenyon Law does not provide that liquor shall not be sent into any prohibition State, but that each State's law on this subject must be obeyed. Incidentally, only a few of the prohibition States prohibit individuals from receiving liquor for personal use.

"The law is going to decide whether or not the country really wants prohibition. I think it will test the sincerity of the prohibition States. It has been easy for a State to go dry when persons in it knew they could get whatever they wanted to drink from other sources, and under this condition it has been easy for many men to cast their votes for prohibition, for political effect or other reasons, when they themselves did not really want prohibition. But this will test their sincerity."

To some extent this view seems to be shared by the Boston Transcript, which thinks that the "original-package" privilege did much to facilitate the adoption of prohibitory State laws:

"So long as the well-to-do individual was free to import liquors for his own use he was often inclined to favor prohibitory ensetments for the 'lower classes.' This was the case par-

ticularly in the Southern States, where it was found desirable to restrict the sale of intoxicants to the colored population. It is not too much to say that Southern prohibition rests on the original package as its corner-stone. There has been very little interference by prohibition in the South with the drinking habits of the well-to-do.

"It seems quite probable that the effect of the decision will be to put a certain restraint upon the adoption of prohibitory laws within the States. In any State which adopts such legislation, the legislative tendency to accompany it with such a prohibition as that adopted by West Virginia will be strong. That is to say, it will be impracticable as a legislative proposition to adopt prohibition without making it fully effective in this manner. It is the logical conclusion of the 'dry' enactment. But at the same time there will be some besitation in the adoption of a course which must cut off this chance for

must cut off this chance for personal importation and use. Prohibition, under the new condition, ceases to be a thing for somebody else, not for oneself. It will therefore be unattractive to the comfortable classes, which now include the well-employed artizans and laborers. It is now to be the 'whole bog or none.' There are States which may even be inclined to abandon [the prohibition now in force. On its face, the Supreme Court decision on the Webb-Kenyon Law is a great victory for the 'drys,' In effect, and so far as the ordinary tendency toward 'dry' legislation is concerned, it may work the other way."

But another influential Boston daily, The Christian Science Manitor, hails the decision as "the greatest blow ever dealt the liquor-traffic, the most notable triumph ever scored by the prohibition cause in the United States." To quote further:

"This marks the beginning of a new epoch in the prohibition movement. The enforced, as well as the asserted, right of the liquor-manufacturers, jobbers, and wholesalers to ship their wares into prohibition States has unquestionably retarded the prohibition movement. It is liquor manufactured outside the State that has scandalized the prohibition law in Maine for more than half a century. Under the assumed authority of Federal license and of the Interstate Commerce Law, a New-Hampshire brewing concern ran special trains carrying its products into Maine for a considerable period. The liquor interests, at one time, paid special attention to the shipments of liquor into lows, for the sole purpose of disgusting the law-abiding people of that and of other States with the administration and operation of the prohibition law."

This is "the greatest single gain yet made for the cause of

CASTING RIM OUT.

-Kirby in the New York World.

real prohibition," declares the Philadelphia Press, and the Brooklyn Eagle quotes the statement of Dr. Ferdinand C. Iglehart, in the American Year-Book for 1913, that the Webb-Kenyon Law, if sustained, would destroy "from 15 to 20 per cent. of the liquor business" in the United States. "In the judgment of many," says The Eagle, "this is an underestimate." In any case, other editors remark, this ruling gives the advocates of prohibition a chance to test their theory fairly and fully. "It effectually closes one of the largest loopholes in State pro-

hibition," notes the New York Tribune, "and the reform is now free to survive or perish on its merits."

While the Webb-Kenyon Law makes it possible to enforce a "bone-dry," State-wide prohibition law, the only States that now have such laws, as the New York Times reminds us, are West Virginia, Arizona, and Oregon. These States prohibit any importation of alcoholic beverages whatever, except for sacramental use, and in some cases for medicinal use.

Now that the Supreme Court has abolished another "twilightzone" between State and Federal jurisdictions and has made it possible for each State to deal as drastically as it wishes with the liquor question, will the demand for nation-wide prohibition by Federal Amendment subside, or will it become more insistent and

confident? Many papers discuss this question, but apparently only time can answer it. "The decision," says the Baltimore News, "ought to satisfy the dry States and make them less eager for national prohibition." And in the New York Evening Post we find the following admonition:

"When the question of a national prohibition amendment again comes up in Congress, those who realized the extreme gravity of such a step should perceive that with the upholding of the Webb-Kenyon Act one of the chief props of the argument in favor of it has been taken away. However great the uncertainties and dangers attending it, however serious the departure from the spirit of our institutions, and however difficult the undoing of the error, if it should prove an error, the advocates of a national prohibition amendment have been able to urge in favor of it the consideration that the States were powerless to bring about effective prohibition, and that therefore if it was to be had at all it must be had through Federal action. This plea can no longer be made.

"The adoption of a Constitutional amendment enforcing prohibition throughout the Union, without regard to the wishes of the people of the individual States, would be incomparably the greatest departure from the spirit of our Federal Union that has been taken since the foundation of our Government. It would call for the regulation by Federal authority of a matter intimately affecting the daily life of the people of every State; a matter, too, upon which there exists the greatest possible diversity of habit and sentiment in the manifold varieties of city and country communities throughout the Union. Furthermore, the subject is one upon which experience has shown that there is a constant shifting of public opinion in those States, and subdivisions of States, which have experimented with it; but whereas within a State it is easily possible to repeal prohibitory laws if experience recommends such a course, the repeal of a Constitutional amendment, once adopted, would be almost impossible. However badly it might work in New York, and Massachusetts, and Pennsylvania, and other great States with large urban populations, their people could never throw off its burden so long as there were twelve States, however small,

remote, or sparsely settled, which insisted on retaining the prohibition amendment."

The law now sustained by the Supreme Court was once vetoed by President Taft on the ground that it was unconstitutional, being "a delegation by Congress to the States of the power of regulating interstate commerce, which is vested exclusively in Congress." It was, reenacted, however, over his veto. Under the sanction of this legislation West Virginia passed a law forbidding all transportation and receipt of liquor in the

> State. Both the Webb-Kenyon Act and West Virginia's law were brought before the Supreme Court in two test cases of the James Clark Distilling Company, of Cumberland, Md., against the American Express Company and Western Maryland Railroad. Both laws are sustained in the Supreme Court's decision, to which only Justices Holmes and Van Devanter dissented. Chief Justice White, who announced the decision, emphasized its sweeping nature in the following words:

"The all-reaching power of government over liquor is settled. There was no intention of Congress to forbid individual use of liquor. The purpose of this act. was to cut out by the roots the practise of permitting violation of State liquor laws. We can have no doubt that Congress has complete authority to prevent paralyzing of State au-

Then, after dealing with many minor points involved in the two cases, he reached the following vital paragraphs:

"It is decided that the Webb-Kenyon Act, to use the words of the act, applies to shipments of liquor 'intended to be received, possest, sold, or in any manner used' in violation of the laws of the State. As this conclusion causes every probibition of the West Virginia law to be embraced and come under the right conferred by Congress by the Webb-Kenyon Act, it is decided that the West Virginia law was not in conflict with the commerce clause of the Constitution and the power of Congress to regulate commerce, if Congress had power to enact the Webb-Kenyon Law.

"Disposing of that question, it is decided that Congress had the power under the Constitution to adopt the Webb-Kenyon Law, whether considered from the point of view of original reasoning or in the light of the previous legislation by Congress and the decisions of the court bolding that legislation valid. It is therefore decided that, by virtue of the Webb-Kenyon Law, there is no power to ship intoxicants from one State into another in violation of the prohibitions of the law of the State into which the liquor is shipped. In other words, it is decided that since the enactment of the Webb-Kenyon Law the channels of interstate commerce may not be used to convey liquor into a State against the prohibitions of its laws, or to use interstate commerce as the basis for a right to receive, possess, sell, or in any manner use liquor contrary to the State prohibition."

Glancing at the broader implications, The World says:

"In sustaining the power of Congress to employ the national authority to help enforce State legislation, the Supreme Court has created a precedent of infinite possibilities. It has given to the doctrine of State rights a new force and a new direction. The Webb-Kenyon Law represents the first instance since the Fugitive-slave Law in which the States have appealed to the Federal authority for assistance in maintaining their local legislation, but it will not be the last."

WELL 7 Evans in the Baltimore American,

WHY SOCIALISTS LEFT THE PARTY

THE WORD TRAITOR is not applied to Socialists who voted for Wilson or Hughes in the comment of the Socialist press; the deserters are regarded more in sorrow than in anger. "A Socialist is an individual who didn't vote for Wilson," observes The American Socialist, "tho one who voted for Wilson may be a Socialist some day." This definition is inspired by the realization of the Socialist press that many members of the organization supported the Democratic candidate because he "kept us out of war" and brought about the enactment of the Adamson Law. These journals deplore the decline in the party vote from 901,873 for Debs in 1912 to 750,000 for Benson in 1916, which, the New York Call informs us, is the first decrease "since the Socialist party came into existence." Yet "by the clearest Socialist thinkers it was not by any means entirely unexpected," for the party could not hope wholly to escape the "effect of the world earthquake," Many who, in normal times, would have voted with the Socialists, "through insufficient knowledge lost heart and once again vainly sought refuge and safety in the temples of the old capitalist political gods, only partially discredited by them." This is a symptom, we are told, "not of the weakness of Socialism, but of human instability in times when men's hearts fail them for fear, and old habits, which were once considered modes of thought, reassert themselves." In the Milwaukee Leader (Soc.) we read:

"The war has brought about abnormal conditions in American politics. With a population containing a large percentage of immigrants, the political connection between America and Europe has not yet been severed. But Socialists more than any other class of voters should be last to go so far afield, knowing as they do that the working class has only one enemy to fight, and that capitalism is capitalism, whether it is drest in royal purple or the forbidding black of Republican simplicity."

Similar reproof is uttered in The New Republic (New York) by A. M. Simons, Socialist editor and lecturer, who relates that during the past four years he has heard "many discussions on campaign tactics," but "not once . . , the old familiar question, 'Is this right?" and he goes on:

"Over and over I have heard, 'Will this catch the Poles? Will that land the Germans? Will the other seare the little taxpayers?" Once upon a time almost every Socialistic speech

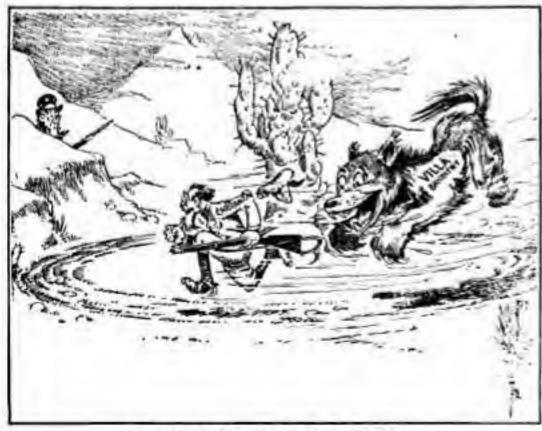

ended with, 'Don't vote for our candidates unless you agree with Socialism.' Then our vote grew. Now we practise expediency, and our vote declines. With the sorrow that comes of the destruction of one's dearest ideal, I say that in many a city the Socialist organization is to-day little more than an organized appetite for office—a Socialist Tammany exploiting the devotion of its members instead of the funds of corporations, for the benefit of a little circle of perfectly honest, but perfectly incompetent and selfish, politicians, who still persist in thinking themselves idealists,"

A man who votes the Socialist ticket to-day and a "capitalist" ticket to-morrow, according to the St. Louis Labor (Soc.), "has never been a Socialist," the he may have thought he was. The American Socialist (Chicago) gives these voters the credit for seeking to choose the "lesser of two evils" forced upon them, yet believes they were "deplorably mistaken," and adds:

"The way to get concessions from the two old parties is by voting against them. The Republican and Democratic parties both stand for the continuation of the present private ownership of the industries—capitalism—which enables the few to rob the many. . . Yet those two parties sometimes make concessions which case up the strain at least a little. They make these concessions only when the Socialist vote becomes so large that they are scared into concessions lest they should lose the next election. The past has amply demonstrated the truth of these statements. The 'good laws' adopted since 1912 have been wholly due to the big Socialist vote of that year.

"It is therefore a certainty that an immense Socialist vote at the recent election would have meant that the party in power-no matter whether it were the Democratic or the Republican party-would make important concessions in the way of favorable laws. The party in power would, for example, be frightened into really lowering the cost of hving, even if it was necessary to make the railroads, coal-mines, shoe-factories, and other industries public property in order to do so. And it would make other valuable concessions. Had the many thousands of voters who are on the verge of Socialism been wise enough to discern these facts, the next four years would be much easier and happier years. Unfortunately, they did not have enough wisdom to do this. They have deliberately handed their one great weapon over to the enemy, and the masses of the people of the United States are under the necessity. of taking the consequences."

Nevertheless, this journal holds that there is "no use in regretting the past," and asserts that "the invincible Socialist movement tosses all these things aside and faces the future with the victorious confidence of a master."

OUTDOOR SPORTS IN MEXICO.

NORTH DAKOTA'S FARMER-REVOLT

A NEW POWER IS RISING IN THE WEST and is cousin to the Populist party and the Farmers' Alliance of other days, remarks the Buffalo Enquirer on the insuguration of Governor Lynn J. Frazier, of North Dakota, who was elected by the Farmers' Non-Partizan Political League, a party that "stands for State elevators, State flour-mills, State packing-houses, State hail-insurance, and a State rural-credit system."

This journal and others wonder what the harvest will be-whether the "usual total failure, or an unprecedented success of the State in business." The Boston Herald says that as "political laboratories" Oklahoma, California, and Nebraska will have to "step into the background for a time and allow North Dakota to bask in the spotlight." A Bismarck (N. D.) correspondent of the New York World calls attention to the fact that Governor Frazier ten months ago was unknown outside his own precinct, and before that time had farmed ever since he was graduated from the University of North Dakota, seventeen years ago. The Farmers' Non-Partizan League at the late election, we are reminded, captured every elective State office except one, and elected three justices of the Supreme Court, who have indorsed the program of State-owned utilities. The tillers of the soil, this informant notes, control every branch of the State government except the senate, where the conservatives outnumber them by three votes, while eighty-five per cent, of the members of the lower house of the legislature are committed to the league's program.

The World's correspondent goes on to say that the league is a "secret organization" and only "actual tillers of the soil" are eligible for membership. It has 60,000 members in North Dakota and is spreading

to South Dakota, Minnesota, Iowa, and Montana. The revolt which has "called many a Cincinnatus from the plow," we are advised, is "primarily a protest against the juggling of grain-prices and the speculation in food-prices by the chambers of commerce," and the purpose of the league is to "put the speculative markets out of business through cooperation of the State and the farmers in the distribution of land-products." As to ways and means, we are told that the farmer-legislators plan a constitutional convention to raise the debt limit of the State from \$200,000 to an amount that will allow the accomplishment of their aims.

A Bismarck correspondent of the New York Tribune says that it is difficult for an Easterner to understand the "utter subjection of this great Commonwealth to alien interests which preceded the farmers' revolution, effective with New Year's." He calls attention to the fact that the "interests" are resident in St. Paul and Minneapolis and belong to Minnesota. They are not amenable to North Dakota's regulation or control, so that in North Dakota the case has always been one of "submission or revolt." The present revolt came with the suddenness of one of those "twisters" which occasionally tear through the State. The Farmers' Non-Partizan League was founded less than two years ago and dipt into its first political campaign before it was a year old. Its victory in the late election, this correspondent says, is "even more astounding" when it is remembered that North Dakota is a State of "magnificent distances," and be adds:

"Eighty-five per cent, of the inhabitants live scattered on farms and must be reached by personal canvass for the most part, That, in fact, is just the way they were reached. Two geniuses named A. C. Townley and F. B. Wood, both farmers without former political experience, organized the campaign. They borrowed money with which to buy automobiles to carry them about from farm to farm. To each farmer they visited they showed in black and white the revolutionary program of the farmers' league calling for State-owned grain-elevators, flour-mills, and packing-houses, for State hail-insurance and a State-operated rural-credit system. They asked him did he favor it, and, on getting an affirmative answer, they said: 'Nine dollars, please.' And they got it. The first hundred farmers they

canvassed joined the league, involving this fee, to a man. After that the harvest of members averaged a little above 90 per f

cent. of a possible crop."

NORTH DAKOTA'S FARMER-GOVERNOR.

Lynn J. Fracier was elected by farmers on a platform for State-owned grain-elevators, floor-mills, packing-bouses, half-insurance, and a State rural-credit system.

As the "membership drive" expanded, Townley and Wood gave over active eanvassing to assistant organizers and remained president and vice-president of the league. Toward the last of the canvass the league was employing one hundred organizers and one hundred automobiles. During the winter of 1915-1916 it promoted five to six hundred meetings in every part of the State, and by last February it had obtained 30,000 members and had organized three-quarters of the State. On Washington's birthday, 1916, a meeting was called in each of the 2,000 voting-precinets of the State simultaneously. The attendance was phenomenal, in many cases 100 per cent., and in not one below 90 per cent. At these meetings delegates were elected to legislative district conventions, and these district conventions nominated men for both houses of the legislature and elected delegates to a State convention which met in Fargo in the latter part of March. The State convention nominated Lynn J. Frazier for Governor and named the league's candidates for other State offices and the Supreme Court. Then the League swirled into the primary campaign, we read, and "tore it wide open."

It rammed its candidates, including Frazier, down the throats of the Republicans, with the exception of P. M. Casey, its candidate for State Treasurer, a Democrat, "whom the Democrats obligingly nominated." Casey, beaten by two hundred votes, was the only leaguer defeated for a State office.

Of A. C. Townley, the inspirer and chief founder of the league, the Tribune's correspondent writes as follows:

"Townley, by the way, used to be known as the 'Flax King' of the slope. The slope is that part of North Dakota lying west of the Missouri River and sloping up toward the Rockies. Here, near the Montana boundary, in Golden Valley County, Townley had one of the world's biggest flax-farms, in which he had invested his own money and some belonging to relatives and friends, His machinery, including a large number of tractors, he had bought on credit.

"The first year, with 900 acres under cultivation, everything went well with him, and he is said to have cleaned up \$20,000. The next year he expanded his farm or ranch over 8,000 acres, and the railroads advertised him extensively as an example of prosperity to prospective settlers. This was in 1910. But a combination of circumstances, including crop failure, caused a complete collapse of his ambitious venture, and he and his wife packed up a few belongings and abandoned the farm with its

stock and machinery to the creditors.

"After this Townley farmed in a much smaller way in different parts of the State, even at times, it is said, working as a farm-band. But in all this time he never ceased to preach the doctrine of political and industrial independence to his neighbors. He attended farmers' conventions and addrest them on occasion, but for the most part he confined his propaganda to personal conversations, until he had come to be known throughout the State as the foremost exponent of those politico-social ideas which the non-partizan league's program embodies. The farmers said of him that he was the first North Dakota farmer to lose enough to care."

Townley attended the Farmers' Convention in Bismarek in the early spring of 1915, which insisted that the legislature take advantage of the constitutional amendment passed the year before and establish a State-owned terminal elevator within the State. The legislature not only refused to do this, but repealed the small tax provided two years before to raise money for the erection of an elevator. The farmers were furious, we are told, and out of their fury was born the non-partizan league. By right of personality Townley became its head, but he declined to run for State office, as did every other officer and organizer of the league, "lest the sincerity of his efforts be challenged," and we are told that he worked as "only a lean, wiry, stoop-shouldered American, with a hook nose and close-set eyes can work." When the opposition had waked up sufficiently to put up a fight. Townley was the main point of attack on his record as the "dethroned flax-king." The league program was largely ignored, but Townley could stand it, and now he is the "boss of the State."

Propaganda of the league is to be carried on in four more States—Iowa, Nebraska, Michigan, and Wisconsin—and press dispatches inform us this is the reason the league's headquarters have been removed from Fargo, N. D., to St. Paul. They quote President Townley as saying that North Dakota, South Dakota, Minnesota, and Montana are already being organized, while the same work will later be extended to the Pacific Coast States, the Southwest, and the extreme South, and we read that the plans of the league as stated by him—

"call for strict State supervision of marketing conditions and public ownership of important industries which relate to the marketing of the farmer's products, such as grain-elevators, by which it is proposed to establish a fair system of grades and marketing, packing-houses, cold-storage plants, and flour-mills.

"Ultimately we shall have Federal ownership of grain-elevators and other important and necessary adjuncts to marketing, which are now controlled by monopoly to the great injury of every citizen of the United States, consumers of farm products as well as farmers."

Dispatches inform us also that the league expects to become eventually the dominant political factor throughout the Middle West and Far West. The New York World observes that "not one of these class parties ever enacted a class idea," although are "full of weird notions." They all die and the old parties, accepting what is reasonable in their demands, live on. In proof, this journal recalls that the first farmers' party was the Grangers of the seventies; they were followed by the Farmers' Alliance of the eighties, and they in turn by the People's party in the nineties. The league "voices a long-standing protest against market conditions controlled by powerful combinations in the larger cities," and The World goes on to say that if North Dakota under its government by and for farmers can profitably perform all the proposed services for itself, it is expected that the old parties will disappear, but we are reminded that—

"Similar hopes were entertained in the eases of the Grange, the Alliance, and Populism, but that was not the way things worked. The Grange was a pioneer in the agitation for public control of railroads, which all parties long ago accepted in the States and Nation. The Alliance demanded Subtreasury ware-houses for the storage of farm products upon which money should be advanced. By an act approved August 11, 1916, Congress regulated transactions in cotton futures, provided for standardized grain, and established a untional warehouse system. Populism urged the income tax and the popular election of United States Scuators, which are now the law of the land."

COMMENT FOREIGN

THE NEW GERMAN WAR-PLAN

GERMANY

'IBBLING HAS FAILED, the Somme drive has not succeeded in breaking through, and the Western front is still a deadlock. The German efforts against Verdun have not been successful if the object was to capture the city and push on to Paris-indeed, the Allies claim that the operations before Verdun must be reckoned as a German defeat, and a costly one at that. Despite recent French successes in that region, Germany claims that all that she desired at Verdun has been accomplished. For example, the official Norddeutsche Allgemeine Zeitung writes:

"The purpose of our Verdan offensive was to deprive this fortress of its offensive position against our left flank and re-

move its character as a sally - port against Lorraine. This purpose has been fully attained."

After describing the new German line on the Meuse, the article continues:

"In view of the heavy demands on our forces during the Sommo offensive and our conquest of Roumania, the Meuse region retired considerably into the background for us as a theater of war, and our army command, in the execution of its military objectives, has, above all, to aim at choosing lines at Verdun better suited for defense than those advanced lines in the region south of Douau-

mont, which were suited for the offensive, but were difficult to defend.'

AUSSIA

Writing in the London Fortnightly Review, Mr. Robert Crozier Long, formerly the Berlin correspondent of The Westminster Gazette, tells us that the next move from the Teutonie side will be nothing less than the complete reversal of the traditional policy of the German General Staff, while on the side of the Entente a vigorous Balkan campaign may be expected. He says:

"The late General Otto von Emmieh . . . became an opponent of the traditional German Staff doctrine that only the unshrinking offensive, unbrokenly pursued, could win. Emmich's plan of success was apparently that Germany should keep on occupying French, Russian, and Balkan territory as long as that was relatively easy and relatively cheap in bloodshed; then, having fortified herself everywhere as thoroughly as she did after the Marne in France, she would leave to the Quadruple Alliance the ugly, or, as he believed, impossible, task of dislodging her. An indefinitely continued German offensive was seen to be impossible; it would fail at some point after losses so great that the retention of the occupied territory would be endangered, or it would succeed with the fatal success of Napoleon's Moseow campaign. But a well-conducted defensive, with large, valuable tracts of enemy territory in its rear, would succeed; and peace, as the Chancellor proclaimed at the high tide of German success, might be negotiated on the basis of the map."

General von Emmich's view, we are told, has now been indorsed by the German General Staff, and Teutonic tactics will change from offensive to defensive. Mr. Long continues:

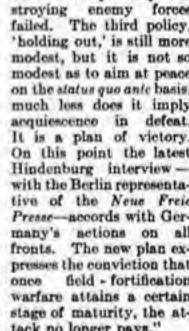

"The new German war-plan, the in some measure a con-

fession of failure, does not authorize offhand the conclusion that a recourse to defense, after successful offensives, is hopeless. Judging by German actions and utterances, by the obvious exigencies of Germany's position, and by the opinions of competent observers on the neutral continent, the new German plan is to attain the best possible conditions, both economically and militarily, for a prolonged and obstinate defensive. This policy does not at all mean acquiescence in defeat. It expresses the German conviction that there is an inexorable time-limit to the war, and that the side in possession when the limit is reached will have won the war, if only in a qualified, indecisive way."

The reasons for this new decision are next given, and they run:

"The plan of annihilating the French and Russian armies in quick succession failed, and the later, more modest plan of

'foreing a decision' by occupying really vital enemy centers or partially destroying enemy forces failed. The third policy, 'holding out,' is still more modest, but it is not so modest as to aim at peace It is a plan of victory. Hindenburg interview tack no longer pays."

on the status que ante basis. much less does it imply acquiescence in defeat. On this point the latest with the Berlin representative of the Neue Freie Presse-accords with Germany's actions on all fronts. The new plan expresses the conviction that field - fortification warfare attains a certain THIS IS HOW THEY SOLVE THE BALKAN PROBLEM. stage of maturity, the at--Nebelspaller (Zurich). Turning to the Balkans,

Mr. Long sees there the weakest spot in the armor of the Central Powers, and he writes:

"If the Franco-Belgian and Russian fronts only were involved the Entente might as well conclude immediate peace, for their victory on either front, the theoretically possible, would take much longer than the war can last. This is characteristic German reasoning on the new 'hold-out' policy, and if it is false in proclaiming the practical impregnability of Germany's position in France and Russia, it is convincing where it admits that a great victory by the Entente in the Balkans would decide the war at once. In a few weeks Germany would see Turkey isolated, Bulgaria crusht, and vital parts of Hungary occupied. The loss of Hungary would make untenable the present Austro-German front in Galicia; and with Galicia lost, Germany, following the precedent of the former two Galician retreats, would have to abandon most of Poland. Germany herself would be intact, but without effective allies, and, threatened from the east and south, she would hardly attempt to hold out in France and Belgium. This is German newspaper reasoning, and that it is also official reasoning is proved by the fact that Germany, last summer, the threatened by superior Entente forces both in west and east, sent to Transylvania and Dobrudja large forces with artillery of exceptional power, which, if kept in the old theaters of war, might have checked General Brussiloff earlier or delayed or made impossible the Somme defeats. Seen from Germany's new standpoint, the Somme defeats, serious as they were, were less dangerous than the new Balkan threat."

This reasoning receives support from the German press, where anxiety is shown as to what move the Allies will make next. The Frunkfurter Zeitung believes that the Allies are at odds over the position at Saloniki, and, after arguing that no Balkan adventures can be expected from Russia or Italy, proceeds:

"In the end we see the two Western Powers, England and France, alone. France has the leadership in Macedonia and in Greece. But it is the French themselves who strongly doubt whether France, outside her own frontiers, can do more than continue the Saloniki undertaking in its present proportions. Many go further and demand the abandonment of the whole campaign. The 'Eastern strategy' of France will hardly win victories by France's own strength, and so the fundamental question is, 'What will England do?' A still weightier question has lately been added—'What deductions will England draw from the collapse of Roumania and from the ending thereby of the idea of the concentric attack?'

"There are three possibilities for the English-to wait and do nothing, to transfer the center of gravity to the West, or

OTTO VON EMMICH,

The victor of Liege, whose plan to
win by defensive warfare is said to
have been adopted by the German
General Staff.

to seek the decision in the East. The first will hardly be accepted, for ever larger holes are being made in the blockade. It is an English argument that the imports from the Balkans and the conquest of Wallachia enable Central Europe to continue the war at pleasure. England is too nervous to be able simply to wait, and, moreover, the Entente is to-day not solid enough for that. Finally, there is the decisivo fact that the Central Powers are not waiting. but maintaining their military action at highest pressure."

As regards the Western front, the Frankfort organ thinks that the burden there has fallen on the shoulders of the English, and thus states their policy:

"It is desired, if there can not be a break through, at least 'to pin' the Germans to the Western front. The En-

glish papers enumerate every regiment which is kept there. For what purpose? What is happening meanwhile, and where is the other front, on which, thanks to the battle in the West, there might be a decision in favor of the Entente? All that we see is the German attack with its casterly direction, and this it will be hardly possible to convert into an English gain."

In view of the present military position of the Central Powers and their rapid sweep across Roumania, it is not surprizing to find the Frankfurter Zeitung writing:

"The fundamental strategic problem of the war, as the Entente would like to conduct it, and must conduct it if it desires to force victory, is insoluble. Central Europe is strategically invincible, because it constitutes a self-contained unit, and because, having the inner lines, it can make absolutely exhaustive use of all its strength, and apply this strength at the right time and in the right place."

Official Germany is as optimistic as regards the future as are the leaders of public opinion in the press, for, we find the Minister of the Interior, Dr. Helfferich, saying:

"Up to the present, our enemies have hoped that our will would become paralyzed and our force be at an end. Bucharest and the national civil service will teach them that still behind Bucharest is our military army, that behind the national service is our civil army, and that behind both armies are the industrial power and unshakable will of the German nation."

CANADA SWEPT BY PROHIBITION

DEMON RUM is fighting for his life in Canada to-day, and the Dominion has gript him by the throat with such force that his death seems to many Canadian editors to be inevitable. During the year 1916 a great prohibition wave has swept over Canada from west to east and has leapt on to the neighboring colony of Newfoundland. In reviewing this aspect of the year's work, the Winnipeg Manitoba Free Press writes:

"The movement has blazed across Canada from the Atlantic to the Pacific like a prairie-fire, leaving but one or two oases, which at any moment may be visited by the cleansing element.

"Saskatchewan blazed the trail in 1915. In the summer of that year the Government closed every bar in the province and took over itself the wholesale stores, greatly reducing their number. It was originally provided that a referendum on the dispensary, or wholesale-store system, should be taken in 1919. But the system did not possess vitality enough to survive more than a year and a half. At the municipal elections of last year several of them were voted out of existence, and so strong was the temperance sentiment in the province that the Government decided to bring in the referendum in 1916 instead of three years later. The result was that on December 11 last, the remaining score of dispensaries went out of existence by a vote of seven to one.

"Manitoba came next. The citizens of the province, by a vote of two to one, decided that they could get along better without liquor-licenses of any kind. The vote was taken on March 13, 1916, and on June 1 following Manitoba was a 'dry' province. Just one month later probibition came into effect in Alberta, tho the electors of the foot-hills province had a year previously voted out the liquor-traffic by a large majority."

In British Columbia, says the Winnipeg paper, the movement was attended by one unique feature:

"A referendum on prohibition was taken in the coast province last September and carried by what seemed a safe majority. However, a provision for a soldiers' vote was attached to the referendum, and, extraordinary as this may appear, the voting has been proceeding among the British-Columbia soldiers over since."

Since The Free Press wrote the returns have come in, and the soldiers in their wet trenches have voted "dry" by a substantial majority. In Quebec, where 85 per cent. of the municipalities were under local option, a modified form of prohibition, patterned on the Gothenburg plan, has been introduced, a measure which, says the Montreal Star, "tried to satisfy everybody and has pleased no one." The Free Press continues:

"The Ontario Government has introduced provincial-wide prohibition by means of legislative enactment. On September 16 last all hotel and wholesale licenses went out of existence, but the legislation provides for a referendum on the question of reintroducing the traffic, to be held in June, 1919.

"The last citadel of the traffic in the maritime provinces, namely, the city of Halifax, fell to the temperance forces last fall.

"One must not forget to mention that on the 14th of this month representatives of the temperance organizations of all the provinces conferred with the Dominion Government at Ottawa and asked for Federal legislation to supplement the measures taken by the provincial legislatures against the liquor-traffic. Specifically the delegation asked for Federal prohibition of the manufacture or importation into Canada of intoxicating liquor as a beverage, or, as an alternative, that a referendum be taken next June on national prohibition as a war-measure."

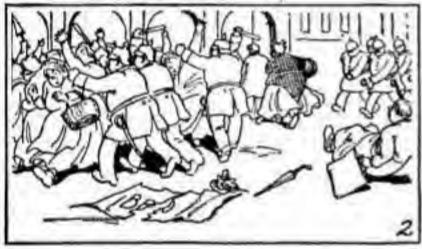

Britain's oldest colony went on the water-wagon on the first of January, says the London, Ontario, Advertiser, which proceeds:

"At midnight the whole island of Newfoundland went dry. A prohibition act, becoming effective, stops the importation, manufacture, or sale of intoxicating liquors of every kind within the colony. After this it will be impossible to obtain any alcoholic compound within the colony, except for medicinal, manufacturing, or sacramental purposes; and in order to prevent evasion of the law a long list of patent medicines has been placed under the ban,"

IS GERMANY STARVING?

HE CONFIDENT ASSERTION of the Entente Allies is that Germany's recent offer of peace was due to a critical food situation at home. Returning travelers have told us that the mass of the German people are on the verge of starvation, but such stories are apt to be unconsciously colored by individual prejudices and, in any case, can not be compared with actual evidence collected from the German press. A careful study of the most recent comment from the Fatherland leaves us no doubt that the food situation is at least serious, so serious, indeed, that radical measures are under contemplation to secure the adequate nourishment of the civil population. A long article in the Berliner Tageblatt on the work of the War

ILLUSTRATED LETTER FOR THE GERMAN FRONT.

(German newspapers complain that the civil population do not send cheerful letters to the soldiers at the front and so help to dishearten them.) "We live very cheerfully. On the occasion of the last batch of

"I am at present writing, cheerful and glad, in one of his strongholds."

—Loukomery: (Petrograd).

Nutrition Office throws a flood of light upon the scene, and in the course of its criticism the Tageblatt says:

"When one looks at things as they are, one is bound to say that, in spite of the comparatively favorable harvest, the food difficulties for the great mass of the people have increased considerably in the course of the last six months.

"Shall one point to the fact that the potato rations, which

originally were intended to be one and one-half pounds a day, have already been reduced in Berlin to six pounds a week, and that a general reduction of the daily ration to three-quarters of a pound will take place on January 1? Is one to call attention to the disturbing fact that at present even the bread ration of one thousand nine hundred grams (about four pounds)

A HERO.

"Ah, poor Otto! Wounded in France or in Servis?"
"Oh, no. at Berlin, in the food-riots."

- D Le Rire (Paris).

a week can in many cases only be obtained with difficulty? Is it possible to overlook the inadequate supply of meat for the people? Again and again the hope that the meat ration could be increased has been disappointed, altho game, and to some extent poultry, can now only be obtained by ticket. Why, in many places, one can no longer obtain even two hundred and fifty grams (about one-half pound) of meat, but only two hundred grams or less.

"If one is lucky, one gets sixty grams (a little more than two ounces) of butter a week. For months past cheese has become something almost unknown for the mass of the people. Milk is supplied at best only to little children and sick persons. Every now and then the War Nutrition Office issues a consoling communication, but generally the words are not followed by deeds. On the other hand, it is one's almost daily experience that foodstuffs which hitherto could be obtained have vanished from the market. And all that can still be bought costs impossible prices."

While the Tageblatt speaks of a "comparatively favorable harvest," the London Times represents the potato-crop as being almost an entire failure, the yield being, it says, "seanty and the quality poor." Comparing the recent harvests, it remarks:

"Germany's potato-harvest this year is reported to have yielded twenty-one million bushels, as against fifty million bushels for 1914 and fifty-four million for 1915."

The recently tamed Socialist Berlin Vorwarts is beginning to grumble again, and exclaims that "it is impossible to dine off words" and that "cheering speeches have little value and little success." Continuing, it says:

"We are all reasonable enough to look facts in the face and

A GLIMPSE OF THE RICH OIL-REGIONS OF ROUMANIA TAKEN BY THE GERMANS.

German dispatches give full information about captured men and guns in Roumania, but little about the exact amounts of oil and grain taken, while the Roumanians claim to have destroyed the grain and fired the eff-wells and tanks. But the oil is still flowing and will probably not be allowed to run to waste. Roumania before the war was producing about 13,000,000 barrels of petroleum and 80,000,000 bushels of wheat annually.

to bear the inevitable with dignity. We also know that a German defeat would take not only the last scraps of butter from our bread, but take the bread also. But apart from the glimpse of a needy future after the war, we have only been told that we have no improvement of rations to expect, and that on the contrary the difficulties will increase, especially after Easter. Figures would have been better, and would have influenced us more than general phrases about 'the terrible potato-harvest,' and to the effect that we shall not go hungry, much less starve."

Some pressure is apparently being exerted on the Government to hasten peace, to judge from a speech of Mr. Ströbel, one of the Socialist leaders in the Prussian Diet. As reported by the Berlin Lokal Anxeiger, he replied to a speech of the Prussian Finance Minister, Dr. Lentze, and said:

"We want not only shells, but also sufficient food for the people. No doubt the expenditure which faces us after the war is terrible, but, after all, the strength and health of the people are the only real capital that remains to us, and we must preserve it. When the Minister of Finance looks at the expenditure, perhaps he will use his influence to shorten the war. We hope and yearn for mediation—among other things, in the interest of our officials and workmen, who suffer more and more the longer the war continues."

The pinch is also felt in southern Germany, and the Munich Post loudly complains that "the Bavarians are suffering while the Prussians get fat." The Post is particularly angry over a consignment of eggs, and writes with some venom:

"How much oftener are we, as the spokesmen for the Bayarian people, to shout into the deaf ears of the Prussian bureaucrats that this people is tired of playing the part of Cinderella among the German tribes." We know that in Berlin and other Prussian centers many thousands of eases of eggs intended for Bayaria and already paid for by Bayarians are being held up with the evident approval of the authorities.

"Those same authorities, well knowing how badly food is needed in Bavaria, are Prussians. Are they about to seize these eggs for their own consumption or will they allow them to rot rather than feed them to the Bavarian riffraff, as we have more than once overheard the northern officials call us? Urgent prayers that have been addrest to the Prussian bureaucrats by our business men and importers have not until now received a moment's attention. Are they blind in Berlin? Can not they see that things can not continue thus? Must it come to a catastrophe?"

Radical measures are to be taken all over Germany, the Berliner Tageblatt tells us:

"According to information which we have gathered in author-

itative circles it would appear that there is no help for it but to introduce a system of compulsory mass-feeding, whereby families will be supplied daily with breakfast, dinner, and supper in fixt quantities. Details are not yet available, but it may be taken as certain that compulsory mass-feeding will be of general application, and that no single section of the population will be exempt from its operation. We welcome the step as perhaps the only one likely to avert the menace of under, or rather unequal, feeding that hovers over us, with all its attendant horrors."

Hungary is worse off than Germany, according to a statement by the Hungarian Food Dietator, urging more thorough foodrequisitions. As published in the Budapest Hirlap, he said:

"The truth is, Germany is not so much in need of food and cereals as we are, and even Austria is in a better position. With us the distribution of food has been unsystematic from the beginning and no improvement has taken place. Appearances resulting from this lack of organization give the impression of an excellent position, not necessitating food-tickets, as in Germany and Austria. We are not, however, in a better position. We are merely not organized. From benceforth Austria can not receive even a grain of corn from us."

ENGLAND'S INDUSTRIAL CONSCRIPTION—The proposal of the new British Premier to introduce some form of industrial conscription, whereby every man between sixteen and sixty not actually fighting should be mobilized for some form of war-work, has excited qualms in England. For example, the London Everyman writes:

"In the course of his speech the Premier said, 'It is not what the nation gains, it is what it gives that makes it great." If the industrial conscription project is applied all round to young and old it will mean that any laborer who is to be brought under its operation may be called upon to sacrifice his industrial freedom, and may be sent to any part of the country to take up any work which he is able to perform, at the command of a government department. If such a man sees that the profitcer, the food-cornerer, and the government contractor are left apparently untouched, this measure will result in nothing but bitter class feeling. The British public has shown that it does not very much mind giving up its liberties in a good cause. But it has also shown quite unmistakably that it is only prepared to sacrifice its liberties provided that the sacrifice is made all round. Mr. Lloyd-George's speech will be read in future years as one of the most noteworthy utterances ever made in Parliament. It bears all the marks of a vigorous intention to stop at nothing, and to achieve victory at all costs."

SCIENCE - AND - INVENTION

WHY WE EAT

OST PERSONS would answer the question, "Why do we eat?" by replying astutely, "Because we are hungry." This is only a partial answer, according to Miss Minna C. Denton, of Ohio State University, who writes on "The Desire of Food in Man," in The Scientific Monthly

(New York, December). Two great motives, according to this writer, cooperate to bring about and maintain the desire to eat-motives having a different physiologie basis and different modes of action. These motives are hunger and appetite. Hunger, we are told. is unpleasant, while appetite is pleasant. Hunger is due primarily to contraction of the stomach museles, while appetite depends on changes in its lining membrane and in that of the mouth. Hunger appears to be extraordinarily independent of environment and education, while appetite is susceptible to the influences of both. Appetite may induce one to eat, even when not particularly hungry. The writer goes on:

"Not all food-materials are valuable to the body in proportion to the appeal which they make to the appetite. For example, the flavor-substances in foods which stimulate the olfactory and gustatory nerves, and thus give rise to appetite, are not ordinarily the substances upon which the body depends for its fuel, nor for the great bulk of its building material. . . . For instance, in the use of boiled meat, appetite leads us to prefer the broth, which contains most of the flavor bodies (except those which may have escaped into the air with the steam), but which has practically no nutritive value, unless quite greasy; and to reject the tasteless meat, which contains 96 per cent. of the protein; very likely we also skim the soup to remove most of the fat, which is a highly concentrated form of fuel.

"Besides the fact that not all food-materials are valuable

to the body in proportion to the appeal which they make to the appetite, we must consider the great and often irrational variations to which this faculty is subject. No other bodily sensibility, perhaps, is so easily influenced by habits and customs and conventions, by personal idiosynerasy and prejudice, by connotating circumstances, by suggestion of every sort, by the

emotional complexion of the momentary mood; none, as a rule, so highly susceptible of education. Racial, sectional, religious, social, family, individual experiences—they all have a vote in determining my ideas of what I should have to cat. So, too, does the historical era, the geographical area, in which I live. The skilfulness of my cook may have the largest 'say' of all;

DO WE EAT TO DYE !

Cheap raudies satisfy childhood's appetites for sweets, but they may prove costly in the end. This cheap candy is colored with powerful dye-materials. Prof. D. R. Hodgdon, of the State Normal School at Newark. N. J. has arranged this doll, which he calls the "Praudulent Miss." to show the effects of coal-tar dyes which may be obtained from candies. Says Professor Hodgdon:

"The doil is eighteen frehes high. Its dress and stockings are dyed from coal-tar dyes obtained from follypaps. Its shoes are blackened with lamphlack from liceries candy. The lamphlack was extracted and used in its proper place as shoe-blacking. The shoes are made to shine with shellar which was used on peach-piths, a penny candy which may be purchased from the usual penny candy-shop next to a sclosel building. The hair was glued on with carpenter's glue obtained from the 'All-Day Suckers.' She holds in her hand a steel kitchen-knife which has been copper-plated with copper obtained from a can of French peas, and beside her hangs a baby's stocking colored pink with a dye obtained from peach-pith randy."

if she does not prepare vegetables so that they are appetizing. I shall probably eat more meat, bread, or fruit, tho none of these is an interchangeable substitute for any other. Convenience, the cost of living, and food legislation are sometimes large factors; city life does not conduce to hearty luncheons nor even breakfasts; rich country cream on my oatmeal adds ninety calories to my breakfast over the 18-per-cent,-fat-by-orderof - the - health - department cream that I usually get at my city boarding-house. Varying physiological conditions may act irrationally, as on the hot summer day when I take icecream (very likely a more concentrated food than meat) solely for its cooling effect; or when in the midst of the afternoon's shopping I buy tea and eakes in order to get a chance to sit down for half an hour.

'It is evident that many of these factors mentioned above have no conceivable relation to my bodily requirement for food, which is determined chiefly by my age and stature, the amount of muscular work I do, my general nervous and muscular tone, my exposure to cold. Digestibility of foodmaterials and conditions which favor good digestion are essential. Yet it appears that the importance of the enjoyment of food to secure favorable psychic influences upon digestion has been considerably overestimated, since men forcing themselves for experimental purposes to live upon a diet so monotonous as to be repugnant in the extreme digest it in normal fashion; and similar results usually obtain with forced feeding of animals."

How far, under these circumstances, may we trust our "natural instincts" or "normal appetite" in the selection of food? The writer warns us, in the first place, that "nor-

mal" or "natural" demands are intended for man in a state of nature, from which we have traveled far. Every fat man, for instance, is an abnormality, and the punishment for abnormal nutrition is often delayed and comes suddenly, in the form of disease. Again, in a "state of nature" the voluntary muscles

THE HORSESHOE FALL AT NIAGARA IN 1798
This old print shows a large volume flowing over the ends of the curve.

. use about 75 per cent, of the bodily energy. In modern man these muscles are largely disused. We need less food. Hunger may be diminished in consequence; but appetite remains, and we overest.

"The discrepancies, then, which are so frequently to be observed between food-requirement and food-consumption may be explained as due in part to present lack of adjustment to recent and enormous changes in environment and human activities and in the nature of foods. It seems quite possible that adaptation of diet to the activities of the organism, and

other important hygienic measures, may come about, not simply through the slowly accomplished downfall of degenerate classes and nations, which history has so often shown usfor neither the rich fruits of shrewd business capacity nor the activities of the altruistic can ultimately shelter physical deterioration - but through the further discovery of the principles of scientific management of the human organism, and through the apprehension of these by the enlightened classes and the consequent practise of them by the world's population. Should we, indeed, expect the scientific intelligence to accomplish so much less striking results in the study of the structure and conduct of our own machine than in that of the simpler non-living machines? Is it reasonable to assume that the laws of scientific feeding which man has already begun

to apply with some success to other animals will fail to produce results with the human species itself?"

RHYTHMLESS ANIMALS—Because animals can be taught to dance, we should not assume that they have a sense of rhythm, for Dr. Craig, of the University of Maine, according to The Guide to Nature (Sound Beach, Conn.), believes they have none—

"Horses driven in span make no attempt to step together. Two birds, however sweetly they sing solo, never sing in time with one another nor with any other music. Even the so-called dancing animals of the circus get their rhythm from the trainer, not from the tune."

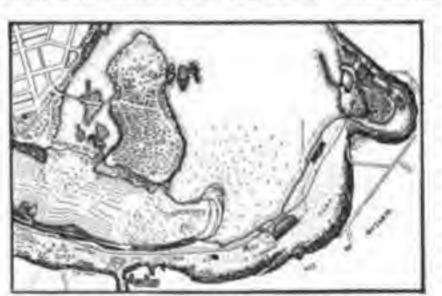

WHY RUSSIAN SHRAPNEL IS POLISHED

REQUIREMENTS that seem foolish at first sight often turn out to be eminently reasonable, after examination. A correspondent of The American Machinist (New York, December 14) spins the following yarn:

"Two men were overheard discussing some of the stories of freak methods of inspection that have been going the rounds. One had been explaining that the entire outside surface of the shell must be free from rough spots and tool-marks and highly

polished. 'They tell me,' he re-marked, 'that after the shells are all finished and inspected. the Russians take a cloth and rub it all over the outside, and if so much as a finy bit of lint is left sticking to the surface, they reject the shell." nonsense, the other replied. 'I don't believe a tenth part of these silly stories about this munitions stuff; they don't sound reasonable, The writer once beard one of the Russian inspectors explain why they were so very particular about the finish, even on clearance surfaces, where it would seem a good tool-finish should be good enough. Possibly you will recall how the skate-runners used to stick to your mittens when, as a boy, you went skating on a snappy cold winter morning. · down on the mill-pond in the home town. If some country humorist persuaded you to

'taste' the runner, you will certainly remember. The Russians assume that any of the shells made in this country may have to be handled in weather much colder than any you or I have ever experienced. The handling is done by soldiers who are equipped with sheep's-wool mittens, very thick and loosely woven to resist extreme cold. If the shells are highly polished, the soldiers have learned that a little dexterity in breaking loose from them makes it possible to let go without much trouble. But if the surface is full of tool-marks or rough spots, considerable of the mitten is left sticking to each shell handled, somewhat after the manner that a piece of magnetized work will pick up chips if laid on a dirty bench. The result is that, after a few hours' handling of rough shells, the soldier is minus a pair of mittens. Not so very unreasonable, after all."

THE HORSESHOE PALL AS IT APPEARS TO-DAY

The photograph shows bare rock through the meager flow at the ends of the curve

TO SAVE THE HORSESHOE FALL

THE WORLD-RENOWNED "Horseshoe Fall," at Niagara, is no longer a horseshoe. For years it has been wearing down into an acute angle until the water at its sides forms entaracts that almost face each other and mingle in a great welter of foam and spray. Moreover, this part of the Fall appears to be delivering now a much smaller

volume of water than it did a score of years or more ago, as is the testimony of many observers. The responsibility has been almost universally laid upon the diversion of the water for power development. Based on this theory. public opinion has been arrayed against proposition to divert additional water; and in recent years attention has been directed to schemes for obtaining power from other sources, such as the Whirlpool Rapids, John Lyell Harper, a wellknown engineer, has just published a pamphlet entitled "The Suicide of the Horseshoe Fall." in which he maintains that the diminution in flow is only apparent, and is due to the changes

in the contour of the precipice, the effect of which is to concentrate the flow in the center so that a smaller proportion is discharged at the sides. We quote from a review of Mr. Harper's pamphlet in Engineering News (New York, December 14). Says this paper:

"The visitor at Niagara who views the Fall from Goat Island

now sees a huge mass of solid green water plunging over the precipies at the toe of the horseshoe, while only a thin veil of water flows over at the sides. It is obvious that with the concentration of the flow in the center of the stream, erosion there tends continually to become more and more rapid, and the concentration of flow at that point becomes still greater. Mr. Harper says:

"An entire cessation of the diversion of water from the river for power would not retard the self-destruction of the horseshoe

> form, but would rather tend to accelerate it. No negative action can preserve the horseshoe. but positive action must be taken with courage and intelligence, and as soon as possible, so that the greatest seenic spectacle in the United States may not be allowed to commit suicide.

> "It should be the policy of those controlling the falls at Niagara to have constructed in the bed of the river. above the Horseshoe Fall, invisible current deflectors which would make impossible the gathering of the whole river into a deep, narrow gorge, and would again deflect the water over to the sides and heels of a reestablished horseshoe.

> "This would not only improve the present spectacle, but would cause the whole contour of the fall to wear uniformly, so that coming generations in viewing its beauty may also

have before their eyes the emblem of good luck." "Mr. Harper further points out that the American Fall. on the eastern side of Goat Island, delivers only 5 per cent. as it is along the crest of the American Fall, Mr. Harper believes that not more than 35 per cent, of the total discharge of the

An acute angle like this is replacing the former broad curve making the horseshor, and the volume of failing water tends more and more to concentrate at the center.

of the total flow of the river, yet it forms at least a quarter of the total seeme spectacle. If the flow of the river in the Canadian channel were spread around the whole length of the borseshoe. river so distributed would cover the entire precipies at the Horseshoe Fall with a cascade more than twice as deep as that of the present American Fall, and would produce a scenic effect equal in grandeur and greater in extent than the present Fall.

"Mr. Harper is chief engineer of the Hydranie Power Company of Niagara, and is a member of the American Societies of Mechanical Engineers, Civil Engineers, and Electrical Engineers, and the Electrochemical Society. He makes no suggestion in his pamphlet as to the methods by which the 'nivisible current deflectors' which he proposes could be constructed in the bed of the river above the Horseshoe Fall. Those who have visited Niagara and witnessed the wild torrent of water which sweeps down the rapids above the falls can form a conception of the heroic task that would be involved in building any structure in these secthing waters which could withstand them.

"The importance of the matter brought forward by Mr. Harper, however, certainly challenges attention. No one will seriously question the desirability of utilizing Niagara's power as a great national or international resource, so far as it can be done without serious interference with its beauty as a spectacle. Even an amateur in hydraulic engineering can see that Mr. Harper's diagnosis of the chief cause of the lessening in beauty of the Horseshoe Fall has every element of probability in its favor; and it is evident that the deterioration of the Fall is likely to proceed at an accelerated pace unless something is done to restore the conditions of a century ago."

THE FUTURE OF ALCOHOL

ING ALCOHOL is not to be put out of business by prohibition. The more he is prevented from taking the motive-power from the muscles of imbibers, the more he will transfer his attention to putting it into mechanical motors. He will have to be denatured, of course, and greatly cheapened; but all this is more than possible. A contributor to The Rural New Yorker (New York) points out that the increasing demand for gas-fuel and quick heat and the desire to make waste into value have combined with the requirements of the munitions-makers to turn the attention of chemists to denatured or industrial alcohol. He goes on:

"As a gas-fuel, alcohol is not as good as gasoline in theory; it is already one-sixth burned up, but, mixed with air, it can be more comprest before it explodes from the heat of compression, and this tends to equalize them. As a quick heater, alcohol has no equal; it is safe and odorless. In its most recent solidified form it is also cheap, since there is no loss when not burning.

"The munitions-makers use alcohol and its derivatives, ether and acetone, and their demands have forced the price rather high. This condition will not last, and meanwhile the prohibition of alcohol as a drink—or 'food,' if you wish; it is going to be prohibited, anyhow—makes available a number of going concerns which can as well produce denatured alcohol.

"Mr. Ford has announced that the breweries of Michigan can make denatured alcohol for his tractors at a profit. He may solve the problem of a good alcohol-motor, it is already near solution; but cheap alcohol from farm waste, which is also receiving his attention, is a harder problem. It can be solved, if he is willing to pay the price, but the price will surprize Mr. Ford. There is an idea that farmers were misled in respect to cheap alcohol, but the only trouble was that the law was twenty years ahead of its time. Any farmer who has or can buy the waste, and has the outfit and the knowledge, can make denatured alcohol. Lots of them have the waste, cheap and efficient outfits will come on demand, but the skill to manage a few hundred billion yeast-cells so as to make them work at a profit is rather more than is required to make a profit out of fifty cows. But it is not unattainable.

"Another waste which is getting a lot of attention is the waste liquors from the wood-pulp industry. They grind up a lot of wood in these mills every day, and a good half of it goes into solution, and this solution is formentable, but getting yeast-cells to live and work in this sulfite waste is no easy matter. There are those who claim they are doing it, however, and others are taking any sort of waste wood and cooking it with acid till they get a fermentable liquid. But they have their troubles also. Materials which are starchy or sugary in their natural state are, after all, the best food for the yeast-cell, and these are wasted every year by the ton. When we have

learned, by Mr. Ford's help or otherwise, to use these, there will be cheap fuel for all the motors. But like pasteurizing milk, while any one can make alcohol, it will be most cheaply made at central cooperative plants, and their establishment will probably be the ultimate solution of the problem involved in the production of industrial alcohol."

IS RAILWAY-BUILDING TO BE REVIVED?

TERY FEW MILES of new railways have been built in the United States in recent years, and if this stagnation continues it may hamper our national growth. An editorial writer in Engineering and Contracting (Chicago, December 20) reminds us that the railroads will always be the greatest agents in developing farm-lands, and we have many regions that need such development. Most of the land in Texas, for instance, remains almost worthless for lack of it. Territory already tributary to the roads needs branch lines as feeders, and the building of them will doubtless be the first stage in the coming railroad boom—if it is coming. "Political cataracts" over the eyes of the public are blamed for holding it back. We are so blind, the writer thinks, that we can now searcely see the real worth of railways as the developers of agriculture. He says:

"Were it not for two things, one political and the other semipolitical, we should be witnessing right now a great migration
of capital into the railway field; for the growth of the country
districts has not kept pace with the growth of the cities, and
there is a very evident lack of transportation facilities. But
capital, while keenly sensible of the need of more and better
railways, is fearful of not being able to get its reward. State
railroad commissions, particularly in the West and South, have
hammered at railway-rates for ten years, and still hammer.
The Interstate Comparee Commission has limited powers,
and is so overloaded with work that the railway investor sees
little assurance of getting both prompt and adequate regulation
of rates from that source. Finally, there has come the menace
of labor troubles on a gigantic scale, with a dose of political
soothing-sirup that would gag a mule.

"In spite of all clouds, there is a sun still shining behind them, and the sun is the economic necessity for more and better transportation facilities. The nation's railway-clothes fit it 'too soon'—and the pants are up to the knees and its childhood vaccination-marks clearly visible through the skin-tight coatsleeve. Everything that is of the railroad is oppressingly restrictive, and something has got to bust. What seam will rip first we don't know, but we are certain that a rent must start somewhere and soon."

At present, the writer goes on to say, railways are trying to influence Congress to do away with State regulation of rates and to turn this over entirely to the Interstate Commerce Commission. But the old State-rights theory blocks such a change. Nevertheless, the movement is well under way, and there is probability that the present Congress will do something radical. To quote again:

"Whatever is done will undoubtedly serve to restore confidence in railway securities as a safe investment. It needs restoration of confidence, and nothing else, to start a new and great railway-construction period. As indicated in another editorial in this issue, electrification of existing steam-railways is probably the most pressing change, if we except enlargements and changes in terminals and means of loading and unloading freight quickly.

"The next step will be the building of new branch lines as feeders to existing trunk lines. This will open up some new territory, but that is of far less economic consequence than better development of territory now tributary to railways. Branch lines are too far apart in the majority of agricultural States. In some of the States, notably Texas, there are so few railways that most of the land remains almost worthless.

"Railroads always have been, and in spite of the automobile always will be, the greatest agents in effecting development of agricultural lands. For some peculiar reason, the public has let political catarnets grow over its eyes till it can scarcely see the real worth of railways as general developers of agriculture. The suffering resulting from high food-prices, due to this partial blindness, seems now acute enough to lead to an operation that will bring permanent relief. Here's to the hope that Congress will wield the knife courageously and speedily!"

COLLEGE COOKERY

THE OLD JOKE about the college girl and her ignorance of cookery is fast losing its savor. The modern college teaches its young men to farm and its young women to cook. Our colleges, says an editorial writer in Table-Talk (Cooperstown, N. Y., December), are beginning to visualize the kitchen and the dining-room, as well as the library

and the schoolroom. Just as a young man goes to school to-day to learn how to build bridges, survey tracts of land, forge and build and farm, so the young woman adds the practical to her studies—

"Now comes the University of Wisconsin—Wisconsin where they set the pace for other educators—and fits up a model kitchen for its students of the Home Economics Department. Miss Abby L. Marlatt, of the department, having the supervision of the work, intends showing students and housewives what constitutes a model kitchen. I prophesy that every student who works in that model kitchen will be asked to become Mrs. Housewife as soon

as she receives her degree. There is nothing better adapted to matrimonial propaganda than a model-kitchen setting for a

pretty girl.

"The pretty girl is furnishing her friends and neighbors many a surprize. One, aged seventeen, living out in the Imperial Valley, California, is the youngest and best all-round feminine pig-producer in the happy valley. 'Pig culture isn't esthetic work, of course,' says this lovely girl. 'It can't be considered a finishing-school for débutantes, but there's money in it.' So it is her ambition to become the best expert on hogs in her district. She has established a record for developing her porkers for the market at a cost of three and one-half cents a pound.

"A most amazing thing developed recently in a tobacco inquiry. Two physicians of the United States Public Health Service, Dr. C. W. Stiles and Dr. N. Richards, investigated the use of tobacco and snuff by white children in a city designated as 'X.' They found that many small children were addicted to the tobacco habit in one form or another.

"Let every university and every individual in the land set forth to cure these baby tobacco- and drug-users of their eraving for stimulants by satisfying their normal appetite for good, wholesome, nourishing food. When you find a three-year, six-year, eleven-year-old child satisfying his stomach's craving with tobacco and drugs, it is because there is a poor cook at home. Or it may be an ignorant cook who knows nothing of what to serve her children or how to prepare raw foods properly.

"I recall the experience of a friend interested in charity-aid work, called to a home where, the report said, the baby was sickly, needing pure milk, and the husband had the habit of

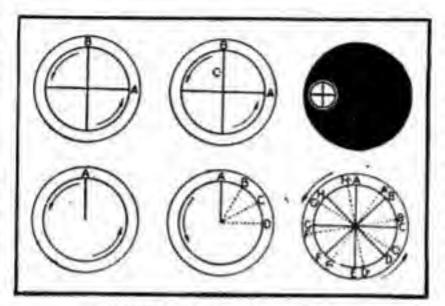

staying away for several days at a stretch.

"'It was a miserable cottage,' she described her call: 'floor thick with dirt, straw instead of earpet; bare table with old dirty coffee-pot and a loaf of bread; dirt and desolation everywhere. The slattern who came to the door looked at me and asked if I did not remember her. We had attended the same

Sunday-school, had been in the same class. She was the foster-daughter of a most estimable family, and was married to a sober, industrious man whose parents lived in another part of the city. These now had charge of her two little boys, and this was where her husband found refuge from her slovenliness. It was simply a case of a woman who refused to be on her job as mother and housekeeper. . . , My report surprized the charity office: "If I were her husband and her little boys," I said, "I would never go home. She is a slattern to her heart's core, The laziness is so deep that we can never reach the woman-she-ought-to-be. She should be placed somewhere where she could live amid the dirt undisturbed; but she should not be classed as a real mother, nor as a deserving one."

"This is a real and a pathetic case—a woman upon whom the bushand and the three little ones depended to make the home, to send them forth happy, well nourished, well clothed, absolutely shunning all these duties. She is not an exagger-

> ated type at all. Poorer distriets of all our cities and many of our tiny towns have these failures as housewives. No I hope our schools and universities will plant model kitchens in the heart of these districts in our cities and have extension courses in cooking for the women who have to cook three times a day for their families. There should go forth from the University of Wisconsin and from all these centers of learning hands of bright, enthusiastic, expert sooks, earrying the gospel of pure food and good cooking to their sisters."

DECEPTIVE MOVEMENTS OF MOVIE-WHERE.

The speed of the wheels may make them appear to stand still, as in the top row; or even to run backward, as in the lower row.

WHY MOVIE-WHEELS RUN BACKWARD — When a rotating wheel, as on a moving motor-car or locomotive, is

shown on the moving-picture screen it often appears to stand still or even to go around in the wrong direction at varying rates of speed. Of course, all of the motion on the screen, right or wrong, is an optical illusion. Nothing is really moving there at all; and in this particular instance the conditions of the illusion are such that it reproduces, not reality, but the reverse. How this happens is thus explained in The Papular Science Monthly (New York, December);

"When the moving-picture camera takes a picture the film is not exposed continuously. Instead, it is uncovered and then covered again in very rapid succession by a black disk edged with a circle of holes which are swiftly rotated across the front of the lens. In this way a series of pictures is taken which represents the successive movements of the subject that is photographed. But because of this very fact, the speed at which an object appears to rotate when the developed film is projected on the screen is very seldom the speed at which it netually rotated. Take, for instance, a four-spoked wheel, such as shown in the illustration, where the wheel rotates at a speed such that after one picture of the film is exposed the spoke A has turned around just enough to show A at the position of B when the next picture is exposed. It is evident that in a case of this kind, if the spoke and the camera keep turning at constant speeds, when the spoke is projected on the screen it will appear to be standing perfectly still. Again, the wheels on fast-moving ears often appear as if they were moving backward while the car is going forward. This would happen if the spoke A, shown in the bottom row of the drawings, had been revolving so fast when it was photographed that during the interval between one exposure and the next, the wheel revolved all the way around from A to B. When the next exposure was made the spoke appeared at C, and so on. When this film is run off and projected on the screen, the spoke will seem to run backward. No matter how many spokes there are on the wheel it is evident that the effect on each one will be the same, and the entire wheel will appear to turn backward at the same speed as that of each spoke. It is merely an optical illusion."

LETTERS - AND - ART

A MODERN SPANISH PAINTER OF PRIMITIVE

ULOAGA is making his second appeal to American suffrage. A few years ago, something like an epidemie of picture-madness seized New York, and uncounted thousands made daily the long journey up-town to the Hispanie Museum to see an exhibition of the pictures of the Spanish painter Sorolla. Following this exhibition was held one of a smaller group of works by Ignacio Zuloaga, and few went near them. Yet the judicious said that he was by far the greater artist. Time seems to bring about the proper adjustments, and

the exhibition of this painter, begun in Boston and continued in Brooklyn, now tarries in New York before going on to Buffalo, Pittsburg, Cleveland, Chieago, St. Louis, Minneapolis, Detroit, and Toledo. And already he is becoming a man to talk about, the he still proves a stumbling-block to those who quickly sensed the snavities of Sorolla. "His material belongs to reality and is of the earth earthy," says Mr. John S. Sargent in his foreword to the official catalog; "but, as if whirled to another planet, it seems to acknowledge the grip of new laws and to acquire a keener life from new relationships imposed by this great artist's imperious will." He classifies with none of the modern cults. Indeed, he confest to Dr. Christian Brinton that he had "a horror of every manifestation of modernism. This distaste, he went on to aver, "includes, of course, painting, most of which, impressionistie, pointillistie, eubistie, futuristie, or whatever you may choose to term it,"

seems to him "feeble and neurasthenie." Declaring that he has remained "a sixteenth-century person," like the surroundings in which he grew up, he adds:

"The primitives and the early Egyptians, with their rigorous economy of line, form, and tone, afford me more pleasure than I derive from the work of my contemporaries. As to modern music it distresses me because of its complexity. I much prefer Palestrina and Bach, and in the way of literature, tho once a great reader, I now searcely open a book or glance at the newspaper."

Dr. Brinton tells us in the current issue of The American Magarine of Art that Zuloaga never set foot inside an art-school or academy, yet he "drew from the first with vigor and decision." His figures were "solidly constructed and his sense of composition correct, tho by no means conventional." We read on:

"Zuloaga's palet, the richly set, is restricted in range. He prefers as a rule warm browns, dark reds, green, yellow, purple, silver-gray, and black. Blue is unsympathetic to him and is rarely found in earlier compositions. It has been my privilege

on numerous occasions to watch him before the easel both at his Paris studio in the Rue Caulaincourt and in the solemn sidechapel of San Juan de los Caballeros, the silence broken only by faint eries from the street or the sound of countless church and monastery bells. Unlike most artists, he makes no preliminary sketches. When he wanders abroad to study native types and scenes at first band, or stands upon the terrace surveying the shimmering, wide-horizoned panorama of Vieja Castilla, he has with him no painter's kit, no brushes, tubes, or canvas. All he carries is a small, compact, leather-bound note-book, wherein he transcribes in free, legible script certain suggestions which

> he afterward translates into line, form, and color. 'Mis dibujos los escribo, he says. and these written sketches merely serve to recall impressions that might otherwise become fogged or effaced.

> "The capacity for synthetic observation implied by such an attitude finds appropriate expression when he undertakes the painting of a picture. A long process of incubation precedes the actual work upon each composition. He ponders deeply every detail, and when the mental pattern is sufficiently clear and the creative impulse sufficiently strong, he attacks one of his big canvases with confident surety. He first draws the main outlines boldly in charcoal upon a light-gray ground and then applies the pigment in firm, resolute passages instinct with rhythmic power. In a method so reasoned, so deliberate, nothing is left to chance. There are no surprizes, no accidents, fortumate or otherwise. All is preconceived, prearranged, and the touch is that of the sculpfor rather than that of the painter. Generations of ancestors who were accomplished modelers seem to have imparted to him a marked feeling for plastic form. (Don Plácido Zuloaga, father of the painter, was a 'veritable lat-

ter-day Benyenuto Cellini, a handieraftsman of consummate skill-a worker in metals-examples of whose art are to be found in the leading museums of Europe.) In looking at these sturdily constructed compositions where there is no suspicion of faltering or incertitude you are apt to recall the triumphs of past ages, the expressive statuettes of Alonso Cano, for instance, carved out of wood and colored in the image of nature. Zuloaga seems to belong to an older epoch. He appears to possess no nerves. His conceptions are wrought in rare strength of spirit and physical fortitude."

Zuloaga's masters are his great predecessors in Spanish art. particularly El Greco, whom he holds as "the god of painters." "Reactionary if you will," says Dr. Brinton, "the method of Zuloaga stands in direct contrast to the minute analytic notations so beloved of the impressionists and their following." Going on:

"It entails no scrupulous study of milien. Synthetic and stylistic, it endeavors to free itself from that which is capricious and ephemeral in order to attain that which is permanent and typical. Zulonga does not seek deftly to catch the smile of

SELE-PORTRAIT OF IGNACIO ZULDAGA. Spain's foremost painter, who will have nothing to do with the feeble and neurasthenic" extreme art-cults of to-day:

nature or sing the simple joys of labor and relaxation. Peopled with matadors and trianeros, sensuous gitanas, cynical priests, and seductive women of society, these canvases are instinct with passion and fatalism. They are primitive, sinister, and full of tragic implication, and as such unflinchingly reflect certain fundamental national characteristics. With its innate

structural strength, its superb graphic energy, and its confident grasp of what may be termed the technique of the whole, the art of Zuloaga is perfectly adapted to the task in hand. It depicts with convincing cloquence la España clásica, that Spain at once Gothic, romantie, picaresque, and legitimately modern to which it is dedicated-that immutable Spain-whether it be the Spain of the Gospel or the Spain of the Koran, the Spain of the Crucifixion or the Spain of the corrida. Finally, in the ultimate analysis, the art of Zuloaga attains, under stress of creative impulse, that purely emotional significance to which he refers -emotional and romantic, not, however, the romantic tinsel of Gautier, Prosper Mérimée, and Bizet, but the more enduring romance of reality. In its affiliation with the master tendencies of contemporary thought and feeling it has transcended Fortuny, Vierge, and the agreeable devotees of the rococo. It reflects some-

thing of the reasoned verity of Manet, the vital intensity of Daumier, and the satanic suggestion of Félicien Rops."

Century. Here is the letter:

"MY UNCLE DANIEL AND HIS FAMILY," BY ZULOAGA. Another version of this family group is in the Luxembours; Paris

EDITING MARK TWAIN

UTHORS OFTEN RESENT the intrusion of editors between themselves and their public, especially the authors who are young and unarrived. The old and tried, however, have had to submit to the pruning of their wild vines, as the recent publication of the "Letters of Richard Watson Gilder" shows. When he prepared Mark Twain's "copy" for the pages of The Century Magazine, he took the liberty of expunging some of the "coarse" phrases of the famous humorist, considering, as the New York Times puts it, "in spite of his gentleness and diplomacy, the welfare of the magazine as more important than the pride of the authors." Mr. T. B. Aldrich acknowledged, some time before his death, that he went through the contributions to The Atlantic, when he was its editor, and changed the phrasing wherever it offended his sense of literary style. Authors might feel their "personalities" pruned away, but Mr. Aldrich's magazine presented a uniform standard of impeccable English. Mr. Gilder's dealings with Mark Twain are set forth in the New York Times, where it gives the occasion for the editor's declaration of principles:

"In 1886 a Superintendent of Public Schools in the West wrote to The Century severely criticizing some of Mark Twain's writings which the magazine was printing. Mr. Gilder answered the letter, defending Mark Twain, but saying, 'at times he is inartistically and indefensibly coarse,' and revealing the fact that 'Huckleberry Finn' had been 'carefully edited for a magazine audience.'"

He sent a copy of the letter to Twain, saying:

"My DEAR CLEMENS: I am going to venture upon an indiscretion. I have had a letter from a Superintendent of Public "Dear Siz: We thank you sincerely for your kind and frank letter. We understand the points to which you object in Mark Twain's writings, but we can not agree with you that they are "destitute of a single redeeming quality." We think that the literary judgment of this country and of England will not sustain you in such an opinion.

Schools in a distant part of the West and am sending you my

letter to him. It was not written for your eye. I could go

over it and make it much more complimentary and leave out

something that sounds harsh, but I have concluded to send it

to you as it is as a sample of what often occurs here in The

"I ask you in all fairness to read Mr. Howells's essay on Mark Twain in the September number of *The Century* for 1882. To say that the writings of Mark Twain "are hardly worth a place in the columns of the average country newspaper which never assumes any literary airs" seems to us to be singularly untrue.

"Mr. Clemens has great faults; at times he is inartistically and indefensibly coarse, but we do not think anything of his that has been printed in *The Century* is without decided value, literary and otherwise. At least, as a picture of the life which he describes his Century sketches are of decided force and worth.

"Mark Twain is not a giber at religion or morality. He is a good citizen and believes in the best things. Nevertheless, there is much of his writing that we would not print for a miscellaneous audience. If you should ever compare the chapters of "Huckleberry Finn" as we printed them with the same as they appear in his book, you will see the most decided difference, These extracts were carefully edited for a magazine audience with his full consent.

"'Perhaps you know my friend Dr. George Macdonald, the celebrated novelist, lecturer, and preacher. He is one of the most spiritually minded men now living, and a most enthusiastic admirer of Mark Twain. Once, when Dr. Macdonald was staying at my house, he spent some hours in reading with great delight one of Mark Twain's books before preaching one of the most profound, moving, and spiritual sermons to which I ever listened.""

The Times wonders if Mark Twain was also the writer referred to in a letter written by Mr. Gilder to a contributor in 1909. Such a conclusion, it observes, might be gathered from the context:

"As to the phrase that you want to retain, make it as mild as you can, and we will see whether we can stand it. Really you

do not honor your art when you think it necessary to stir up a violent stench in the language in order to make it effective. It isn't necessary, and you have a finer art than requires such violence. I do not believe that a certain writer, who shall be nameless, but who is one of the greatest story-writers in the world, is sorry he took out at my suggestion a disgusting word from one of his most beautiful and famous stories, which was published in The Century."

DEPOSING THE MUSIC CRITIC

ANOTHER METHOD of deposing the music critic from the position of arrogant judgeship he is supposed by some to hold is offered by Musical America (New York). As the method suggested should appeal to producers not only considerably in advance of the opera's coming. A corollary to this suggestion is the proposition that newspaper and magazine articles describing the approaching novelty be issued several months before the première takes place—not immediately preceding the event. 'Francesca' was promised for production in America back in the season of 1914–15, and yet of those who heard it at the Metropolitan first night how many, except a few conscientious critics, had made themselves familiar with the nature of the work, save that it was based upon d'Annunzio's tragedy?"

The purpose of such reforms, comments Musical America, which wields somewhat of a big stick over the music critic, "is to put the public in a position to form its own judgment as to the acceptance or rejection of the new opera," so that the decision will no longer lie with a few men who have based their

conclusions largely upon "hearing of the dress rehearsals." True—

"The earrying out of the above suggestions may be impracticable, and the extra expenditure of money may seem unjustified. Would not such action, however, give the opera companies greater security against the contingency of having the chances of realizing on their investment for novelties swept away by the snap judgment of a handful of critics?"

"This is placing the question on a basis that is largely materialistic. yet there are possibilities for real altruism on the part of the operation promoters. By educating the public in this manner, they will in time convert this nation into a country of opera-lovers (such as we are not at present, considering the vicarious state of opera-giving here to-day .. When the country is thus converted operatically, the educational campaign of the managers-begun in altruism-will result in material benefit to themselves. The operation business will then stand upon a substantial footing, and will no longer be an artistic lottery, as we find it to-day-except in our one or two grand-opera strongholds.

Naturally enough, such an innovation on the part of the producer would sooner or later relegate the critic to idleness, save when he should perform the purely mechanical duty of enumerating the singers in a cer-

tain premiers. Thus the critic might gain, in this life, a little of the rest and quiet which a caustic writer in The Bellman suspects will never be his in the next. According to the Bellman's contributor, who is quoted in The Musical Leader (Chicago), several sorts of limbo may await music critics. He conjectures—

"Do they find a paradise in which there are concerts they do not have to attend, newspapers they do not have to write for, and nights when they can sleep? Are their sins too heavy to admit them straight to such felicity, and do they have to spend a few cons in purgatory, or, worse still, an eternity in some private limbo of their own? Probably the latter; their manner of life has rendered them too manifestly unfit for the society of other souls, and, besides, they need the protection of utter privacy in order to escape the vengeance of the musicians about whom they once wrote, and of the public which so consistently sets aside their verdiets.

"Fancy the entire lot of them herded together, with no other punishment than having to listen to one another. It is quite enough. A few of them, indeed, stay outside the angry throng, content to reflect on the philosophy of music, and to leave to others the praise and blame of individuals. These men were once critics, not simply reviewers of music. But the mass wrangle over this and that; they interrupt each other's vague paregyries, and smash each other's idols."

"THE VICTIM OF THE PETE."

Zuloaga has painted the actors of the full-ring in all their aspects. This one is a pathetic contrast to his superb mutadors. The appeal of pity is especially made for the borse.

as a valuable press-agent device, but, too, as a safeguard against failure of new enterprises, it may be realized in practise. Musical America is moved to expand the suggestion of a correspondent who writes it "deploring operatic waste in presentation of new works." His suggestions appeal to Musical America as presenting "constructive reforms in the way of a more scientific method of conducting the experiment of trying out an operatic novelty." First of all—

"He would have the public educated concerning the new work by intensive publicity begun longer in advance. Let us amplify one of his suggestions to read that the opera company should place in the hands of its subscribers a book describing the opera entertainingly, with perhaps a condensed thematic guide. Further, there is no reason why the management should not provide its patrons with lecture-recitals on the season's novelties, having the subject-matter presented intimately, as, for instance, Walter Damrosch acquaints the New York Symphony's public with his programs through his symphonic talks. An example of the benefit of education in such a palatable form is seen in the wide response to the Hubbard-Gotthelf operalogs.

"The writer of the aforementioned article also suggests the acquaintance of the public with the new operas through the circulation of talking-machine records of the principal arias

A WAR-CORRESPONDENT OF THE NEW DISPENSATION

THE PALM FOR WAR-REPORTING was awarded to the American, Will Irwin, early in the war by the London Daily Mail. He has, however, written little of the later phases of the struggle, and an Englishman, Mr. Philip Gibbs, now fills the English eye. His work for the London Daily Chronicle and Daily Telegraph and the New York Times has been constant, and his success is laid by the English Bookman (London) to the fact that he is also a novelist. "He has been able to bring the wide, modern, romantic outlook to bear in his survey and analysis of fighting and the conditions of fighting." He is a war-correspondent of "a new dispensation," giving "not a realistic or a melodramatic vision of war, but a naturalistic vision." Yet the man in the street would never pick him out for the rôle he is filling, so Mr. W. Douglas Newton, the Bookman writer, says:

"He is not only built small, but built almost daintily. Ite looks frail. His features are delicately fashioned. They are neat, and well cut, and of a cameo kind to fit his cameo pallor. Some one has likened his features to those of a Victorian intaglio, and that is not inapt. He has, at first glance, the look of a student, a man who has, with a certain human austerity, withdrawn from the excitements of the world to live among books."

Gibbs had written more than half a dozen novels when the war broke out, and he became a newspaper correspondent. Most of his confrères, eager for news, were relegated to the background, but Gibbs attached himself to one of the ambulances working with the Belgian Army and went to the firing-line. We read:

"In a personal sense his experiences in France will be as valuable to him as an artist, as they have been fortunate for us his readers. The war came at a phase in his mental development when his heart and mind were becoming more and more absorbed in a psychological interest in humanity. That psychological interest has made his writing on the war so precious; but how will the war affect him? One ventures to think that it will deepen and strengthen his artistic outlook to a very profound measure. For him it has come—with all its opportunities for perceiving the humanity of human nature made emphatic under great stress—when his psychological curiosity had entered on a phase of great activity after a spell of what

one might call 'retarded action.'

"I mean by 'retarded action' that after starting out to consider human nature in sympathetic, spiritual fashion in his first novel, 'The Individualist,' a thoroughly interesting study of a woman beset by mental and emotional circumstances, he swung off on to a series of novels apropos, in which the story, the actual theme, assumed domination over the psychological aspect of his case. Of this group, 'The Spirit of Revolt,' 'The Street of Adventure,' and 'Intellectual Mansions, S. W.,' stand as examples. The theme of each of these novels, as well as their treatment, gives each the aspect of a journalistic coup rather than of a spiritual and humanly developed study. It was as the journalism had captured him and had given him that 'nose for copy' which had enabled him to perceive in each of his themes the great 'story' that the public would want. Spirit of Revolt' is a novel of demagogy, written at a time when the power of the labor men began to ferment the land. Street of Adventure' is the story of a great newspaper which failed just when it appeared to promise an influential earcerthe actual failure of that paper was a topic on men's tongues when Gibbs wrote. 'Intellectual Mansions, S.W.' caught the beginnings of the woman's suffrage and the suburban culture movements just when these phases of life were beginning to impress the public. . . . His book, 'The Soul of the War,' is as full and as poignant as any novel. Its human quality is enormously moving. It is a naturalistic study of Armageddon, not all glitter as the romanticists would have it, not all evil as the realists would have it. The actual war is there; courage and grimness, squalor and nobility, beastliness and beauty. There are a fearlessness and a lack of equivocation about the handling. But it is not kinematic. A sympathy and insight give the book a glowing and psychological verity.

"Philip Gibbs hates war as, I happen to know, he hates the thought that any personal notoriety (his own word) should come to him out of it. Yet it is fortunate for himself, as it has been fortunate for us, that he should have been so deeply intrigued with his present psychological phase of development when war came. He has helped to deepen and strengthen our knowledge of the facts of humanity at war, just as war must have helped to deepen and strengthen his knowledge of humanity for all time."

It is "humanity at war" in the mud that Mr. Gibbs tells of in a recent letter to the London Daily Telegraph. This is the way he describes these winter days of discontent on the Somme front:

"A white fog, dank and moist, lies over the battle-fields, so that our soldiers look like ghosts as they go trudging up to the trenches and disappear into this mistiness. At night all the moisture is turned to hoar-frost, and unless there is a rare gleam of sunlight in the day it does not melt quickly. The broken strands of barbed wire and all the litter of old battles are furred with it, and the breath of marching men is like smoke in the cold air. The men in the trenches are having a hard time. Up in the front lines there are no comfort, no shelter, no rest for them, and they need all their courage and strength to endure their wetness, their coldness, and the foul conditions into which they have been plunged by a month of rain. There is only one cheering thought for them. It is not so bad now as it has been."

There was one German trench that the Canadians greatly desired in November, "because men of a patrol who had been near it came back with glowing stories about it."

"It was, it seemed, one of the old-fashioned sort known to the men before the great advance, eight feet deep, beautifully boarded and revetted, nicely drained, warm, and cozy. 'Ye gods!' said Canadians sitting in mud-holes. 'That's some trench. It would be fine to live in such a place.' 'By gosh!' said other Canadians, 'that's the trench we've got to take, and pretty quick, too.' So on November 18 or 19 those wet, muddy, cold men set out for Desire trench, and fought like devils to get it, and killed many Germans, and got it.

"And then they swore great oaths, and laughed, and coughed, and lay down in the mud, because it had all been a fairy-tale, and instead of the eight-foot ditch and the nice revetting and draining and boarding there were only linked-up shell-holes with dead bodies in the water of them, and, around, a lake of mud."

RELIGION-AND-SOCIAL-SERVICE

COUNTRY GIRLS IN THE Y. W. C. A.

THE COUNTRY GIRL comes to the city for more remunerative and more independent activity and more interesting recreation, and she is likely to find, in the new conditions that confront her, counsel, aid, and even shelter in the Young Women's Christian Association. Now, however, the Y. W. C. A. is going into the country to make

life so attractive that girls will not yield to the lure of the city, and to lighten the toilsome monotony that fills the days of many farmers' wives. The woman who leads in this branch of the Association's work is Miss Jessie Field. As rural school-teacher and later as country school superintendent, she attracted nation-wide attention by her zeal to arouse interest in the problems and the pleasures of farm-life. After considerable persuasion, she was induced to undertake the direction of the small town and country work for the national organization of the Y. W. C. A. Miss Field has been in her present work three years, so Mare N. Goodnow informs us in The Continent (Presb., Chicago), "during which time it has grown from the merest beginning to an organization of fifteen county associations made up of fifty-six branches in eleven States, with a membership of 4,420." Miss Field is the consulting expert and is assisted by six young women, known as "field county secretaries," who travel through six of the eleven fields (or groups of States) into which the country is divided. Mr. Goodnow goes on to describe the Y.W.C.A.'s country work as follows:

"The county Young Women's Christian Association members do not always have an entire building

for their use as the city association members generally do, but a meeting-place is chosen which is convenient to the greatest number. Sometimes school-houses are used as the community center; sometimes a church, or a few rented rooms in some building. In the small town the grange rooms are often used, and in one or two instances the Young Men's Christian Association and the Young Women's Christian Association have a building or rooms which are used jointly. The wide-awake country girls who make up this organization have demonstrated that the meeting-place is not the most important thing, but rather the spirit of the workers.

"Classes in county associations resemble very much those in the educational department of their city sister associations. There are country girls enthusiastically studying English literature, French, stenography, typewriting, bookkeeping all the commercial branches—and dramatic expression, as well as first aid to the injured, home nursing, thorough courses in plain sewing, dressmaking, millinery, domestic arts, and sciences. Girls are members of clubs for tomato, corn, and other vegetable growing, and of canning clubs, ranging from the preserving of garden vegetables to the most delicate of fruits, jams, and jellies. There are even classes in manicuring. In reality, the country girl is fitting berself for a useful all-round life, whether it be a business position or for the great job of some day being the head of her own household. It is not much wonder that the farmer boy to-day does not find the city girl more attractive than her country cousin, but prefers the girl he knows will understand him and his problems and will be an inspiration to him in his every-day life.

"Under the heading of practical talks, county associations report lectures on such subjects as suffrage, infant mortality, community service, recreation, nature study, thrift and efficiency, health, sensitiveness, vanity, current events, self-government, country-life leaders, betterbabies contests, home sanitation, building a home, politics in our town, why we need a public library, and a score of other questions which show that the country girl's mind is alive to all the big problems of the day.

"Up-to-date gymnasiums no longer belong to city associations alone, but are seen in many country sections. Then there are hikes, pienies, tennis tournaments, games, skating, snowshoeing and coasting parties, as well as volley-ball and basketball. In Gatesville, Coryell County, Texas, the girls in the county association promoted basket- and volley-ball so that it was enjoyed by five hundred girls in that section. In Montgomery County, Kansas, a 'Good Times Club,' which had an attendance of eighty-four, was formed among business girls, while a recreation club in that association gave nine special recreational occasions with an attendance of 273. The National Guard drill-hall was used for these meetings."

All kinds of community service are now being rendered by these girls, we read in *The Continent*, "from the opening of their Young Women's Christian Association rooms as a substation of the public

library to holding a better-babies contest at the county fair, opening rest-rooms at the fair or in the county-seat for the use of farmers' wives and daughters during the long, tiresome day while they shop and wait for their husbands to transact their business." For instance—

"These girls have promoted the singing of Christmas earols, better music in the churches, and community Christmas-trees. They have collected and dispensed clothing for poor families, have bought toys, candy, etc., for Christmas presents for poor children. In Gatesville, Texas, the county 'Y. W.' girls opened a rest-room for farmers' wives which was used by one thousand visitors in a year. These girls also maintained a residence for seven country girls, that they might attend high school. They also held a cooking and sewing contest participated in by fifty girls.

"In Lake County, Illinois, the county association members themselves distributed candy, toys, books, mittens, and hair-ribbons to the children of eighteen poor families. Through the visiting nurse they distributed clothing to fifteen other families and through the United Charities in Chicago they took care of

The expert on rural life who directs the Y W.C.A.'s work among country girls and young women.

one poor family of father and mother and eight children, providing rent, fuel, groceries, clothing, a Christmas dinner, and toys and candy for the children, while the father was out of work for several months. During the summer, the Camp Fire girls of Lake County, which is a branch of the association, made pajamas, skirts, and aprons for the women and children from a congested quarter of Chicago, who were attending the summer camp.

"All over the country, county association members are cooperating with other agencies in their locality for promoting all kinds of activities for the church; they are holding vesper services for boys and girls of the community, and in some sections they are holding Sunday services in small centers, using a schoolhouse where no church exists. They are helping to promote the work that is being done by women's clubs in the nearby towns and also are cooperating with the district superintendents of schools.

"An interesting phase of county work is the Eight-Week Clubs whose leaders are college girls who come home and gather about them their girl friends and all girls of the community who have not had the opportunity of going to college to share some of the good things they have had the privilege of enjoying. The activities of the club are divided into fun and recreation of all kinds. The leaders of these clubs report an interesting variety of community service performed, ranging

from cleaning up a church and keeping the lamps washed.
trimmed, and filled to providing tennis-court and grounds for
the country school, staying with babies so that their mothers
may go to church, and buying a black dress for a dear old lady
who could not go to church because she didn't have one."

CHURCH AND CORPORATION "SOUL"

HAT CORPORATIONS HAVE NO SOULS is a cynical adage which lost some value as proverbial tender in the closing weeks of 1916. This opinion, hinted at in various quarters, is based on the bonuses and wage and salary increases granted by industrial and commercial concerns and noted in the press. Furthermore, what is practically a new form of social service, as was recorded in our issue of January 6, is "group insurance" of employees. Such benefactions as these prompt the statement of The Presbyterian Advance (Nashville) that corporations are revealing much more soul "than is often manifested by those organizations which are in existence

DOING THEIR BIT FOR THE COMMUNITY.

primarily for the development of souls—the churches." This journal has in mind the particular case of "one of the largest railway companies of the Middle West" which surprized its office force by voluntarily making out the semimonthly pay checks for a larger amount than the employees expected to receive. With each check was a note explaining that because of the increase in the cost of living the railroad thought an increase in compensation was due its employees at this time.

The Adensee wonders, somewhat grimly, how many Church sessions have considered their pastors with equal understanding of the great problem of the salaried man. It holds that pastors' salaries have been actually reduced, for the they may receive the same number of dollars as they did a year ago, these dollars "do not represent the same purchasing power which they represented last year, and, indeed, it appears that month by month their purchasing power is being still further reduced." In other words:

"It takes more dollars to purchase any given articles than it did last year, and consequently there are

many ministers, along with many other salaried persons, who find it much more difficult to stretch their incomes over the necessary outgo.

"Both the cost of almost all sorts of provisions and also the wages paid to wage-earners are very much higher than they were a year ago, but over 80 per cent, of the men in America to-day are salaried men and in very few cases have salaries been increased. One searcely needs to dwell upon the increased cost of living. It is the more startling, however, when we notice the percentage of increase. Meats now cost about 25 per cent. more. That means that it takes \$1.25 to purchase the quantity of meat which could be bought for \$1 a year ago. Dairy products have increased in price about 50 per cent., which means that what could have been bought for \$1 now costs \$1.50. Flour and potatoes cost twice as much, and in some places more than twice as much, as a year ago. Contrary to precedent, for the prices of staple articles usually drop during the summer months, the cost of the common commodities used for food increased over 9 per cent. during the month of August, 1916, and the upward movement did not stop with August, as every one knows. As already stated, wages have been increasing also, but not salaries, with some exceptions. In view of these facts, ought not church sessions to give serious consideration to the question whether they ought not at least to restore the minister's salary to the purchasing power it had twelve months ago? Not to do so is not only unjust to him, but in many eases it will mean that he is no longer able to render as effective service to the Church."

THE PROBLEM OF THE CITY'S EDGE

THE SIN OF MANY CITIES in this country is in making their borders noisome and unhealthy with garbage-dumps, and what a writer in The Continent (Presbyterian, Chicago) calls "unpleasant industries," such as rendering- and glue-plants. Miss Mary E. McDowell, who has lived as a settlement-woman a score of years among the workers of the stock-yards, recalls that the regular phrase for such repulsive things used to be, "Put it on the edge of the city." But in Chicago, at least, a new order has been established, and the "motherhood" of the city is said to be largely responsible for the change. Learning of the heavy immigrant population that lives on the "edge," they decided that as long as children are born and bred there, they must be "free from evil and ugly things," for the "human output must be the test of the civilization of the city," and the "future welfare of American demoeracy depends on this human output." Our informant deseribes the reform as follows:

"We who had the unique experience of living on the edge of a garbage-dump, without losing the keen edge of sensitiveness, began a city-wide campaign of education to relieve the
cruel condition foisted upon a community of unskilled workers
of small wages and large families. We spoke to the citizens
and housekeepers who were responsible for this unjust condition. We told these comfortable and refined people where
their garbage was dumped. We told them of the death-rate
of babies near the dump—five times as great one hot August
as it was near the benutiful lake-shore where the garbage came
from. We told these ignorant well-to-do people what it meant
to these families whose homes were ruined by these garbagedumps. We described to them the plague of flies and bad
odors, of the waste of energy and wages that came to people
with small wages through sickness.

"On the northern boundary of this land of unpleasant things an open sewer had been permitted to be a menace to the community. Industrial waste had emptied into it from the nine-teen packing-houses, equal to the sewage from a population of over a million people. The industries were saving money; the community thought they dared not fight their bread and butter, and the municipality was undisturbed. At last we of this district who were free to disturb the peace of the municipality organized the community and the public opinion of the city, and now this open sewer is being buried under the ground."

The "great city frontiersmen" who must endure such conditions are not so picturesque as the pioneers of the West. Generally they are unskilled workers with "large families and a strong desire to have a home of their own." They are immigrants seeking to better their condition here, and we read:

"At first they live close to their job; then they read an advertisement of lots for sale by monthly payments; they hear that by paying down ten dollars, more or less, they may come into possession of that dreamed-of cottage. They buy the lot on the edge of the city, or perhaps just over the limit-line, for the real-estate agent says it will all be city in a short time. Part of the house is put up during the summer. Then father and mother go to work to earn the monthly payments. Boarders are taken in to the limited rooms, for the children are too young to work, and unless nine dollars extra are paid every month all will be lost. After a long, hard winter they build the rest of the house. Often there is no sewer and the ditches are the open sewers for several years.

"One day five Polish women from the prairie back of the 'yards' came to the settlement. Only one was able to speak English, and she told their grievance against this thoughtless, wealthy city of Chicago whose frontiers they were extending. This unpicturesque pioneer from the unsewered prairie told me that they had been twice to the aldermen and to the City Hall, but nothing had been done. 'Dey say not many houses enough yet for sewer or water, but we so many children, so many people,

we carry water for all the peoples from one block.' We then counted, not the houses, but the inhabitants of the houses and the number of children, and found that the population in the six houses was equal to many blocks where only single-family houses were built.

"I agreed to go to the City Hall with them to give to the Commissioner of Public Works this one fact—that the population of these six houses was equal to that of a block of single-family houses. The five Polish city frontiers women and I found the Commissioner very human when we gave the number of children for whom these mothers had to carry water from a fire-plug a block away, and when we begged for a sewer because of so many people in the six houses, he kindly said that we had proved our case and he would get action by the City Conneil."

The fight for improved conditions on the edge of the city was not an easy one, as may be judged from an instance given by Miss McDowell:

"Spring after spring the prairie, one mile west of the stockyards, between the great trunk railroads that come into Chicago, was flooded with water, and these pioneers often had to make flatboats to enable them to reach the street-car line. These little cottagers who were buying their homes, who had a longing for a piece of land to till, who wanted to get away from the smoke and the smell, had to bear the whole burden of opening up the edge of the city, for the absentee landowners who held on to the land for future speculation fought every improvement. One great estate-owner, who lived in New York City, fought the putting in of the main sewer to drain the flooded prairie.

"The citizens in the districts built for pleasant things are not cruel, nor do they mean to be selfish. They simply do not sewith their minds. They can not sense a bad odor that they do not smell nor feel a pain that others have. Their imagination is so limited that they do not realize the injustice of putting off their discomforts on to others less able to bear them. They, as individuals, think ethically, but have not yet learned to think collectively. It takes graphic pictures of realities and dramatic stories of suffering button beings and a constructive idea of a scientific plan to care for garbage and industrial waste before comfortable citizens are aroused."

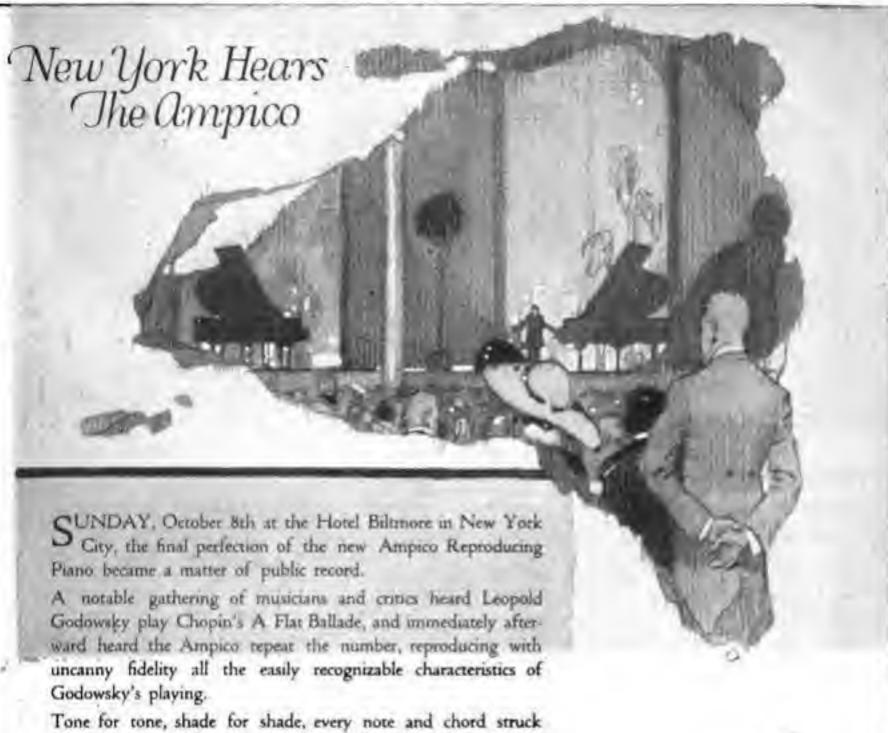

A GIFT OF LAST MOMENTS

NE GRATEFULLY APPRECIATED SERVICE done by the workers of the Young Men's Christian Association in France is to bring relatives to the bedsides of dying or fatally wounded soldiers. In urgent cases, we read in The Christian Endeavor World (Boston), relatives and friends are permitted by the British and French Governments to be to France "to visit those who will never again come across the Channel." From the moment the visitors land on French soil, we read,

"They are the guests of the Young Men's Christian Association, whose cars meet every boat, and often they have as many as two hundred and lifty guests in their charge at one time. They are driven to the place where their loved ones lie, it may be eighty miles away or more; and from the time of comian to the time of going, unless they wish, it need not cost them a cent. That is not the losst beautiful and tender of all the ministries of the Association.

"Many of the cases are infinitely pathetic. Not long are I read of one wife going in sad hope; but the boat was delayed, and when she arrived she was just a few hours too late.

"Mr. Yapp tells of another case, the wife of a soldier-lad. The Young Men's Christian Association took her to the hospital; outside the ward a nurse told her that he was very didelirious all the time, and there was no hope of his recognizing her. They went in. For fifteen minutes she sat there beside him, and there was not the slightest sign that he knew. The she just spoke to him of the little ones at home, his two children, Lizzie and Freddie. 'You remember them?' she asked And for one moment there passed over his face a look of remention. Then the darkness closed in again. But that one mement—so little in one sense, for the days for most of us are full of such moments—was to her priceless—'worth coming all the way from England for,' she said."

Tone for tone, shade for shade, every note and chord struck with the same delicate precision as before—it was Godowsky and no other.

Seldom has a new invention had a more impressive demonstration. The willingness of a premier concert pianist to participate in a public comparison of his art with a "player piano," however marvelous, is in itself a remarkable tribute to the Ampico. In his prompt recognition of the artistic and educational significance of this invention Godowsky is by no means alone. Ornstein, Adler, Volavy and other celebrated artists are also soon to appear in joint recitals with the Ampico.

If you do not get an opportunity to hear one of these recitals, have your music dealer arrange a private demonstration. The Ampico is both a Reproducing Piano and a player piano, playing any standard roll. And the tone and touch of the instrument are unimpaired for hand playing.

The Ampico may be had in the world's oldest and best pianos: the Knabe (1837), Haines Bros. (1853), Marshall and Wendell (1836) and the celebrated Chickering (1823). A handsome illustrated catalogue will be sent on request. The AMPICO Reproducing Piano

Welding saved 87 days shut-down

By avoiding a tie-up or delay in production through the quick, permanent repair of some important piece of machinery, one use of this process in your plant may save you many times its cost. You can probably avail yourself of the increased strength, economy and simplicity of welding in the manufacture of metal parts, as thousands of others are doing. It will also pay you to investigate its use in repair work.

Rest-Offite.

Oxy-acetylene welding fuser two pieces of metal by intense heat into one piece with the strength of the original metal.

It is easily understood—any workman who understands metals can learn quickly to do efficient work. We furnish high-grade welding apparatus for \$60 (Canada, \$75); Prest-O-Lite Acetylene Service and special blow-pipe for cutting metals at extra cost.

Prest O-Lite Dissolved Acetylene is furnished in convenient cylinders, making the welding outfit portable for use insule or outside the shop. The Prest-O-Lite system of exchanging empty cylinders for full ones insures universal, perpetual service. Avoids the initial investment and depreciation neutred in making crude acetylene in cartide generators. Insureshetter welds, quicker work and lower operating costs.

If you use a bolt, rivet or threaded joint in the manufacture of any metal product, it will pay you to bearn the sayings in time and material, and the added strength and neatness offered you by oxy-acetylene welding.

Our illustrated literature probably describes a profitable use in your business. Write for it.

WORLD'S LARGEST MAKERS OF DISSOLVED ACETYLENE

CURRENT POETRY

CHARMING simplicity of expression and appealing naiveté of idea make Katharine Lee Bates' "Fairy Gold" (E. P. Dutton & Co.) one of the most attractive of the recent books of verse. This poet writes best of children and of fairies, and few, indeed, are the modern verse-makers sufficiently deft and discerning to treat these delicate themes successfully. The ballad which we quote is perhaps intended for childish readers, but is interesting and dramatic enough to please all who enjoy a good story put into good verse.

REBECCA AND ABIGAIL

BY KATHARISE LEE BATES

When the Clims of the Open Hand convene And our values are released.
Remember the year eighteen-location And our proud September first.
When ye write the roll of our heroes down Oh, he not the deed ignored
Of two little heroines, bonny and brown.
Whose wit was sharp as a sword.

Careless she sat in the lighthouse door,
Lass of the laughing lip,
When there have in sight off the Scituate share.
The sails of a British ship.
Rebecca Baiss was the merriest maid.
Between Cape Cod and Cape Ann,
But her quick breath sobbed, for, old fears allayed.
The post had never a man.

Over her shoulder Abigaii peered
With the soft brown eyes of their race.
And the sisters watched as the frigate neared
And anchored against the place
Where guards had been stationed till yestere en.
But now had no garrison more
Than the keeper's wife with her gentle mien.
And the girls in the lighthouse door.

The work-worn mother, all unaware
Of the blow about to fall,
Dozed in her faded rocking-chair,
While the kitten teased the ball
That had rolled from her knitting, and not until
Two leaves in stealthy guise
Put off from the skip, had the girls a will
To waken those weary eyes.

Then her dream was pierced by the shrilling fife.
And crushed by the rolling drum.
She swayed to her feet. "O Lord of Life,
Is the hour of bloodshed come?"
White she sprang to the empty door
And saw the redenate, stayed
By that martial note, had raised the oar,
Mistrusting an ambuscade.

A sulien gun from the ship warned back.
The beats, and with burried stroke.
They traversed again that foaming track.
To the shelter of British oak.
While "Yankee Doodle" rang out the fife.
And the drum was calling to arms.
As if mustering men for desperate strife.
From a hundred rebel farms.

Murmured the goodwife: "God be praised!"

And next: "But how shall I feed
This patriot army Thou hast raised
To succee us in our need?"
Then around the cottage, as large as life.
She saw that army come—
Laughing Rebecta who waved the fife.
And Abigail with the drum.

At last Mr. W. H. Davies's poems are readily accessible to the American public. From the press of Alfred A. Knopf comes "The Collected Poems of William H. Davies," with a frontispiece portrait of the poet by William Rothenstein. In England he has for years enjoyed considerable fame, having been the recipient of praise higher

Uncle Sam's Mail Carriers

Have brought thousands of letters relling of the health-benefits following a change from coffee to

POSTUM

Some people seem able to drink coffee, for a time, without much apparent horm to health and comfort. But there are many athers to whom it is definitely injurious to heart, stomach and nerves.

If you are one of those with who is coffee disngrees, a change to the pure, delicious food-drink, l'estim, would seem advisable—and

than that usually given to a living poet. The London Morning Post said of his songs, "They would be most fitly described as poems which Herrick, Wordsworth, and Blake left unwritten," and the London Nation spoke of his "exquisite intimacy with the earth." This last phrase seems especially apt when considered in relation to the three lovely lyrics we have chosen for exhibition.

THE ELEMENTS

BY WILLIAM H. DAVIES

No house of stone
Was built for me:
When the Sun shines
I am a bee.

No sooner comes

The Rain so warm,
I come to light—
I am a worm.

When the Winds blow, I do not strip, But set my sails— I am a ship.

When Lightning comes.
It plays with me
And I with it—
I am a tree.

When drowned men rise At Thunder's word, Sings Nightingale— I am a bird.

APRIL'S CHARMS

BY WILLIAM H. DAVIES

When April scatters coins of primrose gold Among the copper leaves in thickets old, And singing skylarks from the meadows rise, To twinkle like black stars in sunny skies;

When I can hear the small woodpecker ring Time on a tree for all the birds that sing; And hear the pleasant cuckoo, loud and long— The simple bird that thinks two notes a song;

When I can hear the woodland brook, that could Not drown a babe, with all his threatening mood. Upon whose banks the violets make their bone. And let a few small strawberry-blossoms come:

When I go forth on such a pleasant day. One breath outdoors takes all my care away; It goes like heavy smoke, when flames take hold Of wood that's green and fill a grate with gold.

DAYS TOO SHORT

BY WILLIAM H. DAVIES

When Primroses are out in Spring
And small, blue violets come between:
When merry birds sing on boughs green.
And rills, as soon as born, must sing:

When butterflies will make side-leaps.

As the escaped from Nature's hand

Ere perfect quite; and bees will stand

Upon their heads in fragrant deeps;

When small clouds are so silvery white Each seems a broken rimmed moso— When such things are, this world too soon, For me, doth wear the veil of Night.

Arthur Peterson puts a pleasant memory into pleasant verses in his "Summer Evening." which we quote from his "Collected Poems" (G. P. Putnam's Sons).

SUMMER EVENING

BY ARTHUR PETERSON

A night of June, the stars were bright.

And all the air was warm and soft.

And round about us floated oft

Some sweet perfume, and then took flight.

A Belt Is No Better Than Its Friction Surface

The friction surface of a Blue Streak Belt is like the tread on a good tire.

It grips the pulleys and efficiently delivers the power of your engines to your shafts and machines.

How long would the best of tires last if it had an inferior tread or no tread at all? About as long as a belt with inferior friction surface, or none at all.

The excellent friction surface of Blue Streak Belts withstands the most grilling work, assuring increased length of service per dollar of cost.

Blue Streak Belts are balanced belts. The duck and the rubber impregnation are as good as the friction surface. They will further economy as well, and serve as long.

The duck is a special weave which greatly increases the tensile strength per unit of weight.

This superior strength permits a reduction in the number of plies used. And the fewer the plies, the greater the pulley contact and the amount of power saved.

These plies are impregnated under such enormous pressure that the rubber is forced into the very fiber of the duck, welding the plies indissolubly and absolutely waterproofing them.

No matter what the cost of materials, the quality of Goodyear Blue Streak Belts remains the same; they are the best transmission belts The Goodyear Tire & Rubber Company can make.

Write for our Encyclopedia of Mechanical Goods, containing specific recommendations for every operation in mills, mines and factories. Both master mechanics and administrative executives are using it in revising operating costs downward. Have your secretary send for it today.

The Goodyear Tire & Rubber Company, Akron, Ohio

In the Name of God the Father

Let Us Stop the Slow Starvation of One Million Belgian Children After two years and a half beneath the upper and nether millstones of war, the Belgian people find themselves facing ow starvation of more than one million children. a new peril-the sl

that Commission has been able to supply is less than that provided to British prisoners in Germany, less Government. It is enough to keep body and soul together in an adult. It is not enough to do even that for the growing The meagre rations that have barely sufficed for adults have proved insufficient for growing children. There are than that provided German prisoners in England, and about two-thirds that supplied to poorhouses of England by the British ,250,000 of these children who are directly dependent upon the food supplied by the Commission for Relief in Belgium. children. It consists of "a hunk of bread and a bowl of broth each day," and it costs about six cents The ration which

One Million Belgian Children Must Have an Extra Ration Each Day or They are Going to Die of Slow Starvation

This extra ration consists of a biscuit made with lard or fat, and a cup of cocoa. That is all; but it is enough to arrest the degeneration of the growing child. That is all; but it is enough to check the ravages of tuberculosis, rickets, and other diseases that have begun to develop with appalling rapidity among the under-nourished children. That is all; but it means the difference between life and death, between continued vitality and slow starvation. One biscuit a day! "A little more, and oh, how much it is!"

One Dollar a Month Will Supply This Extra Ration and Save a Child

The appeal comes to the United States to furnish that money and save these children. It comes from Herbert Hoover, Chairman of the Commission for Relief in Belgium. It comes from the Pope, in a letter to Cardinal Gibbons. It comes from American physicians (Dr. Lucas, of the University of California, is one of them) who have made examinations of these children for the Commission. It is an appeal that comes from the most distrest nation on earth to the wealthiest nation the sun ever shone upon.

In God's Name Can Such An Appeal Be Disregarded?

Think of it, you Americans who read this, you fathers and mothers of growing children! The Controller of the Currency, in Washington, a few days ago proclaimed the wealth of the United States as 220 billions of dollars. On the first day of this new year, one single industry—the railways—had \$412,000,000 to be paid out as interest due that day on railway bonds. For two and one-half years (nearly) Belgium, formerly 'the beehive of Europe,' has been rescued from destruction at a cost of over \$200,000, and the United States has contributed less than \$9,000,000 of this sum. Yet the Comand the United States has contributed less than \$9,000,000 of this sum.

THE CHILDREN OF BELGIUM FOR WHOM THIS APPEAL IS MADE
Under 3 years of age. 465,000
Between 3 and 7 years. 609,000
Between 12 and 12 years 730,000

and wore them proudly week after week. It is to America that their hearts have gone out. Yet while France and England have been between them providing \$7,000,000 a month for the support of Belgium, the people of the United States have contributed less were capable of earning the highest salaries paid—winning for their country and their flag imperishable honor and gratitude, the support they have received from their own countrymen has been pitifully inadequate. For all the distrest people of Europe, Asia, and than two years. While scores of Americans have been devot-work of relief, without a dollar of recompense—some of them ing their whole time to the than \$9,000,000 in more

Africa, according to the Controller of the Currency, we have contributed, since the war began, less than one-twentieth of one per cent. of our aggregate income. That is to say, we have diverted one dollar out of \$2,000 of income to the relief of such distress as the world has never before seen. And in this same time, provisions for the Belgians alone have been purchased from this country to the amount of over \$100,000,000, according to the official documents of the Relief Commission.

These Letters from Children of Belgium in the Light of the Facts Just Presented Read

The following letters are printed by Edward Eyre Hunt, who was agent of the Commission in charge of the Province of Antwerp, in his revently published book, "War-Bread."

BOY OF NINE FROM A

Good People of America:

much for you and never forget you. I would fly to America to thank the If I had a flying-machine I brave people there. I haven't tell you that I shall pray very

FROM A GRATEFUL LITTLE GIRL

Oh, dear Americans, I am still small. My words can not tell you very well how I want to thank you, but, dear Americans, you

must feel my heart. I pray every day to the good God that He shall bless your lives and that He shall spare you from war, hunger, and all other horrors. Take, then, loving and noble gentlemen, with my deepest feel-ings, the thanksgiving of my elder brothers and sisters.

ing because she could not give us the bread we asked for, because there was no flour. But you have dried her tears with the good flour

FROM ANOTHER LAD OF TEN

which you have sent.

Dear Americani

I often saw mother weep when we came down-stairs in the morn-

FROM A BOY OF EIGHT

GERALDINA VAN DER VOORDT.

I thank you because you sent great big boats over the great sea -eat-boats --rice, com, bacon, stockings, clothing, and shoes. I know that you like the little Belgians, and I like you, too. ACHIEL MAIS.

Letters like the above have come to the Commission not only ALFONS JANSSENS. by hundreds and by thousands, but by hundreds of thousands.

It is war here. We have known hunger and need. We have been fugitives. But, thank God, America has helped us out of need by sending us clothing, hears, bacon, and bread. We thank America and the Americans also, and every day we pray Our Father for brave

What Will "Brave America" Do To Merit This Gratitude of Belgian Children?

It is not generally understood that, even in times of peace, Belgium has to import 78 per cent. of her breadstuffs. Even in normal conditions she produces but 22 per cent. The harvest of 1914 was never reaped. The American commissioners all testify that those Belgians who have means have done and are doing their utmost in

relief-work. It is "up to" America to save these million slowly starving children, if they are to be saved—to give Alfons, and Josef, and Geraldina, and Achiel, and the rest, a biscuit a day as a supplementary meal, in addition to the less than poorhouse rations they are now getting.

Twelve Dollars Will Give That Extra Meal to One Child for a Year

THE LITERARY DIGEST appeals for contributions in \$12 units. you can't contribute that sum, get friends to help make it up.

Every cent or every usual man some along the line for postage or Not a cent will be deducted anywhere along the line for postage or money will be applied to the purpose for which it is given, through or more will be acknowledged in our columns. Every cent of every dollar will go to the feeding of a Belgian child. clerical help or transportation or administrative expenses. the Commission for Relief in Belgium. All sums of \$12

LITERARY DIGEST will start the list by taking care of 500 children for Let the response be quick and prompt and generous.

LARS. Readers of THE LITERARY DIGEST alone should do that, and do it quickly. How many children will YOU save from slow starvation during the year 1917? One thousand? One hundred? one year \$6,000. Remember, \$12 will save a Belgian child from slow starvation. HELP US TO RAISE ONE MILLION DOL-Ten? It is a time for Americans to show to the whole world the size of their hearts.

Make checks, money orders or other remittances payable to BELGIAN CHILDREN'S FUND, and make them as large as possible, and address all letters to Belgian Children's Fund, care of THE LITERARY DIGEST, 354-360 Fourth Avenue, New York.

Planning for Power!

Production—production and more production!! That is the efficiency-gauge of the modern plant. Of all else, "production" is ever the master word.

It calls for uninterrupted operation—for a plant dependable day in and day out—no shut-downs through equipment weaknesses.

Thus, in planning for efficient, reliable power, business heads demand Robbins & Myers Motors for the twenty-one years' record of successful performance behind them.

Whatever the size -1/40 or 25 horsepower; whatever the service—large machine or small; whatever the circuit—direct or alternating current—there is a particular Robbins & Myers Motor for the purpose.

Makers of the best motor-driven equipment also prefer Robbins & Myers Motors for their dependable qualities. Whenever you see any electrical device equipped with a Robbins & Myers Motor, whether it be a vacuum cleaner for the home, an adding machine for the office, or a drill press for the machine shop, be assured that it is a high grade product throughout.

You will rarely find a Robbins & Myers Motor on any appliance that does not measure up to the Robbins & Myers standard,

If you are a motor user planning for more and better power, write for data on motors to suit your particular needs.

If a manufacturer of motor-driven equipment, let us submit sample motors for testing. No obligation involved.

If a dealer, more facts await you regarding Robbins & Myers service.

Robbins & Myers Motors

Your dress was some pale summer stuff,
Its light was all we cared to have.
I at your feet, and near enough
Sitting to feel your fan's slow wave.

Of ghosts we talked, told mystic tales
Which made both turn, almost afraid.
And peer into the woodbine's shade.
Moved to and fro by gentle gales.
In the late evening, growing still
At last, you gazed long at the stars.
And I at your fair face, until
Midnight struck through the lattice-bars.

Here is a poem on an unusual subject, a poem distinguished for its strength of phrase and for the truth of its psychology. There is an important lesson in these lines. They are quoted from Ruth Comfort Mitchell's "The Night Court and Other Verses" (The Century Company).

REVELATION

BY RUTH COMPOST MITCHELL

He had not made the team. The ultimate moment-

Last practise for the big game, his senior year— Had come and gone again with dizzying swiftness. It was all over now, and the sudden cheer

That rose and swelled to great the elect eleven Sounded his bitter fallure on his ear.

He had not made the team. He was graduating. The last grim chance was gone and the last hope fled:

The final printed list tacked up in the quarters:
A girl in the bleachers turned away her head.
He knew that she was trying to keep from crying;
Under his tan there burned a painful red.

He had not made the team. The family waiting His wire, up-State; the little old loyal town That had looked to him year by year to make it.

And laureled him each time home with fresh renown;

The men from the house there, tense, breathlessly watching.

And, after all, once more, he'd thrown them down.

He had not made the team, after years of striving:

After all he had puld to try and held it cheap—
The sweat and blood and strain and iren
endurance—

And the barassed nights, too aching-tired to sleep:

The limp that perhaps he might be cured of some day:

The ugly scar that he would always keep.

He had not made the team. He watched from the side-lines.

Two days later, a part of a sad patrol, Battered and bruised in his crouched blanketed body,

Sick and sore to his depths and aloof in dole.
('ntil he saw the enemy's swift advancing sweeping his team-mates backward. Then from his soul

Was cleansed the sense of self and the sting of

And he was one of a pulsing, straining whole, Bracing to stem the tide of the on-flung bodies. Helping to halt that stendy, celentless roll; Then he was part of a fighting, frenzied unit

from he was part of a fighting, frenzied unit forcing them back and back and back from the seal.

There on the side-lines came the thought like a whip-crack

As his team railied and rose and took control!

He had not made the leam, but for four long seasons, Each of ten prinding weeks, he had given the flower, The essence, and strength of body, brain, and spirit. He and his kind—the second team—till the power To cope with opposition and to surmount it Into the team was driven against this hour!

What did it matter who held onto the leather, He or another? What was a four-years' dream? Out of his heart the shame and rancor lifted.

There burst from his throat a hoarse, exultant scream.

Not in the fight, but part of it, he was winning! This was his victory: he had made the team!

PERSONAL GLIMPSES

CANADIAN WOMEN AND THE GREAT WAR

HIRTY-FIVE hundred women doing work previously done by men in Canadian banks, three thousand in munition-factories, five thousand nursing the wounded at the front and in the base hospitals—these figures give a hint of the spirit in which the women of the Dominion are meeting the demands of the war. To release their sons and brothers for service in the trenches, they are turning to unfamiliar duties in office, counting-house, and ammunition-plant, while others have successfully turned their energies to the raising of great sums of money for war-relief. Like their English sisters, they are working long hours to keep their fighting forces supplied with ammunition, they are knitting, canning, gardening, street-cleaning, for the men at the front. Describing these activities in a letter to the New York World, a Toronto correspondent writes:

When Great Britain entered the war, Canada automatically did likewise. Never perhaps in the history of nations was there a land less prepared for conflict than Canada. Militant Canadians to that date were exceptional; the bulk of the press and the public was distinctly anti on the preparedness question, and there were not over ten thousand men in the Dominion versed in the arts of war.

Yet within six weeks Canada sent on board transports in Gaspé Basin on the Atlantic coast thirty-three thousand men fully armed and equipped with everything an army on active service needed. Since then, 368,346 men have joined the Canadian forces to October 31 last.

This mention of the Dominion's military achievement, one of the greatest in history in view of Canada's sparsely populated territory, which, tho 111,992 square miles larger than the United States, contains only one person to two square miles, or a total of 8,075,000, has been made so that the reader can understand what a task was given the Canadian women to do when their land was being looted of its ablest men. And they have done their task thoroughly.

According to Canadian census statistics there are 2,186,000 women between the ages of fifteen and eighty in the Dominion. Of these, 1,251,182 were married, and 364,-821 were occupying paid positions in store, factory, or office, etc., previous to the war. There are also some 60,000 rated as belonging to the leisure class, and 509,997 unlisted for a total of 2,186,000 to take up tasks left by the departure of 368,346 fighting-men.

These women, we are told, immediately began activities of all sorts, doing everything which would aid, directly or indirectly, in approaching the hoped-for victory. One of these activities was the collection of funds for relief—always the first thought of woman. In conceiving new methods along this line, the women proved amazingly efficient. We read, for instance:

In one far-western Canadian city, on one occasion, the ladies of a small society

"I See Where My Puffed Wheat Goes" But the More That Goes the Better

The last thing to restrict is a child's love of Puffed Grains. And these are the reasons:

Puffed Wheat and Puffed Rice are whole grains. They contain what every child must have. Much they contain—phosphorus, minerals, gluten and vitamines—are discarded in flour-making.

And Puffed Grains completely and easily digest. Every food cell is exploded. So at any hour and in any form Puffed Grains are ideal foods.

They Don't Last-That Is True

People eat Puffed Grains for breakfast-with sugar and cream or mixed with fruit.

In the forenoon, perhaps, the girl of the house uses them in candy making. In the afternoon, the boy, perhaps, cats them like peanuts, buttered or salted. For supper they are floated in bowls of milk.

Thus Puffed Grains are always the most popular foods in the house. But they are all-food, remember. Every food cell is blasted. Every granule digests.

They don't tax the stomach. And they supply what most foods lack, and what every person needs.

Don't fimit the use of Puffed Grains. Keep all three on hand to supply a variety, and tempt a still larger consumption. For these are the perfect foods.

Puffed Wheat Puffed Rice

and Corn Puffs
Each 15c Except in Far West

These are Prof. Anderson's scientific foods. They are steam-exploded puffed to eight times normal size. Every food element is fitted to feed.

They seem like confections—thin, airy bubbles, with a taste like toasted nuts. That's why folks so enjoy them. But their purpose is to supply whole grains in a form which the body can utilize. In no other way known can that be accomplished.

Eat Puffed Grains in some way daily

A "FISKLOCK" BRICK HOUSE

- A Cheaper House
- 2. A Fire-proof House
- 3. A Damp-proof House
- 4. A Beautiful House
- A Warmer House in Winter
- A Cooler House in Summer

"Fisklock"-"Tapestry" Brick is the best and, owing to the low cost of construction and maintenance, is the most economical of all building materials.

It provides an eight inch wall with a two inch air space.

It is stronger than solid brick, and has all the advantages of solid brick but none of its disadvantages.

It has all the beauty, permanence and low cost of up-keep of solid "Tapestry" Brick with

better insulating qualities than any other material.

"Fisklock" is made in a wide range of reds and golden buffs, and has been used successfully in almost every type of building.

Our beautifully illustrated books, "FISKLOCK". "TAPESTRY" BRICK and "TAPESTRY BRICK-WORK, mailed upon request.

Will Show You How

rounded up all the children in the town owning Shetland ponies. With collection boxes on each side of the animals and the flag of the country for the sufferers of which the money was being gathered also adorning the animals, the little boys and girls patrolled the town from end to end seeking

The appeal was no different than had women stood on the streets with boxes and plates, but by adding novelty to the idea and shoving the collection box under the nose of the individual in such a way much more was collected than had the old-style. commonplace methods been adhered to. The numerous things of such nature, showing almost a genius for campaigning and organization, are too many to bear fullest mention.

Probably the most novel scheme and one which required real hard work was done here in Toronto. Last spring the women of the Red Cross Society started a "waste conservation." The financial results almost instantly accruing brought them realization that they had a miniature goldmine. For instance, one hundred pounds of newspaper was worth forty-three cents. An appeal to all the school-children as well as adult householders was made for old magazines, newspapers, bottles, rags, jutebags, books, metal, etc.

Everybody helped. The big banker boaned his motor-car; little Johnny, the day-laborer's son, brought a load in his wheelbarrow; girls brought great baskets full by arm-power, and the children's toy wagons proved as zealous and important carriers as the huger trucks. The Harbor Commission gave a commodious warehouse, where a large staff of girls and women work continuously sorting and packing. The first month's proceeds were \$1.619, and those in charge now claim that the year's total business will be well up to \$25,000.

How important their work along this line was may be better understood when the Waste-Collectors' Union made a protest to the City Council shortly after the women had put their scheme into operation. The union had six hundred members, and through the activity of the charitable ones their receipts had been cut considerably more than half. However, they received no civic sympathy and tried in vain to buy the women's business, offering eight thousand dollars for it.

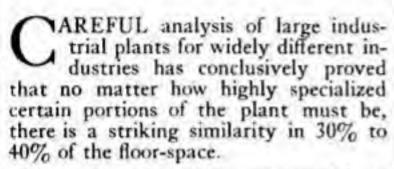

The record for cash collections in any single day or campaign since the war began was established here by the Secour National Society of Women, On July 14 women and girl collectors took in twentyfive thousand dollars in a little over ten hours' work. The feat is the more remarkable because for two years previous to this the people had been importuned almost every day, at least every week, to give to one or another charity.

Turning away from the question of hard money, there is presented the work of supplying comforts, such as wearing-apparel to the men at the front. Truly, millions of pairs of socks have been knitted for the troops. We are told:

For the first two years of the war the supply of socks averaged better than five hundred thousand a month. From the very nature of this work, knitting is, of course, an individual duty, and how seriously and steadily women have applied Complete Industrial Plants

Austin Standards

Plant of the Hooker Electrochemical Company at Niagara Palis, N. Y. Fourteen of the buildings shown were built and equipped by The Austin Company most of the work completed in four with a maximum force of 1800 men.

We therefore perfected the seven types of Austin Standard Factory-Buildings; ordered structural steel pre-fabricated; bought other materials in advance, and held them in stock subject to customers' orders. The result has been marvelously quick construction with high quality at low cost. Many highly standardized factory-products are already bring manufactured in Austin Standard Buildings.

During the past year these Austin Standards have been utilized in many plants that in part are distinctly individual, including: Hooker Electrochemical Company, Niagara Falls; Morgan Engineering Company, Alliance, Ohio; American Graphophone Company, Bridgeport, Conn.; Fox Machine Company and Perlman Rim Company, Jackson, Mich.; General Electric Company, Schenectady, N. Y.; Standard Oil Company, Cleveland.

The Austin Company offers, in addition to the seven Austin Standards, an efficient, comprehensive service in engineering, construction and equipment.

Engineering Department — Embraces six geographical centers where instant service is available for customers who desire quick action. Familiar with the lay-out of sub-tracks, buildings, power and heating-plants and production equipment to secure sconomical results. For nishes preliminary sketches without cost or obligation. When desired will make plans and specifications for competitive bids. Will work under supervision of the owner's engineer.

Construction Department—Supervised by men trained wholly by us or who have come to the Austin organization after conspicuous successes with other concerns. Thoroughly organized. Supplied outle the most recent labor-saving equipment to reduce costs during the present high price of labor.

Equipment Department—Purchases and installs heating, lighting, plumbing, power-equipment and production-machinery as desired Capably organized and manned.

General — We do 90% of the work with our own forces — so little sub-letting that the owner deals with practically one organization, one responsibility, at one profit. We work under any form of contract preferred by the owner; lump sum, cost plus percentage, cost plus fixed commission, or unit price.

You can utilize the service of The Austin Company wholly or in part; for a complete plant or a single building; for engineering, construction and equipment or either of them. We guarantee quality, cost and time of delivery. Write, wire or phone for full particulars.

Best and Cheapest Service in the World

Here are some comparisons of telephone conditions in Europe and the United States just before the war.

Here we have:

Continuous service in practically all exchanges, so that the telephone is available day and night.

A telephone to one person in ten.

3,000,000 miles of interurban or long-distance wires.

Prompt connections, the speed of answer in principal cities averaging about 3½ seconds.

Lines provided to give immediate toll and long-distance service.

In Europe:

Nine-tenths of the exchanges are closed at night, and in many cases, at mealtime.

Not one person in a hundred has a telephone.

Not one-eighth as many miles in proportion to population and territory.

In the principal cities, it takes more than twice as long for the operator to answer.

No such provision made. Telephone users are expected to await their turn.

As to cost, long-distance service such as we have here was not to be had in Europe, even before the war, at any price. And exchange service in Europe, despite its inferior quality, cost more in actual money than here.

Bell Service is the criterion for all the world, and the Bell organization is the most economical as well as the most efficient servant of the people.

THE ART OF MAKING AND USING SKETCHES

by G. Fraigont, a handbook of practical advice for the amateur. Tells you exactly how to make sketches, how to presure your paper, complete the outline drawing, and put on the color washes. It is tilled with helpful hints and illustrated with 50 drawings by the author. Every beginner should own one. Crosen Sin, Cloth, 50 centr. by well, 50 centr. BTAS & WARSALLA COMPANY, 254 Fearth Leane, New York.

themselves to it is evident wherever you go to-day in Canada.

Traveling on the train you will find the lady in the chair-car moving her fingers swiftly and surely to the task. Her humbler sister in the way of life as judged by money standards you will find busy at the same in the day-coach ahead. Grandma knits at home, so does sister and mother. Girls of eight vie on the stitches, plain and purl, with old ladies of eighty. In the concert-half, loath to lose a moment, not one, but dozens of women may be seen almost daily bending the long needles to this task.

Some have become so proficient that light no longer is necessary to their toil. So in the darkest of the motion-picture theaters, while desperate villains, merrymakers, and sad heroines, eternally opprest, flit across the screen, you will hear the faint click, click of the knitting-needle.

Before the war the ability to create warm, well-fitting, and comfortable woolen socks out of a ball of yarn by means of a few slender lines of steel was almost a lost art among the Canadian women. The pioneers of the '70s and '80s had done it. But the new generation, what with great factories and the like, had found it no longer a matter of necessity. To-day all is changed, and it is safe to venture that 70 per cent. of the women in Canada at the present moment can turn out a very fair stocking.

There is never a human activity without some one expressing it in rime. As an evidence the following very humorous little verse is given, voicing the determination of one of the newer generation taking up a strange task:

The time I've spent on these here socks is like a thousand years to me, Dear lad, how do they look to thee? Thy hostery, thy hostery,

Oh, maddening stitches, plain and puri, How oft they've made my poor head whiri, For men must fight—but I'm a girl. And so I'm knitting socks for thee.

My mother taught me how to knit, I hope with all my heart they fit— If not as secks—well, as a mitt, Or pass them on, thy boslery.

A party of expert and very active knitters were the other day discussing the fate of knitting after the war. Will it die? The majority seemed to believe it will not. "Why," said one, "we'll make ourselves the heavenliest jackets, rose, yellow, and blue, to match our varying skirts."

This seems like an awful job, but after a comparison was made later it was found that the amount of work required to make a short-length jacket was only slightly more than twice the number of stitches required to make a pair of regulation twenty-four-inch-long army socks. The members of this little knitting circle are authority for the fact that it takes 86,480 stitches to make a pair of socks.

But there was work to be done at home, too, as well as labor for the direct comfort of the trenchmen. If a city gives its men to Flanders, its women must take charge of the men's work, and see that it is carried through. Just how well this was done is evidenced by the report:

Practically the major portion of the office staffs of banks, bonding, brokerage, and commercial houses throughout Canada to-day are made up of women who, twentysix months ago had no part in commercial life, their places being filled entirely by men who have now gone forth to fight, many of them never to return.

Thirty-five hundred women hold positions in Canadian banks alone who were not there before the war. As their work is similar to those of other women of about an equal number who have taken up duties in commercial, brokerage, and other business houses, their progress is indicative of women's success on the whole in these new environs, and while particular reference is here made to those engaged in banking institutions, the same remarks may be attached to the majority of the others.

Of the women engaged, a certain percentage had some slight experience previously in bookkeeping or were possest of other forms of commercial training, but many of the workers—indeed, more than half—had never previously turned their hands to other than slight household duties at home. These latter made the most energetic and enthusiastic of employees, because for the first time they are enjoying real independence.

Fluffy-haired, rather frivolous débutantes, who entered banks not knowing the difference between a check and a draft, became in a few weeks' time serious-minded, careful presiders over sets of huge and imposing books. These recent sojourners in the marts of money have made good in all lesser positions, and a few have arrived at the actual handling of cash in the paying and receiving tellers' cases.

While a certain amount of these rapid promotions can be accredited to the exigencies of war—some of the girls in six weeks attaining to places which formerly occupied men six months and even a year to reach—the majority of promotions were due to sheer ability.

When, in 1915, the output of the Canadian munition-factories began to fall short of the quantity required, the women met this emergency also, until to-day there are three thousand women engaged in making war-munitions in the Dominion, and the number is rapidly increasing. The writer goes on to say:

Yet again, and for an entirely different phase of the war, did Canada offer the best of her womanhood. Through the burning, war-ridden regions of Egypt, in the Gallipoli expedition, Canadian nurses played a noble part. In English hospitals, in hospitals along the French and Belgian fronts, on hospital-trains, and in temporary quarters close to the line of fight, Canadian nurses are working to-day. Over five thousand of the best of the Dominion's womanhood have donned the neat little army uniform and gone forth to take up their share in the great struggle.

This, then, is what Canadian women have done as their share in bearing the burdens of the war. They have not only given their sons, but they give their efforts night and day that the war may be brought to a speedy end, says the account, and, summing up all that the great stayat-home army has done, it concludes:

Equally efficient to meet the demands of war at home and the front have Cana-

The ARISTOCRAT of BUILDING MATERIALS

Within your reach? YES!

The very same stone that has been used for many years in the finest buildings, both public and private, in every state in the Union—a natural stone so remarkable that if you are about to build or are interested in building, you should *certainly* know all about it. The U.S. Government is one of the biggest users of this "Aristocrat of Building Materials." Yet it is even more reasonable in price than artificial materials.

You are familiar with buildings built of Indiana Limestone, but probably do not know it by name. It probably never occurred to you that this beautiful material is quarried in such quantities that the price is within your easy reach.

You do know that nothing in the world gives the impression of dignity, costliness, refinement and beauty like natural stone, the genuine handiwork of nature, and we want you to know about Indiana Limestone, "The Aristocratof Building Materials," to hold a piece in your hand, and to decide for yourself about the new building. (See FREE OFFER below).

FOR THE NEW

YES—of course. A list of the finest Indiana Limestone homes reads like a society bluebook. Indiana Limestone is a badge of distinguished taste, whether for cottage or mansion. The best architects use it also for the trimmings of brick houses and for porches even on wooden houses.

YES—for the very finest apartments use Indiana Limestone from sidewalk to roof, or one story Limestone and the rest brick. Natural Indiana Limestone trim, porches and doorways, add the final touch of elegance to the brick apartment, and in renting "class pays cash."

YES—where is the wonderful product of nature more appropriate than in a church? What is more certain to express the high function of the edifice than Indiana Limestone? Let us send a sample and book to each of the committee, pastor or others interested.

YES—the greatest architects have used millions of cubic feet in a host of the great buildings in America—for example, the Grand Central Terminal (N.Y.), and business, hotel, bank and public buildings, great and small—EVERYWHERE! By no means fail to investigate Indiana Limestone.

FREE Handsome paperweight of Indiana Limestone showing several finishes with a handsomely illustrated interesting booklet

dian women been. Vast sums of money have they helped to collect. By ingenuity of resource and novel plans they have kept the money flowing into ever-needy and ever-emptying coffers. Hospital staffs in strange lands they have manned with expert nurses. Men's places in the office and the counting-house they have assumed calmly, and the duties have been efficiently performed. The liquor-traffic has felt their might, and in half of the whole Dominion the open bars have been swept away.

To suffering soldiers and foreign noncombatants have been rushed colossal mountains of food- and clothing-supplies. Fresh fruit they have canned in thousands of quarts for the fighters at the front. And at home, eternally vigilant, always alert to fight, they have beaten food-comhines and driven prices down. Even into the great factories, where come the things of death, they have gone and worked and become experts in the art of munitionmaking.

In no single thing have they failed; no single call have they left unanswered. Greatly they have striven and greatly achieved.

AN AMERICAN BOY WHO DIED FOR ENGLAND

A MONG the lives that have been taken as British toll in the great war are many upon which England had no bloodelaim, but which were given for her because of the love borne for her as a nation. French and Germans have fought under the Amerlean flag in our wars, but not many British. Large numbers of Americans, however, are wearing the King's uniform. One such was Harry Butters, a young Californian whose death in France called forth nation-wide eulogies from British personage and press. It seems, according to published accounts, that young Mr. Butters had been educated in San Francisco, and later entered Beaumont College, in Old Windsor, where, amid seenes replete with England's richest rural charm and tradition, he learned to love the country which sheltered him, and felt the debt of gratitude he owed the land.

When the war came, we learn from the London Observer, altho he had returned to America, he went back to England to enlist, and it was as an officer of the British Army that he died. It is stated of him:

This American boy—and what a straight, upstanding pattern of youth and strength he was—owed us no duty and he gave us all. He gave it not impolsively nor in adventurous recklessness, but with a settled enthusiasm belonging to the "depth and not the tumult of the soul." How much he gave is worth considering. His personal endowments and opportunities were such that when he made up his mind to quit everything in his bright California and to come into the war, his choice was heroic in the fullest sense of that word.

When he went back to America after leaving college, he was a young man of mark, framed to excel both in sport and affairs. He was very tall, supple, active, frank, and comely of face, as gay as he was good-looking. You saw by a glance at his hands that he had a born instinct for management and technique. He had been a good deal at sea. He knew all about horses and motor-cars. He was a crack shot and a fine polo-player. His business ability was shown as soon as he took over the management of his father's estates. With this practical talent that could turn itself to anything he had other qualities, One remembers what a delightful, level, measuring glance he used to give suddenly from under his brows when he had finished rolling a cigaret and went on with his keen questioning about men and things. To talk with him was to receive a new and promising revelation of the mind of young America. Like so many of our own young soldiers in their attitude toward polities, he was not content with either of the old parties in the United States. He thought that his own generation, if it was earnest enough, might make a better hand both of social problems and world-relations. He hoped to play his part. Tho he always thought of himself in a fine spirit as "an American citizen," he wanted the United States to take a full share in the wider life of the world, and especially to work as far as possible for common ideals with the whole English-speaking race.

So when the news of the war came to San Francisco, he put aside as fair a prospect of wealth, success, happiness, and long life as could well open before a young man, and determined to throw in his lot with the old country and the Allies in the fight for civilization against all the armed might of lawless iniquity which had flung itself on

Belgium,

He was then twenty-two. He arrived in England in the early part of 1915 to join the British Army, and no military eye could doubt that the British Army had got a rare recruit. Harry Butters got his first commission in the 11th Royal Warwick-shire Regiment. Afterward his technical faculty found more congenial scope when he transferred to the Royal Field Artillery. While training, he stayed a good deal at the rectory, Stow-on-the-Wold, Glos. The rector writes: "He was a warm-hearted, fearless young officer, as fine an American gentleman as ever crossed the Atlantic," It is much to say, but it is true.

An associate continues the tribute with a picture of young Butters after the first baptism of fire at the front, not in his own words, but in the words of the young American himself, as he wrote to his family in a letter afterward published in a San Francisco newspaper. The new recruit wrote:

"I am no longer untried. Two weeks' action in a great battle is to my credit, and if my faith in the wisdom of my course or my enthusiasm for the cause had been due to fail it would have done so during that time. But it has only become stronger. I find myself a soldier among millions of others in the great Allied armies, fighting for all I believe right and civilized and humane against a Power which is evil and which threatens the existence of all the right we prize and the freedom we enjoy.

"It may seem to you that for me this is all quite uncalled for, that it can only mean either the supreme sacrifice for nothing, or at best, some of the best years of my life wasted; but I tell you that not only am I willing to give my life to this enterprise (for that is comparatively easy

FUNK & WAGNALLS COMPANY, Publishers, New York and London

except when I think of you), but that I firmly believe-if I live through it to spend a useful lifetime with you-that never will I have an opportunity to gain so much honorable advancement for my own soul or to do so much for the cause of the world's progress, as I have here, daily defending the liberty that mankind has so far gained against the attack of an enemy who would deprive us of it and set the world back some centuries if he could have his way. I think less of myself than I did, less of the heights of personal success I aspired to climb, and more of the service that each of us must render in payment for the right to live and by virture of which only we can progress.

"Yes, my dearest folks, we are indeed doing the world's work over here, and I am

in it to the finish."

The writer of The Observer account comments on this:

This is a magnificent letter in the height of character, the earnestness of thought, the steady strength of mind and heart it reveals. None of us can read it without being moved and fortified. That phrase about "honorable advancement for my own soul" is one that deserves never to die. Harely has the cause of the Allies been vindicated with more moral force; never was that cause sealed by a purer sacrifice.

His captain writes that, "He was with his guns, and no one could have died in a nobler way. He was one of the brightest, cheeriest boys I have ever known, and always the life and soul of the mess. . . . We all realized his nobility in coming to the help of another country entirely of his own free will, and understood what a big heart he had. He was loved by all."

He is in it to the finish, indeed, with comrades of his adoption, who have passed with him. He takes his last sleep out there with so many of the brave and true where none was braver and truer than he, and among the recollections of the great war, his name will not be forgotten. Beaumont will take care of that. In his old college we doubt not he will have his permanent memorial. In our thoughts the flags of Britain and America cover his heart with double honor. We shall never see them entwined again without thinking of him. No American can read these lines without being proud of him. No Briton can read them without feelings deeper, more moved than can be said in any words. We are grateful, as he would have liked, to his America that bred him.

What this brave lad was to his intimates and family is revealed by a letter written by an Englishwoman who was wont to call herself his "stepmother," because of the filial affection he had for her, altho there were no ties of kindred between them. She is Mrs. Denis O'Sullivan, the widow of the famous Irish singer who was so eulogized by Mark Twain in his "Memoirs." Of Harry Butters, she wrote to friends:

Do you remember in poor Synge's "Riders to the Sea"—the old mother says that now her last son is drowned, she will

be able to sleep o' nights?

The harrowing anxiety of every day in this time of war is over for me, too. On July 22, as you know, Gerard, my first stepson, was killed. And on August 31, at night, too, my last—Harry Buttersthey were both as dear to me as my own—but Gerard had his own people here—he was not dependent on me, while in a way, Harry had only me—his sister was six thousand miles away. I haven't been able to say much of him these last months as he had been getting the carbon copies of my letters to you. Yet it was so often on the tip of my fingers to enlarge upon the boy—his charm, his capabilities,

More still upon the drama of his last experiences-from the moment when he burst into Aldwych his first day in uniform. so big, so startlingly handsome—above all, so gay-a shout of "stepmother!" that raised the dust in that crowded, smoky refuge where the hundreds of tired Belgians looked around in astonishment that anyone left in the world could be so fresh, so dazzling-through those months of his watch beside his guns or directing fire from his exposed shell-swept hillside - that awful moment when the enemy found the range and poured death down upon the shelter that was no shelter-when all the other officers within call took refuge there, fourteen in all, Harry, the youngest, but the one who dashed out under fire to earry what was left of one of his telephonists to the first-aid station-a poor mangled mass of humanity, still breathing and crying out, a deed that in a smaller war would have meant the Victoria Cross, but in this, only one of a thousand such daily -after it his sudden collapse from the shock-("No one knew it, stepmother! I managed to bluff it through!") But his colonel had been through the same experience and backed the doctor up in sending him to the base for a few days.

Then his June leave, luckily due anyway, brought him over to No. 7 where he could be petted and taken care of—but it was a quiet Harry—no less clear-eyed and vig-

Then Winston Churchill and Garvin trying to make him take three weeks' extra leave, the boy's refusal, his return to France, some weeks in the ammunition column, where, knowing him to be comparatively safe, I could carry an easier heart, then a hasty line: "Just going up to one of the batteries to replace a casualty. It's too bad it comes while I'm in bad shape, but it can't be helped, and it surely is what I'm here for, after all. Don't worry any more than you can help."

That was August 22, only short notes after that, the he could find time to write, "I'm going to try to get over to Gerard's grave. If I can find some flowers I'll decorate it for you."

His friend, Captain Zamora, to whom he'd given my address, could not have been with him at the last, for he had also had shell-shock and was with the ammunition column, but he wrote on the 1st of September that Harry had been with his guns the night before, when the call came, had gone in apparently the best of spirits—and the same shell killed him and his battery commander.

I was in town—went up Monday and, on Tuesday, the 5th, came this letter, sent to No. 7. I cabled Harry's sister, through Oscar, that he died splendidly—the boy himself had written when Gerard was killed, "What a magnificent end it is for his life, the greatest luck that can come to any man."

It has been so beautiful this week. I've never seen a harvest-moon more wonderful. One can only think what a world it is—and Harry and Gerard both out of it.

Larrance

(Newprene)

The distinctive designs of radiator and name plate that differentiate one automobile from another are more than more marks of identification.

Each is a symbol of a standard of quality in automobile building. Each suggests the kind of service to be expected from the car and therefore from every important part by which the performance of the whole car is measured.

And certainly among the most important parts of the modern car is the electrical system.

Westinghouse Electrical Equipment has played its part in helping catabhab the car character for which stand the symbols of Pierce-Arrow, Lecomobile, P. L. A. T., Steams, Hupp, Chalmers, National and many other makes of automobiles.

Not alone in the quality of the care of which it is a part is Westinghouse Equipment first, but also in the number of builders who part!

And this in spite of the fact that it costs more, because it represents the efforts of the highest type of electrical and mechanical registers, the most skillful workenmakip and the use of the linest materials.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. V., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdepaint. It cames in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, scultury and darable for outside or inside painting. It is the comest principle applied to paint. It otheres to any surface, west, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, the North Street, Adams, N. Y., and he will send you a tree trial purkage, also color card and full information showing you how you can are a good many dullars. Write today.

WILD LIFE AT THE ANTIPODES

SHORT time ago, Dr. Carl Lumboltz, A the famous Norwegian explorer, set out on an expedition through the wilds of central Borneo. He had lived several years among the aborigines of Queensland, and as it had long been his ambition to visit and explore New Guinea, he procured the necessary governmental permits and started for this famous island, the goal of all those who seek fresh secrets of natural life. But just at that time the war broke out, and his plans were perforce changed. He explains to us in the Chicago Daily News:

The Governor-General, under the eircumstances, regretted his inability to give me either ship or military escort and advised me to wait for a more favorable opportunity. While waiting, I decided to make an expedition to central Borneo, large tracts of which were unknown. In the enterprise I received valuable assistance from his excellency the Governor-General and the higher officials of the Dutch Government, to all of whom I wish to express heartfelt thanks.

Briefly, my plans were to start from Banjermassin in the south, ascend the Barito River, branching thence into its northern tributary, the Busang, and grossing the watershed to the Mahakkam or Koti River, and following this to its mouth, should reach the wea on the east coast near Samarinda. The journey, I found, would take me through a country where the tribes had never been scientifically studied.

On August 15 of last year, I left Batavia for Dutch Borneo, returning September 21, while waiting for fresh photographic supplies from London. The first two months of the expedition were spent among the Murang Dyaks on the Laong, a distant tributary of the Barito. December 9, 1915, I was able to begin my journey through central Borneo. The Government sent with me a licutenant, a sergeant, and five native soldiers, as an escort, and also a photographer and surveyor. We embarked at Banjermassin on the river steamer Otto, which, on account of the shallows, is propelled by large stern wheels.

We enjoyed beautiful weather and therewas not a ripple on the water of the broad river which winds in large curves. Its placid surface reflects the sky and the jungle on the banks with wonderful accuracy. After about five days of traveling and anchoring at night, the water became reddish and speckled with foam. In this neighborhood eleven years ago the Government put an end to a violent Malay revolution, the revolt as usual being headed by a pretender for the sultanate. The steamer in which I traveled as a reminder of those days had gun mountings on the deck and my cabin was armored.

Leaving the steamer for six native boats. ter some difficulty we secured Malay boatmen, the far better Dyaks having been pushed inland by the domineering Malays. The higher up the river we went the more difficult it was to retain the men. who demanded exorbitant wages. Finally, all returned except four. This happened at a critical stage, just when we were about to enter a great accumulation of rapids which makes travel on the Busang a matter of peculiar difficulty. We had already ascended very considerable rapids

on the upper Barito, one being more than half a mile long.

But more difficult rapids were yet to come. It is a somewhat hilly country, and when it rains the current flows with such violence that traveling is impossible. I have seen the Busang rise more than six feet in a couple of hours and seven or eight inches every two minutes.

Dr. Lumboltz tells us that usually February and March are the wettest, and that travel is badly hampered by the delay of two months of high water. However, a certain portion of the distance overland could be covered, especially among the hills, and to press ahead, they sent a lieutenant to a village on the upper river to try to hire men for transport. He writes of this attempt:

We got twenty-six carriers and were enabled to resume the journey. Meanwhile the photographer and the surveyor recovered from attacks of dysentery. The photographer suffered from other complications and was obliged to return to the coast, so that I had to undertake his work myself. As the taxidermist also was attacked by dysentery he had to go home, and I taught a soldier how to prepare

the skins of our specimens.

The weather was favorable, and in ten days we had ascended the principal rapids. Frequently the stores had to be unloaded and carried overland. The boats also had to be dragged over the big stones forming the banks. When we came to the Penyabong country we encountered natives from the Muller Mountains. They are quiet and of hardy, nomadic habits, Lately they have been induced to form villages and cultivate rice. It is the custom for a young man to pay for a bride with a sword or a gong. However, there is no marriage ceremony and divorce is very rare. If the bushand dies the widow fasts on alternate days for one year. She is expected to weep morning and evening. At the end of the period she is allowed to remarry.

I met six natives who had been hunting rhinoceroses in the west. The horn of the animal, when powdered, is in great demand by the Chinese as medicine and fetches a high price. Such hunting may last two months. The hunters carry no provisions, but live on sago and such animals as they can kill. When there is a scarcity of food, and they are frequently three or four days mainly on the water, they stay their hunger with tobacco. I was told that a man would tackle a rhinoceros and spear it, single-handed, tho the beast is very difficult to kill.

We proceeded in our boats, which for the most part were poled only in the shallow stream. One day we were surprized by the arrival of a Saputan chief and two companions in a boat. They brought a dog and a blow-pipe for darts and they had recently killed a pig. Rumors as to our party had reached Saputan in the country north of the watershed. The chief and thirty men had been awaiting our arrival for nine days at the watershed, but the provisions gave out and all returned except the three, whom we welcomed.

The current was very swift and a distance taking only a few hours to descend may occupy several days in ascending. Occasionally quiet pools are passed. Graceful trees, many colored with orchids of

40% off your Coal Bills

Those Coal Wagons

Both these wagons carry coal for heating residences and big buildings.

But one wagon carries a kind of coal which costs 40 per cent less than the other.

That coal is for the only boiler which can burn this very low-priced coal successfully, without incessant shoveling—that is the Spencer Super-Standard Heater.

Slice Off Your Coal Cost

A Spencer can cut your coal cost by that big slice, for it burns no more of the lower-priced coal than the ordinary heater burns of the usual costly coal.

The low-priced hard coal, usable in a Spencer, may be No. I Buckwheat or Pea, in the East. Semi-anthracite or Lignite is used in the West. Buckwheat and Pea Coke, anywhere. These coals cost from One-Third to One-Half less than the large domestic sizes needed for the ordinary heater.

How Can the Spencer Do This?

Because it was built for this special purpose—to burn a very small low-priced coal with perfect efficiency, and with the least labor

Thus, the Spencer has a Magazine-feed instead of a surface-feed. Therefore you can fill it up once a day (or twice in extreme weather) and it feeds its coal down automatically.

Under the mouth of that Magazine the Spencer has Sloping Grates which prevent the coal from piling in a pyramid, but automatically distribute it at just the depth the fire wants it for perfect, even burning. (See diagram).

It Saves Work Also

The Spencer reduces labor to a minimum. Because of the automatic action of the Magazine and Sloping Grates, the Spencer needs attention but once a day in mild weather and twice a day in coldest weather. In a residence, only a few minutes a day. In a big building, the janitor or porter is enough,

and he can do a full day's work on his other duties.

No Ups and Downs of Temperature

Perfectly Even Heat is another result of the Spencer's automatic action. You have an unvarying temperature in your rooms at just the degree you want, day and night. No spurts of over-heat or shivering chill.

Entire Cost Paid by the Savings

The Coal Saving pays the Spencer's Entire Cost in four or five years, and then becomes a yearly dividend on the investment. It can pay its extra cost over other boilers in one season.

Adds to Property Value

The Spencer adds to Property Value because of the above reasons, and also because it is so built that it rarely needs a repair. A Spencer building sells better and rents better.

Send to us for the interesting Spencer Super-Standard Booklet describing the construction and giving the pictures. Take it to your Architect and Heating Contractor for consultation.

brilliant hues, bend over the water. Creepers hang everywhere. The beautiful scenery draws you on and on, and you travel in placid silence. The surface of the water is seldom disturbed by splashing fish and there is a searcity of animal life. Silence and peace are supreme. You are not even troubled with mosquitoes, and consequently there is no malaria. Passing the superb, silent landscape is like a pleasant dream.

The watershed was easily crossed at a height of about 1,400 feet. Not far from the Muller Mountains we came upon the upper Kasso River, the banks of which are inhabited by the Saputans, a crude, friendly people, who a century ago were mere cave-dwellers in the mountains to the east.

It was during his stay with these aborigines that the explorer managed to get a cinematograph picture of the ceremony of piercing the ears of a chief-for all the powers of the tribe are entitled to wear fearful and elaborate ear-ornaments. The rank held by this particular chief entitled him to wear a tiger's tooth through a hole in the upper part of his ear. They had seated him in a comfortable place, placed a board behind his head, while his friends and retainers were zealously engaged in forcing an empty rifle-cartridge through his ear-rim. The man was near to fainting. The narrative continues:

A medicine-man was burriedly summoned and elapped his hand over the ears. Then he produced a small stone, which he threw into the river, I was told that the stone was supposed to be the cause of the chief's illness. The seene was brought to a dramatic conclusion and the exhausted ebief was ignominiously carried away on the back of a young man. During the afternoon more pubbles were produced by the same sleight of hand and a pig was killed in order to appease the bad spirits which caused the chief's illness,

On a fresh, beautiful morning we made a start down the Kasso, which was swollen and discolored. On a yellowish - green current we drifted swiftly, and now and again the most enchanting fragrance was wafted to us from the white flowers of a large tree which grew profusely on the banks. The natives we had with us were very accomplished boatmen and took us safely through the rapids amid rushing and foaming waters, where a false move would have been awkward to say the least. But the rapid movement and the turbulent, roaring stream gave a delightful feeling of physical exhilaration despite the burning sun.

The most exciting passage was reserved for the afternoon. We were being rapidly carried with the current when suddenly we came upon a small waterfall and, turning sharply to the left, we encountered another. More than a third of the boat was in the air as it jumped the fall.

After a few moments of comparative quiet, we again dashed into boiling waves. and, making a turn to the right at furious speed, we glided after a time into smoother waters. These common, but nevertheless. exciting, experiences reminded one of tobogganing in Norway, and it was great fun, the the enjoyment was always mingled with anxiety for the cameras and instruments.

While the native boatmen seem quite reckless, they are very skilful and generally manage to steer clear of the almost invisible rocks with which the river is studded. A man stationed in the bow shouts warnings of the hidden danger and all the boatmen start, with every nerve at full tension. A foot or two one way or another may make all the difference between safety and disaster. One of our boats was upset in this way, but luckily the damage was not irreparable.

In the region of the upper Mahakkan, where we now arrived, the first European to enter was the Dutch ethnologist, Nieuwenhuis, who came from the west. In addition to scientific research his mission was political. He sought by peaceful means to win the natives to Dutch allegiance. In this he succeeded, but not

without difficulty and danger.

The he was considered generous, one of the chiefs twice tried to kill him. The Dyaks of the upper Mahakkan are friendly to strangers, and as the great rapids down the river form a natural barrier they seldom receive visitors and are little changed by outside influences. For instance, the Mohammedan Malays have never been able to extend their influence above the rapids, luckily for the Dyaks and incidentally

These natives possess fine muscular development. The women are well-formed and move with grace and freedom. Head-hunting, a part of the native religion, has been practically supprest by Dutch influence, and as far as can be ascertained the last case of the kind in this region occurred at least five years ago. Apart from this repulsive custom the Dyaks have many good qualities. They are quiet, trustworthy, and industrious. Theft is unknown. Their carving is good, and even the wooden piles of their huts

are artistically arranged.

They recognize classes and nobles whom the rest obey. The their clothing is very scanty, they bear themselves with great dignity. Women as well as men practise their primitive medicine, and the women doctors are as much in demand as the male doctors. Part of the treatment consists of a dirge sung by the practitioner, and when there is an epidemic the night is made very melancholy by the professional chorus.

The tattoo-marks on these natives generally represent some part of the durian-tree, about the famous fruit of which so much has been written. I may add that a taste of the durian fruit is worth a journey to the Orient. One of the favorite games of the natives is top-spinning, which they also use as a means of tossing up when in doubt as to the best site of new rice-fields.

I should have liked to stay in this region for years instead of months. In spite of their objection to photography and anthropological measurements, I was able to obtain many photographs and cinematograph films. I also took measurements of 174 individuals. My ethnological collection is fairly comprehensive and includes children's games, folk-lore, and numerous short vocabularies. One of the tribes has an elaborate legend of a flying-boat which foreshadowed the Zeppelin and the aeroplane, neither of which, of course, had been heard of in these parts.

Nearly 1,000 birds and mammals were collected, besides fish and reptiles. I bring back also an excellent map, cor-

STUCCO

The Ideal Finish for Artistic Homes

If applied on a background that will hold it securely—that will not allow it to break away from its fastenings and crack.

Bishopsic Board is the one background that has fully met these requirements. It's a scientific combination of building principles as old as the pyramids.

Bishopine Board is made of dove-tailed lath that clinches the afaces; the lath are esessived to preserve them, imbedded in asphalt-martic, which is a perfect protection against vermin and dampness, and backed by heavy libre-board through which neither sound, heat nor cold can proetrate.

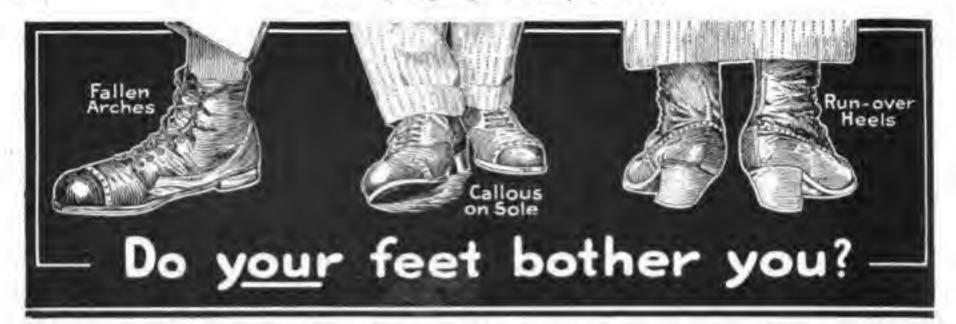

Let us used you free samples and our book "Hash on the Wisdom of Ages." It illustrates homes, apartments and buildings of all kinds using Bushopsic Board. It contains seventific tests with letters from architects, builders and users, and it gives facts and byores to prove that Bishopsic Board is both the best and the most economical background made for the stucco-finished house.

The Mastic Wall Board & Roofing Co.

Relieves Callouses and Corns on the Sole

It is possible for the person unable to bear his weight on his feet, to walk in perfect comfort immediately after being fitted with the Wizard Callous Remover. There is no other device in the world like it.

Wizard Callous Remover, \$1.00 per pair,

Wizard Callinus Remover and Arch Builder combined, \$5.00 per pair.

They are absolutely guaranteed to give results, or money back.

Nearly all foot troubles, such as callouses, fallen arches, run-over heels, Morton's Toe, etc., are due to one or more bones of the foot being out of normal position. Restore the bones to normal and the trouble will disappear. The

Willand Adjustable Foot Appliances

accomplish wonderful results by this simple process. They aid nature by supporting the misplaced bone in its proper position.

They contain no metal, but are featherlight and flexible and do not have to be broken in. They permit of any adjustment necessary to give immediate relief.

Wizards are sold in shoe stores generally. Do not confuse them with the ordinary devices sold for foot troubles, as there are no other devices which correct foot troubles on the Wizard principle.

If you can't locate a Wizard dealer, write us and we will see that you are supplied with the correct device to give you relief.

Write for our book, "Orthopraxy of the Foot," a complete treatise on foot troubles. Free to foot sufferers.

DEALERS' NOTICE If you would like to equip your store to give intelligent relief to customers with foot troubles, write us about our free course of instruction.

By means of inserts in overlapping pockets a support can be made the exact shape and height of the arch. That is why Wizards are so comfortable.

Adjustments can be made at home, and the fallen arch gradually and without pain can be built up to normal. Wizards contain no metal, and are featherlight, flexible and feel fine. Price \$2.50 per pair.

Run-over heels,-

either to the inside or outside, are due to the misalignment of the heel and ankle bones, not to slovenliness. Can be overcome by placing under the heel a

Wizard

Adjustable Heel Leveler

This evens the heel and the ankle bones remain in their proper position. The inserts and the pockets permit the exact building up necessary. Also, the adjustments required by different shoes. Price \$2.00 per pair.

WIZARD FOOT APPLIANCE CO.,

1608 Locust St. St. Louis, Mo. recting the errors of previous cartographers, especially as to the watershed region of central Borneo. For six months we were without mail. On our return we passed safely the great rapids of the Mahakkan in three days. Many Dyaks have lost their lives there and only recently a foreign trader was drowned. We arrived at Samarinda, August 22, having in nine months covered by river more than 1,000 miles in native boats and nearly half that distance by steamer.

A STUDY IN SERVANTS

THIS happened in Saloniki, not in a private home in the West End, and the principals were a British officer and his servant, supplied to him by the Government. The servant was called Howlett, and had been, before enlisting, a stable-lad attached to a famous English racing stable. At least this is what the officer said in his account of his experiences with this particular version of the servant problem, according to the Westminster Gazette, which printed it.

He tells us with no small show of gusto:

Howlett would come to me after dinner and put the regulation question: "Any orders about the horses, sir?" "Six-thirty, with feeds." "Very well, sir, good-night, sir." "Good-night, Howlett." Five minutes before the appointed hour in the morning, Black would be in silent evidence with the two mounts, perfectly groomed and everything else as it should be. In his work he was faultless and silent.

Howlett was a slack, undisciplined character of about nineteen, with the makings of a man in him, the lacking Black's great merit, knowledge of his work and soothing silence. The H.Q. servants used to take it in turn to be mess orderly, and, as one of them was a professional butler, I advised Howlett to learn what he could of his duties from this paragou. I'm afraid his idea of learning was to superimpose his own superior polish on a hasty misconception of his model's methods.

One evening we had a gingery little General to dinner, who would eat very heartily of any of his favorito dishes. Naturally, we saw that one of his pet foods figured in the menu, and, sure enough, he whacked into it in proper fighting style. Now, Howlett's model, on seeing the General's empty plate after the first assault, would have been quietly at hand, and, more by suggestion than direct appeal, the General would have been plying his knife and fork again, and no one the wiser. Not so, friend Howlett, who was mooning inanely on the company at large instead of being ready to anticipate the wants of the guest of the evening. The General had already unwittingly or hintingly picked up his knife and fork on an empty plate before I could wake Howlett up with a sharpish, "Howlett! the General will take some more 'Bouille à la Heinz.'" structions: Open one or more tins of bully beef, and one or more tins of Heinz's beans, according to number of guests. Serve on one dish, if large enough, or on separate dishes if you've got them. Should be served up quick before the flies get at it.) An unnecessary nihil obstat in the shape of a "Yes, sir, sut'nly, sir," from the awakened and flustered ex-slaughter-house

apprentice advertised to the assembly that the General was making a glutton of himself. But Howlett was now on the No sooner had the little man qui vine. prodded the last dainty mouthful of his second dose than the dish clattered round his shoulder, and Howlett had us all on the raw with, "Hev you hed qualit enoof, sir?" The startled brass-hat turned round with an abrupt "What!" There was poor Howlett, staring straight into his face with the frightened gaze of a cow. I could see his poor brain trying to work. Instinctively he knew he had put his foot into it somehow or other. The phrasoology of his simple question was no doubt unsuited to a high-class table like ours. Which was the jarring word? Ab, yes! It must be the homely "enoof," That was it, sure. With a gleam of reassurance, he nodded to the delectable remnants on the dish and essayed his second string: "Hev you hed quaht sooficient, sir?" I was really dreading that he was about to extricate himself by offering generously to open another tin. The sweat on his brow drew attention to his upstanding crop. The General's scrutiny of the wretch satisfied him that there was no guile, but merely an unsophisticated gaucherie. With a genial, "No more, thank you," he relieved the situation, and in his masterly manner he was soon recounting to us some thrilling episode of his earlier days on the Indian frontier.

After the departure of this personage, it was unanimously decided that as a waiter Howlett was a splendid stable-boy, and, accordingly, he was removed from those duties to the lesser ones of washing up plates. This was quite congenial to his individual temperament until a month or so had rolled by, and then the officer lost him. It happened, we learn, this way:

A bunch of soldiers' letters was brought to my "bivvy," by the orderly with a note from the Adjutant, somewhat to this effect: "The accompanying letters have been returned by the Brigade, and I am to point out that officers in consoring letters must affix their full signature on the bottom lefthand corner of the envelopes. Initials only are not sufficient." The Adjutant was passing by at the time, so I asked him what it was all about. "Well, you see, the letters have been opened by the Brigade and the writer has been found to be your man; so I suppose those initials on the envelopes are yours." Now I always sign in full on letters that I censor, and my signature is not an easy one to copy. There were a number of dirty. elumsy scrawls-limited to initials-here and there on the envelopes which I could now see were intended to be mine. They were in copying-ink, and an effort had been made to disguise the penmanship by smudging them over with wet and making the ink run. It was a painful eight, and hopeless in its crudeness, and I really hadn't the face to say they were mine. A term back with his troop, I thought, won't do him any harm; so his punishment took that form.

Black's successor is my present orderly, Mitchell, a rough, independent specimen, but full of merit. He confided to me early on how it was he came to join the Army. He was working in a colliery the first year of the war, and was earning 10s. a day easy. Possest of considerable force of character. TOTAL STATE OF THE GUNG OF THE

An Ideal First-Aid!

THAT is the verdict of those who have put APINOL in the medicine chest and used it for the thousand and one little accidents that happen in every home.

APINOL and just aid

is a pure, healing pine oil, strong enough to kill germs, but harmless even if taken internally.

APINOL is good for cuts, burns, bruises and boils. Used in many hospitals as a surgical dressing. You should have a bottle in your medicine chest.

Ask your doctor about

APINOL

THE WHITE CHEMICAL CO. WILMINGTON, N. C.

Of course a Blend tastes better

Each of the several tobaccos in this pipe blend plays its own part in giving Harmony its cool and characterful flavor. One is used for its exquisite aroma - one for its "fruity" richness - one for its delicate pungency—one because of its unusual sweetness—and one for its full, mellow "body."

The result is a new, more delicious flavor - a flavor that pipesmokers call "rich mildness." No one tobacco by itself could ever give you such flavor. It requires a blend.

If you think you have been enjoying a pipe-smoke made of only one tobacco, just try Harmony-a blend of five tobaccos.

Logatta Ngus Tobowo Co.

he soon became top dog in his shift, with only one man disputing his supremacy. The technicalities of the pit take me out of my depth, but I understand there was some trouble between the two on the question of buckets. "One of us'n's got to be able to say, 'Aye' or 'Nay'; and Ah'll faght you fur it." They fought, and were interrupted by the pit-manager. They were each fined £1. "What for?" says Mitchell. "For fighting," says the manager. "Very well," says Mitchell, "Ah knows wheer Ah can faght wi'out having ma mooney took awaay." And, then, slinging his recently acquired Egyptian "bat," he told me, "And so Ah 'Imshied."

"Imshi," of course, is the Gyppy equivalent of "Na'poo." Not that it means the same originally. What, indeed, does either of them mean? They have been seized on by the Tommy as the medium of exchange in the West and the East, and if you want payment in French currency you get a flexible "Na'poo," or an Egyptian "Imshi." In Saloniki the native is being offered a choice of either, but he will probably insist on his own variety.

WHY SHOE-PRICES ARE HIGH

OUBTLESS some will think it is due somehow to the war; everything seems to be due to the war. But this time the amateur economists are in the wrong. Shoes have gone up because of the astute business ability of a Los Angeles shoedealer. The story, and it is vouched for by the veracious Kansas City Star, reads like the old saying about "For want of a nail, . . . the kingdom was lost." The high cost of shoes, if we are to believe what The Star says, was sprung, like the great oak, from the scorn of a business man's desire for increased trade. Here is how it was done:

A local shoe-dealer—a man who deals exclusively in women's shoes and the higher-priced women's shoes-divulged the

"Women's shoes began to jump about two years ago," he said, " and a little before this jump was noted you may have observed that the women were beginning to wear high-top shoes—shoes with tops higher than they ever had been before-and in colors that presented a rainbow medley when you got enough of them on the street at the same time.

"Naturally, the dealers now cry that the shortage in leather has sent up shoeprices, and, while that is true in a sense, the war has had very little to do with the leather shortage. Responsibility really rests with an enterprising retail shoedealer out in Los Angeles. Follow me elosely:

"I think it was three summers ago that this particular Los Angeles shoedealer, owner of the largest and smartest shoe-store in the town, conceived the idea that something extraordinary would have to be done if he were to sell shoes to women who were touring in California from the East. There had always been high-topped shoes for women and always shoes in many colors, but they were the kind of shoes (or boots) that one usually saw on the stage. They looked good on the chorus girls and the prima donnas, see?

"Well, this Los Angeles man sent an agent East and he bought up all of these fancy boots that he could find. In the course of a short time there was received by the Los Angeles dealer a job lot of women's fancy shoes that looked like the dream of an opium-cater."

No specialist in futurist art, we are told, could evolve a greater variety of colors than these which tinted the wares he received. There were champagnes, ivories, Havana browns, mouse- and pearl-grays. chamois, smoke-grays, pinks, and redsand, it is whispered, no lack of the strange, exotic tones so romantically called elephant's-breatn, song-of-roses, pigeon-milk. negro-head, and a thousand other indescribable shades purloined from the "Arabian Nights." Then, adds the narrator:

"The dealer makes a great window display of these fancy boots and the women tourists in Los Angeles look upon them, then gasp for breath, then wonder what has happened in the East-or in Paris-and straightway start to buy.

"In the course of a few months the tourists from California, returning East, began to startle the women who had remained home and were wearing the common old blacks and tans. The stayat-homes started a rush on the home shoestores, the home shoe-stores started a rush on the manufacturers and, as a consequence, the leather-market was upset and the manufacturers were kept busy night and day making new patterns in a dozen different colors, and totally unaware all the time as to the identity of the man who had started all the excitement.

"Manufacturers, of course, don't let golden opportunities skid down the toboggan. They shot up prices and women's boots of the more than ordinary pattern now range in price from \$12.50 to \$25 a pair. The women would have them and the manufacturers decided that the women must pay for their fun. Not meaning, you understand, that these high-priced boots are not made of expensive material nor that they are not actually worth far more than the fancy boot of an earlier day. But that is the story. The Los Angeles man did it. If it hadn't been for that Los Angeles fellow, I dare say the women would still be wearing blacks and tans, leaving the richer and more colorful boots to the musical comedies, which, in my candid opinion, owe a large measure of their decline to the competition which is now offered by female pedestrians on our most frequented highways."

"What price shoe will the average woman buy who enters your shop?" the dealer was asked.

"I should say that \$15 per pair would a fair average. Many go as high as \$25, others drop down to \$10. Many buy shoes at \$12.50 per pair. I should say that \$15 would be the average price."

"How long have you been in the shoe business?" the dealer was asked.

"Fifteen years," he replied.

"Now, fifteen years ago," the visitor continued, "how many pairs of women's shoes did you sell at, say, \$12.50 a pair?"

The dealer smiled. "Let me tell you something," he said. "If a woman came into the store fifteen years ago and paid as much as \$6 for a pair of shoes, it caused

Life, Death and **Immortality**

By William Hanna Thomson, M.D., LL.D. Author of "Brain and Personality"

THE CARRIE NATION OF ALASKA

CHE doesn't smash saloons, nor deliver public lectures on temperance, but she is doing a great work toward eliminating the use of whisky in the huge Northwest Territory of America. Her name is Mrs. Dabney, first name unknown, for in the Alaska country men either call you by your first name and forget your other one, or, if they have a great deal of respect for you, you are called Mr. and Mrs., and the name your parents gave you is forgotten. And respect is exactly what Mrs. Dabney gets-from every miner and traveler, every trader and wandering wayfarer. They know better, she says, than try to deceive her when they appear at the camp with a bottle in the back pocket. In The Union Signal, Miss Ella A. Boole, of the W. C. T. U., tells us all about a visit to Mrs. Dabney. We read:

Mile Twenty Three And A Half is a station on the new Government railway between Seward and Anchorage, Alaska. It is a square building made of logs and, altho everything about the place is primitive, it is scrupulously clean. Sometimes seventy-five men who work on the railroad take their meals there. Mrs. Dabney is housekeeper and a good cook and, with the help of a friend, does all the work.

When the Government began the construction of the railroad it established its base at Anchorage at the head of Cook inlet. In two years' time this has grown to be a town of 8,000. The Government made it a prohibition town and also let it be definitely known that no drinking would be tolerated among employees and no liquor could be sold at the road-houses.

All types of men are at Mile Twenty Three And A Half, and last Fourth of July twenty-five of them secured a demijohn of whisky and several bottles. Mrs. Dabney walked in upon the company while they were drinking. She ordered the owner of the house, her employer, to go to his room, escorting him there. She told him to go to bed and locked the door. Going back to the company, she attempted to break the demijohn, but the bottle was too strong. She then poured out the whisky, smashed the receptacles, and threw the bottles of whisky into Kenai Lake. When one man called her a second Carrie Nation she simply said that she did not propose to clean up after men who got drunk, that the Government rules forbade the use of liquor and she would see to it that they were enforced, and that no man could come to her table who had been drinking. It is said she enforced her words with a threatening finger. The men submitted, and while they were at dinner the construction "boss" came in and, before all the men, apologized. He said she was right and that he would not ask her to serve meals to him or anybody else who had been drinking. No man took offense at her action, knowing it to be right.

We had heard the story from others, but it was interesting to hear Mrs. Dabney

tell it berself. She added, "I can find whisky any time they bring it in. The other day a man appeared with a suit-case. I suspected he had liquor and I went up to him and said, 'Give me that whisky.'" She said he meekly opened his suit-case, took out the bottle, and handed it to her. She threw it into the lake.

If you could see this little white-haired woman and learn how firmly she stands for the enforcement of the law, and then realize how seventy-five men submit to her martial law, you would appreciate it, and you would know how the men respect her. It had hurt her a little when the men called her Carrie Nation, but when I told her how Carrie Nation never attacked any saloon except illegal ones, and how the people of Kansas so respected ber memory that they were about to build a memorial to her, she was encouraged and permitted us to take her picture. We were there on the birthday of the mayor of Roosevelt, which is the other name for Mile Twenty Three And A Half. As we went away, she said, "Al says he is going to celebrate to-night," and then, with a twinkle in her eye, she turned to me and said, "but he won't, even if he is mayor."

Mrs. Dabney is providing those menwith a clean place in which to sleep and plenty of good, clean food, and she demands that they obey the Government rules, and that they do not do things which make her work harder and cause her extra trouble. There is no greater evidence of the respect in which the men of Alaska hold good women, than the way the men at Mile Twenty Three And A Half submit to the law's administration at the hands

of Mrs. Dabney.

Being Kind to Her .- A colonel's wife, who is doing real nursing at a certain London hospital, was recently offered a tip of sixpence by an honest old couple in gratitude for her care of their soldier-son. Tact personified, she slipt the sixpence back into the father's hand, saying, amilingly, that nurses weren't allowed to accept gratuities.

"Oh, that'll be all right, sister. I'll not say nothing about it. Just take it, and get yerself a drop o' giu in your off-time! "-Tit-Bits.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even the they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. Tur. LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspeet that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York City.

SPICE OF LIFE

Habit.-Sr. Peter-" Give this man a pass into heaven."

QUICK-LUNCH WAITER-" Make it two." -Record.

Surprized.—Bentin (whose motor has broken down and who is compelled to ride in a trolley)-" Bah Jove! I had no idea these affairs were so popular!" Judge.

Just as Good .- Guest-" We want to play poker. Can you direct us to the card-room?"

CLERK—" Sorry, sir, it's being used; will the anteroom do?"—Pelican.

Not This Time.—" Quick, hand me that satchel!" yelled the physician, "a man just telephoned me in a dying voice that he couldn't live without me."

"Wait," declared his wife, who had taken up the receiver, "that call is for Edith."-Punch Bowl.

Quite Right .- VISITOR -" How long are you in for, my poor man?"
Prisoner—"I don't know, sir."

VISITOR-" How can that be? You must have been sentenced for a definite period of time.

PRISONER-" No, sir. Mine was a life sentence."-Record.

Never Again. - A recruiting sergeant stationed in the south of Ireland met Pat and asked him to join the army. The latter refused, whereupon the sergeant asked his reason for refusing.

" Aren't the King and the Kaiser cous-

ins? " asked Pat.
" Yes," said the recruiting sergeant.
" Well," said Pat, " begorra, I once interfered in a family squabble, and I'm not going to do so again."-Chicago News.

No Time for a Loaf.—Some time ago, when a local corps was reviewed by Sir lan Hamilton, one officer was mounted on a horse that had previously distinguished itself in a bakery business. Somebody recognized the horse, and shouted, " Baker!" The horse promptly stopt dead, and nothing could urge it on.

The situation was getting painful when the officer was struck with a brilliant idea, and remarked, " Not to-day, thank you." The procession then moved on,-Weekly Telegraph.

Real Penalty.-" I have come here," said the angry man to the superintendent of the street-car line, " to get justice; justice, sir. Yesterday, as my wife was getting off one of your cars, the conductor stept on her dress and tore a yard of frilling off the skirt."

The superintendent remained cool.

"Well, sir," he said, "I don't know that we are to blame for that. What do you expect us to do? Get her a new dress?"

"No, sir. I do not intend to let you off so easily as that," the other man replied gruffly. He brandished in his right hand a small piece of silk.

"What I propose to have you do," he said, " is to match this silk."-New York

Times.

B E E M A N'S PEPSIN CHEWING GUM

Many Illnesses can be traced to Indigestion

It is the lack of a sufficient quantity of the gastric juices of the mouth that causes many cases of indigestion.

Improperly digested food, as everyone knows, interferes seriously with the functions of all the vital organs, and frequently leads to serious illnesses.

The chewing of Beeman's Pepsin Gum, into which I have put pure chicle and pepsin in nicely balanced proportions, releases the gastric juices of the mouth which make up largely for what was lacking when the food causing the indigestion was eaten.

Cassell's Latin Dictionary

Latin-English and English Latin 2008 Thomand. Thomaghly Revised and Corrected by J. R. V. Marchant, M.A., formerly scholar of Wadham College, Oxford; and Joseph F. Charles, B.A., late assistant master at the City of London School.

It is above all intended to be a dictionary of classical Latin, and thus, in this new edition, a large number of archaic, or post-Augustan, words have been omitted, while nearly all of the Important articles have been entirely rewritten, chiefly with a view of introducing a greater number of questations to illustrate construction and usage. The historical and geographical notions have been largely increased in number. In addition to the regular vacabulary features the book contains a table of the Roman Calendar, and a Geographical Glossary of the English names of important places with classical or later Latin equivalents.

Ortavo, Cloth, 928 pages. \$1.50 net; by mail, \$1.62, With double, patent thumb-notch index, 50c extra.

Cassell's New French Dictionary French English and English-French

Edited by James Boielle, B.A. Newly revised by de V. Payen-Payne, Assistant Examiner in French in the University of London. Containing, in addition to the regular French-English and English-French vocabulary, a special article on French Pronunciation; a list of French Nouns of Double Geometric a table of Irregular and Defective Verbs, and their Conjugations; a special Vocabulary of Proper Names; separate Vocabulary of Geographical Names, etc.

"The best French and English Dictionary of an ordinary size in existence." - Critical Review, Paris. Octavo, Cloth. 1.230 pages: \$1.50 net; by mail, \$1.66. With double, patent thumb-notch index, we extra. Bound in Full Flexible Leather, Indexed. \$5 protourd.

FUNK & WAGNALLS COMPANY 354-360 Fourth Ave., New York Apt.—"Why do they call the baby Bill?""

"He was born on the first of the month."

—Awk.

Page Sir Galahad.—SHE—" Can a man tell when a woman loves him?"

Hs-" He can, but he ought not to."-

"We do all our cooking by electricity here."

FUNK & WAGNALLS COMPANY 354-360 Fourth Avenue, New York

CURRENT EVENTS

EUROPEAN WAR

EASTERN FRONT

January 4.-On the Struma front the British forces raid Keupri, inflicting casualties and taking twenty-eight prisoners.

The battle of the Screth begins, as the Teutons struggle to cross the stream between Braila and Foesani. Dobrudja, save for a narrow spit of land toward Galatz, which is held by the Russian rear guard, is declared freed from Entente forces.

January 5.—German and Bulgarian troops take Braila, and are reported advancing on Galatz, fifteen miles distant. The Russians lose Gurgueti and Romanul, with 1,400 prisoners and six machine guns. The clearing of the Dobrudja is announced by Berlin.

January 6.—Fighting continues at the Screth as the Teutons reach its southern bank in two places, driving the Russo-Roumanian forces across the stream in numbers. Galatz is now reported under gun-fire.

The Russians on the Riga front begin an offensive, and flerce fighting, with some Russian success, is reported from this northern sector.

January 7.—The Russians take the offensive on a fifteen-mile front along the Sereth, driving the Teutons at one point back to the line of Raspitza Lake. On the Riga front, the Teutons are said to have been unable to retake any positions lost, but Berlin denies that renewed Russian attacks have accomplished any results.

January 8.—The Russians lose the battle of the Screth, and are driven toward the river, as Focsani falls into Teutonic hands, with 4,000 prisoners. The Muscovite forces are admitted by London to be falling back in great disorder. On the Riga front, additional Russian successes are reported, consisting of the storming of a number of German trenches, and the capture of an un-named village. The substance of the Russian Riga reports is admitted at Berlin.

January 9.—The Russian offensive on the Riga front gains in force as the Museovite troops attack near the Riga bridgehead. Attacks are renewed near the Gulf of Riga also, but Berlin states that the Russians have been driven back on both sides of the River As.

Further south, von Mackensen's forces, take Galreaska, on the Putna River, in Roumania, with nearly 5,500 prisoners. On the west frontier of Moldavia, says Petrograd, the German attacks in the Oituz and Suchitza Valleys are beaten off, but the Roumanians are forced back slightly in the Kasino Valley.

January 10.-Von Mackensen's troops continue to force the Russians beyond the Screth, having fought their way across the River Putna, pushing the enemy ahead. Along the Riga front, the Russians continue to make a slight headway, advancing more than a mile in the bend of the River Aa.

WESTERN FRONT

January 4.—A dispatch from the British front states that General Haig is now in command of the largest army Eugland ever levied on her soil, including nearly 2,000,000 trained and officered

Berlin reports that 53 per cent. of the

You never saw a germ die-

HEN how do you know that the germicide you use is doing its work?

How do you know that in a real crisis it can be relied upon?

Perhaps, to make sure, you are using bichloride of mercury or carbolic acid preparations. These will destroy germs, but unless used with the greatest care, are dangerous even to human life.

Why take a chance with poisons when there is

Dioxog

Dioxogen is as safe as watermore effective than bi-chlorideand ten times as effective a germicide as a carbolic solution.

No disease germ can live in the presence of Dioxogen. Yet it is so safe, so non-destructive of human tissue, that it can be used freely even in the mouth of a child.

A few of its every day uses:

For the mouth and teeth. As a gargle for sore throat. For cuts and wounds.

A Working Grammar

N Sectional Bookcases Are Lower in Price than Others

THE two things you want—quality and a low price—you get in Gunn Sectional Bookcases. The judges at the Panama-Pacific Exposition awarded us first prize for quality. We guarantee you a big saving in freight because we ship in a condensed knock down form one-fourth the size of others.

> THIS BOX CONTAINS THE GUNN BOOKCASE

SHOWN AT THE LEF

IT SAVES PRESENT

When you need a bookcase to really preserve your books, do not fail to look at the Gunn. Our free new catalogue in colors belps you make a bargain selection from our hand-somely finished, dust-proof Colonial, Mission, Clawfoot, etc., styles in malogany and oak.

You will also get a new booklet, "In an Emperor's Den," telling about our furniture in use by high

officials in the Orient. Dealers everywhere.

THE GUNN FURNITURE CO. 1810 Broadway, Grand Rapids, Mich.

Some Day You're Going To Smoke This Cigar

Some day you're going to say to yourself-"This very minute, I'm going to write for a box of those Shivers' Panatelas!"

You've often been about to say that, but this time it's going to be different.

You're actually going to reach for your letterhead and a pen, write your request for a box of Panatelas-and tell the girl to mail it.

You're actually going to receive a box, smoke the cigars and send as your check with an order for more.

Now what's the use of continuing to read these advertisements and just wishing for a Shivers' Panatela? Reach for that pen and letterhead now.

OUR OFFER IS: Upon request we will send fifty Shivers' Panetelas on approval, to a reader of The Literary Digest, express propaid. He may smoke ten cigars and return the remaining forty at our expense and no charge for the ten amoked, if he is not sat-isfied with them; if he is pleased, he agrees to remit the price, \$2.50, within ten days.

This Paratela is made of selected long Havana filler with a Sumarra wrapper. It sells at \$5.00 a hundred but we claim that it is the three-for-a-quarter quality of the retail store. As you stocks one we ask you to consider athether we have made used or sider whether we have made good on

We gladly take all the risk of pleas-ing you because we have the utmost confidence that in our cigars you will find a better smoke at a lower price.

We make other cigars than the Pan-atela, including a line of Clear Havana Cigars. All these cigars are shown in our catalog which is sent on re-quest. In ordering please use busi-ness stationery or give reference, and state whether you profer mild medistate whether you prefer mild, medi-um or strong cigars.

captives taken from the French forces in the Somme fighting are boys of 18 and 20 years. Of the British prisoners, 30 per cent. are rated as "too young."

January 5.-A German raid pierces the British front near Loos, and returns after penetrating to the fourth-line trenches, blowing up galleries and taking 51 prisoners.

January 6.—British troops raid the German trenches near Arras, cutting a way to the third line and doing, says London, much damage.

January 7.—The troops of the Crown Prince attack again west of the Meuse, at Verdun, and serious fighting is also reported around Morte Homme Hill and Hill 304, but without material success to the Teutons.

January 9.—Paris announces small activity on the Western front, consisting mainly of a French air - raid on a German supply-depot in Alssee at Illfurt, and patrol engagements near Navarin, in Champagne.

January 10.—Revived activity is reported from the Ancre, as the British raid the German lines east of Beaumont-Hamel, and capture part of a trench, with 143 prisoners. Intense bombardments from both sides along the Anere are also announced.

GENERAL

January 4.—Geneva is the source of a report to the effect that Dr. Weis-kirchner, the Burgomaster of Vienna, threatens to resign unless Hungary comes to the relief of the food stress in the capital. It is said that food riots are daily occurrences, and that many women and children are robbed of food in the streets.

London admits that the British transport Icernia was sunk by a hostile submarine in the Mediterranean on January 1, with the loss of 150 lives. The vessel, formerly a Cunard liner, was valued at \$3,000,000 at \$3,000,000.

Berlin avers that the British lost between 500 and 600 men in a fruitless attack on part of a Turkish position near Kut, on December 31.

Trenches stormed, and the foe routed are the gists of reports from British forces operating in the Mgeta Valley, near Kissaki, in East Africa.

January 5.- In a sudden attack on the Carso, the Italian forces advance 200 meters to new positions, which they hold despite efforts to drive them out.

January 7.-Rome states that the Italian forces have made a slight additional gain near Hill 208 on the Carso, rectifying a point in the front.

January 8.—Canadian war-losses from the opening of hostilities to December 31, 1916, are set by a report from Ottawa at 68,290.

January 10.-Greece accepts the Entente terms, as framed in the recent ultimatum. Bulgarian and Austrian troops are rumored to be moving on Thessaly, to strengthen the king's opposition to the Entente.

Premier Briand delivers to the American Ambassador the Allies' answer to President Wilson's peace-proposal note. The text will be published, according to rumor, within a few days.

FOREIGN

January 4.-Villa is defeated at Jiminez by General Murguia, with a loss of 1,500 men, according to dispatches received at E! Paso.

January 5.—The Greek Government deeides to reject the Entente demand for

Here Go My Corns"

'M just one of the millions who have used that easy, remarkably simple, and painless remover of come and callones, 'Gets - It.' I don't have to 'potter' with my corns any more and make them sore. I just put 2 or 1 drops of 'Gets-It' on. It takes only a few seconds, and it dries immediately."

Common-Sense Corn-Removes

It's a pleasure to use "Gets-It"-there's It's a pleasure to use "Gets-It"—there's to work discomfort or pain in its use, but worke how that come or callus loosens right off from your toe, so you can past part it off with your fingers!

Let It's 'gets' the com only, not the mornanding fiesh. It will make it unteressary id con, or dig at a corn to remove any part of it. Try "Gets-It" tonight earprise yourself and has a corn.

or sent direct by the manufacturers. E. Laurence & Company, Chicago, Dipols.

HEALTHY BABY

is a happy halpy, such a one as this stordy young ser of 18 months, whose mother has brought her up to strict accordance with the advice of Dr. Louis Fischer in his modern work The Health Care of the Baby, which tells just how your child should be fed, dothed, exercised, as cared for generally. This invaluable book for mathers and nurses, i smo, cloth, with helpful illustrations, is yours for 25c, by mail for \$2c. Buy it to-day, risk & Wagsah Genson, 354 & Ave., N. Y.

TO GRAND OPERA LOVERS

You Don't Need A Libretto

If you have " STARS OF THE OPERA "a charming book by Mabel Wagnalls in which the masse and plots of more than a dozen GRAND OFERAS are so entertainingly told that even if you "don't know one note from another" you will become enthusiastic about the music and able to enjoy every aris with appreciation and understanding. Added to these opera descriptions are personal interviews with the prima donne. Read these and learn—what Melba thought the first time she heard an opera; what Calve practises for her high notes; and what made Nordica "weep barrels of tears."

New Edition with several portraits of singers, tame, cloth, 400 pages. \$1.00, net; post-paid, \$1.30.

FUNK & WAGNALLS CO.

New York

reparation for the recent fighting in Athens.

January 8.—The Entente notifies King Constantine of Greece that forty-eight hours will be allowed for acceptance of the demand for reparation for the recent attacks on Allied troops in Athens.

January 9.—Alexander Trepoff, liberal, the
Russian Premier, resigns after prolonged friction with elements in the
Duma. He is joined by Count Ignatieff, Minister of Public Instruction.
Prince Golitzine, conservative, a Senator, is appointed Premier, while Senator
Kultchitsky succeeds Count Ignatieff
in the Instruction portfolio.

The Spanish cabinet resigns, but after a conference with the Premier, King Alfonso refuses to accept the resignations.

DOMESTIC

January 4.—In the opening of bids for armor-piercing shells by the Navy Department, a British firm underbids all the American steel companies by 35 to 40 per cent.

Capt. William S. Sims is appointed head of the War College in Washington, to succeed Rear-Admiral Austin M. Knight, who takes command of the Asiatic Fleet.

January 5.—The Senate indorses the peaceaction of President Wilson by a vote of
48 to 17, passing the Hitchcock resolution, after it has been shorn of its original indorsement of proposing peace.
The resolution, as passed, indorses the
President for "sending" the peace-note.

The House Rules Committee begins the investigation of the "leak" which supposedly delivered advance news of the Wilson peace-note to Wall Street for stock-speculation purposes.

January 6.—Representative Adamson, author of the Eight-Hour Bill, presents a new bill to the House forbidding railroad employees from working more than eight hours a day, and providing against lockouts or strikes without ninety days' notice as well as for the taking over of railroads by the military when public convenience demands.

January 8.—The Supreme Court rules that the Webb-Kenyon Law, prohibiting shipments of liquors from wet to dry States, is valid, and also sustains the West Virginia amendment to her law prohibiting interstate transportation of liquors for personal use.

Secretary of the Navy Daniels appeals to Congress for \$12,000,000 to increase the capacity of ship-building yards, as private bids for the four new battle-ships have not been forthcoming, and the Government will, it is said, have to construct them.

January 9.—Secretary Daniels of the Navy announces that the Government will build large-caliber mobile guns and a fleet of Zeppelins to guard the coasts.

The Senate passes, by a vote of 55 to 32, the Sheppard Bill, making the District of Columbia "dry" after November 1, 1917. The measure is then referred to the House.

January 10.—Col. William F. Cody (Buffalo Bill), famous throughout the world as a pioneer frontier scout, Indian fighter, and showman, dies in Denver, aged seventy-one.

Luther D. Bradley, cartoonist of the Chicago Daily News, much of whose work has appeared in The LITERARY DIGEST, dies in Chicago, aged sixtythree.

Why don't you let your stenographer earn her salary?

No you don't not if you make her sit at your desk taking dictation and waiting to take it, while you telephone, see callers or hunt for information.

Write your letters once on the typewriter. Let your stenographer produce, whether finished typewriting or other important work.

Give some real thought to this correspondence question. Put your correspondence on a rational, economical basis. Save at least a third on every letter. Get convenience in dictating and comfort and ease into the typewriting end of letter writing.

Important Profits of Legitimate Timber Investments

IN SELECTED REGIONS UNDER TRON-CLAD" CONDITIONS

Many of the most substantial fortunes of today are rooted in timber investments of past years. The similar opportunities of today are less frequent, but when they do occur they are as remarkable as they are unusual.

It is usual for timber owners in distress to present their needs to the James D. Lacey Timber Co., who are thereby enabled by their resources and prestige not only to relieve with cash the needs of the seller but also to thus acquire for the profit of their clients various tracts and timber rights at figures very greatly below their value.

Our facilities for re-sale of the timber, at very attractive profits, are unequalled.

At the suggestion of many minor investors we have arrenged a most intransating ross or investment, entransating some fair, which we combate

Lacey Profit-Sharing Bonds

They extend to a public wider than our usual dispuse the exact advantages (and all of them) which heretofore have nerved to the initiated few. It is our belief that they will be genuinally approximated hymany curtious investors. The legitimate appendations are identical in character with those on a large scale of individual investment through James D. Lacry & Co.

You have read about the status, prespects and limitations of lumber at this data. Everything WOOD is a value rapidly and suffered in all y subscript. There never will be timber purchasing opportunities equalling the few which now, from time to time, become available. Some new in our control compare well with the more notable profit-yielders of the past. (We pay no attention to proportion ordinarily offered for public sale.)

INVESTMENTS - AND - FINANCE

WAR-ORDERS CANCELED

HE cancelation at the end of the year of at least \$100,000,000 on war-orders that had been placed in this country by European belligerent Powers seems generally to have been ascribed to the caution of our Federal Reserve Board against investments in British and French treasury bills. It is predicted that further cancelations will be made by Great Britain, chiefly from a desire to curtail her large indebtedness in this country. Meanwhile, Canada is to get the business that is canceled here. It is believed that the total orders now being placed in that country will reach \$100,000,000, and possibly \$400,000,000. It is further believed that, as a result of this transfer of business to Canada, banks in the United States will be called upon to finance the business of the Canadian com-The orders canceled in this panies. country were mainly for manufactured products, such as rifles, shrapnel, and shells. They were not for raw material on which factories in France and Great Britain, as well as Canada, are to a great degree dependent.

A writer in The Evening Post stated that if orders were placed with Canadian firms, the Canadian firms would have to get their raw steel and copper here just as much as American concerns would. England could never, at home or in her colonies, produce the steel and copper she needed. The United States must still remain the main source of supply. England's diversion of war-contracts to Canada was not new. While it was being widely blamed on the Federal Reserve Board's warning in regard to the treasury bills, England's plans in this regard were known long before the Federal Reserve Board's warning appeared. It could be said, in fact, that the Allies generally had been planning to decrease their purchases here almost from the time when the war began, and that Great Britain in particular had been planning almost since the war began to divert her buying to Canada.

The cry of grany British financiers, ever since the problem of financing their necessary purchases here began to loom large, had been: "We must decrease our imports and increase our exports; we must pay for our outside purchases as much as possible in goods, and not in gold and loans; we must speed up our own production. Great Britain had been constantly aiming at that. A few weeks before the Federal Reserve Board's statement was published it became known that Canada had made ready her capacity to receive war-orders on a large scale, and that such orders were being placed. The Pest's writer added that if these facts did not exist, "logic alone should convince us that Great Britain would not cut down her purchases here to any great extent merely on the failure of one method of financing, which was professedly of a very temporary nature." Already a new secured loan placed in this market was being rumored. Many people had imagined that the diversion of the Allied buying from here to their own countries and to Canada had been done "in a spirit of resentment and retaliation." They thought it "an affair of feeling,"

which it was not. It was "a matter of business, and had been from the beginning."

THE ROCKEFELLER FOUNDATION'S SECURITY HOLDINGS

From the annual report of the Rockefeller Foundation for 1915 have been extracted by a writer in The Wall Street Journal some interesting facts as to changes that had been made within that year in the Foundation's holdings of securities. Something more than \$5,000,000 worth of securities were sold or redeemed at a profit of well over \$1,000,000. This profit was not and took account of four small losses. The changes made were mainly in shifting from stocks to bonds. Following are the principal stocks sold, with the prices obtained, the amounts, and the profit or loss:

Sharre	Company	Price	Amount	Gain
AS NO	Nat. Lead com.	63.979	\$2,789,492	\$600,492
15,300	Erie Lit pld	85.3015	846,113	142,313
4 000	Int. Agre. pfd.	00.7H7	243,146	123,146
5,000	Int. Agric, room	26.1412	78,423	63,423
A.100		ID 4016	157,153	76,153
3.000	U. S. C. L. P. pfd	50.451	151,443	18,109
16,405	Int. Mey. M. com	1 5246	25,313	*24,495
AXIE	let. Mer. M. pld	5.979	34,500	*29,283
2.000	Minut, Pac.	11.1975	22,395	*29,605
388	Swan & Finch	127.511	49,474	*28,125

* loss.

Of these stocks considerable holdings remain with the Foundation, notably in National Lead common, Eric first preferred, and International Agricultural preferred and common. The investments of the Foundation during 1915 amounted to \$6,338,998. The principal purchasers were the following:

Acres Acres				
Per Amount	17	Incue	Price	Cost
\$1,500,000	P. R. I	E. gen. mtg. 4154	9N 25	\$1,473,790
		ref. & gen. in		646,375
500,000	Anglo-	French In	96.25	677,500
		ine let seen, to		455,000
		as conv. deb. fr		550,000
		d Qu. 5-yr. De		496,750

It appears that the total investments of the Foundation on December 31, 1915, had a cash value of \$104,933,739, and that the Standard Oil stocks included in them comprised \$49,429,858. The bond holdings of the Foundation then had a cash value of \$40,893,315, and the stock holdings, other than the Standard Oil issues, a value of \$14,610,566. Following is a table in which are shown the bond and stock holdings in all properties where they amount to more than \$1,000,000, but not including the Oil stocks:

Bonds	Zenie	Price	Cost
\$1,303,000	Chie, C. & C. Rys. coll. 38	85	\$1,109,250
2,000,000	Celerado Ind. 1st 5s	80	1,600,000

MOTOR-CAR TRAVEL GREATER THAN STEAM-RAILROAD TRAVEL

From statistics recently compiled it appears that motor-cars now perform a greater transportation service than do the pas-

The Superlative Degree in Motoring Luxury

THOSE whose social prestige suggests that their mode of motoring be in keeping with their position, will recognize in the Cadillac Landaulet a car whose grace of contour and richness of design and appointments, stamp it as a creation of dignity and distinction.

It is a car for 365 days in the year.

With the passenger compartment closed, it is an ideal equipage for inclement weather. With the rear section laid back, the unusually spacious opening provides the advantages of an open car. With the super-smoothness of Cadillac mechanism, the deep soft upholstery and scientific spring suspension, its riding qualities are truly a revelation; there is experienced a delightful sense of ease and relaxation impossible of description.

It would be difficult for you to suggest to yourself any qualities which could contribute more thoroughly to your comfort and your enjoyment.

The complete one of Cadifian care is as follows: Seven-Pursenger Towing Car. Four-Passenger Phoeton. Two-Passenger Roadster: Four-Passenger Clob Roadster: Four-Passenger Convertible Victoria; Seven-Passenger Convertible Touring Car. Four-Passenger Coope. Five-Passenger Broughen: Seven-Passenger Limitation Seven-Passenger Imperial: Seven-Passenger Landstoller.

Cadillac Motor Car Go. Detroit Mich.

Our First Mortgages on highly productive Louisiana, Mississippi and Texas Farms are sound investments not subject to fluctuations.

They not only yield a comparatively high income return but are worry-free in that the investor has no trouble in the collection of principal and interest as payments are due, WE MAIL OUR OWN CHECKS and collect from the borrower ourselves.

The safety of these securities is proven by the investment of MILLIONS OF DOLLARS in them by Life Insurance Companies and others.

In all cases the land securing these mortgages is WORTH AT LEAST TWICE the loan. Our own funds are first invested in them only after a roost searching investigation of both borrower and security by experienced officials.

> We attained the election of MR. R. B. BISHOP

(Fremery at Fact Water, Sea.) as View President and General Manager of our Moragage Lows Deportment, Intogragite pur management his record of 25 years' condult configure experience with

ad a precent of patentials or innered.

senger-cars on steam-railroads. These statistics are, however, by no means exact, and yet they are believed to be within reason. Such has been the growth of motor-transportation, that predictions are made that by another year the amount of transportation by motor may double the amount done by steam-railroads. It has long been contended that the automobile was depriving the railroads of a considerable part of their passenger revenue. More and more is this contention being verified. At the same time, it has to be borne in mind that a considerable part of the motor-transportation would not be done at all by railroads if the antomobile did not exist. Some interesting comment on such data as are available appeared recently in The Wall Street Journal as follows:

"Automobile-trade authorities agree that the opening of 1917 will see no less than 3,000,000 passenger-automobiles in use. The same authorities put the average annual mileage per ear at 6,000 miles as a minimum. Neither of these figures appears to be at all inflated. On that basis the motor-ear mileage for next year would be 18,000,000,000. If the average load for all cars, all trips, is three passengers, the passenger-mileage by motor for 1917 will be 54,000,000,000. The traffic of the railroads now amounts to about 35,000,000,-000 of passenger-miles annually. If the average motor-car load be put as low as two passengers, the accomplishment of next year's motors would still be 36,000,-000,000, a trifle more than that of the railroads. It is probable that two passengers is too low for the average motor-load.

"For two or three years railroad men have recognized a relative decline in passenger traffic and earnings, despite the fact that this business does not ordinarily fluctuate as widely as freight traffic between good and bad commercial periods. The automobile has frequently been cited as a factor, but until recently its importance in this regard has nowhere been fully recognized. The enormous increase in motor output since the middle of 1915 is now beginning to reveal its logical consequences for other modes of travel.

"In the year ended June 30, 1916, the railroads enjoyed record gross earnings, but the passenger revenues, altho they were well above those of 1915, were below the level of two previous years, whereas the freight earnings were far ahead of those of any previous year. How the passenger and freight revenues of the Class I or larger roads for 1916 compare with those of earlier years is shown below:

	Butto of Gain in 1818
Over	Passenger Freight
1915	8.50 St. 21.25
1914	1 9 16.0
1913	97 12.6
1912.	3 3 26.9
1911	42 28.0
1910.	5.7 27.6
1990	21.9 47.0
1906	21.3 45.7

"Large-scale production of automobiles began in 1911 and was first reflected in the June 30 total of automobiles in the country for 1912. It is significant that railroad-passenger earnings for 1916 were only 4.2 per cent. above 1911 and 5.3 per cent. above 1912, whereas the expansion of freight earnings was 28 per cent. over 1911 and 26.9 per cent, over 1912. In the eight years from 1908 to 1916 railroadbassenger revenues gained 21 per cent, as against a gain of over 48 per cent, in freight. In the eight years to 1909 the gain in passenger revenues was 60 per cent, and in freight 51 per cent. Here is another clear indication of the recent drag upon the passenger business of the steam-railroads.

"Probably the nearest approach to a reasonable comparison of freight and pas-

Preferred Stocks

Industrial Corporations

In times of great Industrial prosperity the best grade of such shares attract investment funds because of-

- 1. Safety of the principal involved.
- 2. Wide margin of excess profits over dividend requirements.
- 3. Practical certainty of continuous dividend payments.
- 4. Liberal yield on the investment.

First consideration should be given to the stocks of corporations whose future will be favorably influenced by Peace, rather than War. An analysis of attractive shares in this group sent by request-ing Circular "P-1".

songer earnings with the automobile equipment of the country may be had by setting the rate of gain in railroad revenues for each year over those of the preceding year down alongside the number of automobiles in use at the close of each fiscal year. This is done below:

	Yearly	Gain	
	Passenger Resenue	Freight Revenue	No. Autor in Use June 50
1915	8.5	21.20	2,900,000
1915	*9.2	*3.4	2.073,000
BULL CARLES STREET, SALES OF STREET	0.5	*3.8	1,750,000
1913	5.1	12.8	1,254,000
1912	*1.1	0.8	1,010,000
1011	4.3	*0.5	675,000
1910	12.1	15.1	673,000
1909	11.5	1.3	295,000
Association of the Control of the Co			

^{*} Decrease.

"It will be seen that the correspondence between multiplying automobiles and relatively falling passenger revenues is not close. Too many other factors affect rail-road travel. But it will also be seen that in 1912, the first year in which autos passed the million mark, passenger revenues recorded a slight decrease against a slight gain in freight, and that the next year passenger revenue gained only 6 per cent. against nearly 13 per cent, for freight. In 1914 passenger revenues made a trifling gain against a noteworthy loss of freight revenue, but the next year the ratio of loss in passenger revenue was nearly three times that in freight, despite the traffic to the two Pacific Coast expositions. And the gain in 1916, despite abounding pros-perity, was at the rate of hardly more than a third the ratio of freight gain and did not even make up the loss of the year

"Automobile competition affects chiefly the railroads serving the thickly settled eastern portions of the country, the big cities and recreation regions. Little actual commuting is done by auto, but the commuter's family uses the motor to and from town by preference, and the family's movements make two-cent business, as com-pared with about a seven-mill rate on commutation. A really tremendous volume of summer-tourist travel is now done by automobile, especially on the good roads of New England, New York, New Jersey, and Pennsylvania."

WHAT LIVING NOW COSTS, AND FORMERLY COST, IN GREAT BRITAIN

In the London Statist was recently printed a table, showing in an index-number the monthly figures of living costs in Great Britain since the war began, this number having risen from \$1.2 in June, 1914, to 150.8 in November, 1916. With these figures were given others for certain full years back as far as 1800 as follows:

ANNUAL FIGURES	MOSTRAT PROTRAS SERVE	WAR BUGAN
Index	Indez-	Index-
No.	No.	Na
1809	June, 1914 81.2 Oct	. 1915, .110.0
1818	July, " 82 4 Nos	"
90-99 06	Aug. " ., 87 0 Dec	. "
06-14	Sept., " 80 3 Jan	
1550 58	Orta " 80 S Feb	
1806	Nov. " 88 S Mar	
1906 77	Dec. 91 6 Apr	. 134.2
1907	Jan., 1915. 96 4 Mar	
1908	Feb. 100 9 Jun	
1909 74	Mar., 4 . 103 7 July	
1919.	April Ami	
1911 80	May, " . 107 2 Sept	
1912 85	June, 106.4 Oct.	
191385	July, 106 4 Nov	Lin S
1914 85	Aux., "107.0 Sept., "107.8	
1913 108	Sept., " 107.8	

The Statist's index-number was based on the wholesale prices of forty-five commodities. Since November 1, the last month for which the above table gives the index-number, wholesale prices in Great Britain have shown further increases. These were more marked during the month of November than in any month since August, 1914, the first month of the war.

More nutritious than tea, coffee, etc.
Substitutes cost YOU Same Price

when many trade currents were disturbed and a good deal of confusion in consequence existed. The Statist has comments to make on its table as follows:

"The index-number of the forty-five commodities we take for our purpose was 6.6 per cent. higher at the end of November than at the close of October, the November figure being 150.8, compared with 141.5 for October. Prices have not touched so high a level since 1818, for which year the number was 159. Indeed, it is apparent that unless drastic steps are taken to curtail consumption, prices may approach the extraordinarily high level touched during the Napoleonie wars. only index-numbers taken out for that period are those of Professor Jevons, who compiled his data on a somewhat different basis from that adopted subsequently by Mr. Sanerbeck. However, in a Government return—"Wholesale and Retail Commodities"-compiled by the Board of Trade in 1903, there is published an extremely valuable chart, showing the movement of prices throughout the nineteenth century. As explained in the chart, the course of prices during the early part of the century is based on Professor Jevons's index-number, and between 1846 and 1871 on that of Mr. Sauerbeck, but in order to make the record continuous necessary adjustments were made in Professor Jevous's figures. The chart shows that the index-number of prices of commodities rose in 1809 to about 189, from which it fell in 1816, the lyear after peace was declared, to 110.

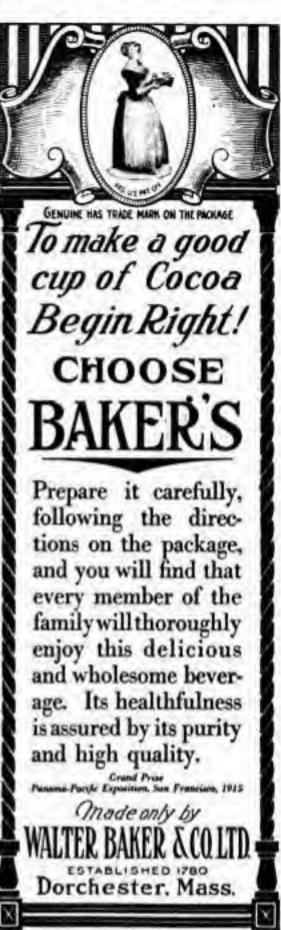

"Altho the index-number for November this year exceeded 150, and for December may show no reduction, the average number for the current year will not, of course, be anything like this figure, inasmuch as prices, as shown in the above table, have been on an ascending scale throughout the year, with the exception of a temporary dip in June and July. On this occasion we present the table in a somewhat different form, in order to show price movements as gaged by our index-number for each month since war began. Until the close of this month it will not be possible to ascertain the number for 1916, for annual numbers are compiled on a somewhat different basis from the monthly figures, but so far as can be seen at present it will be somewhere between 130 and 140, or the

highest since ISIS.

"Practically without exception, every one of the forty-five commodities rose in price last month, the only instances of lower prices being flour and pork, which were both a shade cheaper, and potatoes, which were substantially lower. The rise in prices was more marked in textiles than in any other class, the index-number for textiles being 10.2 per cent. higher. Here there was all-round appreciation in prices, the feature being the further sharp advance in cotton. The end-of-the-month quotation for American middling was 12.11d. per pound, after having touched 12.51d. a few days before. Just two years ago the price was only 4.28d. The number for sundry materials was 9.4 per [cent. higher, the most noteworthy increases in prices in this section being in soda."

Still later figures sent over by cable gave the index-number of The Economist, of London, for the end of December, which showed "a sensational advance over November." For all commodities except tea, sugar, and minerals, new high records were recorded, the end-of-December number being 4,908, which was an advance of 129 points over the number for the end of November. Details and comments on the subject as given in a cable dispatch to The Journal of Commerce are as follows:

"With the 173-point advance marked at the end of October, the December 31 figure

English Grammar Simplified

By JAMES C. FERNALD, L.H.D., Author of "Syounyms, Antonyms, and Prepositions," "A Working Grammar of the English Language," etc.

An absolutely simple yet thoroughly practical book on a new plan that gives you the correct use of English words in English sentences. Its statements can be grasped at once by a child or a person of limited education, and they make the dreaded complexities of the language as clear as crystal. It settles disputed points and gives you the meat of

English Grammar in a Nutshell

and for the office, the home, or the classroom will prove the readiest help in time of doubt or perplexity that you have ever owned. It has not been made brief by leaving out essentials, but by eliminating conducing discussions and extended explanations, and is a complete susmary of the subject. Order it to-day and be grateful every day of your life.

"As a handy volume ... for quick reference and authoritative decision, its direct clearness, its remarkable simplicity of language, and its plain, common sense will win admiration and command respect."—N. Y. Essaing Sun.

Sec. Cloth, 382 pages, 75 cents; by mail, 83 cents Funk & Wagnalls Company, 354-66 Fourth Ave., N. Y.

is 312 points higher than the end-of-October record. The average of the commodities on which the index-number is based is 2,200, and the advance now recorded is thus more than 123 per cent, above the average. One month ago the figure was 117 per cent. above the average, making a net rise of 5 per cent. on the month. The advances in December (except for minerals) were all more or less marked. The column for cereals and meat at 1,294 is 116½ higher on the month, other foodstuffs (tea, sugar, etc.) at 553 are 5 points lower, textiles at 1,124½ are 33½ points higher, minerals at 850½ are 26 points lower, and heavy goods. such as timber and leather, at 1,112 are 10 points higher. The following is a table the recent monthly capitulations of The Economist, the figures in each case being those of the close of the month:

COUNTRIES IN WHICH EXCHANGE ON NEW YORK IS ABOVE NORMAL

Public attention has been directed more than once to the remarkable decline in German, Austrian, Russian, French, and British exchange on New York during the progress of the war. In December the reported rates rose noticeably in consequence of the peaceproposals, but, just before the proposals were made, exchange on all the belligerent capitals was extremely low-on one or two countries the lowest points reached since the war began. In contrast with those figures appear quotations for exchange on neutral countries of Europe-Norway, Sweden, Denmark, Holland, Spain, Greece, and Switzerland. Following are the rates for these countries as printed recently in The Financial World:

		Parity	Dec. 21	Press. Per Cent.
Sweden	100 kroper	\$26.80	\$29.20	
Norway.	100 kroner	26 80	27.85	
Denmark	100 kroner	28.80	27 00	1
Holland.	100 Sorine	40 20	40.87	114
Spain,	100 pesetas	19.30	20.90	
Greece.	100 drachmæ	19.30	19.45	1
Switzerland.	. I dollar	Fra. 5, 18	Fra. 5.02	3

The writer in The Financial World points out that the main reason for the high rates

and children form a Women large proportion of the passengers of the Pullman Company. The safety of the cars, due to their unusually sturdy construction; the sanitary condition in which they are maintained; the numerous conveniences which their equipment affords, and the courtesy of the Pullman employes are all factors contributing to the increased comfort and enjoyment of railroad travel.

In the Pullman car only a limited number of passengers are accommodated; there is no crowding. Operating over practically every railroad in the country, it is rarely necessary for the passengers to change cars from departure to destination. Both of these conditions contribute to the safety and comfort of unescorted women and children.

For fifty years the Pullman Company has directed its efforts to the determination of the needs of the traveling public, and the development of a service to meet these requirements. That twenty-nine per cent of Pullman conductors and twenty-five per cent of Pullman porters have been in the continuous service of the Company for over ten years indicates the high personnel of the employes by whom the service is rendered.

The Ambitious Woman in Business

Here is a back for every woman who works and every one expecting to work. If you are in busi-ness, whether you work in an office or factory, whether at a desk, behind a counter, or at a mathine, you need the advice and inhormation in this book. Eleanor Gilbert, the author, gives y from a wearen's core-point, the practical knowledge that long experience and deep study of business have given her—knowledge that will listly you to do better work and earn more money.

Some of the Things This Book Tells You

How to fit yourself better for your position; How to increase your earning capacity; How to secure a raise; How and why to hearn more about your work; What employers pay for different kinds of work; Should business women marry? What habits are profitable? What is the opportunity in the office field. How stemography leads to success; How weener can succeed in Advertising; How to win as a Saleswoman; How to rise in a retail or department store; How to secure and fill executive positions; How to manage finances.

These and many other subjects are treated in a simple, practical way that makes them of immense value to every woman who wants to command a latter practice and a larger adary. Contains also much that is of great interest to every employer of women—information and plans for developing a more loyal and efficient staff.

Clock bound, 203 pp. Illustrated with pholographs and charts. Price \$1.50; by mail \$1.62.

FUNK & WAGNALLS COMPANY.

354-360 Fourth Avenue, New York

for these neutral states is the large amount of goods which they have been able to sell to the belligerents at top prices. He says in detail:

"The three Scandinavian countries sell chiefly to Germany, but also to Russia and England. Sweden profits in addition to this from the large transit traffic which is carried on between England and Russia, and this explains the very high premium Swedish kroners command. Holland's best customers are Germany and England, and her currency already saw a premium of about 8 per cent, in New York City when she was able to import American goods, which she sold again with good profit in Germany. But the increasing pressure of the English blockade has curtailed this very profitable trade for Holland and Scandinavia to a very large extent. Switzerland, surrounded by belligerents and without any acress to the open sea, did not enjoy the same advantages as the other neutral nations. She had great difficulties in getting England's permission for importing American raw materials for her own consumption, but nevertheless she was able to sell her home-made products at very good prices to the neighboring belligerents, chiefly Germany and France. Her currency has lately commanded a premium.

"Spain, the most powerful neutral in Europe, is at present coining money in supplying France with various products. Her currency, which in peaceful times used to be at a considerable discount, commands now a premium of 8 per cent.

"These six nations, Spain, Holland, Switzerland, and the three Scandinavian countries, will certainly keep out of the world-war. The Government banks of these six countries have increased their

gold holdings during the last year by about

50 per cent. They are flooded with gold, and the Scandinavian countries practically demonetized gold; they relieved the Government banks of the duty of taking gold and issuing bank-notes against it, thus making further gold-imports impossible.

"Greece, torn by civil war and threatened by revolution, with part of her territory occupied by troops of the Entente, is still nominally neutral. Her merchant marine has profited by the high freightrates, and she has also been able to sell some supplies to the belligerents. Her currency commands a premium of 1 per cent, during a time when the French currency, with the same par value, is at a discount of about 13 per cent.

"As far as non-European neutrals are concerned, the Argentine is selling her surplus products with good profit to the Entente Powers, and her currency is at a

premium of about 3 per cent.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"J. T. H.," Philadelphia, Pa.—"Is the word but incorrect or superfluous in the following:—
In my answer I stated that the color was blue. I now believe that it was yellow. I have no doubt but that the records you have will show whether the color was really blue or yellow? Does the use of this word 'but' imply the phrase 'the doubt' immediately after it, in which event the phrase would seem to imply that the writer doubts that the paper will show what he really believes it will show?"

But is in many cases redundant before that. The omission or insertion of but often reverses the meaning. "I have no fear that he will do it." and "I have no fear but that he will do it." have contrary senses, the former indicating the feeling of certainty that he will not do it, and the latter the feeling of certainty that he will do it. From this it will be seen that the construction of the sentence in question is correct without "but."

"A. DeV.," Seattle, Wash.—"I note in the works of current and recent writers the frequent terminating of a sentence with the personal possessive pronoun, and I would like to know if it is an improved mode in the use of language."

It is merely a question of taste with a writer whether a sentence he composes end with a possessive pronoun or not. The usage is ancient enough. "Nor anything that is his" (Exedus xx: 17, Prayer-book Version).

"O. B. P.," Sydney, N. S.—"Is the following sentence, appearing in the amounteement of a recent edition of a certain dictionary, correct." After the etymology comes the definitions. (2) What is the meaning and derivation of the word descular."

(1) The sentence you quote is ungrammatical. One of the best-known rules of grammar is that the verb must agree with its subject in number, and the sentence, according to this rule, should, therefore, read, "After the etymology come the definitions." (2) The word dracula is New Latin (from Latin draco, a dragon) and means "A little serpent, or dragon." The word is the title of a book by Abraham (Bram) Stoker.

"C. W.," Brockport, N. Y.—"Isn't it pretty?"
'Hasn't he nice eyes? 'Doesn't that sound sweet? 'You can come, can you not?' Questions in this form seem to assume an affirmative answer. What is the process of reasoning that makes a negative interrogative particle assume the affirmative? Not all sentences built on this plan do seem to imply, 'Yes'—e. g., 'Wasn't she ready?' 'Couldn't you find it?' Why isn't, the principle consistent?' Is it anything more than a convention of language that gives the first four sentences an affirmative implication? A similar construction may appear in German, Latin, or French, so it is not English idiom.

You will find on consideration that all negative interrogations imply an affirmative answer. "Wasn't she ready" is only another way of stating, "Surely she was ready," even the the speaker suspects that such was not the case. The negative form of the question introduces a challenge, and it is difficult to see how the idea could be expressed in any other way.

"H. E. K.." Manila, P. I.—"Kindly let me know whether the following sentences are correct.—George Eliot in 'The Mill on the Floss' Book II. Chapter II. paragraph 4. says: 'When Mr. Tulliver got louder and more angry in narration.' Why not angrier? Quoting from a sentence before me: 'The raptorial claw is much more slender than that of L. multifusciata.' Why not much slendere?"

Both forms, more angry and angrier, are good English, and the fact that the dictionaries record the inflections angrier and angries is to indicate that they are formed irregularly, changing the y to i. As to the second sentence which you submit, you can say slenderer if you choose, but the LEXICOGRAPHER prefers more slender. Both forms are good English.

"R. J.," Tahlequah, Okla.—"Please send me the correct form of the following sentence: "Macaulay's style of writing is graphic."

This sentence is correct. One of the definitions of the word graphic is "Describing with pictorial effect; clearly, vividly, and accurately expressed; portraying with vividness; as, a graphic account."

Virginia Hot Springs

Spend the Winter Months at Virginia Hot Springs, the one spot in all America where "a cure" can be taken just as comfortably as in the Spring, Summer or Fall.

The inestimable benefits of the healing waters (naturally heated 106°) have won international recognition for Virginia Hot Springs as use of the world's most famous resorts where the climate, scenic beauty and general surroundings are unsurpassed.

The completely equipped modern Bath House, connected with the Hotel by an enclosed sunlighted viaduct—the Spout Both, famous for Gost, Rheamatism, Nervous dissues, Sciares, etc.—the exceptional medical attention and the opportunity for absolute rest, maintally enhance the value of "the cure."

Riding and driving over delightful mountain trails, Golfing on one of the sportiest courses in America and a variety of other sports give an added seat to outdoor recreation.

The well known Homestead standard of equipment and service maintained throughout the year.

ESSENTIALS TO PERMANENT PEACE

THAT THE PEACE MOST TO BE DESIRED is a lasting peace, spokesmen of neutral and belligerent 'nations all emphatically agree. Neutral approval of the Allies' reply to President Wilson was largely based on the conviction that the terms it outlined were, in a general way, the essential conditions of a peace that was to be permanent. Similarly, neutral and pro-German dissent largely took the form of argument that no enduring peace could be built upon any such foundation. The British people, said Mr. Balfour, in his note of January 13, supplementing the Allied reply, "do not believe peace can be durable if it be not based on the success of the Allied cause." And apparently one of the objects of this new communication was to convince the American public that the changes in the map of Europe, suggested in the previous note, would prevent future wars. Thus, for instance, he deemed it necessary to reply to those who have "argued that the expulsion of the Turks from Europe forms no proper or logical part of this general scheme." The maintenance of European Turkey has long been considered by European statesmen "essential to the maintenance of European peace." But, says the new British Secretary of State for Foreign Affairs:

"Circumstances have completely changed. It is unnecessary to consider now whether the creation of a reformed Turkey, mediating between hostile races in the Near East, was a scheme which, had the Sultan been sincere and the Powers united, could ever have been realized. It certainly can not be realized now. The Turkey of 'Union and Progress' is at least as barbarons and is far more aggressive than the Turkey of Sultan Abdul-Hamid. In the hands of Germany it has ceased even in appearance to be a bulwark of peace, and is openly used as an instrument of conquest. Under German officers Turkish soldiers are now fighting in lands from which they had long been expelled, and a Turkish Government controlled, subsidized, and supported by Germany has been guilty of massacres in Armenia and Syria. more horrible than any recorded in the history even of those unhappy countries. Evidently the interests of peace and the claims of nationality alike require that Turkish rule over alien races shall, if possible, be brought to an end, and we may hope that the expulsion of Turkey from Europe will contribute as much to the cause of peace as the restoration of Alsace-Lorraine to France, or Italia irredenta to Italy, or any of the territorial changes indicated in the Allied note.'

But Mr. Balfour goes on to say that while such territorial arrangements may diminish the occasion of war, they "provide no sufficient security against its recurrence."

reviews the Allies' case against Germany, asserting that a German defeat is essential to the future security of small nations, and lays down three conditions for a durable peace:

 "The first is that existing causes of international unrest should be as far as possible removed or weakened; the second is that the aggressive aims and the unserupulous methods of the Central Powers should fall into disrepute among their own peoples; the third is that behind international law and behind all treaty arrangements for preventing or limiting hostilities some form of international sanction should be devised which would give pause to the hardiest aggressor,"

And none of these conditions, Mr. Balfour asserts, "can be satisfied, even imperfectly, unless peace be secured on the general lines indicated in the joint note."

The British Foreign Minister, comments the New York World, might well have appealed to Lincoln, who exprest in a letter his hope that peace would "so come as to be worth the keeping in all future time. It will then have been proved that among freemen there can be no successful appeal from the ballot to the bullet, and that they who take such an appeal are sure to lose their ease and pay the cost." This, says The World, "is essentially Mr. Balfour's argument in the case of Germany, and it is profoundly true."

"Germany appealed to war while spurning the processes of peace. It appealed to the bullet when it might have appealed to the conference, and all the blood that has been spilled in this war is upon the bands of the responsible officials of the Empire that compelled the crime.

"Until the German people realize that the country which recklessly rushes into war must pay the price of war, they have learned nothing that can promote the peace of the world. Whatever territorial adjustments are made, whatever indemnities are imposed, the war will have been fought in vain unless the German people themselves come to perceive the ghastly. folly of the Prussian gospel of domination.

But it seems to the St. Louis Past Dispatch that the German Government is doing its best to avert any such stirring of the German people by continually reminding them that they are victorious. In an editorial which has won the commendation of some of our German-American readers in St. Louis, The Past Dispatch quotes a few of the German Emperor's glowing and optimistic proclamations to his Army and Navy, and continues:

"The Kaiser could hardly say more if the British Navy were

TERMS: \$3 a year, in advance; three months, \$1: single copy. 10 cents; postage to Canada, 85 cents a year; other foreign postage, \$2.00 a year. BACK NUMBERS, not over three months old, 25 cents each; over three months old. \$1.00 each. SEMIANNUAL INDEXES, issued in January and July, will be sent free to subscribers who apply for them. RECEIPT of payment is shown in about two weeks by date on address-label; subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF AD-DRESS should be sent fare weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions in-

terrupted and their files broken in case they fall to remit before expiration. Notwithstanding this, it is not assumed that continuous service is desired: still, subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect. they will receive attention at the proper time.

"For dynastic reasons it is necessary to make the German people believe that they have won the war and that any peace which Germany may propose is a victorious peace; but there will be no peace on that basis.

"It may flatter German pride to believe that Germany has been 'victorious in all theaters of war, on land and sea,' but that

WHICH WAY NOW? -Evans in the Haltimore American.

sort of pride must be paid for, and it will be paid for. What the German people are actually fighting for is not a German victory, but a means of so placating their own pride that they will not be tempted to revolutionize their Government when the war is over. They do not know it; but they may rest assured that the Kaiser knows it, and the Chancellor knows it, and all Junkerdom knows it.

"The Imperial Government would immediately offer most liberal terms of peace, if it could be certain that when the reaction came there would be no change in the German attitude toward the throne and the doctrine of divine right. This is not the first time that a great people has battled desperately to insure its own political servitude and to save itself from freedom, and it may not be the last. But there can be no basis for a permanent peace until the Germans themselves begin to understand what they are really fighting for, which is not freedom for Germany, but their own continued political submission to the medieval system that plunged them into this war."

Some pro-Ally American editors seem to perceive a direct or indirect danger to America in a German victory. They even fear that anything less than a complete overthrow of the Central Powers, or a thoroughgoing revolution in Germany, portends peril to the peace of the world, including our own country. But even in London, says a Chicago Daily News correspondent, they have heard of "a lurking fear in some parts of the United States that an overwhelming victory for the Allies would imperil the peace and security of the American nation." One Englishman quoted this sentence from an American: "Numerous occurrences in the present war, to go no further back, have shown that this country might have a dangerous enemy in England if, through ernshing Germany, she should become the

supreme and undisputed military and naval Power of the world." The terms of peace stated in the Allied note, and confirmed by Mr. Balfour, are thus interpreted by Mr. Hearst's New York American:

"The avowed object, therefore, of the Allies is to completely destroy the political and commercial and industrial existence of the Teutonic and Magyar peoples and erect upon the ruins a Slav Empire and minor Latin states, which among them shall rule continental Europe, while England destroys German trade competition and asserts a complete lordship of the oceans of the world.

"If the Allies succeed in destroying the Central Empires and establishing the begemany of Russia over Europe and the undisputed dominion of England over the seas, then we are as sure to have to fight this combination for our rights and for our very national existence as the sun is sure to rise to-morrow

morning,

"Instead of establishing permanent peace in the world, the program of conquest and division of spoils set forth in the Allies' reply to President Wilson makes another great war in the near future not only probable, but absolutely NECES-*ARY to the reasonable freedom of all the nations not included in this gigantic condition to conquer and divide Europe, Asia, Africa, and the seas."

The same newspaper gives prominence to the declaration of one of our foremost authorities on international law that "the maistence upon any such unrealizable conditions for the attainment of peace" as the Allies demand "means war forever." To the "intelligent, impartial observer," says John W. Burgess, professor emeritus of political science and constitutional law at Columbia University.

"The demands and guaranties which Great Britain and her Allies make and require would, if realized, result practically in the 'Cossackizing' of Europe, as Napoleon predicted, and the 'Britainizing' of the rest of the world.

"Of course, neither the belligerent enemies of Great Britain and Russia nor neutral nations can consider such extravagant terms of peace. . . . They are calculated, and perhaps intended, to prevent peace and continue war indefinitely."

In a letter written and smuggled through to President Wilson before the publication of the Allies' terms, Bertrand Russell, the English scholar and pacifist, repudiates the idea that a victory for the Allies is possible, or that anything is to be gained by "seeing it through." To quote from his letter, as published in The American:

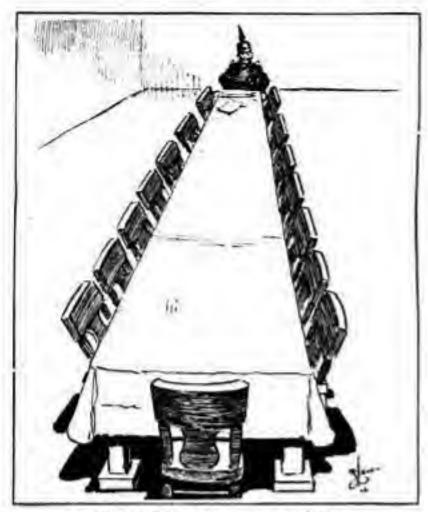

"It is evident that, however the war may be prolonged, negotiations will ultimately have to take place on the basis of what will be substantially the present balance of gains and losses, and will result in terms not very different from those which might be obtained now.

"The Allied Governments have not had the courage to acknowledge publicly what they can not deny in private, that the hope of a sweeping victory is one which can now scarcely be entertained.

"Such [popular] acquiescence as there is in continued hostilities is due entirely to fear. Every nation believes that its enemies were the aggressors, and may make war again in a few years unless they are utterly defeated.

"The barm done by a peace which does not concede all that we desire is as nothing in comparison to the harm done by the continuance of the fighting."

What Mr. Russell demands, then, is "peace without victory for either side," and "peace without victory" seems desirable to The New Republic, "because a victory would provide both contestants with an irresistible temptation to use their triumph for the essentially military purpose of redressing a preearious balance of power in their favor." In so far as "Prussian militarism" aimed at the mastery of Europe, it is, we are told, "defeated and will be thrown back." The New Republic does not believe that the Allies will ever "overthrow the Hohenzollerns or set up a republic in Germany"; "the wiser course is to allow Germany no victory and no ground for brooding revenge. and then trust that the Germans, faced with their awful burdens,

LITTLE IRONIES OF THE PEACE SITUATION:

their sorrows, and their moral isolation, will assess the cost on their ruling class," The New York weekly admits "a measure of truth" in the Allies' denunciations of Germany, but says:

"There is a crushing retort to the proposed policy of making German aggressive intentions the excuse for promoting French and British safety by isolating and bottling up the German nation. In any contest for power, a result always counts for very much more than an intention. Even if France and Great Britain were drawn into the war for defensive reasons, they are cooperating with other nations, such as Russia, Italy, and Roumania, who are frankly fighting to make certain territorial gains at the expense of the Central Powers and Turkey. The net consequences of their cooperation will be precisely the same as if they had all actually conspired to despoil Turkey and Austria-Hungary and to reduce Germany to comparative political impotence. It is this implacable result which will sink into the hearts of the German people, which will confirm all that they have been told about the unserupulous expidity of their enemies, which will paralyze the future movement of German liberalism, and which will justify the German nation in the resolution to recover by means of patient and sleepless cunning what they may have yielded to an overwhelming preponderance of numbers

An avowed champion of Germany, The Fatherland (New York), dismisses the Allies' terms as under no circumstances a possible basis for permanent peace, and holds up the "principle of nationality" for ridicule:

"No matter from what point of view we approach it, the Balkan omelet is beyond unserambling. We can no more distribute Balkan territories strictly on the principle of nationality than New York City can. If we should attempt to do so, logic would compel us to divide New York between Italy, Germany, France, China, and the Kingdom of Jerusalem, should the Zionista succeed in establishing a Jewish State. . . .

"In other words, the Allies have made conditions which they know to be preposterous. Even if the case were reversed, if the ten Allies, beaten on every front, worsted in every offensive, strangled by the submarine blockade, had triumphantly entered the capitals of the Central Powers, if their victories were real, not rhetorical, the conditions laid down by them would be manifestly absurd, because they could not be the basis of a lasting peace."

TO TAX "EXCESS PROFITS"

TAX ON EXCESSIVE PROFITS of a monopolistic corporation might be necessary some time, but the Administration's plan to raise additional revenue for the fiscal year 1917-1918 includes a proposition that "strikes at the foundation of industry, by taxing the machinery of production." This at least is the opinion of The Wall Street Journal (Fig.) and is typical of the prompt opposition that has sprung up in some quarters against a feature in the Administration's revenue bill which, as sketched by a Washington correspondent of the New York Times, provides "that all firms and copartnerships engaged in business will be required to pay a tax on 'excess profits' above a return of 8 per cent, on the investment. That is, all profits above 8 per cent, will bear a tax of 8 per cent, per annum on the excess." Washington dispatches advise us that the proposal is the most attractive and most uncertain feature of the bill, because it is most vulnerable from the point of view of partizan attack. With an intent to levy the tax as far as practicable on the big fellows, we read further, it has been decided to exempt individuals, yet it is realized that even this will not prevent a storm of protest from smaller interests, and means are sought so to frame the measure that it will apply most largely to centers of wealth and industry.

A Washington correspondent of the New York World informs us that official reports reaching the capital state that the French Treasury estimates the return from the French excess-profits tax for the first three months of 1917 at an aggregate of \$60,000,000, or at the rate of \$240,000,000 a year. It seems that this is a new tax, levied since the outbreak of the war, and that for the first seventeen months of operation it yielded \$100,000,000. Last year's returns showed a rapid and sustained rate of increase. The Philadelphia Public Ledger (Ind.) recalls that we are facing the biggest deficit since the Civil War, and thinks the Treasury Department may well east about for new things to tax. And the very best thing for extra taxation is war-profits, remarks this journal, which urges the Government to "make the war-brides pay up." We are told that England

taxes all war-profits 60 per cent. and the "measure of a warprofit is the excess of profits to-day over the normal profit before the war." We read then:

"War-profits in the United States are excessive in some places. Copper companies and certain manufacturers are reaping stupendous profits, not only at the expense of warring Europe, but equally at the expense of our own people in the United States. Thirty-cent copper, which is an outrageous price, inflicts a fearful burden upon all consumers of that metal in this country. What better source of Federal taxation than the excessive profits of nearly all copper

companies?

"There are other concerns to which the calamity of war has brought only stupendous money rewards. We read almost daily of huge dividends and extra dividends being declared by companies. A large part of the money needed to pay these bonuses and provide for these melon-cuttings comes from the people of the United States. What more equitable arrangement than a system of laxation which should compel a return to the people, through the Federal treasury, of a substantial portion of such war-bought profits?"

In the view of the New York Globe (Rep.) the proposed tax raises many highly important questions both of "principle and practicality," and it believes that it "embodies the first attempt ever made in a country whose industries are organized under capitalistic leadership to limit profits as a part of its economic system." We have taken wealth from producers after production and have proceeded on the social theory that "to permit a concern unlimited profits was a good thing because leading to greater efficiency in production, which in the end led to imitation of its methods by others, and thus brought about the cheaper production of objects of desire." The Globe cites Henry Ford's factory as a case in point, and goes on to say that-

"A tax on profits will probably be of most unequal application. Some men get their profits in the form of direct return, while others get them in direct returns plus the enhanced value of their property. On their books farmers of the West are able to show that they get only a or 6 per cent, on their farming operations, yet in ten years their acres have doubled in value. It does not appear whether the proposed law has in view merely a tax on direct profits or on indirect profits as well. If the latter (and justice would seem to require this), it would be necessary for the Federal Government to assess all natural resources and ascertain whether or not they increase in value—charging increments to profits and allowing decreases to be used to offset what seems to be the returns. It would seem difficult, if not impossible, to establish when an 8 per cent. limit is reached except by creating a new department of Government."

Another provision of the Administration's revenue bill, we read in the Washington dispatch of the New York Times, is a 50 per cent, increase in the existing rates on inheritances, which will make the maximum tax on inheritances 15 instead of 10 per cent. It is planned also to sell \$289,000,000 in Panama Canal special bonds, which is to be justified by the extraordinary expenses incident to the mobilization of troops on the Mexican border and the large appropriations for preparedness. For the Mexican situation and preparedness the allotment is \$162,000,000, while other expenditures are: Alaskan railways, \$21,000,000; armor-plate plant, \$11,000,000; shipping hills, \$50,000,000; purchase of Danish West Indies, \$25,000,000, and mitrate plant, \$20,000,000.

A GERMAN BOMB-PLOT CONVICTION

THILE IT IS DEPLORABLE that the official representatives of any foreign country should be involved in plots to violate the neutrality of the United States, it is equally a matter for congratulation that the plots should be unearthed and the plotters run down and convicted. Thus the Milwaukee Journal expresses itself on the conviction of Franz Bopp, German Consul-General at San Francisco, and four consular employees, and it adds that if Germany would put

> herself in our place she would realize that the "abandonment of all inspired propaganda would be a most effective way of serving Germany's interest in the United States and of maintaining relations of goodwill and amity between the two countries in the future." After a long trial in the United States District Court of California, San Francisco dispatches inform us, Bopp and his associates were found "guilty of all charges," and at once took appeal. Plotting to destroy munition-plants in the United States and Canada and to blow up military trains, railway-bridges, and steamships earrying supplies to the Entente Allies are the offenses named in the indictments, and the punishment is imprisonment and a fine. The dispatches further relate that two actions were consolidated in the trial. The defendants were charged with a violation of the act of July 2, 1890, by conspiring to restrain interstate and foreign commerce by destroying factories, railroads, and steamships. The other action was for alleged violation of Sections 13 and 37 of the United States Criminal Code in conspiring to set on foot and to provide and prepare means for a military enterprise to be carried on from within the United States against the territory and dominion of the King of Great Britain and Ireland.

Besides Franz Bopp, the defendants are

E. M. von Schnek, Vice-Consul; Lieutenant Wilhelm von Brincken, German reservist; J. F. Van Koolbergen, Margaret E. Cornell, Charles C. Crowley, and Louis J. Smith. Van koolbergen is out of the country, we are told, and his alleged offense is non-extraditable. Smith, the Government's star witness, was granted immunity. Bopp and von Schack are released on their own recognizance pending the appeal, while Mrs. Cornell, Crowley, and von Brincken are at liberty on \$10,000 bail. Also, pending the appeal, Washington dispatches advise us, Count von Bernstorff has relieved from duty the Consul-General and the Vice-Consul. Until the appeal is heard no final judgment should be exprest, thinks the New York

"No excuse of devotion to the Fatherland should avail even morally for Consul Bopp; and legally he should receive the full penalty for his offenses. His own Government should not lose a day in disavowing his acts, and apologizing for them to the Administration at Washington."

Eccning Post, yet "as the ease now stands, it has a very black

look," and this journal adds:

The views of Mr. Bopp on the conviction of himself and his associates are reported in a San Francisco dispatch to the Los Angeles Times as follows:

"In spite of the verdict I must still maintain my innocence, and we will leave nothing undone in our efforts to secure a reversal. I can not say that I am happy at the outcome, but I can not say I am surprized.

FRANK BOPP.

Veteran of the German consular service, who is relieved of duty pending his appeal against conviction for plots violating our neutrality

Consequents by the forecomment from home for York

NOT IN THE WAR-ZONE.

These photographs, taken at Kingsland. New Jersey, during and after the burning of the Canadian Car and Foundry Company's ammunition-plant on January 11, resemble scenes near the battle-line in France. Despite the explosion of millions of dollars' worth of shells which were being manufactured for Russia, not a life was lost in this fire, owing to the courage of Miss Tessie MacNamara, a telephone-girl, who at the outbreak of the fire stock to her post intil all the workers were warded. The court day a similar fire and explosion occurred at the Haskell (New Jersey) plant of the E. I. du Pont de Nemours Company, where a gramber of lives were lost. These disasters, which bring the number of such explosions in the United States since the war began up to forty-one, are now the subject of official investigation. The picture on the reader's right shows a shell embedded in the wall of a house three-quarters of a mile from the scene of the Kingsland explosion.

"Our ease was very complicated, and we were allowed only four and a half hours in which to make our arguments. That that was insufficient time is best evidenced by the fact that it took Judge Hunt four hours to deliver the charge to the jury. I believe also that the outcome would have been in our favor but for the long and unusual charge of the judge, and particularly his instructions to the jury as to the facts. We will appeal, of course."

The St. Louis Post Dispatch is imprest by the fact that the testimony in the trial is "exceptionally interesting for its light on the difficulty with which our neutrality was maintained during one phase of the war," and we are told that—

"It establishes the astonishing extent of the secret conspiracy on American soil in behalf of the Central Powers and creates a presumption of centralized planning and direction. Linked up with testimony in similar prosecutions in sections farther East, it shows that the plotting was continent-wide. The comprehensive campaign of destruction reaching from coast to coast was aimed at munitions in process of manufacture, munitions in transit on railroad-lines to the seacoast, munitions loaded on foreign-bound ships, "In view of Allied conditions during the early months of the war, this effort on neutral territory, remote from the war-zones, was potentially not the least of efforts admitly planned and successfully executed in part for promoting the cause of the Central Powers. As a whole, the Allies are not yet in a position where the battle against munition-supply as well as men has lost its effectiveness."

The Post Dispatch then records Berlin's assertion that no less than sixteen munition-ships destined for Russia have been destroyed by submarines and other agencies in arctic waters. Russia admits that two such ships blew up in Archangel Harbor, but "concedes a loss of life and record of injury leading to the suspicion" that the disaster was greater than would naturally attend the destruction of two ships. And this journal is moved to question—

"How many obscure phases of recent operations on the eastern and southeastern fronts are explained by this loss of indispensable munitions in huge quantities? How far does it throw light on the calamities that came to Roumania, all of whose munitions in excess of a limited domestic production must come through Russia."

"WHITE-SLAVE" LAW AND BLACKMAIL

NDER PRETEXT of regulating private morals, is the United States to become "permanently a party to organized blackmail"? asks the New York World. The question suggests itself to this journal and others as a result of the Supreme Court's decision, by a vote of five to three, that the Mann White Slave Traffic Act applies "to individual escapades as well as to commercialized vice." As the New York Ecening Mail recalls, the law was designed to break up the interstate trade known as "white slavery," and no one claims that Congress intended to invoke its severe penalty against men and women not engaged in that traffic. It would be desirable, if possible, to pass a law to prevent personal derelictions, The Mail thinks, but the offsetting danger of this legislation would be the "constant temptation to blackmailing women to lure men to travel with them across a State line and then extort money from them as the price of secreey." A law of this sort "would infinitely help to further the thing it sought to suppress." Under the present law it is said the blackmailers long not only the guilty but the innocent citizen who would rather pay than appear in a besmirehing case. Unfortunately, The Mail goes on to say, the wording of the Mann Law is such the Supreme Court has found itself "constrained to uphold the conviction of Caminetti and Diggs, convicted of having accompanied two willing girls from California to Nevada." The majority opinion, as read by Mr. Justice Day, runs in part as follows:

"The plain terms of the net must take precedence over the designation and the report that accompanied it to Congress. It is said it will open the door to blackmail, but that is to be considered by Congress. We think the power of Congress to regulate transportation of passengers affords ample basis to exercise authority in the case of this statute."

In the dissenting opinion read by Justice McKenna it is held that Congress did not intend to cover other than commercialized vice, and the Justice spoke in part as follows:

"Blackmailers of both sexes have arisen who use the terrors of the construction now sanctioned by this court as a help for their brigandage. The result is grave and should give us pause.......

"Any measure that protects the purity of women from assault or enticement to degradation finds an instant advocate in our best emotions. But the judicial function can not yield to emotion. It must, with poise of mind, consider and decide. It should not shut its eyes to the facts of the world and assume not to know what everybody clse knows. And everybody knows that there is a difference between the occasional immorals of men and women and that systematic immorality epitomized in the statute's graphic phrase, 'white-slave traffic.'"

The Supreme Court, it is generally recognized, could not act differently, since, as the New York Times observes, it is "a universal, an ancient, and a prime rule in the interpretation of statutes that if there is no ambiguity in the words, the meaning shall be reached from the text of the law, whose words shall be taken in their common significance." This journal and others see the only way out in action by Congress, and it wonders "how much longer will Congress leave the blackmailers to their boundless opportunity," but a Washington dispatch to the New York Tribune reports that there is small likelihood of an amendment being made to the Mann Act. Of a score of leaders of both houses questioned by the Tribune's correspondent, "all frankly are agreed upon that point," and be quotes a leading Democrat in the Senate as saying:

"No member of Congress ought to be expected to undergo the penalty that would surely follow the introduction of a bill which would restrict the present statute.

"Every purity league in the United States would crucify him. The trouble is, good people do not distinguish. They would mistake motives. No, the only chance of an amendment to the law would come from the Department of Justice. Let the Attorney-General recommend an amendment, and let the

Judiciary committees report a bill, with no personal responsibility. Then, if there was not much howling about it, it might slide through. But there is no chance of that. The law will stand as it is now written. If it benefits blackmailers, that is bad of course, but we can't help it."

Among the journals that oppose any change in the law is the Pittsburg Gazette-Times, which says that "no tears need be wasted on those whose private psecadillos put them in position to be plucked," and the Boston Journal points out that while the workings of the Mann Act unquestionably permit the blackmail game, nevertheless, no "law-abiding citizen has reason to fear such blackmail, and the enforcement of such a law is a logical supplement to the enforcement of local laws."

LAST YEAR'S LYNCHINGS

TAST YEAR'S LYNCHING FIGURES, suggests Principal Robert R. Moton, of Tuskegee Institute, may well be kept in mind when we consider the northward migration of the negroes. The latter movement, says the New York Age, a negro paper, "is following a natural economic pull, but back behind it, increasing and hastening it, are lynching and all the other forms of oppression and injustice practised against the race." This is not believed due to the number of lynchings, for there were only fifty-four last year, as compared with sixty-seven in 1915, but, so the negro editor thinks, to "the horrible atrocity of several eases; the burning alive of the victim at Waco, the lynching of two women in Florida, and the lynching of a respectable and well-to-do colored man at Abbeyville." All but four of the victims, it might be added, were negroes, and all but one of the lynchings took place in Southern States, according to the figures sent out from Tuskegee.

The geographical distribution of these occurrences interests the antiprohibition National Herald (Philadelphia), which notes "that forty-four of them were in prohibition States, or prohibition territory of 'wet' States," and that the only Northern lynching occurred in prohibition Kansas. So, it observes, "prohibition, at least, does not prevent mob murder any more than it prevents mob confiscation of property by ballot."

Georgia keeps the lynching record, which she held in 1915, a fact that leads the Montgomery Advertiser in the neighboring State of Alabama to remark that there are people "who mockly hold that it might be good for this whole section of the nation if Georgia would kindly mend its ways and quit spilling human blood on the picturesque theory that 'it's no barm to kill a nigger.'" We come to the end of 1916, admits the Atlanta Constitution, speaking for Georgia, "with fourteen out of a total of fifty-four to our credit, or more than 25 per cent. of the whole." And it adds:

"The seriousness of it all is strest by the fact that in only three of the fifty-four cases was the victim lynched for the particular crime which many have held to justify mob action, and which first gave rise to it. In nine cases there was attempted assault, while in forty-two, or 77 per cent, of the whole number, the crime varied from murder down to slapping the face of a boy. Men were lynched for aiding suspected prisoners to escape, and there is one recorded instance where a man was killed because he protested with a mob about to put another to death."

In face of the seorn and criticism which have been directed at Georgia, says The Constitution regretfully, "we have done nothing." Another Georgia daily, the Savannah Press, believes "the lynchings in this State can be traced almost wholly to the fact that none is punished for complicity in such unlawful and dastardly acts." Indeed, "more energy is expended probably in getting evidence against a man accused of violating the prohibition law in the average Georgia community than there is in getting the data together upon which to convict a man of the crime of murder—for lynching is only murder by the many instead of by the individual."

CHICAGO'S POLICE SCANDAL

HETHER THE SPECTACULAR ARREST of Chicago's Chief of Police "marks the end of the control of the Chicago Police Department by an organised band of the worst criminals operating in this country," as State's Attorney Maclay Hoyne declares, or is merely, as the other side contends, the outrageous culmination of a political feud, the courts must decide. "The production of the evidence will establish my innocence so firmly that there will not be a shadow of doubt of it," confidently predicts Chief Healey, whose arrest, declares his counsel, is "a damnable outrage." Mr. Hoyne, on the other hand, is no less emphatic in his assertion that Mr. Healey "has been nailed hard and fast as the head of the vicegraft ring which levied tribute on the underworld of the West Side," "There will be no truce," he adds; "this cleaning-up process is going to continue straight to the end." Meanwhile, the official allegation that the Police Chief of our second largest city was himself part of a great conspiracy to violate the law he was sworn to uphold is a fact to challenge the attention of the whole nation. For, as the secretary of the Citizens' Association of Chicago remarks, "if criminals of the worst type can operate without fear of punishment because they are in league with the guardians of the law, the very vitals of civic government are in danger." The story to date, as gathered from the news columns of the Chicago papers, is as follows:

After many months of investigation, in which he had the assistance of the Citizens' Association of Chicago, State's

Capyrighted by the international Film Service. New York.

"I AM NOT GUILTY,"

Says Charles C. Healey, who was Chicago's Police Chief before his arrest on January 8 on a charge of accepting money collected from protected vice-resorts, saloons, and gambling-houses.

Attorney Hoyne, on the night of January S, threw a bomb into what he called "the inner circle of corruption in the Police Department" by arresting Chief of Police Charles C. Healey on a charge of accepting graft collected from protected vice and

saloon interests. Among others arrested at the same time on charges of extortion, conspiracy, and bribery were Thomas Costello, described by Mr. Hoyne as "the operating head and chief agent of the combination," and Police Lieutenant A. M. White, both of whom are reported to have confest. "I believe

"WE HAVE STRUCK AT THE SOURCE,"

Declares State's Attorney Maclay Hoyne, who accuses Chicago's Chief of Police Charles C. Healey of an alliance for profit with "some of the worst criminals operating in this country."

we have struck at the source of the system," declares Mr. Hoyne, who goes on to say in the columns of the Chicago Herald;

"It has been a filthy combination of crooks, including almost every type of criminal known, from burglars, pickpockets, safeblowers to backmailers, firebugs, and extortionists. The Chief of Police and men associated with him have been in deliberate conspiracy with the vilest elements in Chicago."

Nor does the State's Attorney hesitate to place some of the blame on the shoulders of Mayor Thompson, who, he says, knew that there was corruption in the Police Department, yet obstructed at all times and in every way my efforts to bring crooked police officers, including the Chief of Police, to justice." The Mayor, on the other hand, says that if there is corruption in the Police Department "no one can blame me," because under the statutes of the city of Chicago "the Mayor is not responsible for the Police Department or its conduct." He further states that "since I have enforced the Sunday-closing law every means has been used by the whisky ring to obstruct me, and this looks like another move of the same interests."

"The whole thing would be ridiculous were it not for the pain it causes," declares Mr. Healey, who from the beginning has asserted his absolute innocence. In a statement quoted in the Chicago Tribune he says:

"The production of the evidence will establish my innocence so firmly that there will not be a shadow of doubt of it.

"If it were not for the instructions of my attorney I might tell you now what a part of that evidence is, but he forbids me to talk."

FOREIGN -COMMENT

THE CLOSED DOOR OF PEACE

ERMANY IS FURIOUS with the calm assumption of superiority displayed by the Entente in its reply to President Wilson's peace-note. The semiofficial Berlin Lotal Anseiger describes the reply as "arrogant and insolent, filled with hypocrisy and prevarieation," while the conditions upon which the Allies are willing to consider peace are denounced by the Berliner Tageblati as "Toolish and senscless and such that no

German could consider for a moment." But perhaps the Kaiser has never yet so completely voiced the feelings of the German nation as he has in his proclamation to the people on the Entente's reply. He says:

"Our enemies have dropt the mask. After refusing with scorn and hypocritical words of love for peace and humanity our honest peace-offer, they have now, in their reply to the United States, gone beyond that and admitted their lust for conquest. the baseness of which is further enhanced by their calumnious assertions.

"Their aim is the ermshing of Germany, the dismemberment of the Powers allied with us, and the enslavement of the freedom of Europe and the seas under the same yoke that Greece, with gnashing of teeth, is now enduring.

"But what they could not achieve in thirty months of the bloodiest fighting and unserupulous economic war they will also fail to accomplish in the future. .

Burning indignation and holy wrath will redouble the strength of every German man and woman, whether it is devoted to

fighting, to work, or to suffering. We are ready for all sacrifices."

On the other hand, another powerful figure in Germany exhibits no surprize, and roundly says that the German Government has got only what it asked for. In his Berlin Zukunft Maximilian Harden writes:

"The German Government formulated its peace-offer in such manner that it could possess no semblance of sincerity in the enemy's eyes. The German note was preceded and accompanied by an array of blunders and stupidities which robbed it of all authority, such, for instance, as the proclamation of the kingdom of Poland, the deportation of Belgian workers, official speeches which were nothing more than bragging about German

"The Entente nations rejected Germany's offer because they do not believe such offers could serve to prepare a fasting peace. We must, therefore, reverse the procedure. Instead of first signing the peace-treaty and then forming a European league to fix the conditions of such a pence, Germany ought to declare herself ready for an understanding and willing to agree to convene an international court of arbitration."

In Spain and Switzerland we find approval of the Albed reply; the Madrid Imparcial's view runs;

"With calm precision the Entente Governments explained their attitude and proved the necessity of continuing the war. in order to obtain a just and lasting peace. They also defined their program, which considers not only the restitution of invaded territory, but the reorganization of Europe on a historic basis and conformably with the principle of nationalities, which guarantees the growth of progress and liberty."

The Januard de Ganère thus describes the reply:

"Its language is firm and dignified, and is that of succrity, It is instinct with the principles of justice. The Allies have

explained their position with all possible elearness, and it is now for the Germans to reply."

Sweden believes that the Allies' reply destroys all hope of peace for the present. The Stockholm Tulningen considers the Allies' terms extreme, but thinks that the Central Powers might be induced to compromise, while the Dagens Nyheler says that if Germany does not publish her terms at once "she will not be playing the game." Holland is disappointed; even the pro-Ally Am-

"The Entente program may appear to some neutrals to be too mereiless, too radical, and thus unacceptable to the enemy, but in any case it has the great merit of elearness and should give complete satisfaction to President Wilson, who asked both parties to state their terms,'

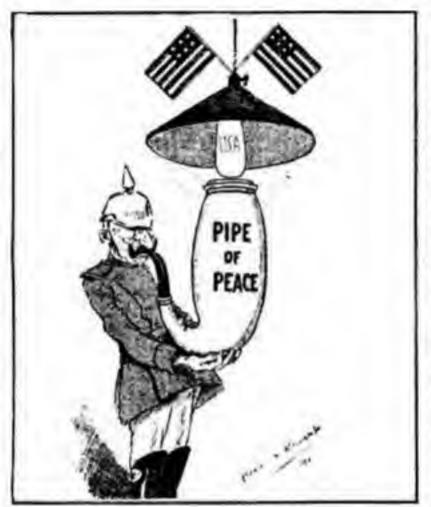

sterdam Telegraaf writes:

The French think the reply clears the air; this view is heldly exprest by Mr. Affred Capus in the Paris Figure;

"The principal value of the note is the clear and solemn declaration of the Allies as to their objects in pursuing the war. It is the first time they have been thus grouped, and their full moral worth, given to them by their simple enumeration, forces upon the mind the conviction of their necessity. Either they will be fully attained or Germany will be a continual menace to Europe, and upon the first opportunity will again turn it into a field of earnage. Our enemies are now in possession of our true aims. They can compare them with their own and deduce therefrom the degree of our resistance and our implacable resolve to vanquish them."

The Manchester Guardian remarks that the Entente owes the Germans a debt of gratitude, for it contrasts the "evasive reply" of Wilhelmstrasse to Washington with the Allies' clear statement of terms, which constitute, it says, "a diplomatic victory." Attention is drawn to one remarkable feature in the reply by the London Daily Chronicle, which, commenting on the absence of any demand by Great Britain either for new territory or compensation, says:

"This self-effacement can not fail to impress public opinion in the United States. It furnishes fresh proofs that we did not enter the war from last for dominion or any desire to destroy an inconvenient commercial rival, but simply from an overwhelming sense of duty. . . . Our disinterestedness will remind the Americans of their relinquishment of Cuba to the Cubans and Great Britain's bestowing of autonomy on South Africa after the war."

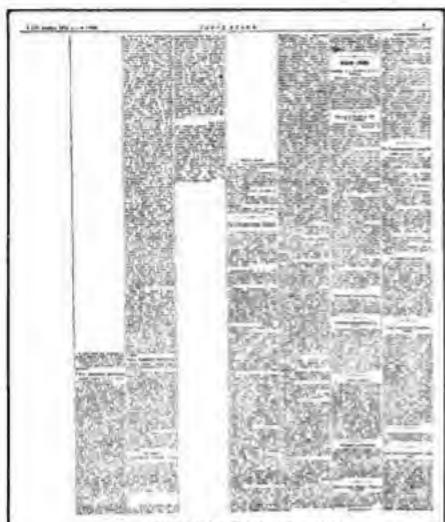

THE LIGHT THAT FAILED.

-To-day (London).

THE RUSSIAN ENIGMA

BEHIND THE VEIL of a rigid press-censorship critical events are happening in Russia, and from time to time a little hint slips by the eternal vigilance of the official blue pencil. From these straws we learn how the wind is blowing in the dominions of the Czar. While, as the New-Yorker Staats-Zeitung says, "the wheels have turned for all the belligerent Governments with exceeding rapidity, only in Russia do they seem to revolve with equal facility in opposite directions."

THE RUSSIAN CENSOR AT WORK

This is a page from the Petrograd Noroge Vrenge, a paper so mildly liberal as to be almost reactionary, yet the censor has made hay with it. The checker-board appearance of the more radical journals can be easily imagined—indeed, they contain more blanks than print.

This paradox becomes clear when we review the wlorlwind changes that have occurred in the Russian Government during the course of one year. On February 1, 1916, Mr. Goremykin fell from power and was succeeded by Mr. Boris Stürmer, the last of the Russianized Germans from the Baltie Provinces to hold high office. He is described as a bureaucrat and anti-Semite, and was suspected of being a pro-German. A rumor that Premier Stürmer was attempting to negotiate a separate peace roused the Duma, and for the first time in the history of Russia the will of the people forced the Premier from office. On November 24, Boris Stürmer, as a result of this popular pressure, gave way to Mr. Alexander Trepoff, who entered office as a "progressive and reformer," pledged to a war to the bitter end. His fall on January 9 of this year is mysterious, and he has been succeeded by Prince Golitzin, who is said to be a typical reactionary of the old school. The born at Wiesbaden, in Germany, the Prince belongs to one of the oldest Russian families, descended from the ruler of one of the former Museovite sovereign States. At this point the weird figure of Rasputin, monk and mystic, makes his final bow upon the political stage. This romantic peasant, who exercised a curious influence upon the Czar and other members of the Imperial family, was murdered on December 29, and, according to the Overseas News Agency, a German official organization, this murder brought Prince Golitzin to power. Its dispatch by wireless runs:

"Prompted by the assassination of Rasputin, the Emperor decided to take the firmest stand against advocates of a compromise with the Duma and against the radical elements.

"Mr. Trepoff and the other members of the Cabinet with the exception of Mr. Protopopoff, Minister of the Interior, were shielding the murderers. Mr. Protopopoff, who up till that time had received only a provisional appointment, was confirmed in office by the Emperor without the knowledge of Mr. Trepoff.

"Thereupon the Premier and the other Ministers hastened to the Emperor's headquarters and protested against recent developments. The answer of the Emperor was that he had decided to reorganize the Cabinet and exclude all Ministers who had taken part in the protest. Mr. Trepoff and Mr. Ignatieff, who in particular were suspected of liberal views, have already left the Cabinet.

"The power behind the throne is now Mr. Protopopoff. Prince Golitzia, who nominally is the new Prime Minister, is best characterized as to his political tendencies by a saying of his which is known all over Russia: 'The Dunia will keep quiet as soon as it gets a beating.'"

How true this is there is no means of knowing, as from the much-censored Russian press no information can be gleaned. How the Russian Socialists in New York welcome the advent of Prince Golitzin can be seen from the views of their organ, the New York Novy Mir, which says:

"It seems to us that the appointment of Golitzin to the post of President of the Council of Ministers is the end of all attempts at deception. By this act the ruling Russia threw a challenge to the popular masses. A notorious reactionary, an open enemy of the people and of any progressive movement, Golitzin will not be able to put on, even temporarily, a mask of virtue. He will be from the first day an enemy with whom the people will have to struggle fiercely.

"That it will be so, his first declaration . . . shows: 'Everything for the war, everything for victory. We can not now think of internal reforms.' Clear and outspoken! No hope for the alleviation of the condition of the one hundred and seventy millions of Hussia's population which is groaning under the yoke of constables, district police captains, governors, and plain untitled but dread personalities. As before, the people will be robbed; as before, the people will helplessly starve.

"The people will see once more that only a victorious revolution is capable of freeing the population of Russia from the terrors which reign over her."

The opinion is exprest that the change in the Premiership of Russia has nothing directly to do with war, but is the result of a domestic political crisis. According to this view the Duma, flushed by its victory over Premier Stürmer, attempted to force the pace of internal reforms and roused the nlarm of the powerful reactionary minority. That there is grave internal disorganization in the land of the Little Father can be seen from a passage in the Moscow Russkoye Slove, which runs:

"The greatest disorganization of the administration, which is the result of the action of dark, hidden forces standing behind the official Government, the so-called 'united Cabinet,' has not only brought our country to a dangerous internal crisis, which threatens the national prestige and the future destinies of Russia, but has also produced a feeling of alarm and protest among all the live forces of the nation, having obliterated class and party differences and united for the purpose of saving the Russian state all in whom the sense of honor and love for the Fatherland have not died,"

THE SWISS PRESIDENT—Some little-known information about the President of a sister Republic is found in the pages of the Manchester Guardian, which writes:

"If you ask a Swiss who resides outside his native country for the name of the President of the Confederation, he is almost certain to express complete ignorance on the point, and the vast majority of people will be totally unaware of the fact that just recently Switzerland changed its official head.

"The President only holds office for twelve months—from January 1 to December 31—and usually the Vice-President succeeds to the Presidency. The President for 1916, Mr. Décoppet, was succeeded on New-year's day by Mr. Schulthess, who will retain his post as head of the Department of Public Economy.

The President and Vice-President are elected by the Federal

Assembly, and the President's official salary is \$2,700. He has a Federal Council of seven, which forms a sort of Cabinet, and each member receives \$2,400 per annum."

A NEW SCHEME FOR IRELAND

Lloyd-George at the head of the British Government, he may perhaps make a clean sweep of the anomalies of the Irish situation. Indeed, he has told us that he regards the "removal of misunderstandings with Ireland as a war-measure of the first importance," English journals of almost every school of thought urge him to take action to end a situation which has become as intolerable to the English as it has long been to the Irish. For example, that Liberal-Unionist stalwart, the London Speciator, writes:

"All we desire is that whatever is done in the ease of Ireland shall be done, not as a piece of political maneuvering or leger-demain, but in order to provide a real solution of the problem. The idea of curing one set of ills in Ireland by creating another is madness. The subject, however, is too big to be treated in a paragraph, and must be left over for further consideration. We shall only say here that if the Nationalists, and the Sinn Feiners, who now so largely control the Nationalists, can agree with the men of northeast Ulster upon a common policy, it would be an act of criminal lumsey for any English politician to forbid the bans. But the agreement must be a real one. It is no good to pretend that there is agreement if none has taken place,"

According to the London correspondent of the Manchester Guardian—an astute journalist who has often secured early and exclusive information for his paper—this agreement has actually taken place. It is, he says, private and informal, but it has gone so far that all parties are now concerned in picking the men under whom Ireland will set off on her course as a self-governing nation. He writes:

"The new proposals will provide for something in the nature of equal representation in the Irish Parliament for both Nationalists and Unionists. Several eminent men on both sides of the stone wall in Ireland, but unattached to any of the political parties, have been sounded as to the practicability of equal representation, and opinion, I am told, is strikingly favorable.

"One thing is clear, and that is that the exclusion of Ulster, or any of its counties, will no longer be considered by either Nationalists or Unionists. Home Rule all round is the basis of the new proposals, and my informant (whose name would be recognized as of weight) is confident that both Mr. Redmond and Sir Edward Carson will, in view of the argency of an Irish settlement from the point of view of the prosecution of the war, be persuaded to agree to them."

The first Irish Administration is next sketched, and the list includes a weighty list of names, both Catholic and Protestant:

"A forecast of the composition of an Irish Administration, which attempts what once would have been thought the impossible task of pleasing all parties, has also been given to me from the same source. It bears on the face of it long and intimate knowledge of Irish affairs. The offices of importance are evenly distributed between the forces of the Irish nation—in fact, the Administration is drafted on lines of equal representation.

"Of the proposed executives, seven are Roman Catholic and six are Protestant, and of the High Court judges (not counting the Lord Chancellor) seven members are chosen of each denomination. Politically classified, the executive would include seven Home-Rulers and six Unionists.

"Here is the forecast as it reached me:

Lord Lieutenan: ... Lord Wimberra ... Mr. William Moore, S.C. Spraker Prime Minister. . Mr. J. E. Bedinsond Lord Chancellor. . Sir James Campbell Minister of Finance Mr. William M. Murphy Education..... Mr John Dillod Agriculture..... Sir Horsey Physicatt Labor. . Mr. Joseph Devila Industries and Mines .Mr. Barry Major Crais Home Secretary . . . l'ostmaster-General. Mr. Jeremiah MacVengli Mr. D. S. Henry, K.C. Mr. John Claury, K.C. Attorney-Cleneral Solicitor-General ...

The Guardian's predictions receive some confirmation from a journal of the opposite camp, the London Morning Post, In referring to Major Craig's appointment as Treasurer of the Royal Household, it remarks:

"He was at the back of the negotiations for the settlement of the Irish difficulty which caused such a stir in the late spring of last year, and his inclusion in the Government has already revived the rumor that the new Ministry will make a further endeavor to compose the Irish difficulty."

Even the most dyed-in-the-wool Tory journals are clamoring for action. Thus the London Observer says:

"Ireland is not the Achilles heel of the Empire in the present struggle, but for all political purposes it is a diseased spot which can not be allowed to fester while the Government confesses

ANOTHER INJUSTICE TO DRELAND.

GALLANT IRESE SOLDIER (from the fronts-"An' who's to fill the gaps in th' onld rig ment if ye don't join up?"

Amendorian Civitian - "Sure it's myself that'd go willingly if they'd only compel me." -Punch (London).

itself impotent to attempt a remedy. From the new Administration, despite the unduly conventional Unionist element it contains, the country firmly expects healing statesmanship. We say this very carnestly, because every day proves more clearly that in the Irish question we are dealing, not with a domestic issue which can be indefinitely adjourned without sensible detriment to our arms and profound moral prejudice to our cause, but with one of the most urgent of all war-questions.

"We have learned this week that in Australia Mr. Hughes's proposals for conscription were just beaten by the easting vote of the Irish Nationalist electors, the these at the beginning of the struggle were as enthusiastic as any."

As regards conscription in Ireland, the Manchester Guardian's London correspondent believes that Erin will finally accept it. He writes:

"Recruiting in Ireland has been almost at a standstill for some time, but the supply of men has obviously not been exhausted. A leading Irish Nationalist said the other day that 50,000 general service men could be enlisted voluntarily by the right kind of recruiting campaign immediately a settlement of the Home-Rule question was accomplished. The view of this Irishman was that Ireland would resist conscription if an effort were

made to enforce it now, but he went so far as to believe that the country might accept it if convinced that German victory was the alternative.

"The pressure on English statesmen to try to bring about a solution that would add these untapped forces of Irish manhood to the Army grows greater every day. My information is that it now seems likely to swamp those irreconcilable elements which wrecked Mr. Lloyd-George's last attempt."

BELLIGERENT RAPS AT THE PRESIDENT

CERTAIN DISTRUST of President Wilson seems to haunt the belligerent mind. In Germany the President is openly accused of acting in the interest of the Allies,

while on the side of the Entente there is a feeling that he took action with a view to strengthening the hamls of the Central Powers in their efforts to seeure peace. This curious misunderstanding is doubtless due to the ambiguous wording of the President's note, but the net result is that a shower of bitter criticism has descended from every quarter of the sky. For example: the powerful Kölnische Volkszeitung, the chief organ of the German Clerical Center party, writes:

"President Wilson did not abandon in the interest of England an offer which, according to his own words, he intended to make long ago, the this step after the pence-offer of the Central Powers was superfluous. The game was preconcerted, therefore, and the earefully thought-over plan could not be abandoned. America has put all her money in the Entente business, and therefore America must try in the interest of ber debtors and in her own interest to obtain the best possible conditions, so that they may be able to fulfil later their financial obligations toward the

United States. For these reasons the United States are out of the question as impartial mediators. Their President in his present note even goes so far as to threaten war, which, considering the whole affair, can only be directed against Germany."

In France a somewhat contemptuous note finds expression in the press, where French editors profess to be unable to understand the President's "sudden zeal for humanity" in view of "his silence in the face of violated Belgium," That great organ of French opinion, the Paris Temps, thus attempts to explain his attitude;

"The President, we know, may plead the old Monroe Doctrine in its parrowest form, which is, on his part, an affectation of disdainful indifference in regard to European policy. But a nation of a hundred millions of people can not retire at will into an ivory tower. The European War is the biggest duel of ideas of the last twenty centuries. Two morals, two life conceptions, are opposed. One can be neutral politically. One can not be neutral morally. One must make a choice."

The Temps assures us that "the vagaries of Mr. Wilson" will not affect the deep-seated friendship between France and America:

"Our strong attachment to the Americans makes us particularly feel all that comes from them. Therefore, an unfortunate

word of their President is of little weight when we remember the numerous proofs of appreciation and friendship that we have received from across the ocean."

Our nearest neighbors are perhaps the most scathing in their denunciations of the President, and the Canadian papers warn the British Government that American peace-activities, if continued, may become embarrassing and even dangerous to the Allied cause. The Montreal Daily Star is relieved that the journals of the old country are beginning to recognize the importance attaching to the atterances of President Wilson, and it says:

"It is reassuring to find influential leaders of old-country opinion at last realizing that the situation created by President There has been too Wilson's 'note' is distinctly dangerous.

casy a disposition to imagine either that President Wilson is as the Westmonder Gasette puts it - purely an academic person' who totally misrepresents the American mind, or that the American mind is so firmly pro-Ally that it would never consent to measures which would embarrass us. The truth is that President Wilson seems to have a genius for interpreting the mind of the majority of the American people; and that, while the Americans are overwhelmingly pro-Ally, they are much more actively pro-American, in a short-sighted way.

"These two statements need, perhaps, a little elaboration. First as to the President's gift for reading the mind of his countrymen. That was proved surely by the recent elections. He pursued a course touching the Mexican and European situations which most of the influential organs in the big eithes criticized constantly, . . . Yet he won. He had correctly interpreted the mind of the Middle and Far West as tending to regard all war as barbaric,"

The Daily Star urges a campaign of education in the United States, for, it says, the

Allies are fighting to protect the integrity of America, tho Americans do not realize it:

"Most of the Americans who support the Allies think that they do so for unselfish and sentimental reasons. They are for us 'on principle'-it never occurs to them that their national independence is actually at stake on the stricken fields of northern France. But if that gallant line, facing flying death with every hour, should fail, our American neighbors would soon learn the terrible truth in bitterness, blood, and tears,"

The Toronto Globe refuses to attach undue importance to the President's activities and indorses the phrase of the London (Ontario) Advertiser, which remarked, "one ends the reading of the President's note with the feeling that the supreme schoolboy bas spoken." The Globe makes this profession of faith in the American people:

"Here in Canada we shall continue to put our trust in the good faith and the sound common sense of our neighbors, and, leaving our borders as unprotected as they have been at all times during the past half-century, go forward to our great and arduons task of raising, training, and equipping men for service in Europe. President Wilson's itch for writing political essays may safely be left to the correction of his fellow countrymen. who are the principal sufferers."

FRENCH FOOLHARDINESS.

A French military surgeon performing acrobatic fouts on parapet of trench in full view of the enemy's gure. The surgreen had a wager that he would perform certain gymnastic sturns on the top of a parapet, in spite of the fact that the trench was only 300 meters from the German line. The daring officer won his bet, but also won a ten-day are/ts simples, a slight punishment, for having exposed himself needlessly to the enemy fire.

SCIENCE - AND - INVENTION

PEACE-ORDERS WE MAY GET

E ARE GETTING OUR SHARE of "war-orders"contracts for munitions and supplies for the battling myriads. What are our chances for the coming "peace-orders"-the material, tools, and machinery that will be needed to replace the unheard-of destruction that has been going on in Europe? In France alone, we are told by Noble Foster Hoggson, writing in System (New York, January), these peace-orders will include seventeen thousand tractors, one hundred million dollars' worth of hotel-construction work, great quantities of labor-saving machinery, lumber, window-sashes, doors, hardware, window-glass, and other necessary supplies for rebuilding forty-six thousand structures. Mr. Hoggson's figures were obtained during his service on the American Industrial Commission, which spent two months abroad last autumn, studying just such conditions as these. He says it has repeatedly been pointed out to the commission that the following are among the materials and equipment of which France will be in the most immediate need

- 1. Rolled steel for quick construction.
- 2. Sanitary and plumbing fixtures.
- 3. Concrete-mixing and concrete-block machinery.
- 4. Stock factory sashes and doors.
- 5. Wire glass.
- 6. Factory lighting-fixtures.
- 7. Cranes, earrying belts, and conveyors.
- 8. Elevators and lifts.
- 9. Pneumatic riveters.
- 10. Metal furniture and lockers.
- 11. Standard factory bardware.
- 12. Automatic sprinklers.
- 13. Farm equipment.
- 14. Labor-saving machinery of practically every kind.
- 15. Modern factory structures.
- 16. Hotel equipment.

Considering first farm-machinery and equipment, Mr. Hoggson informs us that, contrary to common belief, France is primarily an agricultural country. French farms are somewhat dispersed, but concentration is expected to follow recent legislation, favoring a greatly increased demand for improved farm-machinery. Then from the farm-needs he goes on to tell of an even greater demand expected for industrial machinery and hotel equipment. French officials cooperated heartily with the American Commission in this investigation. Says the writer:

"Out of the five million five hundred thousand farms in the country, eighty-five thousand are at present the market for American implements and machinery. As the factories throughout France are now engaged in making ammunition and other war-material, the manufacture of even such farm-implements as were previously produced has ceased. The demand for American-made machinery will therefore be, at the close of the war, of permanent importance to both this country and the people of France. But it is in her industrial reorganization that France needs American cooperation more urgently, and it is here that the greatest chance for the American manufacturer lies.

"France has been strangely unprogressive in her industries. Under normal conditions her demand for modern American machinery would be slight. As a result of her lack of modern machinery her business in different centers has been dropping off during the past few decades. With modern methods and modern labor-saving machinery it is probable that she might have held a large part of this lost trade. The war has awakened France to this need, which has become so strikingly manifest.

"In visiting many industrial plants I found few that were modern in construction or plan. I was surprized to find in use types of machines which went out of use with us twenty years ago. When I described new American machines having greater production and a material saving in labor, the officers of the companies showed a keen desire to be put in touch with the manufacturers.

"The war has made France conscious of her industrial needs and has created an infinitely greater demand for labor-saving machinery than would have prevailed under normal conditions of peace. And this demand is accentuated by the scarcity of male labor, the high cost of labor, and the necessity of converting labor to remunerative work. France can not allow her men returning from the trenches to work at lowly tasks, such as the production of raw material. She will need every man and woman available to work at the latest labor-saving machines to manufacture finished products and thus justify their higher wages.

"New machines, new parts, quantities of machine tools, together with raw materials and partly manufactured goods, will be in great demand for a considerable period, and until France has found her balance in her industrial manufacture as she has in her manufacture of ammunition,

"With the need of labor-saving machines comes the even more immediate need of modern structures in which to house them. This need is not merely one of the future; it is felt poignantly right now. Temporary houses are wanted immediately, while the more permanent ones are being erected.

"The need for American lighting equipment is conspicuous. And this need is not confined to the factory districts, but also prevails in the hotel districts frequented by travelers. Indeed, the opportunities for American goods are perhaps even greater among the hotel districts of France than among the industrial districts. Here lies an excellent opportunity for the American manufacturer.

"The hotel industry is one of the greatest of France. At present there are two hundred million dollars invested in twentyfive thousand hotels in France, exclusive of the so-called 'palnees.' It is reckoned that before the war four hundred million dollars a year was spent in France by American travelers alone, It is estimated by the hotel committee of the Touring Club of France, which is one of the largest and most influential organizations in France, and has a membership of one hundred and thirty thousand, that it is necessary to undertake immediately, for readiness at the end of the war, about one hundred million dollars' worth of hotel construction-work. It is probable that the hotel industry will be one of the first to get on its feet after the war because of the expected influx of curious visitors who will want to visit the battle-fields and to stop at the healthresorts and watering-places. Foreigners, especially Americans, will use these hotels and will demand and expect the comforts and conveniences to which they are accustomed.

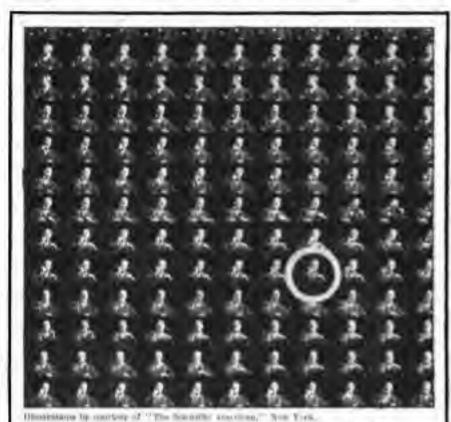

"A few days after my return from my trip a friend who was about to sail for France as the representative of a group of lumber interests came to my office for suggestions covering his travels through the war-zone.

"'I want to find out what kind of lumber is needed and how much,' he explained. 'I want to prepare the way for the big business that we expect to do in France.'

"This was one of the points which the American Industrial Commission had studied with particular care, and I was glad to place at his disposal so much data that his proposed trip was abandoned.

"The incident is noteworthy merely because it illustrates the care with which the French officials have supplied the commission with specific and detailed information that is intended to aid the American business man in his efforts to establish trade relations with a country that is in immediate need of just those

products which we Americans are especially qualified to furnish. France is truly holding the door of trade open to us, and expects through a closer reciprocal industrial relationship not only to

A MULTIPLICATION TABLE OF HIMSELF.

Quite at his case, the man amuses himself while the moving-picture machine takes a few hundred snap shots. He selects the one hellkes best,

buy much from us now and at the close of the war, but to sell us of her products when she has reached the maximum of her industrial production."

PAINLESS PHOTOGRAPHY

N THE ORDINARY METROD of portrait-photography the sitter is first made to feel as uncomfortable and ill at case as possible and then photographed. Little wonder that he and his family are apt to find fault with the likeness. A more promising plan, certainly more comfortable for the subject, is described by a contributor to The Scientific American (New York, December 30). By this method, the invention of Mr. G. Bettini, of New York, a motion-picture is taken of the sitter, who does not really "sit" at all, but moves about naturally, talking and doing anything that occurs to him. In this way about five hundred exposures are made and from these the customer selects what suits him for subsequent calargement, much as Luther Burbank picks out the desired variety from a host of experimental plant-breeds, The failures are "scrapped" in the true Burbank fashion.

To quote the paper named above:

"The inventor states that all the expensive apparatus in the professional studios will be unnecessary when his camera is introduced, and in portrait-work, because of the certainty of natural expression selected and the simple manner of controlling the light effect, the average amateur will be able to make artistic portraits quite as readily as the foremost professional.

"The new process consists of nothing more than the taking of motion-pictures of the subject while the latter is assuming a number of natural poses, then developing the negative and printing a positive from it, followed by the projection of the positive for the subject so that a selection of poses may be made, and finally the printing of the desired photographs on paper to any size desired.

"A positive glass plate or lantern-slide is made from the negative, and the subject then has an opportunity of seeing himself on the motion-picture screen just as others see him. Since the glass plate is non-inflammable, the subject can have the motionpicture projector stopt at any desired point. Thus a selection is made of one or more poses, and by means of two indicesone for the horizontal and one for the vertical rows—the operator can make a note of the images approved of. "The photographer then returns to the negative, which he places in an enlarging machine. The latter, in its main essentials, is a counterpart of the projector; in fact, the projector may as well be employed for this purpose if there is no occasion to use both machines at one time. Referring to the notations of the poses selected, the photographer brings the desired image into position by adjusting the pointers on the horizontal and vertical indices which correspond to those on the projecting machine. The enlarging process now resolves itself into the usual procedure; the powerful are-lamp is turned on; a piece of plain paper is placed on a stand in the path of the rays of light, in order to focus the negative image properly; and finally the sensitized paper is substituted for the plain paper and the exposure made.

"The finished prints made by the new process have the soft, harmonious effect that is so much in vogue among leading photographers to-day, and despite the intense enlargement the amount of detail demanding attention is surprizingly high.

"But most commendable of all is the naturalness—unusualness, one might say, since naturalness is such a rarity in studio photographs—of the expressions and poses, for the subject has been photographed at moments when these were beyond voluntary posing. Finally, it should be remembered that in this new process the subject is not obliged to assume a number of

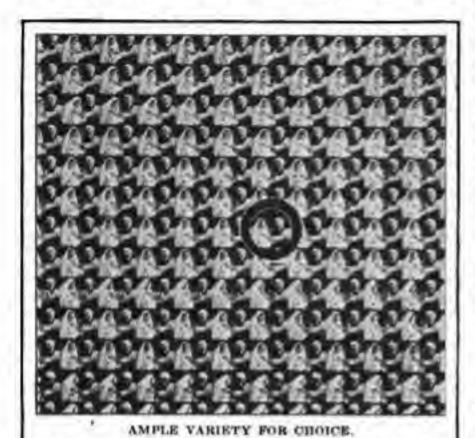

NATURAL, IF NOTHING ELSE.

This is the enlargement of the small image marked by the white circle in the upper picture. The stiff pose and the strained look are avoided by the "movie" method of photography.

expressions and poses under the guidance of the photographer; instead, he smokes, laughs, reads a letter, and chats with the photographer while the camera is recording every move that he makes. 'Painless photography' is what we are tempted to call it."

IS STAMMERING HEREDITARY?

TAMMERING is not a physical but a mental defect. The inheritance of various mental disorders is a firmly established biological fact. Of these two things we are assured by Dr. Frank A. Bryant, of New York, writing in The Journal of Hereddy (Washington, January). There is no

reason to suppose, then. Dr. Bryant goes on to say, that a tendency to stammer may not be inherited. Whether or not it is actually so inherited, we must determine by observation. A study of 20,000 cases, during a practise of thirty-five years, has convinced him that stammering is inheritable and that many persons actually inherit it, altho inherited stammering is curable if treated early. Writes Dr. Bryant:

Nurse and patient photographed in 500 positions, of which the

above reproduction shows only a few.

"In the early stages of the stammering of very young children. it begins spontaneously, seemingly without any external cause. upon the very first attempts to speak. While some cases do not show the affection until after the third or fourth year, I have never known an instance where it began with the early attempts at speech unless some blood relative had previously shown disordered utterance.

"This early manifestation of the trouble precludes absolutely the assumption that it is a habit or the result of faulty education, example, or environment, because the child on account of its extreme youth had never been brought under such

"My statistics show that the number of stammerers with relatives who have stammered is greater than the number of stammerers from all other causes put together. This furnishes a strong presumption of inheritance, which is converted into absolute proof by a study of the nature of some of these cases of relationship. It is a fact that grandchildren frequently stammer who have never seen the grandfather or grandmother who stammered. The speech of the nephews and nieces of an affected person is likewise impaired; and cousins who have never seen each other frequently stammer. Such crucial instances offer the best evidence possible of real inheritance,

"Many cases of what might be called atavism have come under my observation. I mean cases of stammering which seem to have skipt one or more generations. The following description of what occurred in one family of my practise will illustrate the point.

"A man who lived to be eighty years of age was a stammerer from childhood. It could not be ascertained whether any of his relatives had ever been afflicted in this way. He had two sons, Robert and Henry. Robert, the elder son, showed stammering in his first attempts to talk. He grew to manhood a stammerer, married, and had two or three children, none of whom was afflicted with speech trouble.

"One of these children, William by name, also had two children, a boy and a girl, both of whom stammered quite severely from no apparent cause from the time when they first began to speak. This was in the fourth generation from the original stammerer. The affection had skipt the grandson, William, to appear again in the great-grandchildren. Fortunately. I, with the aid of good sensible parents, was able to take them in hand within a few weeks after it first appeared in each case, and it was soon cured. These children are now twelve to fifteen years of age, and they are now, and have been ever since their early treatment, absolutely free from any trace of stammering. In fact, the boy is quite a young orator.

"Henry, the younger son of the original stammerer, altho constantly associated with his stammering father and stammering brother Robert, never showed any signs of the disorder, but curiously enough, his son James became a bad stammerer. This boy James, whose father, Henry, was skipt, was a grandson of the original stammerer. He also was cured, but not until some years after it made its first appearance,

"The individuals referred to were all native-born, intelligent Americans, enjoyed good health, had no stigmas, no bad habits, were not 'nervous' people, and occupied stations in business and professional life rather above the average. The facts as related are authentic, for I saw all the persons mentioned; and I believe it to be a true example of the effect of heredity in enusing stammering."

Dr. Bryant summarizes his conclusions in the following final paragraphs:

"Stammering, in most, if not all, eases, being due to an unusual excitability and instability of those cells of the cortex which preside over the function of speech, it follows from the general principles of heredity that when such a condition exists in a parent it is likely to be reproduced in the child.

"Statistics confirm this expectation, showing a family history

of stammering in a majority of cases.

"The affected relative is often one whom the child has never seen. This, with the fact that stammering often appears at

THE POSE THEY CHOSE. Enlarged from small circled image above. The motion-picture method enables one to be photographed at his best instead of at his worst.

the first attempts to speak, precludes the idea that the defect is due solely to imitation, and proves that we are dealing with a true germinal trait. When a parent stammers, part of the children may stammer and the rest speak normally, a further proof that association and imitation will not necessarily cause stammering unless there is an inherited predisposition.

"Cases of inherited stammering, if treated early, are usually curable."

TO PROLONG POLICY-HOLDERS' LIVES

O MAN IS ALLOWED to burn up his house after insuring it; but he can insure his own life and then proceed to drink himself to death at his own sweet will. Fire-insurance companies insist that certain precautions shall not be neglected by the owners of insured property, in order to lessen the danger of fire, and on penalty of invalidating the insurance. Life-insurance companies ascertain, before they insure a man, whether or not be is "insurable," after which they usually abandon him to his own devices. Some life-insurance companies are abandoning this loissez-faire policy so far as to give their policy-holders periodical health examinations. That the functions of a life-insurance company may profitably be extended to the conservation of life is the opinion of Dr. Eugene Lyman Fisk, medical director of the Life Extension Institute, of New York City. In an address delivered before the American Association for the Advancement of Science, on December 29, Dr. Fisk spoke as follows:

"Which is the greater public service for a life-insurance company to perform; to pay a ten-thousand-dollar claim to a widow and children or to keep alive a one-hundred-thousand-dollar husband and father?".....

"Rapid growth of sentiment in the past few years is adding this great function to the business of life-insurance—that of conserving life and improving health as well as paying death-

"It is becoming recognized that the death-rate is not a fixt quantity, that it can be controlled by human agencies, that in wiping out communicable disease, like typhoid and tuberculosis, we are only taking a short step in health conservation; that slowly progressing organic disease is taking more lives than communicable disease, and that by rational methods of living and careful periodic examination of the human body, these diseases can be checked and controlled and human life prolong d.

"The expense of carrying on this work, therefore, by the lifeinsurance companies is more than offset by the saving from

reduced mortality.

"The life-insurance tables, graduated to end at ninety-five, are simply based on past experience, governed by past conditions. It is within the power of science greatly to modify these conditions and radically to change the so-called law of mortality.

"Periodic examinations thus far made among policy-holders show, approximately, in all companies, the following conditions:

"This closely approximates the conditions found in any large group of people who are examined by the Institute. They show that the average individual is to some degree impaired.

"About 40 per cent, of those reexamined by the Institute show definite, measurable improvement, altho in the natural course of events, being one year older, they would be expected to show some deterioration."

Government investigation covering one million workers shows, according to Dr. Fisk, an annual average loss for the whole country of about two hundred and seventy million days on account of illness. Besides this, he reminds us, there are millions of people who do not lose a day's work on account of illness, but who work year after year physically below parbillions of days of inefficient or substandard work that have never been counted. The following are the ways in which Dr. Fisk suggests that life-insurance companies should broaden their functions into those of life-saving as well as death-indemnity:

"I. Educational work among policy-holders by means of health bulletins.

- **2. Direct intensive work among policy-holders by means of periodic health surveys solely for the purpose of prolonging life.
- "3. Reports and advice to entering policy-holders with regard to their condition as risks and the ways by which they can become better risks.
- "4. Cooperation with health departments and health agencies to secure better health legislation.
- "5. Thorough organization and standardization as to technique of the medical examinations, in order that the results may be of value to science in the study of human defects and the influence of living habits.
- "6. The stimulation among medical men throughout the country of a close study of diagnostic technique in the detection of early signs of bodily impairment and the personal hygiene necessary to combat such tendencies."

Practically all of these things, he says, are now done to some degree, but there is need for concerted action to make their utilization complete instead of partial and experimental. Dr. Fisk goes on:

"When we consider the amount of energy and money and time and human intelligence that has been exerted to provide the superficial appurtenances of civilization; how we have girdled the earth with wireless telegraphy and the telephone; our undersea and overhead activities; and all the marvelous developments that science has provided for amusement, for dissipation, for money-getting—it is rather pitiful to think of our helpless condition as we face the average man of to-day and his physical equipment.

"With the leading nations of the world in a death-grapple, we can not stand idly by, as children viewing a tragic film-play, and trust to luck for everything to come out right. Action is needed. The insurance companies can mobilize for physical

preparedness among the people. Will they do it?"

HARNESSING A VOLCANO

THE NEWS that volcanic steam is now used in Italy to operate power-plants is not a chapter from an unpublished romance by Jules Verne, but apparently a bit of sober realism. This sensational use of subterranean heat is reported by Prof. Luigi Luigi, of the University of Rome, Italy. According to Professor Luiggi, as quoted in The Electrical World (New York, December 23), volcanic steam now operates three 3,000-kilowatt steam-plants at Larderello, in central Tusenny. Numerous cracks in the ground there permit powerful jets of superbeated steam to escape in the air, besides borie acid and other mineral substances. Says the writer:

"Prince Ginori-Conti in 1903 tried to utilize this superheated steam for the production of motive power. He first applied a strong jet to a small rotary motor, and then to a very modest reciprocating steam-engine connected to a dynamo, which generated sufficient electricity to light part of a borax-works. Later, holes were bored in the ground and iron pipes driven down to the very source of the steam, which is under a hard stratum of rock about 300 to 500 feet below the surface. These bore-holes vary from 12 to 20 inches in diameter, and give forth steam with a pressure of from 2 to 3, and exceptionally up to 5, atmospheres, and temperatures varying from 150 degrees C, to 190 degrees C.

Encouraged by these results, Prince Ginori-Conti, in 1906, applied the steam to an ordinary steam-engine of about forty horse-power. The experience of several years has shown that this arrangement works well so far as the mechanical power of the steam is concerned, but that the borax salts and the gases mixed with the steam—especially sulfureted hydrogen and traces of sulfuric acid—have a corresive action on the iron parts of the engine and are the cause of frequent repairs.

"This difficulty was avoided by applying the superheated steam not directly in the engine, but to a boiler; that is, by applying it instead of fuel to an ordinary multitubular boiler, in which steam was produced at a pressure of two atmospheres, then passed through a superheater and afterward used for driving a 300 horse-power condensing steam-turbine.

"To carry out the experiments on a large scale, Prince Gineri-

Conti installed early in 1916 three groups of condensing turbogenerators, each of 3,000 kilowatts, working with superheated steam at 1.5 atmospheres generated in especially-constructed multitubular boilers, the latter arranged vertically and with aluminum pipes, both for better utilization of the heat and better resistance to the corrosive action of the natural steam. The steam thus generated in the boilers, after passing through the turbine, is discharged into a surface condenser, whose circulating water is in its turn cooled in an ordinary cooling tower. The condensate from the turbines is pumped back into boilers,

and thus no natural steam ever comes in contact with the turbine, by which arrangement corrosion is completely avoided.

"The three - phase energy is generated at 6,500 volts, 50 cycles, and stept up through an oil-transformer to 36,000 volts for transmission to Florence, Leghorn, Volterra, Crosseto, and many smaller towns of Tuscany. This energy is principally used as motive power for munition-works during daytime and partly for lighting purposes at night.

"One of the 3,000kilowatt group has been in operation since January, 1916, the second since April, and the third has recently been started. So far the first two groups have worked quite successfully, and have been a great boon to the industries of Tuscany,

greatly crippled by the searcity and high price of coal. This successful harnessing of volcanic heat to an electric powerhouse can be increased practically to hundreds of thousands of horse-power, since volcanie steam can be secured for many square miles around Larderello."

A LIGHTING-PLANT ON THE CAR-AXLE

NDER THE HEADING, "How Railroad-Trains Electric-Light Themselves," a writer in The Electrical Experimenter (New York, January) explains how the modern car is lighted by a miniature plant attached to its Once upon a time the passenger was lucky if he had light enough to prevent his stumbling over the seats. Now he wants to read fine print, and the electric light makes this possible. As we learn:

"When you ride in an up-to-date railroad-train at night you invariably notice the electric illumination. Once—in our grandfathers' day-it was produced by the evil-smelling oil-lamp. Then we had, and still do have to some extent, the gas-lamp supplied by a high-pressure gas-tank supported under the coach. But to-day we find all the best railroad passenger-coaches equipped with electric lights. Possibly you never stopt to philosophize regarding this every-day convenience.

"Let us consider, then, the three known general methods of securing electric light on railroad cars. First, there is the straight storage system, in which a car carries a very large battery so as to receive at the terminal charging station a sufficient charge of electrical energy to last to the next charging station. This means hauling excessive weight and switching of ears on to charging tracks and holding them there for the hours of charging which each trip demands. This system interferes either with normal car movements or with proper charging of the batteries or with both. The exigencies of railroad operation are such that one can hardly count on proper charging under such conditions. It takes just so many hours to charge a battery right. To force the charge inevitably damages the battery, and such damage is hardly avoidable with the straight storage system.

"Then there is the head-end system, with a special electric generating equipment on board the train supplying the lighting energy for the ears trailing behind. There are so many objections to this system that it has but few installations,

"Against both of the foregoing systems the axle-driven unit system in which the dynamo is driven from the car-axle by

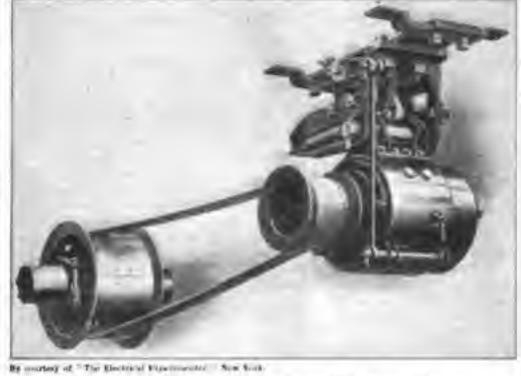

a belt has steadily gained favor in the past few years, because it has gradually attained to the operating perfection of an up-todate stationary electric plant,

"The axle-driven unit system makes each car an independent unit, which goes about its own business, charges its own battery en route, and is in every way sufficient unto itself. The operating department handles cars and trains oblivious of lighting problems-it has but to couple the cars and airhose. There are no special switching of cars, no interference,

and no delay. "The improved axlecar-lighting gystem here illustrated charges its battery perfectlyattaining a result hardly to be hoped for in the terminal charging scheme. Furthermore,

the generator does all the work, that is, carries whatever lamp or fan-load may exist, all the time that the car runs at generating speed. During this generating time the battery rides as a passenger, does no work, and receives automatically only such charging as it requires. The principle involved in this particular design utilizes the axle energy every moment it is available and works the

battery only when such energy is not available. "The illustration shows how the enclosed dynamo is mounted under the train and belt driven from split steel pulley elamped on the main axle. Note the holes in the dynamo pulleythese help to make the belt drive more steadily, as otherwise there are apt to be air-pockets formed between the moving belt and the pulley face."

IT BRIGHTENS THE CORNER WHERE YOU ARE.

This is the axle-driven dynamo which enables a pass-neer-car to carry its own electric plant, to illuminate the cur brilliantly, whether moving or standing still. It is fastened under the car and belt-driven from the axle, as shown in the cut. It keeps all the lights going, and charges the battery, which is used as soon as the train stops.

> THE BABY AS SHE IS CARED FOR-Some strange rules for the care of the baby, gleaned by a Red-Cross nurse from essays by country school-children, are quoted in The American Red-Cross Magazine. Sound advice mixed with bizarre reasoning is shown in the following excerpts:

"Don't let the baby suck its thumb, for there might be a fly on it and it would get the disease of the fly."

"Don't rock the baby, as it will toss its brains."

"If a baby gets beer every day, it won't grow very large and it won't be good in sehool,"

"Rocking is not good for it; it makes them sick and stiff." "Bad habits are easily made by the mothers, and the babies

get wise to it." "If you give the baby alcohol, he will lose one-half pound every year and will become drunk when he is old."

"Never lift it up by the arms, because it will place them out of place. Never, never never pick up the baby by the arms whatever."

"The public owes the baby as follows: Pure air and sunshine; pure, cool, fresh, free-flowing air at night; its own private, sufficient covering of fluffy, porous materials, and the chance to be a perfect man or woman."

LETTERS - AND - ART

THE PHILHARMONIC'S BIRTHDAY

It was During the Gathering of war-clouds in 1842 that a society of musicians banded themselves together into what has since lived in the metropolis as the New York Philharmonic. The original "lovers of harmony" have all passed away, but their successors find themselves celebrating their seventy-fifth anniversary contemporaneously with a greater clash of arms than was thought humanly possible in 1842. The "lovers of harmony" of to-day, who began their celebrations on the 17th, inaugurating a series of concerts, would seem to their forebears to tolerate "a musical fare too highly perpered with discords and spiced with noise." It would scarcely suit the tastes of the precursors, thinks Mr. Clarence Lucas, of The Musical Courier (New York), who speculates further on the change of tastes evinced by the society's history:

"No doubt the old lovers of music of two hundred years ago would scoff at the word [Philharmonie], and say that those who call themselves lovers of harmony hear nothing but discords in modern music. What would they say could they have returned to their strangely metamorphosed New York City to hear Strauss's 'Maebeth' symphonic poem at a Philharmonic concert last November and learn that 'Maebeth' was entirely out of date in the harmonic experiments of Strauss? What would the 1842 group of Americans, Bohemians, Englishmen, Germans, Frenchmen, who founded the society, say of a 1917 program?

"The first program of the New York Philharmonic Society was as follows:

W-1-110-110-110-110-110-110-110-110-110-
Symphony No. 5, C minor Boethoven (Conducted by Ureli Corelli IIIII)
Scena from "Oberon"
Quintet in D minor
Overture, "Oberon" (Conducted by D. G. Etlenne.)
Mine, Otto and C. E. Horn. (Conducted by H. C. Timm.)
Scena from "Fidelio"
7 77 70 74

"How old-fashioned that program already seems! No broad and powerful last movement of Beethoven's fifth symphony. Still, there may have been many worthies present who shook their heads dubiously over Beethoven's wild extravagances and welcomed with nodding approval a return to the same and balanced melody of Hummel. Was not the young Beethoven enraged when the influential Hummel laughed at certain passages in the new mass in C? The hum of Hummel's honey-bee harmonies is heard no more in concerts where Beethoven is now a deified old master.

"The Philharmonic audience of 1842 could stand an excessive amount of operatic arias. Look at them!-four in succession: Weber, Rossini, Beethoven, Mozart. And the German, H. C. Timm, as a reward for conducting all the vocal accompaniments, was allowed to play the audience out with a Kalliwoda novelty. He also probably wanted to get even with the French Etienne, who conducted Weber's overture, and the American Hill, who directed the symphony. And what has become of the new overture conducted by Timm? The name of its composer sounds obsolete to-day. The 'Oberon' overture, having been composed by a German in London, had to be conducted by a Frenchman in New York. That kept the international balance perfectly adjusted and prevented diplomatic jealousies. Presumably C. E. Horn did not like to play second fiddle, so to speak, to Madame Otto, who appears to have dominated the vocal section. Ten to one, he refused to help the lady out in the Rossini duet unless he was allowed to sing a solo. That may account for the seena from 'Fidelio,' Such things have happened in the song world before and since IS42,"

The ensuing history of the Philharmonic is reviewed in an article in the New York Sun that both Musical Courier and Musical America certify to by reproduction. A glimpse of the social amenities of New York in that earlier day is given in the writer's account of the audience:

"The first concerts of the society were held in the Apollo rooms, the same fashionable hall in which the society was founded. At these concerts chairs were unknown. The audience sat on benches. Members of the orchestra rescived the subscribers at the door of the concert-hall and escorted them to their scats. These usbers were selected by the society because of their appearance and demeanor, and wore white gloves which were paid for by the society. They carried long, thin batons of wood painted white. These were the symbols of their office. Their perhaps too formal appearance caused considerable amusement among the younger members of the audience, so that the custom was finally discontinued. As a result, the fourth annual report of the society declares that four dollars and seventy-five cents was saved, owing to the fact that ushers' gloves were no longer paid for by the society.

"The society rapidly became a leader not only in musical circles but as an attraction for New York society. Early in its life a class of associate members who were privileged to attend rehearsals was established. In the sixth season of its existence, the Philharmonic saw the admission of ladies to its associate membership. In the twenty-fifth year of the society, when Dr. Doremus was its president, the orchestra was increased to ninety members, then to one hundred, and every endeavor was made to make the programs more attractive. Society and the world of fashion were calisted into the service of the Philharmonic, Edwin Booth, the famous actor, was persuaded to read Byron's 'Manfred' to the accompaniment of Schumann's music. These new progressive methods resulted in a tremendous financial success."

The New York Philharmonic is the third oldest organization of its kind, the London and Vienna societies only having preceded it. The New York organization, says Mr. Lucas, "has grown with the great city itself, which can not be said of the Philharmonic Society of London." Further:

"It is noted also for having perhaps the longest list of famous conductors of any orchestra. On its record pages are names that stand out in the musical development of Europe and America—uniones that read like a roll of fame in musical history. Its first conductor of international fame was Carl Bergmann. who was a pioneer in introducing the music of Wagner to symphony audiences in this country. Theodore Thomas, whom all Americans revere as the man who did more to spread the love of good music in this land than any other one person, was conductor of the Philharmonic for many years. After Theodore Thomas came Anton Seidl, for four years Wagner's private secretary. At the time of Scidl's death he had been conductor of the Philharmonie for eight years. Among other famous conductors who have wielded the baton over this famous institution are Colonne, the French orehestral genius: Vassily Safonov, the most noted of Russian conductors; Richard Strauss, the great composer of modern scores; Henry Wood, the famous English conductor; Felix Weingartner, of the Vienna Philharmonie and Royal Opera; Gustav Mahler, and now, of course, Josef Stransky.

"The Philharmonic in its seventy-five years has gradually extended its activities until now the members of its orchestra devote practically all their time to the work of the organization. Rehearsals are held daily during the season and about fifty concerts are given by the society in New York and Brooklyn, in addition to which tours, including more than thirty cities, are made each season.

"From time to time the New York Philharmonic Society has invited a number of eminent musical artists to become honorary members. The first one was the violinist Henri Vicuxtemps, who was elected as long ago as 1843. Shortly

before his death, Mendelssohn accepted. Spohr, Sontag. Alboni, Jenny Lind, Wallace, Thalberg, Liszt, Raff, Wagner, Rubinstein, and Dvořák are also on the list.

"Volumes might be written about the programs, the conductors, composers, performers, and the influence for good of all this music on the general public, but space forbids."

REWRITING THE WAR'S HISTORY

HE REWRITING OF HISTORY is one of the favorite occupations of the leisured, but Mr. G. Bernard Shaw pauses in the midst of the fevered occupations of the war to be beforehand in this respect. He tackles one of the best entrenched of Allied prepossessions—that Germany is a militaristic nation. The "Wittenberg horror," for instance, which is the phrase used to represent the conditions in the typhus prison-camp for British at that place, exposed to the world "that the German Army disgraced itself professionally, and the German medical service turned tail in the face of its enemy, typhus." "It was important to expose the Wittenberg horror thoroughly," declares Mr. Shaw in The New Republic (New York), "because it effectually disposed of the notion that the Germans, who are a very unmilitary people, and have to be kept in fighting order by an exaggeration and ostertation and idealization of military duty

and organization that would be ridiculous in comparatively pugpacious peoples like the British and the French, can stand a strain on discipline better than the rest of us." Then to enforce this contention, which might perchance be taken lightly as no more than a Shavian inversion of the ordinary man's mode of thinking, he brings forward a new solution of the failure of the advance on Paris, laying the matter squarely at the Germans' own door, while he plucks a feather from the Entente cap:

"The Germans guessed, and as it proved, rightly, that modern fortifications could not stand against modern siege-artiflery, says Mr. Ceeil Chesterton. Precisely; and it follows that they knew that the whole success of their dash to Paris, and, consequently, the fate of the whole campaign, depended on their obliterating the forts of Liege at the first shot. Yet they arrived before Leige without siege-guns; were held up before it by Leman for many days; and finally had to wait for Austrian guns. It was that delay, not the battle of the Marne, that left Germany without a chance of ultimate victory. She should have been in Paris before she reached Brussels; and her famous intelligence department, with its fabulous network of spics, ended in her spending more days hesitating before Antwerp than she needed have taken minutes had she only known the truth as to the defense. Mr. Cecil Chesterton knows the Prussian program; but he has been so pacifistically preoccupied with its warlike wickedness that he has failed to notice that it was a

Salonov and Mahler were recent conductors, the latter being the immediate predecessor of Stransky, who now holds the position

paper program, and that, when it came to the point, the boasted preparation and organization for it had simply not taken place; the whole thing was mere postprandial brag, war-game, and elub-fender gossip. We, on the other hand, were fairly well prepared to the extent of our pledge. The Belgians were prepared to the extent of their resources, and put up a very good fight. The collapse of the French at Namur has not yet been explained, but Joffre made no excuse of unpreparedness; he said bluntly, as a big man would, that the retreat was sheer military misconduct, and should not have occurred.

"It was the German preparedness that turned out pure romance. One can not say she was wholly unprepared; for no country with compulsory service and a military aristocracy headed by a King whose chief amusement is playing at soldiers, can answer to that description; but there is most certainly no

convincing evidence that the German general staff were as well acquainted with the writings of Bernhardi or von Bülow as Mr, Cecil Chesterton, or, indeed acquainted with them at all. It seems to have known rather less about these writers than the British War Office knows about Mr. Belloe or Mr. Blatchford. The Next War,' which had been so often described over the walnuts and wine, with the salteellars for fortresses, was a wonderfully planned business; but no one who has followed the actual campaign without illusions will ever again suspect the German authorities of being a party to it. As to the silly forgery which appeared in the French Orange Book, and which Mr. Cecil Chesterton still quotes seriously, the no one clse does, the French Government did not make even a pretense that it was an authoritie official document. Shapira's original manuscript of the Pentateuch was plausible in comparison."

The truth of the matter, Mr. Shaw declares, is that "preparation for war is not humanly possible." He goes further:

"It is no discredit to be prepared for war. All nations should be prepared for war. All houses should be protected by lightning-conductors. Every man's will should be made and his soul ready to appear before the judgment-seat at a moment's notice. And every convinced believer in vaccination should have himself revaccinated once a fortnight. But we don't do these things. Mr. Spenlow, who was so eloquent as to the positive

wickedness of not making a will, died intestate; and all these terrible Iron Chancellors and Brass Tamburlaines with their shining armor and their mailed fists, who, when the Kaiser rushes into their bedroom and cries, 'War is declared by (or against) Blankland,' says 'Third portfolio on the left,' and go to sleep again, are humbugs like Mr. Spenlow. There are no portfolios, no time-tables, no invasion-routes marked out with 'controls' like the Tourist Trophy motor-bieyele race. People write about such things as they write about anarchist conspiracies or Jesuit plots, because they amuse the human imagination. But the plan does not go beyond ink and paper, Germany and Austria on the one hand, and England, France, and Russia on the other, ought to have been preparing elaborately during the last ten years for the present conflict. The least neglect was criminal; and their Maxses and Blatchfords and Robertses kept telling them so. Yet their preparation never went beyond such obvious steps as keeping level with one another in the matter of armaments, and arranging that if England looked after the North Sea France would look after the Mediterranean. General French, as we have seen, was supposed to be studying the ground in Flanders for five years. I should like to see a diary of his studies outside Brussels,

"The importance of this lies in the entire hopelessness of all schemes of military preparation of the Bernhardian type. If we depend on defense-programs and invasion-time-tables, on plaster Machiavellis and generals who gain a reputation, like the one in Mr. H. G. Wells's book, by presenting themselves to the nation in profile, we shall be led into paper adventures and real disasters like the Germans. Our business is to provide the conditions for improving an army at the shortest possible notice, and not fight until we have to. It is possible to trust in God, to keep your powder dry, and not to be in a burry to bid the devil good-moraing. It is not possible to plan a conquest as if it were a Cook's tour. That way lies Moscow or the Marne."

A "POILU" ART EXHIBITION

THREE THOUSAND MEN at the front in France have found odd moments enough to contribute to a "Poilus' Salon" that now holds forth in Paris. Two of the soldiers were the winners of prizes for the poster designs that draw the attention of the Paris public to the exhibition thus resulting. The New York Sun's correspondent forwards an account of the enterprise and a copy of the design which won for the soldier the prize of forty dollars. Thus:

"The Bulletin des Armées, the weekly paper supplied to the soldiers, conceived the idea of holding a 'Poilus' Salon' and invited its readers' opinions as to the advisability. So much support was promised that the Bulletin obtained the promise of the tennis-court in the Tuileries gardens, and opened up a competition among the men at the front for poster-designs, two officers supplying a prize-fund.

"Three hundred and twenty-one designs were sent in, and the first prize (forty dollars) was allotted to Private Dangon, of the First Army, for his colored drawing of a poils carving a figure

of Victory.

"The second prize (twenty dollars) went to Private Carrière, an ambulance man. It shows a poils sketching a shell-battered ruin. These two posters are now on the walls of Paris inviting the public to attend the show.

"Over three thousand exhibits have been received, all duly attested as the genuine work of men at the front. The difficulty of arranging the varied works was such that 'art-crities' could not be invited for a private view two or three days before the remissage, but the Sun's correspondent was allowed to wander around while the work of putting in place was still going on.

"Besides paintings, drawings, water-colors, engravings, sculptures, there are reproductions in plaster and cardboard, jewelry in aluminum, articles made from German cartridges, from shells of all sizes, fiddles made of cigar-boxes, one of bamboo; innumerable canes, many with handles showing the Kaiser or his eldest son (not flattered), and, in fact, a splendid collection of war-souvenirs, all for sale for war-charities.

"A portrait by Boucard of Madame Macherez, the brave lady who acted as Mayor of Soissons when the Germans arrived, and at least one work by an American especially caught the Sun representative's eye, the catalog not being ready. The latter is by Thorndike, an ambulance volunteer."

DEMOCRACY OUTBREAKING AT PRINCETON

EMOCRACY seems likely to profit by the advocacy extended to it by Princeton's sophomores. At the same time an example is set that may have far-reaching effects on the social life of American colleges. To "make" a society has in many cases come to be the be-all and end-all of a college career, and to fail were to fail all along the line. The men elected to secret societies or social clubs have constituted

the élite of the college's personnel, and the unelected remnant have willy-nilly borne the stigma of the undesirables. A group of Princeton sophomores, among whom is the son of ex-President Cleveland, have issued a manifesto in The Princeton Alumni Weekly (Princeton) reciting that in the belief that "the Princeton club system operates against the best interests of the University," they have decided not to join any club. Princeton, they argue, cut off as it is from the outside world, offers "conditions most favogable for democracy," but "the clubs, by setting up false standards, oppose this democracy." They offer some pertinent reasons:

"This evaluation of sophomores by groups of upper-classmen is all the more inaccurate because the club system raises an artificial barrier between the upper and lower classes. Bootlicking' and the fear of being suspected of 'bootlicking' prevent friendship with upper-classmen.

"Any large body of men tends to divide into groups. But instead of these groups forming naturally, social ambition frequently influences under-classmen to choose their associates for the sake of personal advancement. Some men even avoid others because of the fear that such associations may 'queer' them in the eyes of upper-classmen.

"Every undergraduate has so many different interests that he instinctively wishes to

form friendships with all the men that he finds congenial. But such friendship is restricted by the narrowness and sharply defined limits of club groups, which can not be flexible enough to encourage a man to continue all of his former companionships or to form new ones. Then, too, there are the obvious distinctions among various clubs. There are some clubs to which it is more 'desirable' to belong than to others, and there is a definite order of desirability among all the clubs.

"Moreover, there are always some who are not elected to any clubs whatsoever. Such men feel that seventeen clubs have carefully searched their class and have marked them as 'undesirables.' The result is that they experience a sensation of com-

"The expense of maintaining the clubs is so great that large funds must be exacted from the Alumni for that end. The money thus used is diverted from the larger university purposes for which, it is fair to believe, the Alumni would otherwise be glad to contribute it. Nor is this expense likely to cease in the future, since the competition between clubs in building costly homes is yearly more apparent. In addition, membership in the clubs necessitates a much greater per capita expense, As a result some parents, in order to gratify the wishes of their sons, make a greater outlay than they can well afford.

"In our belief, any internal reform of the clubs would be unsatisfactory, as a social system with all of its accompanying false standards would still exist."

The alternative to the club life is continuance in "the commons" as an eating-place, the function that brought the clubs originally into being. Men who forswear the clubs will thus continue in the general association carried on through the first two years of their course. The Alumni Weekly, speaking editorially, finds it significant that the movement should spring spontaneously from the students themselves, and adds:

"The sophomores have evidently gone into this movement with their eyes open, and with a sincere and unselfish desire to improve the conditions of undergraduate life at Princeton, by taking advantage of what appeals to them as a promising opportunity. The leaders in the movement are likewise leaders in their class, attractive and popular young men who, in the ordinary course of events, would have been sought for as members of the upper-class clubs. This is quite evident from the personnel of the committee they have chosen as their spokes-

men, Mr. Bruce being vice-president of the sophomore class, Mr. Cleveland, the son of the late President Cleveland, having been president of his freshman class, Mr. Strater being one of the editors of The Princetonian, and the other members of the committee being representative sophomores who are highly esteemed on the campus. It is also significant that the movement has the sympathy and, in some instances, the open support of leading upper-classmen who are themselves members of clubs."

President Hibben offers in The Princetonian his approval of the sophomores' move, saying that—

"This new enterprise will serve to relieve the pressure of undue emphasis now placed by our undergraduates upon the importance of being elected into the membership of one of the upper-class clubs, inasmuch as every member of the University will be assured of pleasant surroundings for his meals and leisure hours together with that companionship which all young men crave."

It is recalled by papers outside Princeton that the ends to be compassed by the sophomores were sought by President Wilson when he headed "a smaller institution than the United States." When he called upon the students to abolish their clubs, says the Philadelphia Record, "the students angrily protested; the Alumni denounced the demand and threatened to withdraw their

support. The Trustees became alarmed and begged the President to withdraw his revolutionary proposition." The Record comments on the situation:

"President Wilson's quadrangle project would probably have solved the problem. The assignment of men to the clubs, not by election, but alphabetically, or according to the color of their hair, or by the set purpose of the faculty to mix the rich with the poor, the hard scholars and the very easy ones, the fast students and the slow ones, neight accomplish it.

"But, after all, there is no community more democratic than a college community. Nowhere else do men stand more nearly on their own merits. Of course, there are the men who can get into fraternities or clubs and those who can't, but the distinctions are almost entirely based upon the qualities of the persons concerned. And possibly it is not so bad a thing for the young men to get accustomed in college to the sifting-out process that will be applied to them remorselessly by the world after graduation."

No more does the New York Telegraph see democracy imperiled by Princeton's clubs:

"Why should Princeton undergraduates who prefer 'commons' on the score of economy, or for any other reason, interfere with the conduct of sophomores and seniors who prefer private dining-clubs and the more or less exclusive atmosphere that is found in them? Nobody is compelled to register at a club; nobody is even invited, except in a general way by the announcement of 'cligibles,' as we understand it. . . . We have an idea that if his distinguished father were alive Richard Folsom Cleveland would be advised with some vigor to mind his own business—to dine at 'commons' if he prefers and to permit other undergraduates the same 'democratic' privilege of selecting their own table-mates."

The son of a Democratic President of the United States, he leads a movement for democracy in his college.

RELIGION-AND-SOCIAL-SERVICE

TAKING CARE OF THE WORLD'S WOMEN MUNITION-MAKERS

ACTUATED by desire of profit with scant recognition of ethical values, our manufacturers of munitions stand in strong contrast to those similarly engaged in Europe. Especially is this seen in the employment of women and the crowding in of the legal limit of time for night-work. The Survey (New York) points out that in the United States no patriotic motive governs the output of war-materials, and so "no Governmental review has been made of the new industrial conditions, except that a study of occupational diseases connected with the munition-industry is now in progress by the

Federal Bureau of Labor Statisties." But neither wages nor hours come under this survey. The British, after foreseeing a protracted period of warfare, found that night-work was oneconomical "because of the higher wages and the lower output"; that "workers can not seeure the necessary amount of sleep," and that "workers' digestion is deranged by unwonted meal - hours." The British committee came to see that if the war was to continue indefinitely, the humane treatment of the workers was necessary for the economic value of their labor. Conditions among American women munition - workers

WOMEN BELPING MAKE ARTILLERY FOR THE KAISER'S ARMIES.

in Bridgeport are elaborately described by The Surrey:

"At the present time, according to a statement made by the company, on December 5 last, women are employed in the works in but two shifts. The day shift works the first five days in the week from 7 a.m. to 4:36 r.m., with one hour off at noon, and on Saturday from 7 a.m. to 12 m., a total of eight hours and thirty-six minutes on each day from Monday to Friday, with a working week of forty-eight hours in all. Overtime may prolong the day until 6 r.m. five days in the week, making a total working week of fifty-five hours, the limit allowed by the Connecticut labor law,

"The night shift works from 6:30 r.m. to 4:36 a.m., with a half-hour recess, nine hours and thirty-six minutes each night from Monday to Friday, inclusive. The overtime schedule is until 5 a.m., making ten hours a night and fifty hours a week. Thus, altho the hours have been changed, night-work for women continues, and both by day and by night women not infrequently work as long as ten hours. Moreover, the changes have resulted in lengthening rather than shortening the hours.

"Thus the general impression, that since the outbreak of the war Bridgeport is an 'eight-hour town,' has gradually ceased to be true in the munitions-industry. 'We are still considered an eight-hour department,' said one worker, 'but considering don't make the day seem any shorter when they keep us till six o'clock, as they did every day last week.'

"It was after a series of strikes in the summer of 1915 that the munition-industry in Bridgeport, like several other local industries, was generally organized on the basis of an eighthour day. In trades in which the unions were strong, as with the machinists, the short day has persisted; but for the women workers many of the schedules have been modified, first by frequent overtime and later by the regularly longer day."

The problem of "industrial accident and disease" was less conspicuous, says The Survey, "altho not less important than the night-work." Thus,

"In Connecticut, as in other States in which munition-factories have recently spring up, little attention has been paid

by the community to the means of protecting the workers from the dangers incident to the use of explosives and to the operation of the machinery in the factories.

"Altho Bridgeport manufactures a variety of munitions, nearly all of the thousands of women employed connection with them are at work upon one single product, cartridges. Several of the early processes on the eartridge-cases are performed on dial machines, before which the women operators are seated. The women receive the material in the form of the small brass cups from which the cartridge-cases are to be The worker formed. slips the cups into hollow dies set in the revolving dial, and these pass under punches which draw out the

cups into longer and thinner cylinders.

"Stories of hands mained by breaking punches and fingers crusht in the presses were frequently told to the investigators by the girls who had seen the accidents happen or who had experienced them. One worker showed two crooked fingers, permanently stiff, which had been injured by an unguarded machine a year and a half before. The punch broke, flew out and penetrated the two fingers; blood-poisoning set in, and the girl suffered severely for two months. 'I often used to complain about that machine,' she said, 'but they didn't put guards on it until after I was burt."

In contrast to this is the practical effort of the British Government to pay a part of the "debt of gratitude" which Premier Lloyd-George declares that Britain owes to her women munitionmakers. In the London Daily Chronicle, Mr. Harold Begbie outlines what is being done by the Welfare Department of the Ministry of Munitions under the direction of Mr. Seebohm Rowntree:

"He has seen to it that the conditions of nationally controlled factories shall be humane conditions. He has installed lady superintendents in these factories whose duty is the buman welfare of the workers. And wherever it has been possible he has created in the neighborhood of these factories large hostels for the workers—huts for their sleeping, canteens for their eating, and recreation-rooms for their amusement.

"At some of the factories, while the girls are at their meals

a person will sing or play to them, and in the evening there will be concerts.

"A girl can have a nice cubicle, share in the amenities of the recreation-rooms, and get all her meals for 13s. [\$3,16] a week. This is a veritable triumph of organization, and when the recreation-rooms are better, and a more resolute effort is made to develop the girls' love of dancing, music, and acting, and a more intelligent effort made to mix the sexes in happy and healthful amusements, the triumph will be complete."

In a dispatch from France to the London Times we read of elaborate provisions for the welfare of women in some of the French factories. A correspondent of The Times visited one of the many great plants in which thousands of Frenchwomen between the ages of eighteen and sixty are employed. Here, he says,

"The women in the fuse-making department work under particularly admirable conditions, thanks to the forethought and elever organization of the manager, under whose instructions the buildings were creeted. There are light, ventilation, every possible precaution against fire, and that perfection in the smallest detail which is necessary for the safety of the workers and for the faultlessness of the work they turn out. The women who undertake the most dangerous tasks are isolated and carefully watched; they are also fully warned as to the nature of the work before they are allowed to undertake it. A separate group of buildings is given up to the infirmary, where doctors and nurses are always in attendance."

In Canada, according to a Toronto dispatch to the New York World, three thousand women are engaged in munition-making, and this number is being rapidly added to. They are said to be efficient workers, and, according to this writer, they labor under ideal conditions:

"The rooms are huge, airy, well lighted, and spotlessly clean, and the wages high, ranging from ten dollars to twenty-two dollars a week. In the matter of wages, however, the old antagonism of man has evinced itself. Women, the doing the same work as men, receive less pay. So the ery has been raised:

A DAUGHTER OF FRANCE Doing her part to drive back the invader.

'Equal service, equal pay!' Backed by strong suffrage support, the fight for the putting into force of this slogan is now going on."

In many plants, we read in a descriptive book issued by the Imperial Munitions Board of Canada, spacious lunch-rooms are provided where light refreshments can be bought at low prices, or in some cases are furnished in part by the employers. Many of these rooms are "supervised and managed by the Young Women's Christian Association, as a patriotic contribution, those in charge being voluntary workers." It is added that "matrops, where the number exceeds one hundred, are almost

IN A CANADIAN FACTORY.

This independent worker distains using the stool provided have

indispensable as a means of adjusting the many small irritations that are magnified in a woman's mind by neglect or inability to make them known to one of her own sex."

"SUPPRESSING" RELIGIOUS PAPERS

D'ANGER AHEAD is sighted by practically the entire religious press, Protestant, Catholic, and Hebrew, in the rider attached to the Post-office Appropriation Bill now pending. If adopted, the measure will more than troble the rates on religious periodicals and other second-class matter, baving the effect, so The Churchman (New York) declares, of "suppressing" religious publications in this country. In place of the present flat rate of one cent per pound, it is proposed in the new bill to establish a zone-rate with a sliding scale of from one cent per pound, for deliveries within a radius of three bundred miles, up to six cents per pound for distances over eighteen hundred miles. With the present unavoidable high cost of paper the new burden strikes a death terror, and The Churchman rallies its readers in its own behalf in words like these:

"For The Churchman this would mean an added expense of more than three thousand dollars per year. Other religious papers would be even more seriously affected; come of them would be compelled to suspend publication. Religious journals are notoriously unprofitable as commercial enterprises. Very few of them are self-sustaining. All of them are maintained in the interest of right thinking and right living. Whatever arguments may be advanced, therefore, in support of the proposed increase in its application to secular publications, it should not apply to the religious press.

"The matter is one of serious concern to readers of The Churchman. Indeed, it must affect the whole Church. We urge, therefore, that all possible influence be exerted against the adoption of the new rate, or at least to secure for religious publications exception from its provisions. There is no time to be lost. Write at once, or better, telegraph your Congressman and Senator and the Hon. Robert Lee Henry, chairman of Rules Committee of the House of Representatives, Washington, as follows:

"The zone system of rates for second-class matter as contemplated in the Post-office Appropriation Bill, if applied to national religious periodicals, would practically amount to their suppression. You are urged to use your utmost endeavor to secure such amendment as shall avert this calamity."

The Wesleyan Christian Advocate (Methodist Episcopal, South, Atlanta), taking up the words of protest published by The Continent (Chicago), shows the imminent foisting of the measure before any hearings of the interests affected were held by the House committee, and declares that—

"This matter is so important to the religious enterprises of all faiths that those who do not believe in such a destructive action should communicate at once with their Senators and Congressmen, asking that no final action be taken until opportunity is given for a hearing of all the facts."

THE PAPAL PROJECT FOR CHURCH UNITY

THE POPE'S SUGGESTION FOR UNION among the Churches of the world is hailed as an auspicious augury for 1917, in which year many editors of the religious press hope prayerfully for peace among the nations at war. This is the supreme chance for Christianity "to assert her authority and guide the world out of the darkness enshrouding it," observes The Northwestern Christian Advante (Methodist, Chicago), and it wonders whether the organized Christianity that "failed-ingloriously failed"-in 1914 will again "misher golden opportunity by coming into the new world without a program." If for no other reason, this is why there should be a "congress of Christendom, a democratic congress where all believers in Christ shall meet on a plan of equality, and naught but the spirit shall be master." Yet this journal points out that "what Rome here has to offer is still under cover," and it adds, "we shall see what we shall see." In this connection it is important to note that the plans of the Vatican toward Christian unity are suggested rather than specified in a manner wholly unofficial by Dr. A. Palmieri, of the Library of Congress, who is a writer on ecclesiastical subjects. He is the authority in Washington dispatches for the statement that Pope Benedict XV. is about to appoint a commission of four cardinals to consult on the reunion of Christianity and the cultivation of friendly relations with the Anglican Church. The movement will be particularly directed, according to Dr. Palmieri, toward the establishment of a conciliation of the Russian Church and the Papacy, and a reesamination into the validity of Angliean and Episeopalian ordinations. In summarizing the information he received in private letters from the Vatican, Dr. Palmieri recalls that "efforts of Leo XIII. for carrying out the reunion of Christianity were abruptly stopt by Pius X., who aimed at an inner reform of the Catholic elergy and turned all his energies to the crushing of Modernism," and he adds:

"Benediet XV, thinks it is time to renew the policy of Leo XIII., and also that a reestablishment of a political peace would be the first step toward renewed attempts to stop the splitting of Christianity into a great number of sects......

"One of the most important tasks of the new commission will be a thorough reexamination of the arguments pro and con. on the validity of Angliean ordinations. The buil, Apostolica Scdis, by Leo X., has settled in the negative the problem of that validity, but generally theological schools assume a more favorable attitude toward acknowledgment of the validity of

Anglican orders, and the new commission of cardinals will carefully ponder the reasons set forth by Russian and Anglican divines against the decision of Pope Leo X. The friendship of the Anglican Church is appreciated by Rome, for she may be as a link between Roman Catholicism and Russian Orthodoxy.

"The interest of the Vatican in the problem of Christian unity has been aroused by the recent progress of the world-conference, the well-known initiative movement of the American Episcopal Church. The movement toward Christian unity, started by the world-conference, excited interest and sympathies in Rome, and Cardinal Gasparri, in the name of the Pope, wrote to the secretary of the world-conference, Robert H. Gardiner, several letters which seem to reproduce the style and the feelings of Leo XIII. But that correspondence would not have had any tangible results if the conference had not met with a great success in Russia."

As an indication of Russian feeling toward the project, Dr. Palmieri gave to the press a letter received from Professor Ekzempliarski, editor of The Christian Thought, in which the Russian writer says that "it is with a feeling of joy that Russians see their American brothers take in hand the initiative of Christian unity with energy and assiduity."

Among American religious journals those representative of the Catholic Church seem at the moment to be reserving comment. Their atterances will be recorded as received, while at present we quote only from the non-Catholic press. The Churchman (Protestant Episcopal, New York) believes that the "sympathetic welcome accorded the publication of the papal program in this country is a most hopeful sign," and it speaks of the peace-spirit as "brooding over the face of the world." The hard lessons of the war are learned by neutrals as well as by belligerents, and "criticism of opponents is giving place to a more healthy desire for self-criticism and self-improvement." Again, The Living Church (Protestant Episcopal, Milwaukee) says that it behooves Episcopalians to receive Rome's advance with "full recognition of its frenie value and with a dignified reliance upon the facts of our history." It points to the record of the Church of England and her daughter Churches since the unhappy split with the Churches of Europe, and asks that on that record, "the it is full of grave faults and the there is very much in it of which as churchmen we are ashamed, there be a restoration of communion between the Churches." We read then:

"After intercommunion has been restored, we shall be glad to discuss the questions that are at issue between the communions, but we wish to discuss them as friends and brothers, from within the recognized communion of the Catholic Church, and not as strangers and aliens to each other. We doubt whether the Anglican Churches will wish to lift a finger or to say a word in behalf of the recognition of Anglican orders. That is an internal question which Rome must decide for herself."

As representative of the Lutheran view-point, we have the statement of Dr. Junius B. Remensnyder, pastor of St. James's Lutheran Church, New York, and chairman of the Commission on Peace and Arbitration of the Federal Council of the Churches, who is quoted in the New York Sun as saying:

"I do not think denominations should be separated except for fundamental differences, but I do not believe we are yet ready for the obliteration of denominational lines."

In New York also, Dr. Howard Duffield, paster of the First Presbyterian Church, exprest through The San hearty sympathy with the movement, and said that while he did not "know exactly how the union may be brought about," yet, nevertheless, he would "welcome any movement to unite the different bodies of Protestantism or to bring the Greek, Roman, and Protestant churches together." But among the New York elergymen quoted in The San, we hear a strong dissenting opinion from Dr. Charles A. Eaton, of the Madison Avenue Baptist Church, who is reported as saying:

"I think we might better pay more attention to our souls and less to the mechanics of church organizations. We would put Jesus Christ out of most of our churches—Catholic and Protestant—if he were to appear here to-day."

AMERICA'S GREAT HEART SWIFTLY RESPONDS

Y EVERY GENEROUS INSTINCT of humanity, the Belgian Children's Food Fund, inaugurated by Tuz LITERARY DIGEST last week, is demanded as a philanthropy in which every American citizen should share with eager promptness. More than 1,250,000 children in Belgium hunger for food they can not have, and are slowly wasting away for lack of it. Underfed, underweight, ill-nourished, lacking proper nutrition, puny and pitiful, many of them are too small and weak even to lisp the cry that fatherhood and motherhood must make for them through all the world-"Feed us!" To fathers and mothers in America this ery comes now with irresistible appeal, as from lips that are whitening for a new and appalling harvest of death. One weeping mother might be pictured, with her children at her side, who should represent a great host of such, helpless to supply childhood's wants. Amid the desolation of homes, and hearts, and hopes in which those mothers linger, they beseech us to save their little ones from the slow starvation that besets, to help them build up the weakened lives that remain.

America must answer, or fail, shamefaced, in its duty to civilization. America must answer, with a swift and worthy response, or confess its cruel and unheeding selfishness. America has been growing rich on the profits of food-supplies for starving multitudes in Europe and of the war's necessities for millions of fighting men. Meanwhile Belgian babes have wasted to skeletons for lack of sufficient nutritious food, or have grown toward adolescence without vigor to sustain manbood and womanhood that should by and by be theirs. And whatever peace may bring to their native land, and whenever for them it may dawn, they must now have the help required or never grow fit for making the new Belgium. A humane regard for the future demands that they be properly fed to-day.

Digner readers will remember that two years ago we inaugurated a Belgium Flour Fund, whereby over 22,000 barrels of flour were sent to assist in feeding Belgium's needy people. A barrel of flour was then the accepted unit of contribution, with a barrel's price fixt at five dollars. The Children's Food Fund is even more pathetically needed than was that; and the unit of this Fund we make the cost of that one additional and autritious food-ration a day for one child one year, which will mean all the difference between slow starvation and healthful body-building. That cost, carefully computed, is TWELVE DOLLARS.

The Digest guarantees that 100 cents of every dollar contributed shall go to the Belgian children for whom intended; that not one cent shall be deducted for postage, or elerical help, or publicity of any kind. Only \$12 units, or larger sums, can be acknowledged in these columns. If you feel unable to contribute so much, get others to help you make up the amount. The Literary Digest, as stated last week, will provide for FIVE HUNDRED CHILDREN on this basis, subscribing thus 500 CHILD UNITS of \$12 each, or \$6,000.

We have been led to undertake this new philanthropy by the urgent suggestion of Digest patrons, and by our own growing realization of the tremendous appeal which America must hear and heed. Nothing to match this appeal has been known in human history. For almost thirty months a war has been waging that staggers mankind. The blood it has drained from the hearts of men would crimson every stream of every country where its armies have fought. Even if peace could come to-morrow, and bloodshed cease, Belgium's children must still hunger for many starving months above the soil so drenched with human gore, unless fed by the generosity of other lands.

Droest readers, in the past, have nobly demonstrated their largeness of heart, their openness of purse. In this connection they have again delighted and inspired us with their quick impulses to generosity. Scores of letters came to The Droest from sympathetic subscribers who read "The Cry of the Belgian Children," in our issue of January 6, asking where money could be sent, and urging that opportunity be afforded for them to contribute. One lady in Kentucky remitted \$25, and said:

"For some weeks I have felt conscience-stricken because of my indifference to the sufferings of my fellow beings abroad. As a consequence I have watched the papers and periodicals for advertisements or articles appealing for assistance and indicating the proper address to which contributions may be directed."

"I am a veteran of the Civil War," said a letter from Harrisburg, Pa., after its writer had read the article referred to above: "I am now within a month of my seventy-seventh year. This is part of my pension." And he enclosed \$25,

In the brief time since any Droest readers could have seen our announcement of last week, and before this number goes to press, several responses have come which are gratifying and suggestive. One from Aurora, N. Y., covers \$100, and says: "I shall put your appeals in a public place, in hope others may wish to contribute." From Tulsa, Okla., came \$120, with practical suggestion looking to more. A lady in Northampton, Mass., remitted \$144 "to help through twelve of the little ones," and saying, "I am glad to send with a sense of certainty as to the destination of the gift." "At a conference to-day," says a letter from a Philadelphia manufacturer, enclosing \$100, "I showed 'the boys' your announcement, and I feel that you will probably hear from them individually."

"My Sunday-school class of girls wants to send a small sum weekly or monthly to help aid these sufferers," wrote a lady in Birmingham. Ala., mentioning \$6 a month as the probable amount; and she was advised that if her class wished to pledge \$72 and pay it in monthly instalments of \$6 they could do so. Similar inquiries as to instalment payments on pledges by individuals, organizations, or towns have been answered in like manner. Classes, schools, churches, and whole communities may thus have share in this great philanthropy and arrange to make payments easy on every pledge without burden to any one.

Make all checks, money-orders, or other remittances payable to The Belgian Children's Fund, care of The Liteuary Dieker, 354-360 Fourth Avenue, New York.

REVIEWS - OF - NEW - BOOKS

In deference to some hundreds of requests from subscribers in many parts of the country, we have decided to act as purchasing agents for any books reviewed in The Livenship Doubst. Orders for such books will be reafter be promptly filled on receipt of the purchase price, with the postage added, when required. Orders should be addrest to Funk & Wagnath Company, Jo. 269 Fourth Ass., New York City.

A CURIOUS BOOK ON "SWEDISH CHARLES"

Gade, John A. (Editor). Charles the Twelfth of Sweden. Translated from the Manuscript of Carl Gustafeon Klingspor. With Stustrations. Octavo, pp. xv-371. New York: Houghton Mifflin Company. \$3 net. Postage, 16 cents.

One of the striking effects of the European conflagration is seen in the way it lights up other periods of history and brings within the range of present interest events and characters of the partly forgotten past. Thus, two centuries ago the nations of northern Europe, which thus far have escaped the fiery ordeal, were engaged in a mortal struggle for supremacy and for the control of the Baltie, Then, as now, racial hatreds and the overweening ambition of princes plunged a large portion of Europe into war. A whole century before Napoleon there appeared upon the stage of northern Europe. a military genius whose brilliant achievements changed the current of history and gave lasting renown to his country.

In Charles XII, more than one historian has seen the prototype of the man who was to distance all rivals a century later. And altho the comparison hardly holds true in the literal sense, it appeals to the historic imagination as in some sense warranted by the facts. In originality, in brilliancy and daring of political conception, and in what seems to be the peculiar appanage of genius-the ability to succeed under conditions where success is to other men impossible—Charles is not unworthy of comparison with Napoleon. Had fate deferred Poltava, Charles XII.'s Waterloo, by a few years, had he not been ent off in the early flowering of his achievements, it is certain that the history of northern Europe would have taken a different course. The story of Sweden's great king has left a deep and lasting impression in history and literature as well. Pope in the famous "Essay" links his name with Alexander's; Byron in "Mazeppa" laments "dread Pultowa's day when fortune left the royal Swede," and Dr. Johnson began his famous poem "The Vanity of Human Wishes" with the lines-

On what foundation stands the warrior's pride, How just his hopes, let Swedish Charles decide." And again said of him,

"He left the name at which the world grew pale, To point a moral, or adore a tale."

Voltaire deemed the young conqueror worthy of a separate monograph, and his "Life of Charles X11. of Sweden," is still a classic of its kind. No adequate presentation, however, "of the unconquered lord of pleasure and of pain" has up to now been available for English readers. At last an old Swedish chronicle has been unearthed, a real historical treasure and "document" of Sweden's épopée and its central figure. It is the complete history of Charles and of his famous campaigns told from old diaries kept by a comrade-in-arms, an intimate record of court and camp in Sweden during an epoch of unrivaled historical interest.

The name of the soldier-author is Carl Gustafson Klingspor, He was born in Stockholm, in 1665, and lived until his seventy-eighth year, or until 1742. The translator, who has performed his difficult task admirably—his work producing upon the reader the effect of an original-gives some interesting details of his author. Klingspor entered the service of Charles XL, the hero-king's father, as a mere lad, serving in his early teens as a page, and as an officer "as soon as he was old enough to wield a sword or sit a horse decently."

"The babe whose sword was to flash lightning under European skies," writes the Swedish biographer in his quaint fashion, "was born at a quarter before eight in the morning of June the sixteenth, 1682," That "a glorious and bloody reign" was prophesied it was easy for all men to see, he says. The ladies in waiting "wiped blood off the hands of the babe," and a furious storm was raging without.

The young prince's earour approved the portents. This is how the biographer describes him as he stands upon the brink of manhood:

"Like the whelp of the greybound, the stripling was clean of tooth and limb, museular, gaunt, and lanky, unacquainted with bodily comforts or case. The views of his royal peers. Louis, Augustus, and Peter, were never to be his. The vanity of pomp and splendor, the blandishments of women, the allurements of drink, and the pleasures of delicate food, were all indifferent to him. The religious cant of our time . . . was in the boy practical Christianity, as needful to success in life as the very broath he drow. In the thin, well-marked nose, the wiry hair flowing back from the high, clear forehead, the firmset jaw, and flashing supphire eyes, there were a calm resolution and unbending determination that brooked no resistance. His was an eager, forward face like the prow of a ship, and the short hair in locks like pointed flames. If ever man was born a king, it was this last seion of the line,

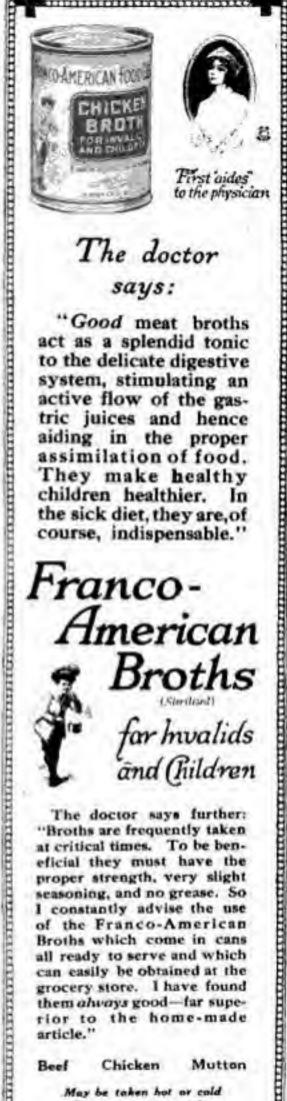

The narrative of Charles's exploits has the picture-queness and Homeric touches of Sienkiewicz's colchrated Polish romances. Nor has the biographer spared love-intrigues, from which the King always issues immentate. Some idea of the quality of the book may be had from the author's description of Countess Aurora von Königsmarek, who was sent to Charles to employ her charms in bringing about peace between Sweden and Poland;

"How shall a poor soldier's pen describe one who at this time was the toast of all Europe? The the grace of her body and the beauty of her face were extraordinary, they were still inferior to the brilliancy of her soul. Everything in her seemed in the greatest harmony. The color upon her cheeks and the shining of her eyes were still, in this her thirtieth year, as those of a beauty of twenty. Her thick black hair lay in waves around the oval face. Her forehead was high and of a lofty ealm. The delicate curve of her dark eyebrows would have inspired poets. Arrows which none had been able to resist were darted from her black eyes, fiery and radiant.

The doctor says:

"Good meat broths act as a splendid tonic to the delicate digestive system, stimulating an active flow of the gastric juices and hence aiding in the proper assimilation of food. They make healthy children healthier. In the sick diet, they are, of course, indispensable."

The doctor says further: "Broths are frequently taken at critical times. To be beneficial they must have the proper strength, very slight seasoning, and no grease. So I constantly advise the use of the Franco-American Broths which come in cans all ready to serve and which can easily be obtained at the grocery store. I have found them aheays good-far superior to the home-made article."

THE FRANCO-AMERICAN FOOD CO. Jersey City, N. J.

Digitized by Google

Even the nose was a masterpiece of the Creator. The mouth was small, the lips like blood, the teeth white and regular. Her bosom was high, her waist was slender. And in this fair casket was the mind no less fair, a jewel. Her rich and cultivated genius had captivated many of the most brilliant men of Europe. Equally well could she banter or argue in the Swedish, Latin, French, German, or Italian tongue. By her talent for painting, song, music, and the art of poetry, as well as her sound, scientific attainments, did she charm whoever discoursed with her, whether amid her nuns of Quedlinburg, or under the flashing crystals of the court chandeliers. She flamed like a very meteor down among the tents of the Swedish camp."

Such was the paragon of her sex whom the Polish diplomats relied upon to melt the Swedish monarch. "But Charles remained obdurate as adamant," says the biographer. The charming embassy proved futile.

Apart from its romantic interest, which seems to us to be almost unrivaled, the book has high value as a study of a great military period possessing some phases analogous to our own.

MR. HOWELLS'S RECOLLECTIONS OF HIS YOUTH

Howells, W. D. Years of My Youth. Pp. 238, New York: Harper & Brothers. \$2 net. Postage, 12 cents.

Renan, who, like Mr. Howells, wrote in old age his early recollections, avers that the most interesting period in the life of distinguished men is their youth, since it is then that the future seems also apparent, the "hidden by a veil." Intrinsically golden, that epoch of life hardly needs the adventitionwaid of literary art to make it. alluring to the reader. In the case of some lives of supereminent interest this chapter has been torn out, or remains fragmentary. When it exists for us complete, and has the charming mold of autobiography, there is little left to be desired in the way of literary interest. Mr. Howells, having almost reached the eightieth mile-stone in his long life's journey, now pauses to take "a longing, lingering look behind." Gazing down the vista of almost fourscore years, he can discern through the lanes of time the magical years of youth. He sees "the wavering outline of its nature shadowed against the background of family."

It would be difficult to conceive of a life more penetrated with literary associations than the one which is here so vividly and charmingly depicted. Never was literary man more thoroughly to the manner born. Howells's father owned a newspaper in Hamilton, Ohio, and the smell of the press and of printers' ink literally haunted his infancy. "The printer's craft," he writes, "was simply my joy and pride from the first things I knew of it." He remembers when he could not read, but he does not remember when he could not set type. His first attempts at literature were not written, but put in type, and printed off by him. He condenses his educational history in an unforgettable sentence: "At ten years and onward till journalism became my university, the printing-office was mainly my school." Yet he did not escape altogether the traditional plague of infancy, the school. But he admits that his schooling was "irregular." As to religion, on its dogmatic side at least, the reader gets the impression that it did not cut a very large figure in the life of the

Your Grandfather Knew These Rubber Footwear Trade Marks

WHEN he bought a new pair of rubber boots, the thing he was most particular about was to see that one of these trademarks was plainly stamped on each boot.

Their names are names to conjure with; each one of them represents a modest beginning, a remarkable growth, a continuous record of quality production, coupled with honorable tradition.

The thought of making any article in any way or from any materials that were not the very best for the purpose would never have occurred to any of these great manufacturers.

To-day, these same trade-marks are on good rubber footwear for your guidance in buying. Only an expert can distinguish good from poor rubber footwear by external appearance and touch. Thus it becomes a matter of self-interest and self-protection for you to make certain that any rubber footwear you buy is marked with one of these famous brands

Seventy-four years of successful manufacturing and the experience of forty-seven great factories are back of every pair of rubber shoes, overshoes, arctics, boots, etc., produced by the United States Rubber Company, the largest rubber manufacturer in the world.

Rubbers that fit wear twice as long as rubbers that do not fit

Asbestos - secret of earth's dawn-source of age old fable-wonder tale of voyagers-curio of kings

When you think of Asbestos you

brakes lined with this same Asbestos mineral of many marvels, fashioned to meet man's needs.

Think of a rock, heavy and dense as marble, yet a nugget of silky fibres, a floss like thistle-down. Each fibre so light it flosts on water-yet so rugged that these million years 'mid the chaos of earth's change have neither broken its slender thread nor marred its silken sheen. Like wool or flax, yet a mineral; both crystalline and fibrous, brittle and pliable-this is Asbestos-Nature's Paradox.

The Ancients Held it in Awe

and wonderful tales grew with each telling. Legend made it the bair of the Great Salamander, the lizard that lived in fire; or again a wonderful plant immune to flame. Small wonder that Asbestos became the stage property of Magi, the costly curio of kings and their shroud on the funeral

Charlemagne astounded his warrior guests by flinging the cloth of Asbestos from the table into the fire, only to withdraw it unburned-even bleached and cleansed by the flame.

Marco Polo was the first to set his little world to rights. Returning from Tartary. he wrote, "In this same mountain there is a vein of the material from which Salamander is made. For the real truth is that the Salamander is no heart, as they aliege in our part of the world, but is a substance found in the earth." And he tells how the rock was missed, pounded into wool in great copper mortars, and woven into napkins for the Great Khan.

But for centuries after, Asbestos remained merely a curiosity.

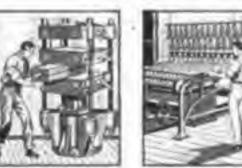

Unique Combination of Properties

Compared with other materials, its aggregutton of properties is unparalleled. Wood burns - Asbestos is unchanged by flame or by a temperature of 1500° F. Stone disintegrates - Asbestos defies erosion. Steel rests Asbestos is immune. Asbestos resists wear and the action of oxygen and acids, is a non-conductor of electricity, and insulates against heat or cold. The old Greeks named it deaserns - "inconsumable." And nothing was ever better named.

Its Service to Man But Begun

Had someone championed Asbestos earlier, the world today would be further along. The Chicago fire might never have happened-indeed, it is probable that 50 years hence the community fire will be a finished page, as the Asbestos roof gains ever wider acceptance.

Steam pipes, once plastered with mud, are now being insulated by Asbestus to prevent waste of heat; engines improve their economy by Asbestos packings. Modern chemistry, too, requires this marvelous mineral for its filters. At every turn, in the homes or workshops of the nation, we find Asbestos, converted into useful form.

How It Was Made Useful

Natural products are usually developed by necessity. But it was left to the vision and foresight of a business institution to realize the possibilities of Asbestos-and to supply the effort, the courage and resources to make Asbestos what it is today.

To really appreciate the task so successfully mastered by Johns-Manville requires a trip through one of their ten great factories. One most see giant machinery transform rock into felts - see paper pressed from pulp—see fibre and wire pressed back into rock-hardness for the brake blocks of some great lift or dredge.

In another section a complete textile mill, where this same rock of Asbestos is spun or woven-spun into thread so fine that a hundred yards weigh but an onnce-woven into cloth like lines or into beavier fabrics as thick as your finger.

On one side a tailor making clothes of flame-proof cloth; on another this same Asbestos combined with rubber for engine. pump, or compressor packings, - again into cements to withstand fierce furnace bests.

So it is made into Shingles, Roofings, Brake Linings, Insulations, Coments, Electrical Devices, Tapes, Clothes, Yarushundreds of products that enter every avenue of science and the useful arts.

Through Asbestos Johns-Manville has made industrial history - bas contributed to progress has made life safer and more complete. It has taken the mystic mineral, the curio, the paradox of the ages, and made it serve Man. A task for any 30 years on achievement which justifies the linking of Asbestos with Johns-Manville.

Paper Spile

think of JOHNS-MANVILLE

American Industries Threatened

American manufacturers have been supreme in turning out high grade machinery and going a long way toward winning the world market, in spile of high labor-cust and of methods in some respects both wasteful and insfision.

To maintain leadership after the war, our manufacturors must correct their methods, eliminate the inefficiencies, adopt alandardization.

There is shown below a Thread Limit Clage, one of the many G. T. D. Gages, The two pairs of points are set by standards in maximum and minimum limits respectively and scaled. Any belt that is too large will fail to pass the apper points, or if too small will fail through the lower ones.

Using Limit Gages, an inexperienced workman can gage thomsands of parts in a day, without error in measurement, and the manufacturer homes the parts will be interchanguide. Not only is accoracy insured, and material and maney saved, but also assembling of parts is much more rapid, and the average quality of the finished product greatly impoored.

For information as to Gages and their wide field of uses, send for "How to Measure Screw Threads."

future novelist. The family faith was that of Swedenborg, and he was received into that communion. "But there were no services of our recondite faith in Hamilton," he writes. "Out of curiosity and a solemn joy in its ceremonial, I sometimes went to the Catholic Church, where my eyes clung fascinated to the life-large effigy of Christ bleeding on his cross against the eastern wall."

Passing to the quite as enchanting period of adolescence, Mr. Howells reviews the period to which his fondest recollections seem to revert—that spent at Columbus, with its social and literary triumphs. It is a delightful picture of mid-nineteenth-century social life in the West that he conjures up for us. Of the literary atmosphere of these far-off days, Mr. Howells writes:

"It was the high noon of Tennyson, and Thackeray, and George Eliot, and Dickens, and Charles Reade, whose books seemed following one another so rapidly. 'The Newcomes' was passing as a serial through Harper's Magazine, and we were reading that with perhaps more pleasure than any of the other novels, and with the self-satisfaction in our pleasure which I have before this argued was Thackeray's most insidious effect with youth striving to spurn the world it longed to shine in. . . . We are all dead now, all save we and the youngest daughter of the house, but, as I think back, we are all living again, and others are living who are also dead."

FABRE'S STUDIES OF THE CATER-PILLAR

Fabre, J. Henri. The Life of the Caterpillar. Translated by Alexander Tetaeira de Matton. Pp. 371. New York: Dodd, Mend & Co. \$1.50 met. Postage, 12 cents.

This is the sixth volume of Mr. Teixeira's admirable translations of the Somenirs Entomologiques, by the remarkable French naturalist, Fabre. It is the first that has been prepared for English publication since the author's death, on the 11th of October, 1915, at an exceedingly advanced age, and it contains all the essays, fourteen in number, which he wrote on butterflies or moths, or their caterpillars. Some of the essays have been printed in periodicals, but the rest now appear for the first time in English.

In the new volume, an elaborate monograph on the enterpillar, the "Homer of the insects" continues his wonderful revelations in the tiny world which has been the study of his lifetime. The exquisite literary form which distinguished the earlier volumes of the great naturalist is here maintained, and the philosophical and lyrical undertone which gives such charm to his writings is even acceptuated. Fabre, with his microscope, absorbed in studying the infinitesimal comedies and tragedies of insect-life, is constantly pereciving glimpses of the truth of things, of the secret of creation. It is hardly too much to say that he sees in the cocoon what Plato sees in the empyrean. He is convinced that future persistence in the study of his chosen domain will reveal new and important truths of science. We have much to learn, he insists, from the animal creation. How enviable, he exclaims, is the superiority, in many cases, of the animal over man. It teaches us the poverty of our attainments, it declares the mediocrity of our sensory apparatus. It proclaims realities "so far in excess of our attributes" that they astound us.

The variety and gorgeous apparel of the caterpillar and the butterfly are well known even to the casual observer of the insect world. But how many have ever seen the tiny, glorified reptile known to entomologists as the Great Peacock? The naturalist goes into raptures over him. "Who does not know the magnificent moth, the largest in Europe, clad in maroon velvet, with a necktie of white fur. The wings with a sprinkling of gray and brown, crossed by a faint zigzag and edged with smoky white, have in the center a round patch, a great eye with a black pupil, and a variegated iris containing successive black, white, chestnut, and purple ares-On the top of thinly scattered tubercles, erowned with a palisade of black bairs, are set beads of turquoise blue." A tiny row of moth's eggs is sufficient to awaken in the author a train of philosophical speculation.

OTHER BOOKS WORTH WHILE

Gray, Louis Herbert, A.M., Ph.D., Editor. The Mythology of tAll Races. Vol. IX, Oceania, by Roland B. Dixon, Ph.D. Pp. xviii-364. Boston: Marshall Junes Company. Postage, 16 cents.

This volume is the third in its series to be issued. An important link of the series with an increasingly valuable study is indicated by the fact that it is from the pen of the professor of anthropology in Harvard. For one of the reasons which abundantly justify these volumes is the light thrown by mythology on human history. One wonders that Professor Dixon was not appalled and discouraged by the magnitude of his task. For what is included here is a digest not only of the myths of Oceania as usually understood. but of the continent of Australia and of the islands of Tasmania, New Zealand. Sumatra, Borneo, Java, the Philippines. and New Guinea. This huge surface area. with its varieties of humanity, presents so large a mass that only by dividing it into more limited areas was treatment possible. The divisions are five, and are indicated on a map at the end of the volume: Polynesia, Mclanesia, Indonesia, Micronesia. and Australia. The arrangement of the material is convenient and illuminating. The bibliography is comprehensive, tho we miss mention of the very valuable "History of Melanesian Society," by Rivers (which makes use of the myths and legends of the region), and of such works as Newton's "In Far New Guinea" and Williamson's "Ways of South Sea Savages." May we suggest that if the map were so mounted as to be visible outside the volume when unfolded it would enhance its convenience. The volume increases our respect for the series and our desire to see it speedily completed.

Collins, Francis A. The Camera Man: Ills Adventures in Many Fields, With Practical Sugcestions for the Amateur, Pp. 278, New York: The Century Company, 1916, \$1.30 net, Postage, 10 cents.

The more than forty photographs, many of them full-page, which illustrate the sixteen chapters of text in this book, add wonderfully to its interest. They show "the Camera Man" in his most difficult positions, obtaining films for "the movies," calmly doing his "stunt" in war or peace. He has come to be a necessity on the battle-field, on the sea, in scientific research and industrial development, along routes of travel—about everywhere, to be sure, that men go for adventure, or knowledge, or gain. The marvels of his performance,

To Goodyear Service Station Men

It is a common error on the part of the average consumer, to believe that the tire manufacturer wants his product to wear out as soon as possible.

Correct him!

Tell him what this Company has done to make tires yield more mileage, to give less trouble, longer life, better satisfaction, at lower cost.

Tell him first of the Goodyear No-Hook Bead, and what it has meant to the tire buyers of America in eliminating rim cuts, tube pinching, blowing off the rim.

Tell him of the Braided Piano-Wire Base in Goodyear Tires, and of how much it has added to the effectiveness of the No-Hook Bead idea in security.

Tell him of the Goodyear "On-Air" Cure, and what it means to users in reducing the risk of blowouts from wrinkled or buckled fabric.

Tell him of the Goodyear Wrapped Tread construction, its importance as a guard against inferior tires going into service. Tell him of the special material used in Goodyear Tires — of the fabric, made to our own specifications because the general market doesn't offer its equal, which tests five per cent stronger than we can buy elsewhere.

Tell him of the advantages of the Goodyear Breaker Strip, and how it rivets tread and carcass in an indissoluble unit.

Tell him of the extra material that goes into Goodyear Tires and Tubes, making them larger and stronger, that they will ride easier and wear longer—an item footing close to three and a half millions of dollars extra this year.

Tell him of the bigger blocks that go into Goodyear All-Weather Treads this year, to give them better traction and greater non-skid efficiency.

Tell him that the total of sums spent by Goodyear in twelve months to make his tires serve better, wear longer and cost less, exceeds four and a quarter millions of dollars. He should know this, for it is spent in his behalf.

And then, as a climax (for it is a climax in tire accomplishment), tell him of the Goodyear Cord Tire—how it was developed, improved, perfected—made truly representative of the best we had learned, evolved, hoped for, through all our experience in tire building.

Tell him how, if it costs a little more to buy than other tires, it costs much less to own—and is worth surprisingly more.

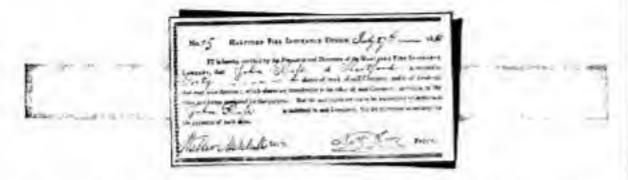

In conclusion, it might be well to reveal how The Goodyear Tire & Rubber Company, through men like yourself, is pursuing a nation-wide plan of tire conservation, by informing tire users in the matters of proper inflation, prevention measures, care and repair.

This point, alone, should refute the error mentioned in the opening paragraph of this advertisement.

The Goodyear Tire & Rubber Co.
Akron, Ohio

Family holds Hartford Stock IO7 Years

The stock originally issued in 1810 to John Russ, one of the founders of the Hartford Fire Insurance Company, of Hartford, Conn., has never been sold. It has been transferred by inheritance only, and is now held by his direct descendants in the fourth generation. In like manner the Hartford's traditions of financial strength and integrity have been handed down from generation to generation. Frequently the biggest inheritance a father leaves to his son is the right to represent the

INSURANCE Service OF THE TWO HARTFORDS

The Hartford Fire Insurance Company and the Hartford Accident and Indemnity Company write practically every form of insurance except life insurance. For over a century Hartford losses have been promptly and fairly paid in ever increasing amounts. Robert Fulton was experimenting with his first steamboat, the Clermont, when the Hartford began to write insurance. From that day to this its growth has kept pace with the wonderful development of the country's trade and commerce.

Are you fully insured? Look over the list below and check the forms of insurance which interest you. Ask your agent or broker to get you a Hartford policy, or write to us and we will tell you the name and address of an agent who can give you rates and particulars.

The Hartford Fire Insurance Co. The Hartford Accident and Indemnity Co.

Hartford Fire Insurance Company, (Service Department D1), 125 Trumbull Street, Hartford, Conn. Gentlement: Please lend information on the kind of insurance checked and name of Hartford agent to the name and address written on margin of this coupon.

the risks that he runs, the progress of his methods, are all set forth in these pages, as also is the camera's evolution.

Leveson-Gower, Lord Granville (First Earl Granville). Private Correspondence, 1781 to 1821. Edited by his daughter-in-law, Castalia, Countess Granville. In two volumes, with portraits and illustrations. Royal octavo. Pp. axviil-510-597. New York: E. P. Dutton & Co. \$10 net per set. Postage, 32 cents.

Encompassing one of the most interesting and dramatic periods of modern history, this correspondence throws penetrating light on the social and political worlds of the third and fourth Georges in England, and upon the Revolutionary and Napoleonic eras in France. Born in 1773 of one of the most aristocratic houses of England. Lord Granville entered early upon a brilliant social and diplomatic career. After having finished his studies at Oxford, a visit to Paris marked the first stage of the "grand tour" upon which he entered. His itinerary included The Hague, Amsterdam, Cologne, and Frankfort. At Frankfort he was present at the coronation of Francis II. Thence he went to Mayence, Coblenz, Gotha, Dresden, Berlin, and St. Petersburg, where he was received by Catherine 11. His course then lay through Moscow, Warsaw, Krakow, Vienna, and Prague, and homeward to England. Most of the famous personages of France and England of that period appear in the correspondence. One of Lord Granville's correspondents saw Napoleon at close range, and the estimate given is singularly interesting.

Nolen, John, Edited by. City Planning. Illustrated. New York: D. Appleton & Co, 1916, \$2 not. Postage, 12 cents.

Many Americans have recently become aware of the disastrous results of an unqualified individualism in city building. Planning in advance and cooperatively has already wrought wonders in many of our growing towns. In this book Mr. Nolen, in conjunction with sixteen other experts, outlines the essentials of city planning in general and in detail. Restrictions upon Private Property, Transportation, Industrial Districts, Recreation Facilities, City Financing, and City Planning Legislation are among the many subjects discust, offering suggestions to meet every contingency in city development. The aim of the authors is to show the public-spirited citizen the advantages of an efficient city to every one of its inhabitants, and to this end they have presented their arguments in the most concrete and practical form. The book is illustrated with photographs and diagrams.

Rider, Bertha Carr (M.A., D.Litt.). The Greek House: Its History and Development from the Neolithic Period to the Helleuistic Age. 8vo. pp. 83-272. New York: G. P. Putnam's Sons; Cambridge: University Press. 33.25 net. Postage, 16 cents.

Archeological investigations over a wide area, especially those taking place since 1900, furnish the material for this volume. the title of which accurately describes it. An interesting feature of the work is one of its fundamental assumptions that the tomb and the house are closely related genetically; indeed, sometimes it is difficult to tell which of the two purposes a structure served. The tomb was "the house of the living transferred to the . . . realms of the dead." In view of the post-glacial migrations, light is sought all the way from North Africa to Iceland, always, however, with strict regard to the environment and to the possible influence upon Greek construction. Lacustrine dwellings, the northern house, Cretan, round, elliptical, rec-

When Will You Displace Cruel, Time Wasting, Money Losing Horse Drawn Service and Use Smith Form-a-Truck?

Blinding storms, snow, icy streets and-down go the horses! One delay, one accident, may cause the loss of a valuable shipment or the death of a costly animal. And the money cost will be greater than you would pay for Smith Form-a-Truck.

Pays for Itself

Smith Form-a-Truck takes uncertainty out of hauling-takes high cost out of delivery-puts your hauling department on a profit-earning, time-saving basis that more than pays for your Smith Form-a-Truck equipment in the first few months of use,

Twice the Tonnage; 3 Times the Area

Smith Form-a-Truck hauling costs are lower than for any other form of service -- accurate records show that one Smith, working the same number of hours as horses, will cover three times the area and haul twice the tonnage. Can you afford to delay installing this remarkable service in your delivery?

\$8 Repairs in 4 Years

Smith Form-a-Truck service is reliable under every condition of work. The first Smith Form-a-Truck ever used has gone 20,000 miles-carried an average load of 2050 pounds and cost \$8 for repairs in its four years of work. Where can you duplicate this record except in Smith Form-a-Truck Itself?

Use These Power Plants

Smith Form-a-Truck combines with any Ford, Maxwell, Buick, Dodge. Brothers, Chevrolet or Overland power plant. Makes a permanent, strongly built one-ton truck, fully guaranteed, with every feature of construction adding to endurance, long life, low cost and good speed of delivery.

Thousands of Users-352 Lines of Work

10,000 users of Smith Form-a-Truck in 352 lines of business all over the country are building new standards of motor truck efficiency and delivery economy in all their work. Equipments range from large fleets used by many of the biggest corporations to single units that are bringing a new idea of real service to small users.

The Smith Form-a-Truck dealer organization is built up of many of the biggest men in the motor trude industry - each is the leader in his vicinity.

tangular forms, Minoan-Cretan houses and palaces, those on the mainland, in Troy, Homeric palaces, and the historic house of classic Greece are successively described, with over fifty illustrations and abundant references to sources.

The conclusions are: A continuity of type from Neolithic to Hellenistic times; the order of succession of forms seems to be round, elliptical, rectangular (on the basis of the order at Orchomenus); the mainland type is characterized by the megaron, or large hall with hearth, which the Homeric palace follows; classic Greece shows the courtyard type predominating, the the Mycengan-Homeric persisted. The chapter on Homeric palaces is of especial value to the student, with its discussion of Homeric terms and phrases. The book is naturally not easy reading, and is intended for the specialist, not for the general reader. It is a convenient summary from sources often not easily accessible.

Winter, Nevin O. Texas the Marvellous. Pp. 343. With a map and fifty-four plates additional. Hoston: The Page Company. \$3.50 net. Carriage charge, 25 cents.

Probably no other State of the Union has had a history so romantic as Texas; none other can match it in breadth of area, in sweep of magnificent agricultural domain. "Few persons," as Mr. Winter says in his Preface, "unless they have had a visual demonstration, fully appreciate the almost unprecedented development that is now taking place in Texas." He writes about this, and about all the romance and strife which preceded it, with a facile pen and con amore, albeit he is not a Texan. "The Lone-Star State" has been a field of courage and carnage unbounded, since the vast extent of it separated from Mexico. now practises chiefly the arts of peace, and the pen-pictures and duogravures presented in this very sumptuous volume will not only prove how successful these arts are but will greatly surprize the world at large. "Texas the Marvellous" well deserves its place in the "See America First Series," of which it forms a part.

Mackle, R. L. (M.A.), Scotland, Illustrated, Svo, pp. aliv-588. New York: Prederick A. Stokes Company. E3 net. Postage, 16 cents.

This volume belongs to the "Great Nations" series, four of which have already been published. It purports to give in thirty-five chapters an accurate and impartial account of Scotland's triumphs and defeats, manners, institutions, and achievements, from the days of Agricola (80 a.p.), in Caledonia, down to the death of Sir Walter Scott, in 1771. The author has aimed to give "a short, well-balanced, and well-proportioned introduction to the history of Scotland," and he has succeeded. It is richly illustrated with half-tone plates and pen-sketches.

Olcott, Virginia. Plays for Home, School, and Settlement. Flowers in the Palace Garden and Other Plays. Designs for costumes by Harriet Messi Olcott. New York: Moffat, Yard & Co. 1916. \$1,00 net.

Color-plates and outline-drawings suggest the practical way in which the little plays, included in this volume, may be used. The author does not claim much literary value to her pieces. Her aim has been to satisfy the average mental capabilities of young folks desiring to express themselves naturally, and without too much demand being made on their natural talents. The language is simple and easy to memorize.

CURRENT POETRY

HILAIRE BELLOC is a historian, an essayist, a political economist, a novelist, a journalist, and one of the shrewdest and best-informed of all chroniclers and erities of the great war. Also, he is a poet, but he has had little time to spend in riming. In a great anthology published a few years ago he was represented only by a few limericks. But the editor of the anthology is not to be blamed; it is only now, by the publication of his "Verses" (Laurence J. Gomme) that Mr. Belloe's claim to the title of poet is made clear to the American public. The first poem that we have selected for quotation from this volame has historical as well as literary interest. During the Boer War, Mr. Belloe's sympathies were not with England. Yet his heart went out to the friends of his university days-his comrades at Balliol College, Oxford-who were fighting in South Africa. So he put his hatred of the Boer War and his love of war in general, and his devotion to Balliol and to the friends of his youth, into lines that are irresistibly appealing in their vigor and passion.

TO THE BALLIOL MEN STILL IN AFRICA

BY HILARE BELLOC

Years ago when I was at Balliol, Halliel men-and I was one-Swam together in winter rivers. Wrestled together under the sun And still in the heart of us. Balliot. Balliot. Loved already, but hardly known. Welded us each of us into the others Called a levy and chose her own.

Here is a House that armors a man With the eyes of a boy and the heart of a ranger, And a laughing way in the teeth of the world And a holy hunger for thirst and danger; Daltiol made me, Balliol fed me, Whatever I had she gave me again; And the best of Balliol lovest and lest me, God be with you. Balllot men.

I have said it before, and I say it again, There was treason done, and a false word spoken, And England under the dregs of men, And bribes about, and a treaty broken But, angry, lonely, hating it still, I wished to be there in spite of the wrong. My heart was heavy for Cumnor Hill And the hammer of galleping all day long.

Calloping outward into the weather. Hands a-ready and battle in all: Words together and wine together And song together in Balliol Hall. Hare and single! Noble and few! . . . Oh! they have wasted you over the sea! The only brothers ever I knew, The men that laughed and quarreled with me,

Balliol made me. Balliol fed me, Whatever I had she gave me again; And the best of Balliol loved and led me, God be with you. Balliol men-

Friendship is the theme of some of Mr. Belloc's best work. In this beautiful ballad, it is to the friends of his youth, as well as to the country of his youth, that he looks with longing. The author of these lines surely deserves to be the laureate of Sussex.

THE SOUTH COUNTRY

BY HILARE BELLOU

When I am living in the Midlands That are sodden and unkind. light my lamp in the evening: My work is left behind; And the great bills of the South Country Come back into my mind.

Setting the Writing at Rights

Schoolroom blackboards have only one purpose and one use and that is tourk.

Speaking generally, the blackboard is used for writing.

Blackboard is a necessity, but it need not necessarily be black. Beaver Greenboard with its live tone of deep green has made this possible. It puts color into the schoolroom wall to take the place of black, which is the absence of color.

Beaver Greenboard and Beaver Blackboard cost infinitely less than slate, and are made throughout, base as well as surface, by a company with an international reputation for products of standard quality.

Beaver Greenboard and Beaver Blackboard will not warp, crack, chip nor bulge. They are easy to apply and to keep in perfect condition. Will last as long as the average building. Backed by a broad guarantee of durability and satisfaction.

Manufactured by the makers of Beaver Board, Simply write your name and address at the bottom of this advertisement and send to the address below. Samples and literature will be sent to you.

Lank for the Beaver trade-mark on the back of every panel of genuine Beaver Greenboard ar Beaver Blackboard.

Quick Starts on Cold Nights

HE theater crowd is homeward bound—your party is seated in the car, eagerly awaiting the first muffled tones of the engine. Whether the start is promptly made, or whether the battery is too feeble to do the work, depends not only on the kind of battery, but also on the service behind it.

A battery that is "supervised by Prest-O-Lite service" is quite certain to be a lively, healthy source of power.

Cold weather, hot weather, roads, speeds, trafficall these things have one effect or another upon your battery.

But no matter what the conditions, and no matter where you may be, Prest-O-Lite Service is at your disposal to help you keep your battery in good condition and insure your satisfaction.

In addition to the Prest-O-Lite Factory Branches insuring direct factory service, there are special service stations in cities and towns in all parts of the country. The service rendered to all car owners in avoiding battery troubles through expert inspection, is a valuable thing to you, but is rendered without cost.

When you need a new battery, remember there is a Prest-O-Lite Battery of correct size for your car, and it will give you superior service and satisfaction.

The great hills of the South Country
They stand along the sea;
And it's there walking in the high woods
That I could wish to be,
And the men that were boys when I was a boy

And the men that were boys when I was a Walking along with me.

The men that live in north England I saw them for a day: Their hearts are set upon the waste fells. Their skies are fast and gray: From their castle-walls a man may see The mountains far away.

The men that live in west England
They see the Severn strong.

A-rolling on rough water brown
Light aspen leaves along.
They have the secret of the Rocks,
And the oldest kind of song.

But the men that live in the South Country Are the kindest and most wise. They get their laughter from the loud surf. And the faith in their happy eyes

Comes surely from our Sister the Spring When over the sea she files: The violets suddenly bloom at her feet,

I never get between the pines
But I smell the Sussex air;
Nor I never come on a belt of sam!
But my home is there.
And along the sky and the line of the Downs

She blesses us with surprize:

So noble and so bare.

A lost thing could I never find.

Nor a broken thing mend:

And I fear I shall be all alone

When I get toward the end.

Who will there be to comfort me

Or who will be my friend?

I will gather and carefully make my friends Of the men of the Sussex Weald, They watch the stars from silent folds. They stiffly plow the field. By them and the God of the South Country My poor soul shall be healed.

If I ever become a rich man,
Or if ever I grow to be old.

I will build a house with deep thatch
To shelter me from the cold.

And there shall the Sussex songs be sung.
And the story of Sussex told.

I will hold my house in the high wood Within a walk of the sea. And the men that were boys when I was a boy Shall sit and drink with me.

There is much delightful music in William Griffith's "Loves and Losses of Pierrot" (Robert J. Shores), and the poems that make up the dainty volume are so interrelated as to make a charming lyrical story. We are tempted to quote many of these poems, but can give only this delicately but memorably etched picture of a lover's grief.

PIERETTE IN MEMORY

BY WILLIAM GRIFFITH

Pierette has gone, but it was not Exactly that she died, So much as vanished and forgot To say where she would hide.

To keep a sudden rendezvous,
It came into her mind
That she was late. What could she do
But leave distress behind?

Afraid of being in disgrace,
And hurrying to dress,
She heard there was another place
In need of loveliness.

She went so softly and so soon— Sh!—hardly made a stir; But going took the stars and meen And sun away with her. Here are war's keenest sorrow and a picturesque bit of English folk-lore blended together in a poem of poignant tenderness and of power. It was in The Westminster Gazette recently.

TELLING THE BEES

(An Old Gloucestershire Superstition)

BY G. E. R.

They due no grave for our soldier had, who fought and who died out there;

Bugle and drum for him were dumb, and the padre said no prayer;

The passing bell gave never a peal to warn that a soul was fled.

And we laid him not in the quiet spot where cluster his kin that are dead.

But I hear a foot on the pathway, above the low hum of the hive,

That at edge of dark, with the song of the lark, tells that the world is alive:

The master starts on his errand, his tread is heavy and slow.

Yet he can not choose but tell the news—the bees have a right to know.

Bound by the ties of a happier day, they are one with us now in our worst; On the very morn that my boy was born they were

told the tidings the first:
With what pride they will hear of the end be

With what pride they will loar of the end he made, and the ordeal that he trod-

Of the scream of shell, and the venom of hell, and the flame of the sword of God.

Wise little heralds, tell of my boy; la your golden taburd coats

Tell the bank where he slept, and the stream he leapt, where the spangled his floats;

The tree he climbed shall lift her head, and the torrent he swam shall thrill.

And the tempest that bore his shouts before shall cry his message still.

There is an imp of adventure hidden in the heart of the sedatest man. In these rollicking stanzas, Mr. Braley gives this imp a voice.

THE LAWLESS HEART

BY BERTON BRALET

Dull trade hath bound me in its grip.

And never shall I be free,
Yet I dream of the decks of a pirate-ship.
In the roll of the open sea;
I dream of the pennant dread and black.
That flies the mast alway,
As we swoop along on a Merchant's track.
In the sting of the flying spray!

Oh. I am a law-abiding chap,
Yet deep in my heart I'd be
A buccaneer with a scarlet cap
And a Terror of the Sea.
As lawless and ruthless a bandit brute
As history ever knew,
Roaming the seas in search of loot
At the head of an evil crew!

Oh, here at home I am meek and mild.

A man with a family.

Yet I dream of deeds that were dark and wild.

And of red, red fights at sea:

And under my breath I softly hum

A stave from a pirate song.

And my throat grows parched for pirate rum—

For I have been dry so long!

My life is ordered and shaped and bound
And kept to its rule and line,
But my thoughts can wander the whole world round
And my dreams—my dreams are mine!
So the old tales hold me in their grip
And I hungrily long to be
A pirate chief on a low black ship

In the roll of the open seal

PROTECTS
YOU
EVERY
DAY
This is a stylish, convertible, all-year top which protects you from the winter's snow or the summer's dust or rain. If

Koupet Top

you drive a Ford you need a

The "Koupet Top" is made ONLY for the Ford runabout — 1915-16-17 models. It is similar in operation to the expensive touring Se an tops.

We have been making closed carriages since 1857. Our skill and experience is summed up in the "Koupet Top." You will appreciate its style, quality, finish, and many other exclusive features.

The frame is of hard wood, covered with best quality 32-oz, rubberized duck. Side panels and doors are of glass and may be removed in a few moments, making an open car.

The windshield is the newest doubleacting, ventilating, automatic type. Both the doors and windshield are adjustable to any position by patented, self-locking devices. They will not rattle.

You can easily put the "Koupet Top" on your own car. No skilled labor required. It will outlast the car.

There are many Koupet Top dealers ready to serve you. We want more dealers.

Write for circular, or order at once if you are in a burry. Weight 75 lbs. Shipping weight 120 lbs. Price F.O.B. Cars Belleville, \$37.50. Money back if not satisfactory after 10 days use:

PERSONAL GLIMPSES

"BUFFALO BILL"

THOUSANDS of Americans remember him first as a straight, proud figure eantering into the arena, waving a sombrero, and smiling at the cheering crowds. He was the D'Artagnan of America, for the country has probably produced no more romantic character. From the Golden Gate to the Plymouth Rock, his name and face have blazoned out on thousands of eireus-posters; he made the old historie West live again for the boys who read of Indian-killing on rainy afternoons, and for their fathers who had done the same, thirty years before.

And now that Buffalo Bill has passed up the long trail, do you remember, asks the Philadelphia Ledger, how he got that name? Then we are told:

Buffalo Bill himself told it in this way: As a boy scout he was employed on the plains by the Kansas Pacific Railroad and paid \$500 a month to supply their workmen with buffalo-meat. They called him Buffalo Bill because he killed so many luffaloes. And thereby hangs the real buffalo story of Buffalo Bill.

In a period of eighteen months' work with the Kansas Pacific young Cody had performed the unusual exploit of killing 4,280 buffaloes with his own hands, and had come off victorious in sixty-four separate encounters with the Indians. The exploit was the talk of the frontier. There were some who doubted, and among them Bill Comstock, a noted buffalo-hunter. Comstock challenged Buffalo Bill to a test of skill to settle the question.

The stakes were \$500 a side. Each man was to hunt a full day, from eight o'clock in the morning until eight o'clock at night. The man who killed the most buffaloes was to be the winner of the stakes. A number of cowboys rode with each contestant to take the count. By his own peculiar methods of buffalo-hunting-his specialty being a way of rounding up the herd and encircling them-Cody came back in the evening on his famous horse "Bingham" with sixty-nine to his credit. Comstock could kill but forty-six. From that day Cody's name was changed by common consent to Buffalo Bill.

And, of course, as any small boy will affirm, he also killed Indians—oh, thousands of 'em, and everything, as the same small boy would add. His first Indian, according to the account, fell before his trusty revolver when the scout was only fifteen years old. It is said of this incident:

The McCarthy brothers, Bill and Frank, famous plainsmen in their day, were in charge of a wagon-train hurrying provisions to a detachment of United States troops under Gen. Albert Sidney Johnston, operating against the Mormons. Young Cody was in the party, eager for adventure and as steady as a veteran in the face of danger.

Their camp was pitched at noon near the South Platte, about 350 miles west of Leavenworth, Kansas. The horses were

unhitched, preparations for dinner under way, and the tired plainsmen stretched out for a little siesta. Suddenly they were surrounded by Indians. Four of the white men fell at the first volley. frightened horses stampeded and fled. Outnumbered four to one, the frontiersmen broke and fled in every direction.

Little Bill was all alone, and for hours made a running fight, finally coming into shelter in brush along the river. As he lay panting for breath he looked up and saw an Indian at the top of the bank. The Indian sighted along his rifle, and at the same instant the boy Cody pulled his revolver and "let 'er go." His shot sped home first, and in a moment the Indian came tumbling down the bank and rolled at the boy's feet. Young Cody took a look and found he had shot the redskin through the left eyeball.

That was Buffalo Bill's first "kill," but, as he told it always in these later years to the leaders of the world whom he met between shows and circuses, his greatest Indian "kill" was his encounter with Yellow Hand, the Cheyenne chief.

In the Sioux uprising of 1876, Colonel Cody was chief of scouts with General Crook's command. They faced the Indians at Bonnett Creek. The confesting forces were close up to each other in their trenches ready to charge. Suddenly a superbly mounted Indian chief rode fearlessly into the open and shouted in the Cheyenne tongue: "I know you, Pa-he-hask (Long Hair)! Come out and fight me if you dare!

It was Yellow Hand, a famous warchief. Of course, the man at whom he hurled the challenge was Buffalo Bill. Needless to say, the challenge was immediately accepted. Before General Crook could interpose, Cody had spurred forward. His first shot dropt the Indian's horse, At the same moment Buffalo Bill's charger stept in a rut and rolled him in the dirt. They were both up in a moment and facing each other. Yellow Hand raised his tomahawk and brought it down straight for Cody's head, but the old fighter sidestept, grabbed the wrist of the upturned arm, and in a trice thrust his own good knife into the Indian's heart.

Colonel Cody was always, we are told, the friend of the American boy. He was known to receive an average of fifteen or twenty letters every day from boys all over the globe, with whom he maintained a lively correspondence, telling them of his experiences and adventures. As we read:

"I have thousands of sons all over the world," Cody would say, "It has been my practise for years, ever since I started in the show business, to write to them. I never neglect my boys."

Horace Greeley said: "Young man, go West." Colonel Cody preached it

continually.

And if Buffalo Bill was "strong" with the boys, he was equally strong with the big leaders of society, business, and finance in his own country as well as the royalty of Europe. He hobnobbed with kings and emperors. The best story along this line is the one set down in his book, "The Adventures of Buffalo Bill," a book that is as well known, I venture to say, among schoolboys as any textbook. The story runs like this;

The Buffalo Bill Wild West circus was touring England. Everywhere the com-

Third Series of Twelves A New Model

When four cylinders were the proper thing. National built the world's Champion Fours. When sixes came into vogue, it was National that built the first Amencan sixes, and National Sixes of today are the highest development of that type. National was a pioneer in the latest type motorthe Twelve Cylinder.

National Twelve Cylinder cars are today in operation in every state in the Union and in cleven Foreign countries.

New Features

Removable cylinder heads to facilitate cleaning and inspecting.

Increased size of cylinder with corresponding in crease in power.

Balanced crankshaft another power increasing improvement.

Heated intake manifold to handle effectively the low grade fuel.

Valves on outside of V continued together with new design valve lifters make National Twelves most accessible of all V motors.

THIS new National Twelve cylinder motor (third series of Twelves) is the last word of all multi-cylinder efforts to achieve perfection. From low to high speed at every stage between—there is the same high pressure of power, even, supple and subject to your perfect control.

You are not reminded of the mighty and faithfully working motor under the National's hood, because no mechanical effort is observable.

The inspiration behind the National gives you outdoors the same status your drawing room gives indoors.

Six or Twelve Cylinder Highway Models

TSNT it logical, the engineers who master I multi-cylinder problems by perfecting a Twelve are best qualified to build the most efficient Six? National, too, had the advantage over all others by building America's first Sixes. Let a demonstration convince you National's Six is a superior Six in every respect.

Furnished in Touring Car, Roadster, Phaeton, Coupe and Touring Sedan in both Six and Twelve Cylinder Models

pany went in Europe the famous scout was entertained by royalty, and he in turn entertained them. One day after they had opened in London, King Edward, then the Prince of Wales, exprest a desire to see the show. A box was prepared and the royal party attended. The whole exhibition was so new and interesting that in a short time the Prince went again and exprest a desire to ride around the ring in the Deadwood coach.

Buffalo Bill was ready, and called for five passengers. The five passengers who accepted were the Prince of Wales, himself upon the box beside Buffale Bill, and four kings who happened to be visiting in England—the King of Denmark, the King of Saxony, the King of Greece, and the Crown Prince of Austria. As usual, the coach started. But this time the Indians who attacked and the cowboys who rescued the coach had been instructed to "do something a little extra," to give louder yells, to fire a few more shots. And it is no wonder, as the rumor goes, tho proof does not exist, that before the ride was over some of the four kings were under the seats. When the trip was finished and the Prince of Wales congratulated Huffalo Bill, he said to him:

"Colonel, did you ever hold four kinglike that before?"

And Cody replied: "I have held four kings more than once. But, your Royal Highness, I never held four kings and a royal joker before."

There is another story which this sketch of the scout includes—one relating to his domestic life, telling how he got his wife. It bears the same romantic color that the greater part of his life did. We are told:

Riding through the streets of St. Louis one morning, young Cody came upon a crowd of intoxicated soldiers plaguing a number of schoolgirls. Chivalric always where there were women, Cody dismounted and ordered the crowd to disperse. They answered with oaths; the young scout sailed into them. It was short and sweet. Three of the bullies were stretched out in a minute. The girls made their escape—all but one, a little black-eyed maiden too scared to run.

The stalwart young Cody just naturally tucked her under his arm and escorted her home. She was Louisa Frederici, a chie little Parisian, daughter of an exiled Frenchman, and one of the prettiest "gals" in St. Louis. Like a true knight, Cody came back later, married her, and took her with him to Salt Creek Valley.

They also tell of him, according to The Ledger:

Upon one occasion, in 1872, Buffalo Bill took care of a party of New-Yorkers headed by August Belmont. They were so pleased with the picturesque warrior that they invited him to be their guest in New York. Cody accepted the invitation, and in a short time appeared upon Broadway in his frontier buckskins. He was a hit in New York—a sensation—and well "taken up."

Cody's fame had preceded him and they were doing him in the theaters. It is related that one night the genial Cody was the guest of Mr. Belmont and his party at a theater. From a shaded corner of one of the boxes Cody looked on in mixed amazement and disgust at a "hero" supposed to be interpreting the rôle of "Buffalo Bill, of the wild and woolly." But the act got over in fine style.

The idea struck Cody that if an imitation would go, why not the original? He fell in with Ned Buntline, and very shortly Buffalo Bill appeared at the head of his own company. His stage troupe included at the first Indians and cowboys, then the Deadwood coach, etc. The troupe got so large it overflowed the largest stage, and so Colonel Cody went back home—to the Middle West—and got together his first famous Wild West show. You know the rest. You have seen it.

And the New York Times, printing his last press notice, winds up with this tribute to the heir of Drake, Raleigh, and all the other early pioneer-cavaliers:

Colonel Cody, "Lieutenant-Colonel the Hon. William F. Cody," as the London papers used to call him in the Jubilee year when he was showing the Queen about his Indian camp and the Prince of Wales rode in the Deadwood stage, was the picturesque and genuine incarnation of a West that is gone, of the days when a million buffaloes "roamed the plains," as in the novels of Mr. Beadle's and Mr. Munro's series, dear to the youth of oldsters. Some of those oldsters remember when buffaloes could be shot from the windows of Union-Pacific trains. The strain of adventure and a romantic temperament was in his blood, Irish, Spanish, English. He trapt and bunted and fought Indians when only a boy. He was in wild Kansas, now so tame, ten years before Mr. Douglas brought in the Kansas-Nebraska bill.

All the excitements of the frontier and the trail were his. He was a man, it may be said, at ten, when his father was killed in a row over slavery, the seed of dissension between men, and parties, and sections. He was freight-wagon courier, pony-express rider, he drove stage. The sum of his accomplishments and activities was all that the boys of fifty years ago deemed admirable and heroic. He was a hero such as "Ned Buntline," or Emerson Bennett, or Mayne Reid could but strive to depict. He was a brave and wary scout, Phil Sheridan's chief of scouts, the slayer of Chief Yellow Hand. He was a brave soldier. Other men were these. It was Cody's good fortune and that of the country, and a good bit of the rest of the world, that he bodied forth the heroic age of the West.

One seems vaguely to remember in the dark backward and abysm of forty-odd years ago his not too successful appearance in "The Scouts of the Plains," or some such border play, rudely enough composed, probably, by that same "Ned Buntline," a god to a generation of boys brought up on novelettes and weekly story-papers, The Flag of Our Union, The Ledger, Street and Smith's Weekly, and now a name writ in water. It was not as an impersonator, but as himself, that Buffalo Bill delighted millions and became better known than the equator.

Will there ever be anything to equal the Wild West show, or is it to confess oneself the child of a simpler time so to ask? Again the outstentoring and world-shaking voice of Nate Salsbury "announces," heralds the pageant. Ponies, mustangs, horses, Indians of fine feather and ferocious port, scouts, Mexicans, cowboys, cowgirls, buffaloes—before these

Your motor robs you of

fully one-fourth of your oil and gas. Its leaky piston rings are "getting away" with fuel that should be converted into power and mileage—and would be, if you had gas-tight piston rings.

Inlands stop the stealing!

Gas-tight piston rings mean cheaper and better car operation. Inlands mean cheaper and better gas-tight piston rings. The Inland spiral cut (patented) produces a mechanically perfect piston ring:—Simple, one-piece construction, therefore low-priced. Equal width and thickness all around; therefore strongest and most durable.

Absolutely gas-tight;—

because it has no gap and because the spiral cut causes it (in expanding) to uncoil in a perfect circle, exerting uniform pressure against the whole inner circumference of the cylinder.

became museum pieces, so to speak, curled darlings of preserves, and parks, and Buffalo Jones—not too wild cattle, "buckers" that kicked the sun, Arapahoes. Cheyennes, Pawnees, Sioux, all sorts of Tawnies; the Deadwood coach, better than all the gilded coaches of Napoleon, rattling and capering along, pursued and rescued, to the sound of shots innumerable, and the darkening of heaven and earth with dust.

It was a grand show, let the slaves of the movie habit say what they will. It pictured an extinct civilization and barbarism. It was honest, manly, courageous, of the open, like its master. We can see him still, a little stiff in the legs latterly, but a gallant figure. He has ridden around until the spectators are dizzy. He lifts that patriarchal and venerable hat—it looks gray, or is that the mist of memory?—and bows from the saddle.

He played a good game of poker. He was straight as a trivet. He knew the men and manners of many cities and countries. Emperors, kings, princes and princesses, sculptors, painters, statesmen, half-breeds, papooses, he was at home with all. There was something essentially poetical and artistic about the man, The frontier boy was naturally a cavalier and a courtier in the good sense, the man at ease everywhere, sure of himself. In certain portraits of him one gets a glimpse of a sixteenth-century look. It is Probisher, Drake, Raleigh, born in Iowa and bred among horse-thieves, border ruffians, and exiles from civilization.

He got a lot out of his long life. Endurance, valor, horsemanship, marksmanship; it was a pretty good university, his show. The symbol of a noble period of American history, a friend of the youth of many of us, departs. "Even as a mother covers her child with her cloth, O Earth, cover thou him!"

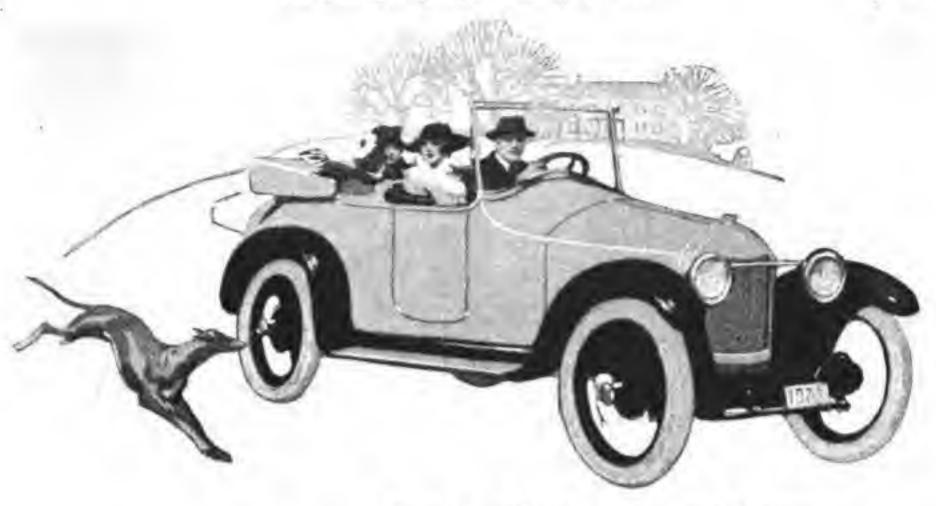

"THE HONEST CITIZEN"

I you happened along a deserted street, and picked up a purse containing ten crisp new hundred-dollar bills, would you advertise them and make an attempt to return them to their owner? Doubtless. However, if in your morning's mail you received a single dollar bill, with a letter showing that it was intended for a certain company—evidence that the sender had apparently mixed the envelopes in which he had mailed two letters—would you return the bill or keep it?

Mr. Cleveland Moffett, who details his experiments in McCluce's Magazine, decides that if you were a millionaire, the chances are that you would not; but if you were a laundress or a poor school-teacher you would. In short, there seems, after all, to be some base for the conclusion of all the old-fashioned writers of the Rollo books, et al., that the rich are usually wicked and the poor are virtuous.

In a recent issue of the New York World, we find a résumé of Mr. Moffett's investigations to discern just how honest people really are when there is practically no chance of their being found out if they fall. Mr. Moffett's views were given to a young woman interviewer, who tells us:

Mr. Moffett, who is an editor and author

Eight Cylinders Crown The Luxury of Light Weight

Here at last are co-ordinated—in the one car of its kind—those elements of ease, elegance and efficiency which, singly, have made a few of the most notable cars successful.

Applying eight cylinders to the luxuries recognized as distinctively Scripps-Booth, intensifies those luxuries, and adds much more than passing interest to the new

Luxury is here, with smooth flowing power and swiftness.

Beauty is here, in Scripps-Booth individual fashion—a fashion more copied this year, in high-class chassis, than any previous body design in America.

Handiness and economy are here—elements never before marked in a car of Scripps-Booth qualities.

And in the "eight" all of these qualities intensify the luxury of performance for which Scripps-Booth is already famed.

Eight-Cylinder Four Passenger - \$1285 Eight-Cylinder Town Car - \$2575 Four-Cylinder Roadster - \$935 Four-Cylinder Coupe - \$1450 An expansion of factory output now comes to match the growing public approval of Scripps-Booth's exclusive luxurywith-lightness origination.

The new Scripps-Booth Eight is displayed at the Chicago Automobile Show, beginning January 27th, in the Coliseum, Space E-4, Main Floor; also by all Scripps-Booth dealers.

Scripps Booth expansion makes possible the addition of dealers in territories which our former output prohibited

Scripps-Booth Corporation

known throughout the United States, told me yesterday that, having grown tired of hearing the honesty of his native land reviled, he made up his mind to put it to the acid test. So he sent to each of fifty men and women a \$1 bill. From the text of a letter which accompanied the money, it was evident that the hill had been intended for "The Novelty Supply Company, No. 153 East Fifty-sixth Street" (an imaginary concern which Mr. Moffett had located at his own address), and had been enclosed in the wrong envelop.

Nothing remained, therefore, for the honest man or woman to do save to put the \$1 bill in another envelop and mail it back to The Novelty Supply Company—in

other words, to Mr. Moffett,

Of the fifty women to whom the money was sent, thirty-three were honest and returned the money. Of the fifty men, thirty-one were honest and returned the money. So the proportion of dishonest men, according to Mr. Moffett's test, is nineteen in fifty, while the ratio of dishonest women is but seventeen.

The \$1 bills were mailed to fifty men, classified in groups of five, according to their occupations. And the women were similarly selected. I will let Mr. Moffett take up his own story of the test.

"Taking the fifty women by groups," Mr. Moffett said, "of five wives of prosperous citizens, three sent back the dollar. Of five actresses, three sent it back. Of five stenographers, three sent it back. Of five trained nurses, three sent it back. Of five teachers, four sent it back. Of the five successful business women, five sent it back. Of five miscellaneous women, three sent it back. Of five working girls, three sent it back. Of five doctors, three sent it back. Of five lawyers, three sent it back.

"Taking the fifty men by groups, I found, that of the five successful business men, three returned the dollar. Of five rich men, four returned it. Of five salnon-keepers, one returned it. Of five salnon-keepers, one returned it. Of five plumbers, three returned it. Of five newspaper men, three returned it. Of five newspaper men, four returned it. Of five doctors, two returned it. Of five doctors, two returned it. Of five New York policemen, three returned it."

Now, strangely enough, we are told, not only did more women return the money, but they returned it more promptly. Of course, the injured males may retort that probably the men detailed the returning of the bills to a secretary or a young woman stenographer, which would throw the blame on fair woman, but the fact remains that the money came back more quickly from the women. Furthermore, they took pains that it got back safely, for, says the experimenter:

One woman put a special-delivery stamp on the envelop in which she sent the \$1 back. Another brought it to me personally at great inconvenience. On the other hand, a man worth \$1,000,000, who lives at one of the hig hotels, never sent it back at all. I allowed six weeks in each case before I reached a verdiet. So I think the honesty of the public at large, and of women particularly, is fairly well established. Which was what I set out to prove.

SEEDS AND H. C. L.

Yes, now it's seeds. They're going to cost us more. The High Cost of Living, which has reached out its tentacles to about every commodity, has fixed one long arm in a firm grasp around our flower and vegetable supplies. So it's more we are to pay for each packet, pound or bushel. BUT, there is one hig compensation, and this applicationally to those of us with little or hig planting areas. This H. C. L. ogre which has boosted the cost of our seeds we can best back with these self-same seeds, because there is to be Economy with a hig "E" in raising our own vegetables next summer.

PLUS QUALITY

No family which buys its own table supplies need be reminded of the high cost of vegetables. Even the lowly cabbage has become an aristocrat. "Lettuce and cabbage are beyond our experimental financial means," says Dr. E. L. Fisk, supervisor of the New York Police Economic Food Test Squad. Indeed, it is believed that no year in recent times will show a greater dividend than 1917 to those who raise some or all of the vegetables needed for their home tables. And besides the actual economy, there is the advantage of securing that flavor known only to products coming fresh from garden to kitchen.

THE YEAR OF YEARS FOR CIVIC GARDENING

The opportunity this year for the municipal school, or community gardens is great. They can afford big returns to families of the poor. The famous Fairview community gardens of Yonkers, N. Y., produced from its 10 x 16 plots in one year \$3,306 worth of vegetables, this valuation being computed from the prevailing prices charged by street vendors.

A SEED SHORTAGE AND ITS WARNING

Although leading seedsmen agree that their full catalog lines will be listed, some varieties are likely to be soon exhausted. When we say seeds will be higher we have told only half the story. They are to be also scarcer.

Dealers unite in predicting unprecedentedly heavy buying for intensive and extensive planting. This means that it is likely that some varieties are to be entirely exhausted when Mr. Late Buyer makes up his list. It means that early planning early ordering, are this year imperative. Prograstination is almost certain to involve disappointment.

BUY FROM TRUSTWORTHY DEALERS

The importance, too, of purchasing your seeds from reliable dealers has been never more necessary. Your protection is the reputation of those houses which have for years guarded the quality of their products in this respect.

Announcements of these houses are appearing in our gerden issues. It may be your name is already on their mailing lists and you have already received their fascinating catalogs. If not, you should write for the catalogs at once. And don't, don't delay. Plan NOW and, above all other matters, ORDER EARLY.

A GREAT GROWTH IN INTER-NATIONAL PARCEL-POST

"HE AMERICAS, a monthly periodical published by the National City Bank, recently brought out some striking facts in relation to the growth of international trade through parcel-post methods since the war began. The increase appears to have been world-wide, and to have affected all countries except the Germanic states. The pured-post for two and a half years has been found a means for the quick and certain transportation of goods in conditions where the normal means were interrupted or eliminated in consequence of the war. Apparently the world has "doubled what was before a much larger international traffic in small parcels than is generally known," a traffic that had aggregated over 700,000,000 packets of every kind, and over 77,000,000 parcels technically ineluded in the pareel-post. In the aggregate the increase during the war has been 'enormous." Our own exports by parcelpost in 1916 were 80 per cent. larger in the volume of parcels than in 1915. England in 1916 shipped \$90,000,000 worth in parcels as compared with \$45,000,000 worth during the year before the war began.

The writer of the article calls attention, however, to the fact that our own shipments might have been much larger except for our lack of parcel-post facilities with cerlain countries. Some of the other countries and notably England, France, and Japan-were able to get into certain markets that were closed to us, but for which they had parcel-post facilities, the result being \$50,000,000 worth of certain kinds of exports that created an increased and permanent trade. In some of these countries our manufacturers found difficulty at times in gotting their goods through by any neans whatever. Notably was this the case with Russia, where military- and war-contingeneral often completely blocked ordinary facilities for traffic. Japan, however, owing to her parcel-post relations with Russia, sent through the mails to that country in 1915, \$3,847,727 worth of articles as compared with only \$98,622 worth in 1913, while the indications for 1916 were that the sales by Japan to European Russia would be over \$7,000,000. At the same time, England in 1915 sent to Russia \$8,500,000 worth of small shipments by parcel-post, which was ten times as much as she sent in 1913, and the returns for 1916 were understood to be much larger than they were in 1915. Returns from France are not yet available, but shipments by pareel-post to Russia are known to have been heavy; indeed, a special bureau of the Russian customs exists in France in order that duties may be cleared before shipments are made,

The writer in The Americas believes that from these three countries — England, Japan, and France—\$25,000,000 worth of goods were sent to Russia by parcel-post in 1916. What the shipments might have been from this country to Russia be does not undertake to say; he merely dwells upon the fact that a considerable loss in trade occurred because of our lack of parcel-post facilities with that country. Mention is also made of British depen-

dencies with which we have no parcel-post convention, but to which Japan has sent goods in considerable quantities. The parcel-post in international commerce has thus become an institution of importance, "a much bigger one in fact than most people realize." Other interesting points about it are set forth in the same article:

"Germany, before the war, and France have led, Germany by a large technical margin but France, probably, in real 'overseas' business. International-post statistics show that Germany sent 20,453,920 or-dinary parcels in 1912, in addition to 690-710 pounds of a declared value of \$47. 000,000, but much of this was practically a part of Germany's local express business over the border to Austria and other ad-joining countries, including parcels of vegetables, eggs, butter, and live chickens. Austria shipped 18,062,330 'ordinary' parcels, besides 591,570 specially valued at \$134,315,000 of the same kind of trade, largely. But, while Germany and Austria did also an immense 'overseas' business by parcel-post, France is generally regarded as the leading country that conducts exportations to far countries by post. Of late years, nearly 9 per cent, of all French exportation was by post. In 1913, \$113.-235,200 worth of manufactures (mainly) were distributed all around the world in this way. Over seven million parcels carried these goods.

"The serious value of the growth of the parcel-post is shown most plainly in the records of English commerce. In 1913, there were 4,637,902 post-parcels sent out of England, with an official valuation of a round \$45,000,000. Last year, there were 6,964,902 parcels, with a valuation of \$66,000,000, In addition to the increase in traffic to Russia, already mentioned, 2,172,-426 packages went to Holland, as against only 122,603 in 1913. The growth this year will be commensurate with that of last year. In ten months over \$75,000,000 worth of goods were exported by means of the parcel-post, which would indicate a year's total of \$90,000,000, or double the post-exports of 1913.

"And while the facts of war-time international commerce show that we missed chances in a few markets by not having az extensive a system available for our use American participation in the international employment of parcel-post being a comparatively recent development, the United States is also coming along well, having this year largely increased in weight of packages the records of the best pre-war year. showing that, in the markets where we could use it, our business interests were not slow in taking advantage of its facilities, It would not be surprizing if our parcel-post exports this year aggregated \$50,000,000 in value. Only the number and weight of parcels is recorded.

"The parcel-post holds a unique place among the facilities in the organization of international commerce. It is the especial convenience for small shipments. Here in America, the belief is general that it can be used to great advantage in the beginnings of the building up of foreign business. It is the facility, par excellence, for attempting an international mail-order or catalog trade. Extension of our own system to a larger part of the world is demanded by American business men who think that by means of the parcel-post they can reach ultimate consumers and dealers with 'trial orders' as they can in no other way.

way.
"France does an enormous international

'mail-order' business. The \$113,000,000 of her commerce carried by parcel-post in 1913 was largely articles of luxury distributed by great costumers, shoemakers, milliners, and department stores of Paris. The number of post-parcels going to South America from France is probably double that sent by any other single country. Of 201,609 post-parcels received in Argentina in 1912, the following were the countries of dispatch: France, 72,000; Germany, 48,300; Italy, 48,200; Great Britain, 22,400; Switzerland, 12,500; Austria, 8,000. We signed our parcel-post convention with Argentina last year. France has provided for packages, weighing as high as 22 pounds, as against 11 pounds, the ruling international limit, and the rates are lowest per pound (or per kilogram, as the French weigh them), on the heavy packages. This is because the prevailing shipments of 'mailorder' goods average well up in moderate weight. For this great and probably Inerative commerce, supplemented as it is by larger shipments and local displays in special stores at Buenos Aires and Rio de Janeiro, France is largely beholden to the great tourist migration from South America (and everywhere else) to Paris. People go to Paris. They come under the charm of French luxury. The charm lasts, and it spells future orders for the great Paris stores. A visit to Paris, followed by periodical catalogs, makes an important element in French commerce,

"England's minimum of expense in parcel-post comes a little below France's, and suggests a wide range of the kinds of goods shipped away. Especially impressive is England's colonial parcel-post, which, naturally, operates under the most favorable conditions. Two and a half million parcels went to the colonies and dependencies alone last year, some of the most notable totals being to the Channel

Islands.

"The United States has negotiated all its foreign parcel-post arrangements on a uniform basis of rate. It is different from any of the European systems. A uniform charge of 12 cents a pound takes packages up to 11 pounds (except to Mexico, where the weight to some places is limited to 4 pounds, 6 owners, and to Ecuador and Panama, where the limit is 20 pounds) to any of the parcel-post countries named above. As a general rule, the United States rate is below that made either by France or England on all small packages, and higher on the heavy ones. For specific instance, our rate to Argentina or to Chile is lower than France's up to 5 pounds, and below England's up to 7 pounds. For a pair of shoes, bundled within two pounds, it costs an American shipper 24 cents in stamps, while the same parcel would cost 55 cents mailed in Paris, or 48% cents mailed in London. To Bolivia, United States parcels go more cheaply than French up to 7 pounds and more cheaply than English up to 10 pounds. To China, the proportions are the same.

"It will thus be seen that the United

States mail-order house, small manufacturer, or retailer, who has articles of light weight per unit, has a particularly good opportunity to try building up a demand among discriminating foreign consumers by effective circularization. At least, there are successful American exporters who believe so, in spite of expert

foreign opinion to the contrary.

"One reason why America has not developed the parcel-post in foreign business to the extent that Germany, France, and England have is found in the competition of our excellent private express services. For many years, before this country adopted a domestic parcel-post, England and other countries gave their exporters a parcels service to any part of the United States through contract with the express companies here."

INVESTMENT SERVICE

or 51 years Peabody, Houghteling & Cohave carefully adhered to the principles of conservative investments.

This cumulative experience in successful investment banking, combined with an efficient organization of trained experts, insures you a most dependable, specialized Investment Service.

When dealing through this firm you procure an investment which has undergone an exhaustive investigation, has been purchased outright by us before being offered to you, and which is safeguarded in every possible way.

It will be our pleasure to send you a list of Choice First Mortgage Securities upon established profitable properties, for long or short terms, in \$1,000, \$500 or \$100 amounts, yielding 5% to 6%.

This company welcomes your correspondence or your call in reference to any investment matters.

CURRENT EVENTS

THE EUROPEAN WAR

WESTERN PRONT

January II .- In the second attack in twenty-four hours near Beaumont-Hamel the British take nearly a mile of German trenches and 176 prisoners. At Verdun the French repel an attack in Caurières Wood, northwest of Don-

January 12.—Renewed fighting is reported from the Ancre Valley, where conflicting statements are sent out. The Germans claim that big British attacks failed, while London states that slight moves accomplished all that was expected of them.

January 13.—The British attack along the Apere with slight success, getting a foothold in one advanced position only, northwest of Serre.

January 15.—A British effort to take Serre fails, as the troops reach the German trenches but are driven out again by hand-grenade fighting. The British lose beavily, according to admissions from London.

January 17 .- On the Ancre the British capture several German positions north of Beaucourt, and hold them against counter-attacks, while near Lens the Canadian troups make a raid in daylight, taking more than one hundred prisoners.

EASTERN PRONT

January 11.—The Russians force the Germans back on the Riga front, taking a village east of Kainsen, on the River Aa, which proved a rich storehouse of ammunition and weapons. In the Screth battle the Russian troops drive the enemy back across the Putna River and bold the northern bank.

January 12.—Russia continues the attack on the German flank on the Riga front, while great activity is reported all along the line from Riga to Dvinsk. Von Mackensen's forces push the battle of the Screth, taking Laburter in the lowlands across from Galatz, thus making one more step toward the Moldavian city.

January 13.-The forces of von Mackensen continue to drive back the Russians in Roumania as the battle of the Screth grows in intensity. The Germans clear the southern bank of the river, across from Galatz, while the Turks take Mihalea, with 400 prisoners. driving the rest into the river, where

In the Karpathians the Germans take a position north of the Slanic Valley, with several large guns, while in the Kasino valley the Roumanians enlarge the vietory recently announced.

January 14. Galatz is reported under fire from three sides. Von Mackensen, after taking Vadeni, practically clearthe last Russians from the neck of land opposite Galatz, while another German army, operating in the Karpathians. takes a mountain peak of importance in the Oituz range. Petrograd announces that the second heavy German attack in two days has been repulsed on the Riga front.

January 15.—The Russo-Roumanian troops turn the tables on the Teutons at the Sereth, attacking at two points and hurling the German divisions back with heavy losses. In the Kasino Valley the Roumanians force the Central Powers' line back more than a mile. No fighting is reported from the Riga front.

Funk & Wagnalla Company, 354 Fourth Ave., N.Y.

January 17.-The Russians continue their new offensive, retake Vadeni from the Germans, and gain control of the southern bank of the Screth. An attempt is also made to retake Laburtea, but Berlin states that it was unsuccessful. The Russians capture Gerleschi, near Focsani, but are unable to hold it against superior German forces.

GREEK AFFAIRS

January 10.-The Greek acceptance of the ultimatum of the Entente is announced to be a limited one, providing for satisfaction to the Allies without inter-ference with the administration of the country or local communications,

January 12.—The Allies occupy another Greek island, Cerigo, in the Egean, according to dispatches from Athens.

January 13.—Hostilities between the Royalist troops and the Entente appear more imminent as the Royalists at Elassona start to march toward the rear of General Sarrail's army.

Rumors have it that General von Falkenhayn arrives by submarine in Greece to confer with King Constantine, as a Roman report is circulated to the effect that it is the intention of the Allies to depose Constantine, and give the throne of Groece to the Duke of Aosta, cousin to the King of Italy.

January 15.—Hard fighting, according to word from Paris, is in progress in the Macedonian sector, where Austro-Hungarian, Bulgarian, Italian, and French Indo-Chinese troops are en-gaged. Vienna reports that the Aus-trians have driven back the enemy south of Lake Ochrida, and across the Cerna. Paris admits that there is fighting below Lake Ochrida, but states that advances have been made beyond Zvezda, while on the Doiran front the British invaders enter Akinjali.

January 17.—Definite announcement that the Greek Government has accepted the Allies' ultimatum entirely and unconditionally reaches London from the British Minister at Athens.

ITALIAN CAMPAIGNS

January 11.—Rome reports that snow halts operations in the Trentino. In Albania, however, the capture of Grment, on the Lyaskovik Coritza River, is reported.

January 12.—Air-raids are reported from the Italian fronts, especially in the vicinity of Aquieleja, southwest of Monfalcone, where a number of Austrian bombs are dropt. One Austrian machine is brought down by Italian gun-lire.

January 13.—Air-raids from both sides are reported from the Trieste sector, when Italian aviators drop a quantity of bombs on the fortifications at Trieste, and the Austrians retaliate by bombarding an Italian aerodrome.

January 14.—Rome states that two Austrian submarines have recently fallen into Italian hands and are employed as units of the Italian torpedo forces.

January 17 .- On the Carso, says Rome, the Italian forces show slight activity, bombing a few Austrian trenches and taking some prisoners.

ASIATIC CAMPAIGNS

January 11.-London announces that British troops have crossed the border from Egypt and taken the fortified town of Raffa, in Palestine, with 1,600 prisoners. A footbold in Palestine is thus gained, and the British press expect a drive into the Holy Land.

The British report successes on the right

bank of the River Tigris as a number of Turkish trenches northeast of Kut-el-Amara are taken.

January 12.—Altho the British succeeded in getting into Turkish trenches near Kut, dispatches from Berlin now state that the Turks ejected the enemy by a counter-attack.

January 13.—A raid on the Anatolian coast by a Russian squadron is announced by Petrograd. The raiders sunk forty Turkish vessels carrying food to Constantinople.

GENERAL

January 4.—The Federal Reserve Board estimates the increase of the belligerents' debt at \$49,000,000,000 from the opening of the war to the end of 1916. Of this sum, \$20,192,200,000 is the debt of the Central Powers, and the remainder, \$29,265,132,000 the debt of the Entente.

January 11.—The sinking of the British battle-ship Cornwallis by a submarine in the Mediterranean is announced at London. Thirteen men are missing, and it is feared that they were killed in the explosion as the torpedo struck.

London estimates the German losses since the beginning of the war at 4,010,100. This does not include the naval or colonial losses.

President Wilson receives the Entente reply to his peace-note. It includes basic demands for reparation and indemnities, as well as the liberation of small nations under the domination of the Central Powers, retrocession of all seizures from the Entente, freedom of Poland, expulsion of the Turks, and virtual dismemberment of the Austrian Empire.

January 13.—Lloyds announce the sinking of four more vessels, two British, one Russian, and one Greek.

January 14.—The Japanese battle-cruiser Taukuba is blown up in Yokosuka Harbor and 153 of the crew killed. The cause of the explosion is unknown.

January 17.—It is learned that a German sen-raider has slipt through the British cordon of ships, and for six weeks has been preying on commerce in the south Atlantic. Twenty-one vessels have been sunk, and three seized, with a total loss of \$40,000,000.

The Pope protests the Belgian deportations, and requests the German authorities to end them, as well as to repatriate the citizens already sent away.

By a second note, the Allies amplify their recent reply to President Wilson, indorsing his proposal for a peaceleague, and stating that its materialization depends upon their victory.

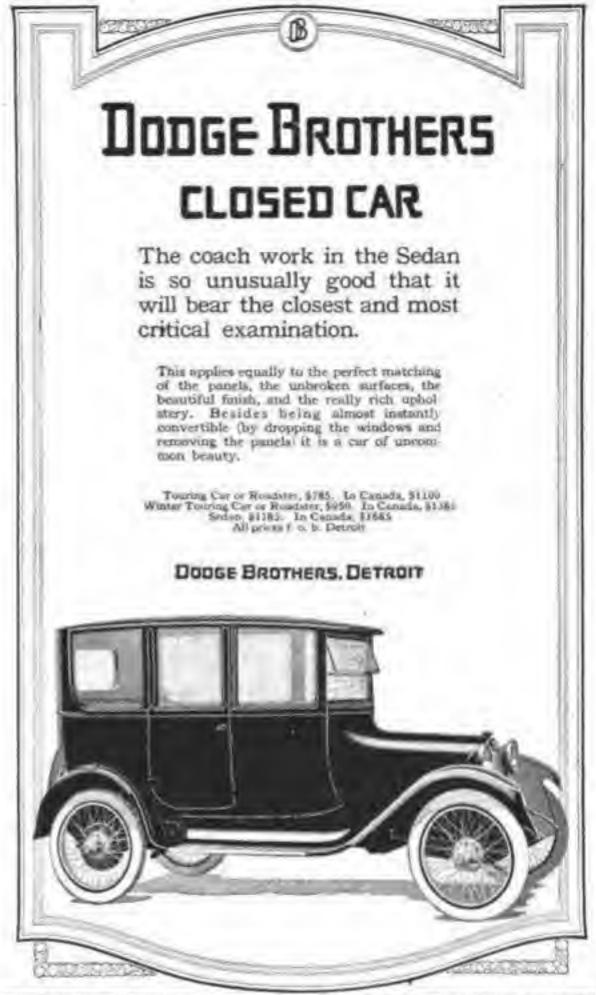

FOREIGN

January 12,—General Gonzales's forces defeat a company of Villistas west of Santa Rosalia, capturing many and inflicting severe loss of life.

January 15.—William de Morgan, eelebrated English novelist, dies in London, aged seventy-eight.

January 16.—Francisco Villa, after defeating General Hernandez and his Carranzistas at Satevo and again at La Jolla, whither he had driven the beaten troops, appears again before the gates of Chihuahua City, according to reports received at El Paso.

January 17.—Title to the three Danish West-Indian islands formally passes from Denmark to the United States, but occupation of the new purchase by

American authorities will await the transference of the gold payment.

DOMESTIC

January 11.—Wayne MacVeagh, formerly the Attorney-General in the Cabinet of President Garfield, dies in Washington, aged eighty-four.

Hundreds of tons of high explosives blow up after a fire in the munitions-plant of the Canadian Car and Foundry Company, at Kingsland, N. J. Sixteen

million dollars' damage is done, according to estimate, but few lives are lost, due to the heroism of a telephone girl in warning 1,400 workers.

January 12.—The second great explosion in thirty hours shakes four States as powder - magazines at the du Pont works at Haskell, N. J., are destroyed. Six are killed and twenty hurt. The origin of both disasters is undiscovered.

Clothed with new powers to compel testimony, the House Rules Committee summons Thomas W. Lawson to tell of the alleged "leak" following the Wilson peace-note, under threat of prison sentence.

The Railway Brotherhoods close their session in Chicago after deciding to take no formal action on the Adamson eight-hour law until its constitutionality is ruled on by the Supreme Court.

January 13.—The United States cruiser Milwaukee is reported a total loss, as it goes ashore on the northern California

coast in a fog. More than three hundred sailors are removed from the vessel by breeches-buoy. The Milwaukee went ashore while trying to salvage the stranded submarine H-53.

January 15.—Confronted by the threat of summary punishment! for contempt, Thomas Lawson, testifying before the House Rules Committee about the alleged "leak," names prominent people as being implicated, including Secretary of the Treasury McAdoo, S. G. Gib-boney, Count von Bernstorff, Joseph Tumulty, W. W. Price, Paul Warburg, and others high in financial and Goveramental circles, but admits his knowledge is merely hearsay. All of those named publish denials.

The Supreme Court construes the Federal White Slave Act to cover private escapades as well as commercialized vice, thus applying the act in the widest sense.

January 16.—The North Dakota House of Representatives passes the woman suffrage measures already passed by the State Senate, giving full suffrage to the women of the State. The measure goes to the Governor, and, if signed by him, becomes effective July 1.

Admiral George Dewey, famous as the commander at the Battle of Manila-Bay in 1898, dies in Washington, aged seventy-nine.

A wide Republican split is promised, according to the press, as the Progressive elements of the party protest against the Old Guard movement to displace Chairman Willeox.

The committee investigating the "leak" subpense J. P. Morgan, H. P. Davison, Frank Vanderlip, J. S. Bache, and others to appear and tell what they can about the stock situations at the time of the "leak." The move is ascribed to an effort to discredit the testimony of Thomas Lawson, who backs his word against that of Chairman Henry of the Rules Committee.

January 17.—The House orders the House Rules Committee to engage attorneys and accountants for a thirty-day investigation of the "leak"; the affair is now said by the press to have taken on the aspect of a broad Congressional investigation.

The lower priced car really costs more!

Lower after cost! Longer life! That's why many a buyer who expected to pay \$1000 or \$1200 for a car has bought the Haynes instead.

Study after costs—look ahead a few years—and you, too, will buy a Haynes. Your Haynes will be in tip-top shape—running better than ever—at a time when the cheaper ear will be getting worn out and a frequent visitor to the repair shop.

The Haynes of two years ago is a modern cur today. The Haynes you buy now will be thoroughly modern for years—in design and in mechanical features.

The Haynes high speed motor has seen no change of any consequence in thirty-two months. It developes more power than any other engine of equal bore and stroke.

With ordinary road conditions and regular gear ratio, the Haynes gives you sixty miles per hour on high. It throttles down to one mile per hour on high. Inside of seven and a half seconds, you can mount up to a speed of thirty miles an hour. It takes the longest hills on "high."

Haynes upkeep is surprisingly low. Tires average 8,000 miles or better. Oil and gasoline give surprising mileage. Trouble or incidental espense runs very small.

You get this extra power and speed you enjoy this big comfortable car of good reputation for a moderate extra first-cost investment. You save much or all the extra cost in low upkeep. You get the additional cost back several times over in the end.

If you will thoroughly investigate the Haynes, it will tell itself to you.

The charm of color stucco

Unless you have seen some of the beautiful color stucco homes recently built, it will be hard for you to picture the artistic effects this new development has made possible. These color effects are not uniform monotones, but are variegated or blended, and given interesting texture by the skilful use of color aggregates—fine colored marble and granite screenings, colored sands and gravel—with Atlas-White Cement. Therefore, each home has its individuality and charm—as different as one painter's technique is from another's.

We have prepared a book in which, for the first time, some of these new effects, so sought for by architects are reproduced in actual colors. A copy will be mailed on request. Ask your architect about color stucco for your home. The Atlas Portland Cement Company, New York or Chicago.

TOPICS - OF - THE - DAY

FEASIBILITY OF THE PRESIDENT'S PEACE-PROGRAM

NDORSED by the Russian Foreign Office, by the Socialist group in the French Parliament, and by the British Labor party, President Wilson's program for making the present war the last seems to have more approval in the belligerent countries than in neutral America. In addition to indorsing his idea of an international league of peace, a great conference of the British Labor party at Manchester, England, rose and applauded for five minutes at the mention of his name. And from the Allied trenches in France come circular letters to the White House, each signed by hundreds of soldiers, thanking him for his generous intervention. But the applause of the British labor conference was followed by a vote of unqualified support to the British Government in carrying the war to a victorious conclusion, and the letters from the trenches ended with a request that the President "dream no longer of the chimera of peace until victory is gained." In his startling address to the Senate on January 22, President Wilson outlined the kind of peace that "the peoples of America could join in guaranteeing." His statement, says the New York World, is really addrest "to mankind, to the democracies of the world." Therefore "what the common people think of it is of infinitely more importance than what cabinets and senates and rulers and newspapers think of it." But since we can not immediately learn what the common people think of it, we must be content for the moment to examine the comments of the rulers and the newspapers. It is notable that in every country, whether neutral or belligerent, whether Teutonic or Entente, we find the press paying cordial tribute to the lofty idealism of the President's speech. But in every country we find also expressions of doubt as to whether the idealism of his program can be harmonized with the realities. As so sympathetic an organ as The World states the problem-

"Can the fundamental principles of democracy be translated into the law of nations?

"Can the Monroe Doctrine be made a world-doctrine, to the end that no country shall be permitted to extend by force its policies and institutions over other nations?

"Can the Declaration of Independence be internationalized to make government dependent upon the consent of the governed in the establishment of a durable peace?

"These questions raise themselves at once in relation to President Wilson's address to the Senate, an address which time and circumstance make perhaps the most momentous utterance on foreign affairs ever uttered by a President of the United States."

The conditions upon which President Wilson believes "this Government would feel itself justified in asking our people to approve its formal and solemn adherence to a league for peace" may be briefly summarized as follows:

The present war must first be ended and the ensuing peace must be "a peace without victory," "a peace between equals."

There must be no distinction between the rights of big nations and small.

Peace-terms must recognize the principle that "governments derive all their just powers from the consent of the governed," and that "no right anywhere exists to hand peoples about from sovereignty to sovereignty."

"So far as practicable, every great people now struggling toward a full development of its resources should be assured a

direct outlet to the great highways of the sea."

"The paths of the sea must alike in law and in fact be free."

The limitation of naval and military armaments must be faced.

"I have said what everybody has been longing for, but has thought impossible. Now it appears to be possible," said the President just after he finished his address. This address, declares the Pope, is "the most courageous document which has appeared since the beginning of the war. It contains many truths and revives the principles of Christian civilization." Senator Tillman hails it as "the most startling and the noblest utterance that has fallen from human lips since the Declaration of Independence." "We have just passed through a very important hour in the history of the world," said Senator La Follette, after listening to the President's words. His speech marks "an epoch in the history of our foreign policy," says ex-President Taft, president of the League to Enforce Peace, who adds:

"His advocacy of our participation in a world-league is a most powerful aid to its formation. It insures the attention and interest of the American people, who must ultimately judge of the wisdom of the policy before we enter upon it. It will stimulate discussion of our world-responsibility and of the burdens we should assume in meeting it. We cordially sympathize, too, with the President's insistence that the United States can not join a world-movement to preserve a peace which is unjust and contains in its unfair terms assurance of its temporary character.

"We can thus express our pleasure and sympathy in the

TERMS: \$3 a year, in advance; three mouths, \$1; single copy, 10 cents; postage to Canada, 85 cents a year, other foreign postage, \$2.00 a year. BACK NUMBERS, not over three months old, 25 cents each; over three months old, \$1.00 each. SEMIANNUAL INDEXES, issued in January and July will be sent free to subscribers who apply for therm. RECEIPT of payment is shown in about two weeks by date on address-label; subscription including the month named. CAITION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions in-

terrupted and their files broken in case they fall to remit before expiration. Notwithstanding this, it is not assumed that continuous service is desired; still, subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

While every one will, doubtless, favor reduction and limitation of armaments, in which all belligerents seem to acquiesce, there are earnest supporters of such a league who believe that only a victory-peace may be a just

- Donahey in the Cleveland Plain Degler.

peace, not a peace selfishly dictated by conquerors, but a just peace wrested from would-be conquerors. The event must determine the correctness of one or the other view. Then others may not have fully analyzed what the freedom of the seas means or what new provisions of international law in war and peace may secure it. So with respect to other matters we may presume that the illustrations are used to suggest to the framers of peace when it comes, not what the exact terms shall be, but rather their responsibility for future world-peace in adjusting its terms to satisfy international justice, without which the greatest and most influential neutral Power will not give the strength of its support to a world-league to preserve such a peace."

Some will regard the President's program as pro-Entente, some as pro-German, remarks the Baltimore American, "but, in fact, it is pro-American, and this means pro-bumanitarian." "Upon the principles enunciated by the President must be based the only saving peace that can come to the world, and the only peace to the permanence of which the American people can willingly lend their support," says the New-Yorker Staats-Zcitung. "What he says about the reduction of armaments sounds well to a world weary of the enormous burdens of supporting big armies-and navies." "Lincoln emancipated merely the African negro," remarks The Fatherland (New York), "but Wilson's speech sets free men and minds in every part of the globe," "The Sermon on the Mount," this German-American organ adds, "is the source of Mr. Wilson's political wisdom." "The speech," says the Springfield Republican, "is specially notable for its clear recognition of the symmetrically twofold nature of the problem-militarism vs. havalism, imperialism vs. nationalism, exploitation vs. economic freedom, and, in particular, coast vs. hinterland." While admitting that it is easy to point out apparently insuperable obstacles to the President's peace-program, The Christian Science Monitor (Boston) maintains that "those obstacles are, at their worst, only temporary." And the New York Evening Mail enumerates some of these obstacles and undertakes to show that they are not necessarily insurmountable. Of the President's insistence on the rights of small nations, this paper says:

"It is on behalf of small nations, particularly Belgium, that the Entente Powers claim to be waging this war. No less definite is Germany in its declared intentions to assure for all nations free and unhindered development. In its note to neutrals, published January 11, Germany says: 'Our allied Powers, however, shall continue the struggle in quiet confidence and with firm trust in their rights, until peace is gained which guarantees their nations honor, existence and liberty of development, and to which all the nations of the European continent give the blessing to cooperate in mutual respect and under equal rights together for the solution of the great problems of civilization.'

"There is no disagreement as to the bases which the future must provide for small nations."

Of the principle that Governments derive their authority from the consent of the governed, and the President's special reference to Poland, The Mail says;

"Germany's intentions with regard to Poland have already been declared. She has made Poland an independent kingdom. In an order to his army, dated December 25, the Czar announced to the astonished world his purpose to create an independent Poland 'from all three of the now incomplete tribal districts.' The Entente Powers, as a whole, in their note of January 10 to the President indorse the Czar's intention. The only difference of opinion with regard to Poland is as to whether it shall include only Russian Poland or as to whether it shall also include Galicia and the German province of Poland."

Both the Central Powers and the Entente Allies, The Mail goes on to say, have indersed the idea of a league to guarantee peace. As to the reduction of armaments—

"Hints have come from Washington, purporting to emanate from circles close to the German Embassy, that Germany is

OUT OF THE DARKNESS.

-Kirby in the New York World.

ready for an international reduction in military armament. A definite statement on the subject by Germany would clear the situation. There is an obvious unfairness in asking for a limitation of naval armament, with the resulting decrease in Great Britain's striking power, without at the same time reducing Germany's power to strike on land,"

Turning to the objectors, we find in the American press a considerable body of opposition to the suggestion that this nation shall abandon its traditional policy of aloofness toward European affairs to join an international league to guarantee peace. In the Entente press, on the other hand, we find that the President's phrase, "peace without victory," is the target

Copyrighted by 3. S. McClure

-Brinkerhoff in the New York Erening Mail.

for most of the criticism. "It is indeed staggering-this formal, actual proposal of a transcendental dreamer for the instant, practical establishment by force of the millennium of mankind." exclaims the Democratic Louisville Courser-Journal, "Mr. Wilson beckons the bleeding and suffering nations of the world toward him with his schoolmaster's cane and delivers a prizeoration on the millennium, while civilization and the liberty of the world are battling for life in the shambles of a hundred bloody fields," remarks the pro-Ally Providence Journal. The New Orleans Times-Picayune reiterates Washington's warning against "entangling alliances," and the New York Sun is amazed at the spectacle of a President who couldn't secure peace in Mexico "lecturing the whole world on the terms on which peace in Europe should be made." The President's address, said one Republican Senator, "will make Don Quixote wish he hadn't died so soon." William Jennings Bryan opposes the idea of a league to enforce peace, but is nevertheless in sympathy with part of the President's program. To an interviewer in Madison, Wisconsin, he said:

"In so far as the President's speech suggests the terms of agreement, it is entirely sound and reflects what I believe to be an almost unanimous sentiment. But I dissent entirely from the proposition that this nation should join in the enforcement of peace in Europe. If the nations will agree to peace on the terms suggested by the President they will not need our assistance in enforcing it.

"If I know the sentiment of American people it is inconceivable that they should be willing to put the American Army and Navy at the command of an international council, which would necessarily be controlled by European nations, and allow that council to decide for us when we would go to war. Such an agreement, in my judgment, would imperil European peace instead of insure it, because they would see in our unlimited resources a means of advancing their own interests, with us bearing the burden.

"I have more faith in our ability to help them by example than I have in our ability to help them by indorsing the European plan of relying upon force and terrorism.

"In the President's appeal to them he presents the philosophy

of brotherhood and cooperation, and this is inconsistent with the proposition that it be backed up by a larger display of force. In other words, the President has sown wheat and tares together. I hope that the Senate will approve the wheat and reject the tares."

"The present war in Europe is but the effort of two groups of nations to enforce peace," says Allan Benson, Socialist candidate for President in the last election, "and for the United States to join a league of nations would mean this country becoming involved in European brawls," The President's peaceviews move Colonel Roosevelt to emphasize "two or three plain bits of bomely fact—"

"The first is that it is worthless to make promises about the future unless in the present we keep those we have already made. Unless this Government is prepared at this moment to take an emphatic position as regards such a hideous outrage as the deportation of the men and women of northern France and Belgium, it is both ridiculous and insincere for us to mouth about standing for righteousness in the nebulous future.

"Moreover, unless this Government can bring the peace of justice to Mexico, it had better not talk about securing the peace of justice throughout the world.

"As regards freedom of the seas, the most important element in it is freedom from murder, and until this Government has taken an effective stand to prevent the murder of its citizens by submarines on the high seas, it makes itself an object of derision by speaking for the freedom of the seas. Interfering with life is worse than interfering with property.

"As for the statement there can be no real peace with victory, so far as Belgium is concerned the statement stands on a par with a similar statement, had there been such, after Bunker Hill and Lexington, that there could be no real peace if victory came to the forces of General Washington."

Subjecting the President's general propositions to the test of specific application, the Boston Transcript (Rep.) has this to say of his theory of the rights of little nations:

"The President illustrates his meaning by taking the case of Poland: he takes it for granted that there must be a 'united independent, and autonomous Poland.' Of course 'independent' and 'autonomous' do not mean the same thing. This is very

Copyrighted by the North Asserting Company

"FIFTY-FIFTY."

-Richards in the Philadelphia North American.

much like saying that there should be 'an independent and a dependent Poland.' But let us take the expression at its most limited meaning, and say that the President's idea is that there shall be a united and autonomous Poland. That involves, of course, the inclusion of all Prussian Poland, as well as Russian Poland, in the new autonomous country—the administrative separation of Posen and Silesia from Germany. To this

Germany would never consent unless Russia had obtained over Germany that complete victory which Mr. Wilson says there must not be. His sine qua non falls to the ground, therefore. And if all Poland must be united and free, what about Finland? And Bohemia? And Ireland? And Porto Rico? And the Philippines? And the Mexican districts of our Southwest? The application of the Presidential principle would abolish Austria, and would instantly restore Alsace and Lorraine to the French. It would not only involve our assertion of a meddle-some control over all the nations of the earth, but it would dismember America. That is what it would mean for America to 'play its part in the great enterprise.'"

Of his declaration that the sea must be entirely free, this Boston paper says:

"If that means anything, it means that all merchant ships, even of belligerent lands, should be left free to move and trade, even in war. The assertion of that principle would instantly put at the head of all the world's power the nation which had the greatest and most efficient army. It would extinguish the naval nations. In fact, the President admits this by putting forward military disarmament as a corollary or accompaniment of freedom of the seas. But he does not and could not propose a total disarmament, and under his plan even a small but most efficient army could march all over Europe. The doctrine would wipe England from the map. It would threaten Japan, and would embroil us in that direction; but it would also cripple the United States, which, relatively, to the rest of the world, is a maritime Power. The assertion of this doctrine is full of danger. Unless repudiated by strong utterances in the Senate, as well as elsewhere, it will lose us every friend we have in the world except Germany.

"'Freedom of the seas,' with infinite danger to us, is the mixture of blood in the dish of barley-sugar which the President

set before the world yesterday."

The following are some of the most striking passages from the address read before the Senate by President Wilson on January 22:

"No covenant of cooperative peace that does not include the peoples of the New World can suffice to keep the future safe against war, and yet there is only one sort of peace that the peoples of America could join in guaranteeing.

"The statesmen of both of the groups of nations now arrayed against one another have said, in terms that could not be mis-interpreted, that it was no part of the Europe they had in mind to crush their antagonists. But the implications of these assurances may not be equally clear to all—may not be the same on both sides of the water. I think it will be serviceable if I

attempt to set forth what we understand them to be.

"They imply first of all that it must be a peace without victory. It is not pleasant to say this. I beg that I may be permitted to put my own interpretation upon it, and that it may be understood that no other interpretation was in my thought. I am seeking only to face realities and to face them without soft concealments. Victory would mean peace forced upon the loser, a victor's terms imposed upon the vanquished. It would be accepted in humiliation, under duress, at an intelerable sacrifice, and would leave a sting, a resentment, a bitter memory upon which terms of peace would rest, not permanently, but only as upon quicksand. Only a peace between equals can last, only a peace the very principle of which is equality and a common participation in a common benefit. . . .

"No peace can last, or ought to last, which does not recognize and accept the principle that Governments derive all their just powers from the consent of the governed, and that no right anywhere exists to hand peoples about from sovereignty to

sovereignty as if they were property.

"I take it for granted, for instance, if I may venture upon a single example, that statesmen everywhere are agreed that there should be a united, independent, and autonomous Poland and that henceforth inviolable security of life, or worship, and of industrial and social development should be guaranteed to all peoples who have lived hitherto under the power of Governments devoted to a faith and purpose hostile to their own.

"I am proposing, as it were, that the nations should, with one accord, adopt the doctrine of President Monroe as the doctrine of the world—that no nation should seek to extend its policy over any other nation or people, but that every people should be left free to determine its own policy, its own way of development, unfindered, unthreatened, unafraid, the little along with the great and powerful." THE SOUTH-ATLANTIC RAIDER

F PRESIDENT WILSON and his Secretary of State "knew that an extensive German raid on enemy shipping was in progress or in prospect off the coast of the South Atlantic, and feared there might be complications that would involve the United States in war," it would explain some phrases in the peacenote, suggests the Minneapolis Tribunc. And the Minnesota daily points out that the Teuton raider had been active about a week when the President's note was dispatched. At any rate, the Washington correspondents agree that the troublesome armedship controversy has been revived by the arrival of the captured British freighter Yarrowdale in a German Baltic port. This ship, according to an official German Admiralty statement, was brought into harbor by a prize-crew on December 31. She had aboard 469 prisoners from captured vessels, among them "103 subjects of neutral states, who, as well as belligerent subjects, have been removed as prisoners of war in so far as they had taken pay on armed vessels." Three Americans are said to have belonged to the erew of the Yarrowdale, and fifty-four more to have been among the prisoners taken from the British freighters Georgic and King George. The precise facts are being ascertained by our diplomatic representatives in Germany, and, we read in the New York World, it has been made clear at the State Department "that if any Americans are among these prisoners a demand will be made for their release." The whole question, says the New York Tribune's Washington correspondent, "turns on whether an armed merchant ship is a war-vessel, and the gulf between this country and Germany on that question is still unbridged." Of course, he adds, "Americans on such ships could be considered as prisoners of war only if the vessels were considered as war-yessels," and "the United States has never conceded that merchantmen armed for defense are war-ships."

As several newspaper writers remind us, the controversy over armed merchantmen started with the sinking of the Lusitania when Germany made the allegation—later disproved—that there were guns mounted on that vessel. Early in 1916 Germany issued a manifesto asserting the right to sink armed merchant vessels at sight. Immediately after, the New York Times recalls, "resolutions were offered in Congress to warn Americans not to sail on armed enemy merchant ships, even defensively armed ships. The armed merchantmen controversy and the McLemore resolution and its defeat followed. The German orders did not go into effect, however, but were held in abeyance." On January 16, 1916, Secretary Lansing addrest to the Allied Governments a confidential note, which was afterward made public, and which the New York World thinks Germany may now bring forward somewhat to our embarrassment. Mr. Lansing suggested that the complete disarmament of merchantmen might well accompany the adherence of submarine commanders to the rules of cruiser warfare, and he said that the United States Government was "imprest with the reasonableness of the argument that a merchant vessel carrying armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government." This would seem to favor the German contention, but no official action was taken in the direction of the suggestions made, and belligerent ships are still allowed to sail from our ports carrying defensive armament. And in March, the New York Tribune reminds us, the Secretary of State prepared for the President a statement setting forth the law governing the question.

"This statement, later published, made it clear that in no circumstances was a belligerent war-vessel entitled to sink a merchant ship, no matter how armed, unless that vessel actually was engaged or had been engaged in offensive operations.

"This statement, however, was not sent officially to Germany, and the American and German Governments, as a result, never

have settled the question.

CRUISER MILWAUKEE, ASHORE NEAR EUREKA, CALIFORNIA.

"When the Sussex was sunk and Germany renewed and broadened her promises not to conduct illegal marine operations nothing was said about armed ships.

"The President profest to believe that armed ships were covered, but many State Department officials admitted the phrase was ambiguous. However, no attempt was made to obtain a definition from Germany, but it was decided to wait until an actual case arose.

"The capture and detention as prisoners of Americans on

board armed vessels presents such a case."

Very little is as yet known of the German raider whose mysterious and effective operations in the Atlantic have reawakened this slumbering controversy. The Yarrowdale is but one of a score of prizes whose total value, with cargoes, has been estimated as high as \$20,000,000. Some ships have been sunk, some converted into raiders, others used to carry supplies or to convey captured crews to land. was the arrival of one of the last, the Japanese steamer Hudson Maru, at Pernambuco, Brazil, which gave the first definite news of the raider. One captured captain said the German ship "was equipped with several machine guns in addition to her cannon, and also

earried three submarines, capable of being operated over a small radius and equipped with torpedoes, dynamite, and ammunition." Other captives told of courteous treatment and of the raider's consistent and scrupulous observance of the rules of international law.

OUR YEAR'S NAVAL DISASTERS

POOR SEAMANSHIP OR NEGLIGENCE caused several naval accidents during 1916, remarks a contributor to the New York Evening Post, with reference to the wreck of the submarine H-S, on December 14, at the entrance to Humboldt Bay, California. To make matters worse, the cruiser Milwauker, in drawing a cable tied to the stranded

submarine, was caught in a tidal current and driven ashore. Last August the armored cruiser Memphia, caught in a tropical storm, was wrecked on the rocks in the harbor of Santo Domingo City with a loss of forty lives. A month prior to the loss of the Memphis the fuel-ship Hector was wreeked off Charleston, S. C., while manned by a civilian crew. In May, 1916, the mine-planter San Francisco struck a shoal near Chatham Light and was laid up for repairs for several months. We read on:

"The destroyer Terry struck a reef off Puerta Plata, Santo Domingo, last summer and was beached. Her commander was tried for negligence but was acquitted. Last fall the fuelship Jupiter was in collision with an Italian bark, and the commander of the naval vessel was court-martialed, but he

also was acquitted. In March last the destroyer Monaghan was rammed and badly damaged by the destroyer Roe at Key West. The Roe's commander, Lieut. G. C. Barnes, was reduced three numbers in his grade. . . . A court of inquiry is trying to determine whether Commander-Lieutenant, junior grade, H. R. Bogusch is responsible for the loss of the underwater-boat H-3."

THE RETREAT OF OUR TEN THOUSAND

THERE WAS ONCE a Duke of York or a King of France who, according to the nursery rime, had ten thousand men, whom he marched up a hill one day, and "then he marched them down again." "There you have it," says the Lansing State Journal. Ten months an army of

A FINE PAMILY SECURION.

—Sykes in the Philadelphia Ecolog Ledger.

more than ten thousand men marched into Mexico under General Pershing; now they are marching out agotn. And, in the opinion of President Wilson's critics, they accomplished no more than the mythical ten thousand on the mountain top. The withdrawal will be gradual, but it has been authoritatively announced. When it takes place, observes the Jacksonville Florida Times-Union (Dem.), "we shall then have twice invaded Mexico in force, resistance has been offered with consequent loss of life, and we have yielded to the demand made upon us in the first instance; the flag has advanced with a definite purpose declared to the world, has been fired upon, and has then retreated to its own territory!" The Vera Cruz and Pershing expeditions likewise seem to the Chicago Evening Post (Rep.) "excellent illustrations of the folly of half measures"; "having no appetite for war, we should not have nibbled at the war-brend." The punitive expedition, the Chicago Tribune (Rep.) remarks, became "too obviously punitive toward American soldiers instead of Villa bandits, and more damaging to American prestige than to Villa's aspirations." It "has resulted in nothing but the expenditure of money and the disintegration of the National Guard," adds The Tribune, which believes "we have frustrated our own efforts in Mexico." "Villa has not been 'got," mournfully comments the Cleveland Leader (Rep.). "There is no new guaranty of the safety of the border," it goes on, and nothing has been done "to make good the wrongs Americans and other foreigners have suffered in Mexico. It is all a record of barren futility." And the New York Evening Mail (Rep.) in its editorial columns simply prints the "Get Villa, dead or alive" order, and under it this El Paso dispatch to the New York Globe:

"It will be a merry time in Mexico when General Pershing comes home across the border—a merry time for one General Don Francisco Villa. "Don't snipe at the Americanos,' he ordered his rebel troopers in a general communication. 'Let them depart unhindered. Do not delay them. For every Americano wounded I shall take a life among you, my children. If you can find ways to help them, do so. And then Mexico shall be ours and we will possess the land."

Even the friendly Brooklyn Eagle (Dem.) finds it impossible to defend the President's Mexican policy in its entirety. So far, it says, "little good seems to have resulted, but two facts stand out: We are not at war with Mexico, and the President's Mexican policy, far from serving as a horrible example of inconsistency, actually represents, for better or worse, his firm resolve to put his idealistic notion of the rights of small nations to a test." It is the very "fatility" that so disturbs certain editors which pleases the San Francisco Bulletin (Ind.). In its opinion "there can not be many Americans who are not well satisfied to have the troops come out of Mexico, without any territorial conquests to brag about and without leaving very many of their number behind them." The New York Times (Dem.) admits that if the Pershing expedition went to Mexico to "get Villa dead or alive," it did not succeed. But The Times explains:

"Circumstances have changed. He is no longer a mere outlaw, hiding in the mountains and subject to identification with Murietta, Billy the Kid, and Jesse James. He is now a military commander again, and the most conspicuous, if not the most important, leader in a revolutionary movement aimed at the overthrow of the Carranza Government. If he is not himself soon in possession of the Mexican Government, at least the army in which he is a commander may be. He seems to be waiting with courteous impatience for Pershing to get out of his way; the official dispatches say, not that he intends to concentrate, but that he has concentrated, eight thousand men near Chihuahua, ready to open the northern campaign as soon as our forces evacuate the battle-field. The situation since

Pershing was dispatched over the border in pursuit of a flying 'bandit' has not merely changed, it has somersaulted. It has been a long time since the presence of our forces was of any benefit; it may soon become harmful, and the sooner they come back the better."

The statement that the Administration believes Pershing's

stay in Mexico to have been of substantial benefit to this country is, according to the Paterson Press-Guardian, based on the claim that "it has taught the Mexicans to respect and fear the military power of the United States, and that this will act as a deterrent from future raids from that quarter." The Chicago Herald (Ind.) declares that the expedition "did a lot," and "did it in a workmanlike manner":

"As long as it was permitted to chase Villa, Villa fled, with scattered forces. That spectacle certainly did not diminish American prestige in Mexican eyes, no matter what irritations it might have caused. It brought something home to them that was good for their souls and understanding. When the expedition stopt the chase and took a position in the north, Mexican raids on that part of the border ceased. They have not been resumed.

"To those who wanted the expedition to be a forerunner of an invasion, who spell success in terms of brilliant performances, captured cities, indemnities, and details of that sort, the expedition must have proved disappointing. To such sources may be attributed the barping that has already begun on the idea that the withdrawal savors to the Mexicans of retreat and that American prestige will be injured thereby. The country can well afford any diminution of prestige likely to come from the orderly and voluntary withdrawal of a force which has maintained its position for months without the suggestion of real danger from any force whatever."

By withdrawing Pershing's army, says the Philadelphia Record (Dem.), the Wilson Administration has demonstrated "to the meanest intellect in Mexico that we have the means and the disposition to protect our border, but that we have not the least covetousness for Mexican soil." These, it believes, "are two large and substantial results which should improve our relations with the Republic south of us." And The Record adds: "A good many Mexicans have had a chance to contrast American military administration with Mexican military administration, and the scarcely different régime of revolutionists, and the kind of civil government provided by the Carranzistas, and to find the American Army rather a comfortable protection from their own people."

The withdrawal of our forces from Mexico was one of the questions left unsolved by the Joint Commission which was formally dissolved on January 17, after four months of virtual deadlock. Its work, Washington correspondents think, will now be taken up by our Ambassador to Mexico, who has not yet been sent to his post. Press comment on the Commission's work is not unlike that on the Pershing expedition. Its work was "wholly wasted," in the view of the Philadelphia Press (Rep.), and the Indianapolis News (Ind.) concludes that the worst phase of this whole dealing with Mexico "is the loss of diplomatic prestige before the world." On the other hand, the New York World (Dem.) and Journal of Commerce agree that the conferences have established a better understanding on both sides. Says the latter:

"Our Government must understand better the attitude of Carranza and those associated with him, and the reasons for that attitude caused by internal conditions with which they are closely connected and upon which their support depends. On the other hand, Carranza's representatives must appreciate as never before what our Government is really aiming at and what its motives for action are."

And the Boston Christian Science Monitor, taking up the work of the Commission in connection with other efforts of President Wilson, concludes that—

"The conditions have greatly improved in the last four years. In 1913 the trend of the sister Republic was toward chaos; to-day the tendency is strongly toward order."

Our future policy toward Mexico now becomes a matter of grave importance, to which the best editorial minds of the nation may well lend their counsel. "We shall be glad to receive editorials outlining a Mexican program and will gather their constructive advice in an article in an early issue in the hope of aiding the solution of this distressing and costly problem.

AMERICAN SHELL-MAKERS UNDER FIRE

THE SHARP DISPUTE between the Navy Department and some American munition-manufacturers over the award of a naval shell-contract to an English company is partly the summarily settled, our editors note, by the intervention of the British Government, which refuses permission for the execution of the contract "so long as the exigencies of war continue." Two days after Secretary Daniels of the Navy announced the award of contracts to the ordinance-manufacturing firm of Hadfields, Limited, of Sheffield, England, for

-Kirby in the New York World.

7,500 large armor-piercing projectiles, protest was made by the Bethlehem Steel Company in advertisements addrest "to the American people," in which this firm made known the facts upon which they entered their bids. As the New York Times and other journals point out, the attraction of the English bid was that the prices were 40 per cent, less than those of the American manufacturers and delivery was promised in one-half the time specified by our home producers. There was a saving of \$1,359,000, we are told, in a contract calling for the payment of \$3,144,000.

In its defense, the Bethlehem Steel Company cited the existence of an "immense stock" of naval shells in the English company's storehouses, and it was conjectured that the British Government might be willing to have Hadfields sell below costsince these shells would not be needed-in order that the procoeds could be used in making shells required on battle-fields. In its newspaper advertisements the Bethlehem Steel Company recites that two years ago it contracted for and made 4,200 14-inch shells-not one of which has been accepted. In wages, materials, and tests the company puts its expenditure at \$522,881. and states that it has not received "a single dollar" on these contracts. We are told, moreover, that the Navy Department tests "are now so severe that neither we nor, so far as we know, any other manufacturers have yet been able to produce in quantity 14-inch shells which will meet them." We read further that this company made its bid for 16-inch shells at "approximately the same rate per pound as that upon which the Navy Department actually awarded a 14-inch-shell contract one year ago." In reply, Secretary Daniels, in a statement to the press, says in part: "Until it is able to fill its contracts, it does not become the Bethlehem Company to criticize the Navy Department for awarding contracts to manufacturers who can make shells that meet the tests." And he adds:

"I regard the attitude of these companies in this and other matters as most unfortunate, and were there no relief through competition either by the Government or by other more patriotic firms, I would feel that they were putting our entire program of preparedness in peril. In urging the necessity for our tremendous program of naval development in Congress, I found the most serious obstacle to contend with was the feeling of many Congressmen that the whole matter of preparedness was a deliberately organized campaign on the part of manufacturers of war-material to obtain enormous contracts at fabulous prices.

"I did not share this opinion. The splendid action on the part of some other manufacturers in foregoing the chance to obtain war-profits from the material needed in the construction of our new program has justified my belief that the manufacturers of this country as a whole are willing to assume their share in the program of preparedness without abnormal profits.

"That other large manufacturers of war-materials should persist in extracting the last penny of profit from our orgent necessity gives a certain color to the arguments of those who believe that 'preparedness' is a synonym for profits and not patriotism."

It would seem astonishing to the New York World (Dem.) that the Bethlehem Steel Company should admit privately its failure to meet the requirements of the Navy Department, but "that it should pay money to advertise the fact in various newspapers is almost staggering." We are told, moreover, that Secretary Daniels's story of naval shells during his administration is "an indictment as comprehensive as any true bill ever returned by a jury," and The World adds:

"With no competition among themselves or abroad, American steel-manufacturers in 1912 had gradually advanced the price of 14-inch armor-piercing projectiles to \$500 each. In 1913, learning that Hadfields of England had made a bid, they cut their proposal to \$315 each, with other sizes reduced in proportion. The latter part of 1914, war in Europe having begun and no foreign bids having been received, they increased their prices \$100. This year, still believing that outside competition was impossible, some of them made a price of \$539. Hadfields, however, appeared with a bid nearly 50 per cent. below the lowest American offer and received the contract."

When English manufacturers in the midst of the world's great war can supply their own Government, contribute to the ammunition stock used by England's Allies, and then cross the ocean and underbid Americans for more business, remarks the Newark Star-Eagle (Ind.), "it would seem to be time for the vannted ingenuity and business acumen of the Yankee industrial Titan to look to his laurels—and his future," and the New York Journal of Commerce (Fin.) sees in the award to Hadfields "a strong hint to American enterprise as to what it still has to meet abroad." The moral of it all is, according to this authority, that "when peace comes and something like normal conditions return, we are likely to find that the easy going of this period for our manufacturers and the strenuous experience of those abroad will put us at a kind of disadvantage that can only be overcome by the most energetic and well-directed effort."

The Government is blamed by the Chicago Daily News (Ind.), which sees a lack of effective cooperation between the Government and American manufacturers, which is to be deplored, because "without such cooperation the United States can scarcely hope to achieve a vital independence of foreign producers of ammunition in time of war," and the Pittsburg Gazette-Times (Rep.) says the project for a Government projectile plant, as a "competitive spur," is "a foolish scheme."

This photograph of a battle on the Somme in October fast was taken by a French aviator only one handred yards above the conflict.

WHERE GERMANY LOST HER VICTORY

THE VIGILANT CENSOR, like Homer, sometimes nods, and then articles slip into the press which make us gasp when we read them. Such is a brilliant essay in the Frankfurter Zeitung of December 31, from the pen of no less a personage than Geheime Hof-Rat Prof. Dr. Friedrich Meinecke, of Freiburg University, one of the German historians of the first rank. The professor tells us that the entire German war-plan "collapsed at the gates of Paris in the Battle of the Marne." This idea has long been current in the Allied press, but up till now no Teutonie publicist of any standing has indersed the view that the "strategic retreat" at the Marne and the failure to take Verdun must be counted as German defeats. Professor Meinceke has a new theory as regards the commencement of the conflict, for he tells us that "only in a political sense did Germany begin the war as a defensive war," while "in a military sense" it has been distinctly a "knock-out war." The professor writes:

"Our first object was to overthrow France rapidly, and to compel her to make peace. As it was our interest rapidly to reduce the number of our enemies, this peace would probably have been very lenient for France. If we succeeded, we could then turn quickly, carry out the same military idea against Russia also, with the best prospect of success, and then, under favorable conditions, conclude the final peace with England, who would have been disarmed on the continent. This peace, also, like the first peace concluded with France, would have had to assume in high degree the character of a compromise, since we could not hope to overthrow England's naval supremacy.

"This whole program, brilliantly begun, collapsed at the gates of Paris in the Battle of the Marne. This battle was not a tactical victory, but it was a great strategical success for the French. Perhaps our program would not have collapsed if we had carried through our original strategical idea with perfect strictness, keeping our main forces firmly together, and, for the time, abandoning East Prussia."

Dr. Meinecke goes on to sketch subsequent developments, and says substantially: We took to trench-warfare, the enemy did likewise; we tried, and failed, to break through both on the Yser and on the Brura and Rawaka; the French tried, and failed, to break through in Champagne. People at home began to argue that the war had finally developed into one of attrition. Then in May, 1915, German troops succeeded in breaking through in Galicia, but ultimately had to settle down again in defensive positions. The French and the English tried again, and failed again, to break through in the West—in the battles of Loos and Champagne. The professor then passes to Verdun and the Somme, and his comments run:

"The argument used among us a year ago was that the decision must be sought not in the intangible distant East, but in the concentrated West, the nerve-center of the enemy's force. The decision, however, must not be a decision in the old sense, aiming at a break-through and rolling-up of the enemy resistance—for such a decision was regarded as no longer possible here in the West—but a decision better adapted to the experiences of the war of position and to psychological calculations. We should, in fact, break in at a particularly critical position, destroy one of the most important French fortresses, and so prove to the French that they could no longer win, and that they would do better to end a war which had lost all prospects for them. That was the origin of our undertaking against Verdun, But this time the new politico-military idea led only to a heroic episode.

"If our original successes could have been pursued at the same pace to their goal, our political purpose would perhaps have been attained. But meanwhile our enemies pulled themselves together for still more gigantic achievements. England learned from us universal military service and the conversion of industry for the production of a mighty supply of arms and ammunition. At the same time she leaned upon the industrial strength of America, and so, while Japan helped also, she was able to equip the new Russian formations with the apparatus which we had smashed the year before. Thus in June and July, 1916, it came to the great double offensive of our enemies in East and West. The result was that we had to interrupt our operations against Verdun, and the enemy offensive also achieved partial successes, especially in the East, altho the real object—

Department to Universal a Universal, New York,

WHERE TWO WHOLE COMPANIES OF SOLDIERS PERISHED.

This vast mine-crater, the largest of which any record has so far reached this country, was made by a French mine of the Somme front purth of Combbs. Its month is nearly 100 yards long and 60 yards wide, a charge of 32,000 periods of explosive being used. Of the two Prusslan companies swallowed up, only four wounded men were found alive, two of these dying the next day in a French implial.

to break through and roll up our lines—readd not be achieved, in spite of an intensity of affack and superiority in technical resources for greater than is our break-through in Galicia. This was due to the fact that we, in the interval, had still further developed the possibilities of trench-warfare."

Professor Meinreke says that the Battle of the Somme has led to the conviction in Goromay that it is no longer possible for either side to arrive at a military decision "in the full peacecompelling somm," and that Germany's offer of peace arises from—

"the idea that the sacrifices demanded by the continuation of the war no longer bear any relation to the military rosults which can still be expected, and that it is state-maxlike, intelligent, and wise to abandon the intention of destruction, which after all does not lead to destruction, and to seek a reasonable compromise."

HOLLAND'S ENDANGERED FRONTIER—Some alarm is exprest in the Dutch press at the fortification of the Belgo-Dutch frontier inaugurated by the Germans. The Kolninche Zeitung reassures Holland, and says:

"People have even been pleased to see behind the fact of these constructions an aggressive intention of the German side against Holland. These trenches, however, are nothing more than a measure of precaution on the part of the German Army Command, which is accustomed to reckon with all—even the most remote—possibilities. Just as very strong positions are constructed behind our impenetrable front lines in the West without there being any consequent idea of giving up the front lines, so these trenches on the Dutch frontier are only made to serve for the eventual defense of our own territory."

The Cologne organ argues that Holland has more to fear from England than from Germany:

"The Dutch will doubtless be men enough to defend their country if the English should dare to violate their neutrality. But the example of Greece must give food for thought to any cautious Government which does not desire to omit the smallest precaution for the defense of its own country. In the case of Greece, England's brutality and the unscrupulous employment of her power have forced a neutral state to go to the utmost limits in surrendering to her demands. Of course, matters will never go so far with Holland. But in the worst event, and if England should attempt to force her way into Germany through Dutch territory, the German Supreme Command must be armed, and the fact that it will be thus armed is proved by the fortifications which have given occasion for so many false speculations. The Dutch should see in these trenches on their frontier nothing but the visible sign of the fact that England's brutal domination shrinks from no violation of international law, that it can be opposed only by force, and that even the Dutch must be armed at all times to defend their mother country against the tyrants on the other side of the Channel."

ENGLAND DRIFTING TO PROHIBITION

A fact, has except over Britain, and almost every newspaper, both in its editorial and advertising columns,
is advocating "prohibition for the period of the war" or the
immediate state purchase of the liquor trade. Shortage of
feed seems to have influenced the situation, and many journ le
of prominence have published spirited protests against the cantersion of badly needed grain into intoxicants. The weighty
London Speciator considers the matter so argent that it heals
its columns with this paragraph printed in italies:

"The chartage of food remains the question of the hour." We are a belonguered sity." Yet an continue to turn foodstuffs into interiornia. Item such a state of things satisfy the nation! It restainly does not satisfy us."

Outlining its policy in more detail, The Spectator says:

"The liquor problem has developed with extraordinary rapidity in the last three weeks, and is now, we believe, ripe for solution. If it is solved now, the nation will greatly benefit, both in war and in peace. If, owing to want of courage and consistency in our leading politicians, it is not solved, the prosecution of the war must be seriously delayed, and we may be placed in a position of danger from which our statesmen could and ought to have preserved us. Moreover, we shall be forced to face the future bowed down with a heritage of trouble from the past.

"The Speciator policy provides, we believe, the best method of solving the problem. It is a winning policy and a just policy. It can be stated, like most things that are worth anything, in

a very few words.

"(1) Prohibition for the war. (2) The elimination of private profit from the manufacture and sale of intoxicants after the war.

"The instrument for obtaining what we desire is, in both

eases, state purchase on just terms,

"But the this is the solution we desire, we realize that as things are we can not at once carry out our whole policy. The politicians have not enough courage to give us prohibition for the war straight off and by direct means. It is, however, clear from the newspapers and from other indications as to the movement of public opinion that we can, if we press for it, have state purchase. Let us have it. Let us accept offhand as much of the Spectator policy as we can get by general agreement. In a matter so vital we should not recommend a compromise if it were a compromise of principle, or if it were one of those halfmeasures which would prevent the whole measure ever being carried out. The acceptance of state purchase, even the not coupled with prohibition for the war, is no compromise of this kind. Therefore, after the fullest deliberation and the most anxious thought on the whole matter, we urge its acceptance upon all those who agree with our policy. State purchase will not give us immediately what we want, but we believe that it will give it to us in the end, if slowly and by two removes. We to cant to open a locked door in of order that the nation may esse ope from the suffocating and positionous atmosphere into the fresch air and gain strength to atta ock and resist its enemies."

The London Times regards set us form of prohibition as in vitable and bids its readers mark the signs of the hour:

"The liquor-traffic is one of theose domestic concerns which have been profoundly affected by the war; and, like others, it will be still further affected as the pressure increases. Those who are interested in it will do we'll to recognize the signs and be prepared to accept the inevitable. It touches the condiffet of the war in two respects. One is the food-supply and the other the efficiency of our warindustries. Both are of such supreme importance that no regard for sectional interests can be allowed to stand in the way of any measures which may be called for to strengthen the natioual effort."

State purchase and not prohibition is the policy favored by The Times, and in this it is supported by The Observer, which says:

"It is easy to emphasize the gravity of the problem. The question is how it is to be remedied. Total prohibition is ruled out by common consent. It could only lead to a disastrous reaction as soon as pence was declared, if not before. The clear way out seems to be a complete scheme of state purchase. Such a plan no longer seems gigantic by comparison

with other undertakings which are now being carried on in the name of the nation."

The London Daily News, however, is of the contrary opinion and believes that the nation would welcome prohibition if it could only be confronted with the accomplished fact:

"What we have not, and to our national shame seem incapable of acquiring, is the resolution to decree that the prohibition of the consumption of alcohol for the period of the war shall be absolute and universal. There have been times when such a step would have provoked a storm of opposition. To-day we believe it would be greeted with whole-hearted approval by the solid mass of the population."

Very skeptical is the attitude of the London Solurday Review, which exhibits a typically Tory desire to let things alone, tho it concludes:

"We are far from holding that nothing must be done. It is both necessary and desirable that the consumption of alcohol should be largely checked, and neither interest nor prepossession can be pleaded against the necessary steps. All we would suggest to the Government is that it should convince itself of their necessity, and should make sure that in dealing with certain admitted evils it does not create worse. Above all, fad and fixt idea should be avoided as the plague. The whole question is hedged with difficulties and even dangers. Some of them must be faced with courage, but wise statesmanship will do its best to let sleeping dogs continue to sleep. From what we know of the workingman of this country—and we think we know him

SAVED BY THE PARACHUTE

The French accopiane has fired incendiary shells into the German observation balloon. The observers made their escape by parachute. In the first picture the two officers are seen falling, their parachutes as yet unopened. In the next their fall is truken by the opened parachutes. The fate of the balloon is next seen. The five dots are balancing weights in the guide-cope of the balloon.

much better than most who speak in his name—we believe he will, with a sort of grumbling cheerfulness, acquiesce in any measures he deems necessary for the safety of the State; but once let him believe that he is the victim of cranks and professional prohibitionists and he will signify his disapproval with some emphasis."

That doughty champion of British beer, Mr. G. K. Chesterton, is very angry over all this agitation, and in the London New Witness thus voices his wrath:

"The tectotaler has twenty schemes for cutting off free citizens from the beverage of their fathers; and out of these twenty the liquor-lord, without whose permission nothing can be done, selects the one scheme which will not interfere with him and his money. It is even more probable that the temperance reformer himself selects, by an instinct for what he would call practical polities, the one scheme which the liquor-lord is likely to look at. And it matters nothing that it is a scheme too witless for Wonderland; a scheme for abolishing hats while preserving hatters.

"It might be a good thing to give the control of drink to the state—if there were a state to give it to. But there is not. There is nothing but a congested compromise made by the pressure of powerful interests on each other. The liquor-lords may bargain with the other lords to take their abnormal tribute in a lump instead of a lifetime; but not one of them will live the poorer.

"The main point is that, in passing through that plutocratic machinery, even a mad opinion will always emerge in a shape more maniscal than its own; and even the silliest fool can only do what the stupidest fool will let him."

SHARPER "U"-BOAT WAR

THE FLIGHT OF THE PEACE-DOVE has focused the attention of the world once more upon the submarine, for on all sides it is admitted that could Germany succeed in establishing a submarine blockade of the British Isles the collapse of Britain for lack of food would be but a matter of days. The Amsterdam correspondent of the London Daily Chronicle believes that immediate steps are being taken by the Central Powers to establish such a blockade and at the same

time to deliver a smashing blow against the Western front. He writes:

"Either from the moral or military point of view there seems. indeed, every probability that the next. few weeks will see the heginning of a desperate onslaught on the West front. To help in this move all possible elements of frightfulness are being piled up in These include still readiness. more horrible gases and other barbarities than have hitherto been used.

"This land onslaught will be waged simultaneously with utmost destructiveness at sen. where the submarines, which official guesses say number nearly three hundred, will sink on sight. Stories of the size, power, and range of these new sub-

marines do not err on the side of modesty. It is said they are now able to withstand a shell of considerable weight. They also carry six torpedo-tubes each and quick-firing gons. It is freely admitted everywhere in Germany that during the last right months particularly the losses of submarines have been very heavy. The new submarines are said to be capable of four weeks' work without touching anywhere for any renewal of stores, and their speed is much faster than any hitherto built."

the Atlantic against U-boats.

There is no doubt that the powerful Conservative party in Germany are desirous of using the submarine ruthlessly, and in the Prussian Diet, Dr. von Heydebrand, often called the "unerowned King of Prussia," took the Government sharply to task for not prosecuting the submarine campaign with more vigor. He promised the Government full popular support for a ruthless U-boat war:

"If we are to win a victory, it is absolutely imperative to use the weapons which give us the possibility of winning a victory against the toughest and strongest adversary, England. . . . If our military authorities, the higher command, and the Emperor find it suitable and timely to make the necessary use of unlimited submarine warfare, the German and Prussian people will be prepared to bear the consequences."

The leader of the Conservative party in the Reichstag, Count von Westarp, in a speech at Magdeburg indersed the views of his colleague and, as reported in the Magdeburg Central Anxiotr. said:

"Our utmost strength must now be thrown into the scales. There is no weapon of warfare which we dare to withhold. We have too few weapons in hand against England, who possesses at this moment our colonies, has swept away our commercial marine, and put a blockade into effect.

"If we want to make further progress against England we must strike her life-nerve—her commercial fleet. We have already dealt England mighty blows in cruiser-warfare, and it is technically possible to augment our achievements, but the chief thing is commercial warfare.

"It is a good sign that nobody feels it necessary to try to interfere with the plans and decisions of the military authorities. but that everybody has full confidence."

The Conservative party is receiving no little support in the press. The military Berlin Kreuzzeitung writes:

"We agree with the Conservative party in the Rethat, as regards the submarine-war on shipping, the G Government should make use of the resolution which it resto itself in the note of May 4, and which is actually considered to it in an almost derisive manner by America's answer and enemy's abrogation of the Declaration of London, W. but see in it a well-adapted and indispensable weapon for the accelerated victorious ending of the war."

The semiofficial Berlin Lokal Anxeiger discusses the marine compromise arranged between Wilhelmstrasse and. Washington, and broadly hints that ruthless action is c

ing presently:

"To the political reasons for the decision of that time there belonged also consideration mot only for America but alses for other neutrals—a consideration intended to preserve for ourselves the friendly feelings of neutral states. If England, lowever, succeeded in ranking the neutral states, either passivel or actively, against us, then hat was an important reason; in spring, 1916, would disappear. . . We can but draw our conclusions from all political and military factors, and so do that is most useful to Germany, 'that best secures victory for Germany. But apart from the above-mentioned reason, another of the total of those reasons which led to

the spring decision of 1916 has altered in its essentials and one which has reference to our submarine weapon, but which can not be discust here in detail. In any case, this change tends in a direction which is favorable to us in case we are compelled to act ruthlessly:"

-C Simpliciations (Munich).

WHY CONSTANTINE SCORES - Mr. Gustave Hervé in the Paris Victoire asks that section of French opinion which classors for open war with Greece to exercise patience. Incidentally he reveals the conditions which have enabled King Constantine to play off one Power against another with such great success. Mr. Hervé tells us that the policies of the different Allies clash over the Greek situation, and proceeds:

"Put yourselves in the place of the Russian Government. which, as every one knows, is not republican. With what eye do you suppose the Russian Government views the Venizelist movement? For the Russian Government Venizelos is a revolutiouary, whereas Constantine represents monarchical principles. You may be sure that from Petrograd all sorts of arging has reached our Government not to inflict indignities npon Constantine, but to stretch patience to its limits in his favor. Whatever may be our sympathies as republicans for Venizelos, we could not on his account quarrel with Russia,"

England and Italy, too, dislike drastic action in Greece:

"Now look at the question from the British Government's point of view. That Government, please remember, entered the war not because of an alliance, but to defend Belgium. It became a belligerent on behalf of a small nation which had been treated with outrageous brutality. How can one suppose that England would be willing to sacrifice the solid moral position she had assumed-so solid, especially in the eyes of neutrals, and particularly of the United States-by throwing berself upon Greece?

"There remains the Italian Government, which prefers Constanting to Venizelos, who, with his views of founding a Greater Greece, including the islands and cities of Asia Minor, runs counter to Italy's Mediterranean ambitions. Since Rome realizes that war against Constantine would mean the triumph of Veniselos, it opposes a rupture with the Greek King with every energy at its disposal. It is easy to see that under these conditions Constantine had things his own way, and that our Premier had to use extreme dexterity to assure the safety of our Saloniki army, which was his main object, without arousing trouble. He is achieving his object."

SCIENCE - AND - INVENTION

WHAT PATIENTS THINK OF THE DOCTORS

ITH THE INTREPID OBJECT of learning the attitude of representative laymen toward the modern physician, The Medical Review of Reviews recently asked a considerable number of well-known men and women, largely authors, the question, "What is the matter with the medical profession?" All of them have no doubt been patients at one time or another, and their answers, printed in its last number (New York, January), are largely favorable and even laudatory, the they include some caustic criticism. James Mark Baldwin, the psychologist, believes that physicians "live up to their light possibly better than any other" body of men; altho medical education in the United States is "inadequate and insufficiently controlled." John Kendrick Bangs expresses "a supreme contempt for the flings indiscriminately hurled at physicians as a class." Ellis Parker Butler, whose opinion is given in dialect, thinks that doctors and surgeous nowadays are "so dang much better than the old fellers was that they seem imperfect," which he further elucidates by explaining that the profession took refuge formerly behind "flubdub hoeus-poeus mystery stuff," which inspired awe, whereas doctors now "come right out in the open," thereby inviting the criticism that they often receive in full measure. George W. Cable knows "no other calling that so faithfully. unselfishly, and constantly toils to put itself out of business." Andrew Carnegie maintains that "the doctor is indispensable." Dr. Paul Carus, editor of The Open Court and The Monist, writes as follows:

"Some physicians understand better than others how to make a fair living, but the physicians who are most successful in making money are not always the best according to the ideal standard of the profession, and if the quack flourishes, who is to blame the quack himself or the public, who prefer his estentations services to the work of a quiet, unassuming man who employs no trick to enlarge the circle of his elientele."

Theodore Dreiser, introduced by the editor as "our most supprest novelist," is unwilling to say that there is anything wrong with the medical profession as a profession, "any more than I would quarrel with lawyers, or engineers, or architects, or authors as such." He goes on:

"The trouble with most professions, including priests and soothsayers, is not the tenets which govern them, but the weak, confused, aspiring, selfish animals who are called to be made into professional men. And back of them is nature, compounding and breeding the above-described animal. Some of the best men I have ever known have been doctors, and some of the worst. An evil-minded or shallow or earsless doctor is to me as bad as a burglar or a murderer. Indeed, I have more respect for the latter, for they are often so passionate and confused that they know not what they do. Similarly, a thieving lawyer—of whose kind there appear to be thousands—is lower than the ordinary criminal.

"The ideal of each day and age since the world began appears to have been and still is, strutting pomp—richly caparisoned power. For this men murder as they go, in an endless variety of ways. The low-minded, ignorant doctor—in order to live and be happy—steals in the sense that he takes what does not rightfully belong to him. He doctors where he should not, pretends to a knowledge he does not have, fumbles with life, and when his victims die turns his back on memory. The higher skilled, but equally unscrupulous professional, seeking local station and wealth, overcharges, browbeats, carries profitable cases along, and bleeds his victims to the last dollar. I know four such eminent practitioners in New York alone. They make a shame of a great art."

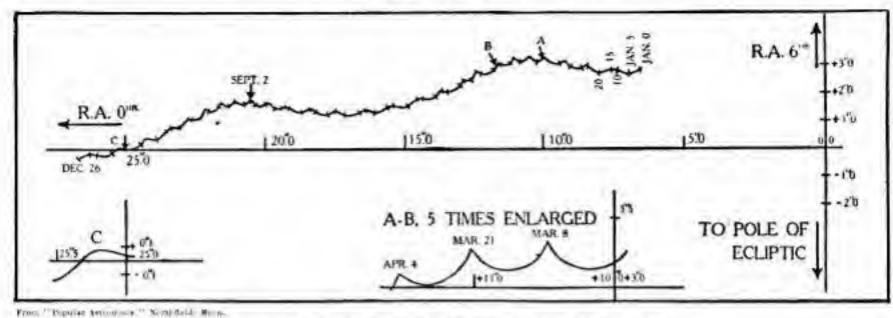

Wallace Irwin thus sets down what he terms "the prevailing fault of the medical easte";

"The trouble with medicine, as I see it, is that any man with an average mind can, by work, obtain a diploma. Exceptional men, men of genius, also go into the medical profession and, of course, do the world an incalculable service. I do not say that the average doctor is not also a benefit to his fellow men, but said fellow men must not make a fetish of him or reverence him as one who has acquired merit through the offices of a mysterious priesthood."

A somewhat similar sermon to the medical profession is read by a fellow humorist of Mr. Irwin's—Jerome K. Jerome—a proof that no one can be more portentously serious than the "funny men" when they try. Says Mr. Jerome:

"What so many of your profession fail to understand is that raedicine is not a science. At best it is an art. At worst a makebelieve founded on credulity and fear. The doctor of to-day stands in the shoes of the medieval priest. In the days of the Inquisition it was our souls that we were expected to hand over to his keeping. If we did not follow his instructions (and incidentally subscribe to the church funds) we were to go to hell. We could not argue with him. He claimed to have got his information from God, and any layman who doubted his claim was to be burned at the stake. The medicine-man of to-day elaims precisely the same omnipotence in respect of our bodies, If we don't do everything that he tells us he condemns us to future torture and disease, and if, looking into the examples round us, we venture to doubt his all-knowledge, he demands from the Government the right to imprison and to fine us. As priest he dealt in incantations. As doctor he inoculates us. . . Half the time of the medical expert is taken up in explaining the mistakes of his predecessors. What they told us up to twenty years ago we now know to be all nonsense. But with a fine absence of humor the medical expert is quite convinced that we have in this particular year reached the limit of medical divination, and that further mistakes therefore are impossible. To the observer the whole thing is an interesting comedy: for the sake of humanity one would be glad if the medical profession could learn a little of the modesty and humility that go to the making of true knowledge."

George Kennan thinks that, like the rest of us, doctors "do the best they can in a world full of perplexities." Charles Rann Kennedy proclaims bravely that he is "on the side of the doctors," and opines that denial of the "mighty and inspired" things they do is "blasphemy against the Holy Ghost"—which is surely hard on Messrs. Irwin and Jerome. S. S. McClure

MOTION OF THE NORTH POLE AMONG THE STARS-1917.

thinks most physicians could stand improvement, but excepts "six great doctors—exercise, rest, food, sleep, sun, and work." R. F. Outeault, the inspired creator of "Buster Brown," cries out: "God bless the doctor; there's nothing the matter with him!" Terence V. Powderly, beloved of some and excerated by others, holds that many a doctor is being spoiled by modern society. He goes on to explain:

"He would rather have a clientele of ultra fashionables than one of moderate means. To my mind the ideal doctor is the one who meets all, serves all, on an equality. I am told that here in Washington there is a skilful physician who refuses to respond in daytime to a call from a workingman or woman for foar that his rich patients might see him entering a humble habitation. That man is not in love with his noble profession, and the man who does not love and respect his calling should quit it—undess his object is to make money.

"Personal observation prompts me to say that no other profession has produced so many unselfish, self-sacrificing, generous men as the medical. If it's the yellow streak in the man that crops out in some doctors, there is that in the practise of the healing art to bring out the best and most humane in the practitioner. Tenderness, sympathy, and generosity are the chief attributes of the great majority of physicians that I know."

William Marion Reedy, the all-around editor of The Murner (St. Louis), argues that doctors should be skepties. He says:

"I can't see or say anything that would help to increase the efficiency of the profession, except possibly to suggest that the members endeavor to keep an open mind as to all that is going on in the world. If they do this they will keep the profession from its greatest danger; that of petrifaction into an exclusive easte of hierarchy. There is nothing more that becomes a doctor than a healthy liberalism, and this implies a certain amount of skepticism as opposed to dogmatism, pseudoscientific, medical, or theological."

Upton Sinelair thinks that doctors are "not socialized," and have a "tendency to fall behind," so that they "have to be prodded." But he bids them not to worry: "being prodded is the best thing in the world." John Spargo regrets the continued emphasis laid upon curative as opposed to preventive medicine, for which he blames the fact that the profession is still "based upon individualism and competition." Nathan Straus, on the other hand, thinks that preventive medicine is coming into its own, and so inaugurating "the greatest phase" of medical history. We close with a word from Booker T. Washington, whose contribution to this interesting symposium was written just before his death:

"The old theory of healing was that of euring diseases by means of medicines after the diseases had appeared. The new theory is that diseases should be prevented by correct living and obedience to the laws of health. The one was curative, the other is preventive. In both systems the physician is the central point, for, if I may quote the famous Dr. William

Osler, 'the basis of the entire profession of medicine is faith in the dector and his drugs and his medicines,' and that is true whether we have in mind the physicians who depend upon drugs for cures; those who manipulate the body for healing; those who teach that one mind acting upon another can banish disease; or those who rely upon the operation of the Divine Mind to heal the bodies of men.

"Sustained by this faith and the obedience which it has created, countless millions have been cured of diseases and relieved of pain from the most ancient of days; and so in the light of all this I regard the physician as one of the most useful friends of mankind—a friend without whom the past would have been a house of continuous human pain and suffering, the present would be a record of complete physical decay and death, and the future would be without hope to those who simply will not learn nature's laws of health and healing."

OUR WOBBLING EARTH

OST CITIZENS UNDERSTAND that the earth's axis points, in general, toward the North Star. If prest a little, they would probably qualify this by saying that the actual celestial pole does not coincide exactly with this star, but is somewhat to one side. Those who retain a vague recollection of their high-school astronomy would say, in addition, that the position of the axis is not fixt. As a matter of fact, the earth does not spin steadily like a "sleeping" top, but "wobbles" a fittle, like a top that is just preparing to yield to the various forces that oppose its continued motion. In an article on "The Motion of the Pole," coatributed to Pupular Astronomy (Northfield, Minn., December), Mr. O. H. Truman gives us a picture of the handwriting of the earth's axis on the northern heavens, the line which it would trace if prolonged as a vast stylus to reach some celestial tablet. Says Mr. Truman in substance:

"All text-books on astronomy give a description of the phenomena of precession and nutation, but never have I seen the last represented by a proper figure—a figure which shows what actually happens instead of an idealized version, and is calculated to give the student a correct and definite idea of it. In an endeavor to present the subject in a more correct and at the same time a more appealing way than common, therefore, I have made a lantern-slide from the accompanying drawing.

"The twenty-five-thousand-year path of the pole of the equator about the pole of the celiptic would be exactly followed, at a uniform rate, if the force were uniform which tends to the carthe axis

tip the earth's axis.

"Now, it is well known that this force is due to the attraction of the sun and moon on the equatorial bulge of the earth, and if the sun and moon were always in the same positions with respect to the earth, and always the same distance from it, we should, in fact, have a constant force and a uniform procession.

"But this is not the case. Twice each year the sun is on the equator, and its tipping force upon the earth is reduced to zero; twice each month the same is true of the moon. And added to all of this, the distances of the moon and sun from us vary by important amounts.

"So the twisting force upon the earth is very irregular, and the pole, instead of moving at a uniform rate along the precessional circle, moves at a variable speed, and departs a little from the circle, sometimes toward, sometimes away from, the center."

The larger fluctuations shown in the curve, like great waves, are six months apart, and are due, Mr. Truman tells us, to the sun's being farthest from the equator, and so getting a bigger "purchase" twice a year. The little ripples on the flanks of the big wave are due to similar variations in the moon's attractive power, with periods of one month. Variations due to the changing distances of sun and moon exist, but are too small to be shown. Mr. Truman concludes:

"Had there been any stars near the pole's path I should have marked them, but none, even as faint as seventeenth magnitude, are close enough to show. But after all this is not surprizing, for if one should put on his telescope an eyepiece having a field less than half a minute in diameter, and point at random on the sky, what would be his chance of seeing a star? The entire year's path of the pole is comprised in a space but little larger than the trapezium of Orion, and the minuter variations which I have drawn are so small that if traced upon the sky they could scarcely be seen, even with the greatest telescopes.

But from the eye of mathematics they do not escape. It sees them and predicts their coming years into the future, and determines the allowance that must be made for them in those minuter observations where alone they are able to make their presence felt."

COVERING UP A FAMOUS VISITOR'S CARD.

The old Mexican cypress shows how vigorous it is in extreme old age by the way in which it is healing the cut and covering over the plate inserted by Alexander von Humboldt in 1803.

Elizabeth and the constraint of this Montan's Relatived bandon from the

A CONTEMPORARY OF ADAM.

This bald cypress, which has been standing at Santa Maria del Tula. Mexico, for perhaps six thousand years, is thought by scientific observers to be the oldest living tree. It is as old as Archbishop Usher believed the human race to be.

THE OLDEST TREE IN THE WORLD

T IS NOT IN CALIFORNIA-for the redwood, altho a giant, is equaled in longevity by the hald cypress, and in at least one instance the cypress is ahead. So, at least, we are told by The Missouri Bolonical Garden Bulletin (St. Louis, December). This aged cypress, which stands in southern Mexico in the village of Santa Maria del Tula, is believed to be at least four thousand years old, and perhaps five or even six thousand. It was first noticed, The Bulletin tells us, by Alexander you Humboldt, in 1803, during his travels through this part of the country. Humboldt believed it to be made up of three united trunks. At the time of his visit he inserted a square board into the side of the trunk, about twelve feet above the ground, cutting a shallow hole in the outer part of the tree for that purpose. This heard here a Spanish inscription, a copy of which does not seem to have been recorded. The Bulletin quotes the following reference to the tree from Dr. Gray's essay on "The Longevity of Trees";

"We possess three independent measurements of this enormous trunk. The first is that given by Humboldt, who states, probably on the authority of his informant, Mr. Anza, that the frunk is thirty-six meters (one hundred and eighteen English feet) in eircumference. In the year 1827, Mr. Poinsett, then our Minister at the court of Mexico, transmitted to the American Philosophical Society at Philadelphia a cord which represented the exact circumference of this tree. Its extraordinary length naturally excited some doubts as to the correctness of the measurement; and immediate application was made to Mr. Poinsett for further particulars. He accordingly transmitted a communication from Mr. Exter, an English traveler who had just returned from Oaxaca, and who had carefully examined the tree in question. According to Mr. Exter's measurement the trunk is forty-six varas-one hundred and twenty-two English feet-in circumference; which is nearly in accordance with Humboldt's account. In neither case is the height at which the trunk was measured expressly mentioned. But this point has been duly attended to by a recent scientific observer, Mr. Galcotti, who visited this celebrated tree in 1839 and in 1840, and whose eareful measurement gives to the trunk the circumference of one hundred and five French (equal to one hundred and twelve English) feet, at the height of four feet above the

surface of the soil. The previous measurements, therefore, were taken somewhat nearer the base. The tree as yet shows no signs of decay, altho it bears less foliage in proportion to its size than its younger fellows. But we find no authority for Mr. Exter's statement, that this tree was mentioned by Cortez, and that its shade once afforded shelter to his whole European army. Perhaps he had in some way confounded it in his memory with a cypress which the conquistador passed on the march to Mexico, and which is still traditionally associated with his name."

The editor of The Bulletin goes on to say in substance;

"In 1903, Dr. Hermann von Schrenk, Pathologist to the Garden, visited this famous tree. At this time measurements were made of the trunk and photographs taken, two of which

are herewith reproduced. One of them, taken from the roof of one of the buildings across the square of the small churchyard, where the cypress stands, gives a good idea of the general shape of the tree. The crown is almost round, and the tree has little resemblance to young cypress trees growing in dry localities or older ones growing in the swamps, but looks more like a large oak. It has an extremely massive but comparatively short trunk, deeply fluted.

"A careful examination of the tree (ineidentally it might be stated that this was made under the supervision of a guard of soldiers and a large percentage of the population of the village) showed no evidence of decay or disease of any sort, all of the branches appearing healthy and vigorous. The best indication of its good condition was evidenced by the manner in which the famous Humboldt plate had been more or less covered during the hundred years after its placing. The other picture shows a photograph of this plate, from which it will be readily seen that the tree had almost fully healed over the wound made by the insertion of the board. The photograph shows only indistinctly the Spanish words which are still evident on the board. Of Humboldt's name, the only parts legible are der' of the first name, the small 'v,' and 'Hum."

Dr. Gray, in his essay, suggests that lateral incisions in the trunk would reveal its actual growth for the last few centuries, and might disprove or confirm the surmise

that this huge bole may consist of the trunks of two or three original trees. The writer in *The Bulletin* tells why it is such an examination has been impossible, and why it has been difficult to make exact measurements of the tree:

"Unfortunately, it proved entirely impossible to carry out the suggestion made by Dr. Gray, because the slightest mention of injury to this famous trunk was regarded with horror by the inhabitants. The external examination does not confirm the description which Humboldt attributes to his friend, Mr. Anza, but confirms the accounts of Mr. Exter and Mr. Galcotti, that the tree appears to be one solid trunk.

"The measurements of the tree were made with difficulty, since it has a considerable swelling, which extends from six to eight feet up from the ground, and furthermore because of the tremendous buttresses, some of which are three to four feet deep. The measurement made by the writer showed a circumference of one hundred and twenty-six feet, measured breast high.

"The age of this great trunk has naturally been the subject of a great deal of speculation, but, due chiefly to the fact that we have so few data as to the rate of growth of these large trees during the past century, no very accurate statement can be made.

"However, enough is definitely known to indicate that a conservative estimate of the age of this trunk would be considerably over four thousand years, and probably nearer to six thousand years. It is hard to realize that this particular treestarted its growth at a period antedating any human records."

BIRTH-CONTROL AND RACE-SUICIDE

D'eontrolled" too much already? That would appear to depend on what class of the population we are considering. Prof. Robert J. Sprague, who holds the chair of economies and sociology in Massachusetts Agricultural College, tells us, in an article contributed to The Journal of Heredity (Washington, February), that our wealthy classes need more births and our poorer ones fewer—"birth-release" in the former case and control in the latter. Control he thus considers as simply a phase of the general problem of population, and he urges the adoption of a "program for eugenies" that shall include this and

many other things. The survival of the merely strong, Professor Sprague says, may result in the survival of "the strong hog." Pressure of population develops brutality, selfishness, and disregard for human life; it crushes leisure, generosity, and art and makes impossible some of the finer virtues of a race. On the other hand, race-suicide is destroying the social balance and is becoming a real menace where this pressure is not felt. He goes on:

"For one great section of the population we need birth-control and for the other birth-release. Massachusetts is the only State that has for many decades taken birthstatistics on a basis of nativity, and these show that the birth-rate of her foreign-born population is about three times the birth-rate of her native, mostly Anglo-Saxon, people, the birth-rate being fourteen per thousand and the death-rate eighteen per thousand in the same native group. There are many reasons to believe that practically the same situation holds in other States among the people of the same class. Merely to sustain the population and not to increase it, every married woman capable of bearing children must, as an average, bring to maturity at least three children. Of the graduates of our women's colleges only one-half ever marry and the average number of children per graduate is less than one.

"Birth-control among the poor is needed for themselves, but birth-release among the

spper classes is a greater necessity, both for their own welfare and the salvation of the nation. Excessive birth-control by those well able to have families sufficient for the nation's growth weakens the nation at every point, necessitates the importation of indigestible foreign elements, good people in themselves but poorly adapted to American life, weakens patriotism, and brings about a mixture of races which makes confusion of morals, dearth of art and literature, and conflicts between classes.

"Birth-control among the poor is a problem, but race-suicide among the middle classes is a racial menace which threatens by its influence to defeat the highest ideals of the nation.

"There ought to be reasonable birth-control by all classes based upon high ideals for the nation and family, responsibility for offspring, and refinement of soul and character of the parents.

"Gradually man has been reducing his life from a world of chance to one of human control and order. Finally, his children will be the result of foresight, plans, ideals, and self-control... Birth-control does not necessarily mean smaller families, but it does mean better families, brought forth and developed according to the right mingling of reason and love. America needs at present a higher quality of population more than she needs a greater quantity; she needs more normal families of the successful classes, not larger families of the unsuccessful. The number of children reared into decent citizenship, not the number born in poverty, is what makes the American family happy and the nation strong."

Birth-control, however, must not stand by tself, for it is only

"Hirth-central among the poor is needed for themselves, but hirthrelease among the upper classes is a greater necessity."

one important factor in the problem of population and vitality. How is our population to increase in the future? Race-suicide is decimating the middle classes of the industrial regions. If the radical birth-control advocates are to prevail, there will be no pressure of population upward among the poor. The men that we shall surely need must therefore come from the poverty stricken classes of the Russians, Italians, Syrians, Portuguese, Mexicans, and negroes. The writer goes on:

"If the insufficient birth-rate of the upper classes were to continue and we were obliged to get our increase in numbers either from the overflowing poverty-stricken families of foreign countries or from the poor classes of our own population. I should say, from the point of view of national welfare, let the mercase come from our own people reared under our own flag, language, and customs, even the in poverty. The adoption of birth-control by poor families to the extent that it is practised by the economically higher classes will condemn this continent forever to be not only the mixing-bowl of the world, but the scrap-heap of the These people may be themselves as good as any of us, but forever mixed together from the ends of the world, they can not make a nation. Nations composed of mixed races are weak in most of the things that make for national strength and progress. Lacking the unity of traditions, idealism, and national spirit, they are liable to have excessive individualism and turn to materialistic goals.

"If in America we are to develop a national unity, a great American art and literature, a full realization of American genius for all classes and races already with us, and a respectable position of influence in the world's progress and affairs, we must have a birth-rate among all classes sufficient to maintain, increase, and unify the people of the United States into one great social and

national body.

"This nation must set up a goal of the normal American family and racial independence. It must idealize the family instead of the individual and work for its success by all forms of legal, social, and economic readjustments that are neces-

sary for the accomplishment of these ends.

"If we are ever to ripen and perfect our civilization we need not depend upon the pauperized villages of Europe, the deserts of Asia, and the jungles of Africa for our population. We must determine to rear our own population from our own best stock, and so organize and utilize the resources of the country that all classes may bring their families up to the high standards that are possible to us.

"America was founded on great principles which the world needs to have preserved, but without a sufficient birth-rate the old population will pass away and her mission to the world will

not be fulfilled."

DANGERS OF RAW PORK—Eat no perk or perk products unless they are cooked, if you would be certain of avoiding trichinosis. This is a warning issued by the Bureau of Animal Industry of the Department of Agriculture. The Weekly News Letter of the Department (Washington, January 3) says that the records show that the number of cases of trichinosis—a serious, painful, and often fatal disease—increases during the holidays, partly because farmers frequently make up special forms of sausage which are caten without cooking. It continues:

"To avoid trichinosis no form of pork in the raw state, including dried or smoked sausages and hams, should be eaten. All pork used as food should be cooked thoroughly, as triching, the minute organisms which cause this deadly disease, die and therefore become harmless when subjected to a temperature of 140 F., or higher. The fact that these organisms may remain alive and active in uncooked pork makes the latter, say department meat specialists, a memore to life and health wherever it is eaten.

"Every one should remember this simple rule of food hygiene: Cook pork well. A practical rule is to cook pork until it has lost its red color throughout all portions, or if a trace of this color is still present, at least until the fluids of the meat have become more or less jellied.

"The Federal ment inspectors do not inspect pork or pork products to determine the presence or absence of the organisms causing trichinosis, as even careful microscopic examination is unreliable. In inspected establishments the inspectors do, however, require that pork which is to be made into products to be eaten raw shall be heated sufficiently or subjected for considerable periods to extreme cold to destroy the harmful organisms. This requirement does not reach all pork products made to be eaten raw, since the Federal Government inspects only establishments preparing products to be shipped in interstate commerce.

"It should be noted that the special treatment required by the Bureau of Animal Industry to be given to pork-products meant to be eaten raw must not be interpreted as an indersement of such dietetic practises. The measures are taken primarily to reduce the risks taken by persons who ignorantly, carelessly, or wilfully eat such products. It remains that the safest plan is to eat no pork products of any kind raw,"

OUR BIG STEEL YEAR

The American steel trade has ever known; so we are assured by the writer of a leading review in The Icon Age (New York, January 4). From start to finish, we are told, manufacturing establishments were driven to the limit of their capacity as in no previous year. All the other important iron-making nations are at war, and most of them needed more iron and steel than their own output, so that there was precipitated upon the United States a demand far beyond anything that an export enthusiast could possibly have pictured. It began in 1915, but grew much heavier in 1916. Says this trade authority:

"Thus was brought about a distortion of the trade relations of the whole world. Not only were belligerents unexpectedly large buyers, but neutral countries generally, that had been cut off from their usual sources of supply, became heavy purchasers of American steel. Only a portion of the details of such transactions reached the public at the time they were consummated, but enough became known to establish the fact that numerous steel purchases by belligerents were of staggering proportions; while the neutrals also showed a disposition to take greater quantities than it had been supposed their needs would require.

"The magnitude of this foreign boying is indicated in our statistics of exports. The report of the Bureau of Foreign and Domestic Commerce of the Department of Commerce for October, the latest issue, shows that in the first ten months of this year the value of our exports of iron, steel, and manufactures thereof, excluding ore, was \$701,052,410, against \$294.822.223 in the corresponding period of 1915 and \$251,-672,076 in the corresponding period of 1913, the year before the outbreak of the European War. There was, of course, considerable inflation in values in 1916; hence, a comparison of the exports of iron and steel commodities whose weights are reported. and are so-called 'tonnage exports,' needs to be given. These exports totaled 4.968.285 gross tons in the first ten months of 1916, against 2.818.999 tons in the corresponding period of 1913. Estimating the remaining two months of the year at the rate of the ten months, the total exports of this class will be only a little short of 6,000,000 tons-a truly stupendous amount. As the foreign buying has not abated, American iron and steel products will for some time further play a prominent part in the world's trade. Foreign buying may also be expected to exert a continued important influence on donestic prices.

"Earnings of steel companies in 1916 exceeded all expectations. Those carrying a burden of floating indebtedness lightly east it aside and substituted the more cheerful process of piling up a surplus. It was a record year for the wiping out of deferred dividends on cumulative-dividend stocks as well as for the declaration of extra distributions of profits. In this latter respect, however, steel companies have been decidedly conservative. Mindful of the lean years sure to come, they have preserved substantial surpluses, and are thus facing the future with far

less apprehension than ever before.

"Labor has shared in the prosperity of the year. Three times in the twelvementh were wages of laborers advanced by the steel manufacturers, each time 10 per cent., while workmen paid on a sliding scale were steadily benefited by the rising prices of the products they made. It is safe to say that never before, in this or any other country, were iron and steel workers in receipt of such incomes from their daily toil as the workmen of this country in 1916."

LETTERS - AND - ART

GERMAN REPUDIATION OF PARIS FASHIONS

THEN THE EUROPEAN NATIONS began houseeleaning and throwing out of doors everything they had once thought good enough to imitate, Germany was foremost in stripping herself of foreign art influences. Her general attitude was given in an article published in our issue of July 29, last year, when we presented Mr. Hermann Muthesius's plea for a national German style in art. Now he has a successor, Dr. Norbert Stern, who particularizes in a pamphlet called "Die Weltpolitik der Weltmode in der Deutsche Krieg (Stuttgart and Berlin) along the line of style in dress. Whatever may be the welcome given his proposals by the women of the Fatherland, and we have received hints from time to time that some have not taken kindly to the proposed reforms, Mr. Stern's claims are asserted with a charming originality and a rare vigor of expression. He picks out language, the press, and fashion as the instruments by which the Angle-French enemy have "formed the spirit of the age, the world's public opinion, and the universal style." After this war is over, he continues, "we Germans will have to alone for our sins of omission and commission." There are too many, he thinks, "who see in fashion nothing but a mere toying with dress-goods and woman's vanity." If they only knew how heavy fashion's influence weighs upon customs and morality itself, how it sets upon art and polities, he thinks their indifference would quickly be replaced by an intense interest in the subject. For, he philosophizes:

"Fashion is idea materialized, and, more than a generation ago, the spiritual Austrian economist, Emanuel Herrmann, the inventor of the postal-card, had foreseen the time when 'professional politicians would seriously take up the study of dress.' Language is a deep psychologist, and there is a profound meaning in the root identity of Mode (German word for fashion) and Modus, habit, and habitus, for dress is a faithful mirror, indeed, of our whole outlook at life, and he who does not submit himself to the tyranny of French fashion has to suffer social excommunication.

"France, by dominating and captivating the fair sex all over the world, knew how to worm berself into the most intimate secrets of foreign statesmanship and diplomacy. Let us not deceive ourselves; it will be no easy task to dislodge our neighbor from her solid position in the world's bondows. We shall have to drive in the wedge very deep.

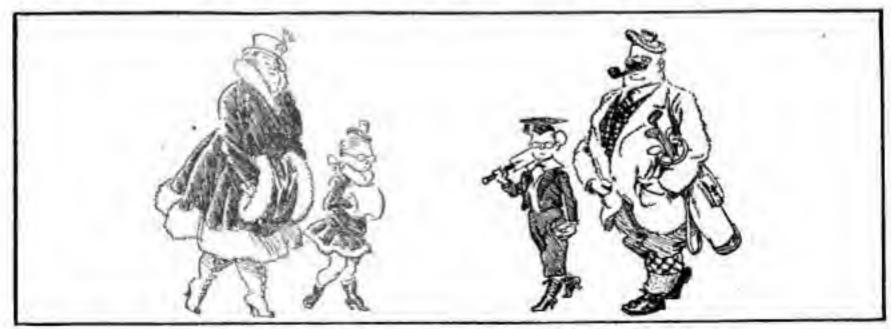

"It is a historical, and, after all, quite natural fact that

world-fashions can only be started from the centers of world Powers. Nations can not so easily be forced to dress as others tell them to do. Rome had to become the mistress of the Mediterranean before the ladies on the Nile, Rhine, and Seine wore the same dresses as their sisters on the Tiber. Spain's court dress was not installed at the courts of Austria, Germany, France, Italy, England, and the Netherlands before Charles V. and Philip II, had made their kingdom the predominant Power in Europe. And France herself had to wait until her glorious Roi Soleil, Louis XIV., on his victorious return from the continent's buttle-fields, laid fashion's scepter upon her lap. Europe, conquered by France, had to assume the French livery. Colbert, the great statesman, was the only leading personality of his time to grasp the political and social importance of the costume. But he had docile pupils in Napoleon I. and Prince Metternich, the famous Austrian Chancellor,

"It was by no means a more coincidence that the final conquest of the French tailor and milliner (1675) was almost immediately (1677) followed by the acceptance, at the Congress of Nimeguen, of French as the universal language of polite European society. The diplomats and statesmen of all countries had to dress 'in French' their thoughts as well as their bodies. Thus, French Kultur penetrated the soul of Europe. And so it remained to the present day. Colbert's prophecy that France will conquer the world by its taste in art, poetry, and fashion has been realized, indeed.

"We had, heretofore, silently and humbly taken the French yoke upon us. But this war must emancipate us. We must give the lie to that beastful French tailor who, while our victorious armies were at gunshot from the Rue Royale, sent the defiant challenge over the Khine that the Gretchens, immediately after the war, would again take their sartorial ones from Paris."

Philosophical calm abandons Dr. Stern at this point of his argumentation, for he seriously calls for the powerful arm of the State police: "Der Staat müsste hier eingreifen, wenn ein gedankenloses Publikum sich nicht belehren liesse" ["The state will have to interfere should an easy-going, thoughtless public not take the lesson to heart"]. Dr. Stern confessos sincere admiration for the handful of Britons who knew how to keep down their giant Indian Empire; but he bows still lower before the genius of the few score of crafty French tailors and milliners, powerful allies of their fatherland's statesmen. With gennine Teutonic scriousness, Dr. Stern reminds us of the insidious skill with which France took advantage of the Russo-Japanese War to throw upon the world-market simultaneously the

"LET OUR WOMEN WHO LOOK TO PARIS FOR THEIR PASSIONS, OUR MEN WHO LOOK TO LONDON, REMEMBER THAT OUR PRESIDAL FORM IS NOT THAT OF THE ENGLISH AND PRENCH."

FASHIONS IN

Dr. Euren Wolff has contributed to the Hustrich Zritung an article on "How we are to order our External Life in the New Germany."

Japanese kimonos and the Russian blouses. "That is carrying water on both shoulders with a vengeance," he cries out. "The bear and the cat, both, were satisfied." A similar game, he further recalls, was played on the occasion of the Turco-Bulgarian War, when Europe's ladies were forced to wear the colors of Bulgaria, then the protégée of France. But, he asks-

"Who would ever have thought it possible that even the now disearded tango fashion had a political background? We were at the eve of the opening of the Panama Canal. The United States made itself ready for its assault on Europe. The San Francisco Exhibition was mainly destined to show the Centraland South-American republies the industrial ascent of their giant neighbor to the north, suggesting to them thereby the thought of severing their economic relationship with Europe, France saw the danger, and, in a jiffy, the favorite dance of the Argentina white-slavers became the fashionable dance from San Francisco to New York, from London to Petrograd. And Paris added to the dance the not less provoking tango split dress. The South-American amour propre was satisfied."

Dr. Stern continues his treatise on the philosophy of clothes by giving us a learned disquisition on the difference between world-fashion and national costume. The latter is a straitjacket which can not be changed by individual taste, while fashion invites-yea, imposes-modification by the wearer. A national costume is the civil uniform of a people or of a certain section of a country. Fashion, on the contrary, represents a transient political thought, a passing economic interest. The costume of the courtier and state functionary is the rigid symbol of aristocracy and bureaucracy; fashion is a democrat, leveling the social differences,

"To speak with historical exactness, fashion, properly speaking, appears on the scene only, then, when the State begins to lower the bars of social privilege, and it can develop its full power in a democracy only. The French rococo style was limited to aristocracy. Real fushion started with the French

Revolution.

"There are people among us who, in the national excitement through which we are now passing, clamor for a German national costume. They mean well, but the idea is ridiculous and unfeasible. There has never been nor ever will be a universally German national costume, for political reasons as to the past, for economic reasons as to the present and the days to come. Only an absolutist régime matures a national costume. The Chinese cue was cut off when the Manchu dynasty left the Imperial palace. Not even the smallest of the German duchies tolerated a universal livery. Only certain corporations, lay and ecclesiastic, accepted one.

"Costumes are petrified thoughts of the past. They can not be transferred to living surroundings without being modified and rejuvenated in a center of world-fashion. The people with its natural, fine instinct rejects the abrupt imposition of an antiquated style. The dress must be in harmony with the ideas,

the taste of the age. France's secret of success lies in her exact reading of racial psychology. Wars or alliances or the opening of new trade-routes were for her the eleverly chosen moments for reviving the fashions of yore. If this war had not broken out. I am sure the world would have been surprized. as a sequel to the San Francisco Exhibition, by some fashions picked out among Uncle Sam's costumes of the eighteenth or nineteenth centuries. Everything was ready. The fashion press of France and the United States worked in complete unison. The German Michel, as usual, would have said, Amen! And all because France knew that we Germans are without backbone, and took no notice of us; and our own stuffs and fashions would have had to pass through the English or French capitals before returning to us under an assumed foreign name."

And now our author springs a genuine surprize on the unaware reader by seriously advocating the khaki uniform as startingpoint for the new German world-style, singing a hymn to the gray color, its intrinsic advantages over black and white, its full harmony with the mood of our time. The great sacrifices made by Germany forbid bright colors and impose absolute simplicity in the out. Nations and epochs instinctively create their dress as nature does in obeying the temper of the seasons. "So could the darker shades of gray express the mourning for our dead, the lighter ones symbolize the hope in our final victory."

But in his great universal solicitude, Dr. Norbert Stern also thinks of the faithful allies, encouraging the creation of a Turkish fashion, for which the Mohammedan Exhibition at Munich in 1908 and the Oriental Exhibition at Cologne, in 1913, furnished very acceptable hints.

"This war brought the beautiful countries of Islam close to Austria and Germany. German warriors are fighting for the sacred interests of the Moslems. An alliance of sword and heart, strange indeed, but so natural on the other hand, has established itself between Central Europe and Asia. Turkish women, several times a day, send up prayers to Allah for the victory of Germany. In Jerusalem, Turkish soldiers exchange the native fez for the Prussian helmet to show their sympathy. German sailors in Constantinople wear the tarboosh. Turkish soldiers from Asia Mino: ape the Emperor's mustache. These things are of great significance to him who knows how to read the expressive language of fashion, to grasp, so to say, the metaphysical meaning of dress.

"If you assume your neighbor's costume, you signify your friendship for him and identify your interests with him. Ships hoist the flag of their honored guest; friendly sovereigns, when meeting, exchange uniforms. In brief, a Turkish fashion is the

logical outcome of the present situation."

Dr. Stern concludes his essay with the recommendation that the scepter of fashion be henceforth transferred from the frivolous hands of the French demi-mondains to the chaste hands of the German Hausfrau. He then passes in review the German cities

" GERNAN CLOTHES AFTER THE WAR MUST BE MODELED ON SOME PARTICULAR NATIONAL COSTOME NOTED FOR ITS EASE AND BEAUTY."

THE NEW GERMANY.

and from it Punch culls and illustrates some selected passages, which Germany in other days might have taken in the spirit of humor.

which could claim to replace Paris as future centers of the world's fashion. He quotes the famous Dr. Julius Lessing, director of the Berlin Industrial Museum, who, in 1884, had the courage to write as follows: "Where should fashion find a center in Germany when Germany berself has none? Berlin is hardly the Kultur capital of Prussia, Frankfort-on-the-Main and Cologne taking their own courses. Of the art of southern Germany, Munich is the center. A German fashion would have difficulties to prevail over its French competitor. How would a 'Prussian' or 'Bavarian' fashion fare? Before Berlin has not become, in the truest sense of the word, the moral capital of Germany, one has no right to dream of a predominating 'German fashion.'"

Dr. Stern soothingly adds that the situation has somewhat changed since the times of William I. and Bismarck, but be evidently inclines toward Munich and Frankfort-on-the-Main, the latter having, among others, the great advantage of being the railroad center of the fashionable cosmopolitan wateringplaces—Homburg, Nauheim, Wiesbaden, Kissingen, and Baden. Dresden, Cologne, and Vienna also have their justifiable claims.

FRENCH ARTISTS KILLED

THREE HUNDRED AND FIFTY French artists, among whom are painters, sculptors, engravers, and architects, have paid the extreme price of their devotion to country and are counted with the dead. Altho a large number were either students in the Beaux-Arts or men young in their profession, says the American painter, Mr. William A. Coffin, "not a few were known to American artists, sculptors, and architects who studied in recent years at the Paris école." Included in the list furnished to the American Artists' Committee of One Hundred, organized to cooperate with the French society in raising relief funds for artists' families, is the name of the young American aviator, Victor Chapman, killed at the front, who was a student of architecture in the atelier of Gromort. The names printed in The Evening Post of January 18 are not repeated here because doubtless only a few would be known even to a limited circle in this country, but Mr. Coffin's words to the Past are worth quoting:

"Some time ago in one of my letters to Mr. Leon Bennat, president of the Fraternité des Artistes, who is the director of the École Nationale Supérieure des Beaux-Arts, I asked if a list could be sent to me of French artists who have been killed in the war. In due time such a list came to hand from Mr. Edouard Thoumy, one of the secretaries of the Fraternité, and it includes students who went to the front from the Beaux-Arts atchers. The lists are, I think, of interest—of sad interest, indeed—for, the there are no more than three hundred and fifty names, doubtless a number of the men would have attained wide fame if their careers had not been cut short.

"The first two sections of the list, including artists who have gained reputation in France, may not contain names known in America, but this is because these soldiers were comparatively

young. All the students were young men, of course.

"I do not like to ask our confrères in Paris, who are face to face with war and have their hands full with their efforts to help the dependents of their brethren, to go to much trouble in a matter of this kind, but I know these lists would be twice as long if they included artists not connected with the Société des Artistes Français or the École des Beaux-Arts. The lists, all bearing the heading, "Tombés sur le champ d'honneur," are transcripts from the registers of the Société and the École, and give all the Christian names of each soldier, making identity exact, but I have deleted in most cases all but the first name given, as well as the names of masters of atcliers, which were appended.

"I beg that a little more of your valuable space may be accorded to say that the Relief Fund for the Families of French Soldier-Artists under our direction is of the greatest help to the Fraternité des Artistes; that we know their needs are more pressing than ever, and that checks for this fund should be made payable to William Bailey Faxon, treasurer, and mailed to 215 West Fifty-seventh Street (American Fine Arts Building) or

to the undersigned [Mr. Coffin]. Treasurer's receipts are sent to all contributors and their names are forwarded to Paris from time to time with our remittances."

DEFENDING "REPERTORY" AGAINST MRS. FISKE

NEW ARTICLES on the art of the theater have aroused more interest than the one by Mrs. Eiske in The Century which we gave our readers a taste of in our issue of January 6. Some have applauded, but not so the dramatic critic of the New York Evening Post, Mr. J. Ranken Towse, if one may penetrate the anonymity of an editorial article. This writer finds that Mrs. Fiske's "series of vehement assertions concerning the value of the repertory system" are likely to seem curiously perverse to most students of stage art and history and doubly strange as proceeding from an actress of her repute and long experience." Mr. Towse looks on with amazement at Mrs. Fiske's assertion that the repertory idea is "outworn, needless, impossible, and harmful," and retorts that assertion is not proof. Her main argument to prove the repertory system outmoded is that it has no place in an age of specialization such as ours, when actors should attain perfection in the special line to which they are adapted. But so it was with the old repertory system, retorts Mr. Towse, "with the significant addition that the player learned to be proficient in several lines instead of one. In other words, he became versatile, an artist, who was a specialist in a dozen different ways." Mrs. Fiske's instances are against the fact, according to the Evening Paul's critic:

"Granville Barker, she is made to declare, showed 'the essence and the evil of the repertory theater when he produced plays for which his company was atterly unfitted.' But Mr. Barker's company was a scratch, not a repertory, company, as was abundantly proved by the results. In 'Androcles' it did well enough, but in 'A Midsummer Night's Dream' it failed egregiously, because it could not embody the spirit or voice the music of the text. Neither Mr. Barker nor his players had been

properly schooled.

"Does Mrs. Fiske really suppose that a repertory theater can, in these days, be formed on the instant? At the stroke of a millionaire's wand? There was a time when this could have been done, when it would have been possible to collect a body of trained actors, with mastery of cultivated speech and varied illustrative action, from every point of the compass, but that ended a quarter of a century ago. She seems to think that the New Theater Company was a repertory company just because it proposed to become one. That enterprise, so rich in promise, collapsed mainly for the reason that the true stock-company idea, which means a cooperative body of players trained in all the requirements of miscellaneous drama, was, unhappily, ignored. The company ought to have been selected and set to work on the proposed program for two or three years before the theater was opened.

"Nothing could be unluckier for Mrs. Fiske's argument than the reference to Irving's famous London Lyceum Company, which, she says, was composed of specialists. Here the fact is true, but the implication disingenous. Specialists, in various directions, many of them, including Irving himself, they undoubtedly were, but how did they become such? All of them were the products of the thorough schooling they had received in these same needless, impossible, and harmful stock companies. Where are their equals to be found to-day? And, why are they non-existent? 'Januschek,' she cries, 'was the last of a race of giants.' Why are there no more of them? Whence did they spring, if not from the competitive stock companies, the only practical schools of acting? A. M. Palmer and Augustin Daly, she avers, often approached the ideal. That is true. Palmer triumphed because he never ventured out of the field in which his players were skilled workers. Daly put his 'specialists' into poetie drama and demonstrated their utter inadequacy. Out of their narrow boundaries, transferred into realms of imagination from those of mimetle realism, they were impotent in speech and action. 'No single company,' says Mrs. Fiske, 'even tho it had years and years in which to prepare, could give five entirely different plays and give them all properly.

Has she ever heard of Sadler's Wells, to quote but one of many instances? Even now, she says truly, good modern plays are often ruined by bad acting. How does this happen, one wonders? By what standards does Mrs. Fiske judge?"

Mr. Towse's question and his argument which follows on recall statements in his recently published book, "Sixty Years of the Theater," relative to the dearth on our stage of actors trained in the art of acting. He is led to reassert his position by Mrs. Fiske's suggestion that the repertory system seeks "to educate the actor at the expense of the public and dramatic literature," to which he retorts:

"That can only refer to the endowed theater in which few students of the stage have much faith. Otherwise it would imply an extraordinary misconception of the real functions of the theater. What profit to the public, or to literature, can there be in uneducated actors without a glimmering of the higher beauties of the art which they profess? The number of our educated actors, except in a few special lines of purely contemporary and comparatively small artistic interest, is diminishing. In the whole English-speaking world to-day there are not half a dozen players of the highest order. Because of this condition the great mass of the literary drama of all kinds, upon which the chief artistic claims of the theater are dependent, is banished from the stage. Even in the modern plays the best performances are still given by actors who had their early training in repertory. The modern system has had a long trial, with consequences too obvious for dispute. It has made 'stars. it has made money (for a few), it has multiplied theaters, magnified the paitry, and relegated to temporary obscurity what is fine, imaginative, or inspiring-matter worthy of intellectual and artistic consideration. Herein no wholesale condemnation of the modern drama, even of the most 'advanced' modern drama, when it has brains, valid significance, beauty, or brilliancy, is intended for a moment. The theater ought to be, noist inevitably be, progressive, but if it is to be in the future what it has been in the past, it must be eatholic and comprehensive. It must have a body of skilled professional artists, in the fullest meaning of the phrase, such as the competitive reperfory system, embracing every class of drama, once provided. If there is any other way, it has not yet been discovered."

AN "AFFIRMATIVE" EDUCATION

ERNARD SHAW once made an onelaught upon modern education and amused himself while he stupefied others by suggesting a new curriculum. One of the things he recommended was to teach children how to look up trains in a time-table. Reforms almost as drastic and as practical as that seem to be in contemplation by the Rockefeller General Education Board, who plan to remove the "dend-wood and lumber of tradition" from the American system of elementary and secondary education. Such a "modern school" as is proposed will be opened in connection with the Teachers' College of Columbia University, and the curriculum devised by Abraham Flexner, secretary of the General Education Board, will include "no study of formal grammar, no involved mathematics, no Latin, Greek, nor other dead language, no ancient history except as it bears on modern problems-nothing, in fact, for which no better reason than tradition can be assigned." Books will disappear as far as possible as a means for instruction, and "the accessible world" will be used as the laboratory where children are to be "taught and trained with an eye to the realities of life and existence." Dr. Flexner is quoted by the press as saying

"The curriculum will include nothing for which an affirmative case can not now be made out. We shall drop the study of formal grammar, for such evidence as we possess points to the futility of formal grammar as an aid to correct speaking and writing.

"The modern school will not go through the form of teaching children useless historic facts just because previous generations of children have learned and forgotten them. Nor will it teach obsolete and uncongenial classics simply because tradition has made this sort of acquaintance a kind of good form.

"Latin and Greek will be left out-not because their litera-

tures are less wonderful than they are reputed to be, but because their present position in the curriculum rests upon tradition and assumption. Nothing is more wasteful of time, or, in the long run, more damaging to good taste than unwilling or spasmodic attention to what history or tradition stamps as meritorious or respectable in literature; nothing more futile than the makebelieve by which children are forced to worship as 'classies' or 'standards' what in their hearts they revolt from because it is ill-chosen or ill-adjusted.

"A realistic treatment of literature will take hold of the child's normal interests in romance, adventure, fact, or what not, and endeavor to develop them into effective habits of reading. Methods will not be calculated to 'train the mind' or to

make make-believe literary scholars.

"Mathematics will be taught in such form, in such amounts, and at such times as other subjects require. Perhaps nowhere else, under present systems, is waste through failure so great as in this subject. When a certain degree of success is attained it is often quite unintelligent; children mechanically carry out certain operations in algebra, guided by arbitrary signs and models; or they learn memoriler a series of geometric propositions. The hollowness of both performances—and most children fail to perform so much—is evident when a mechanical problem takes a slightly unfamiliar turn. The child's helplessness shows a striking lack of mathematical knowledge and 'mental discipline.'

"The truth is that the present position of both algebra and geometry is historical. With the realistic standard applied mathematics taught will be only when necessary, and then in

amounts heresary

"The school will put great stress on modern languages. It is believed that languages have no value in themselves; they exist solely for the purpose of communicating ideas and abbreviating thought and action processes. If studied they are valuable only in so far that they are practically mastered—not otherwise. We shall aim for absolute fluency for our pupils.

"The school from the first will undertake the cultivation of contacts and cross connections. Every exercise will be a spelling lesson; science, industry, and mathematics will be inseparable. Science, industry, history, civies, literature, and geography will

to some extent utilize the same material.

"Located in New York, the school will have wonderful assets for educational purposes—the harbor, the Metropolitan Museum, the public library, the city government, the Weather Bureau, the transportation systems, the terming life of Broadway, lectures, concerts, plays, etc. Other communities may have less, but all have much. As things now are, children living in this rich and tingling environment get for the most part precisely the same education they would get in Oshkosh or Keokuk, They are losing their heritage."

Already a body of opposition is preparing itself; some hold with Father Joseph H. Rockwell, of Brooklyn College, that the new scheme is an "absurdity," while others, like Rabbi Stephen S. Wise, regard it with mild "suspicion." William G. Willeox, president of the Board of Education, opposes the abandonment of the classics and ancient history, saying:

"Human nature has not changed throughout the ages. We can not understand the modern without a study of the ancient. How are we to understand the development of man unless we read the history of those who lived before." We should know the language they spoke, the books they read, and the thoughts that were theirs. I am a believer in liberal education for the common schools. I am opposed to the elimination of the cultural studies. A study of practical problems can not take the place of culture."

Rabbi Wise's enlarged "suspicion" is put in this way:

"Every college man or woman must be particularly interested in the announcement, even the it came too late to save us from the little Latin and less Greek with which we were dowered in our youthful days. It is deeply suggestive that the announcement makes clear that the undertaking is to be regarded as an experiment.

"Some will question, some will wonder, whether it would not be more auspicious to have initiated the experiment under public auspices rather than under the egis of a quasi-private institution. It will be regarded with suspicion by those who have too timidly listened to the councils of vocational education, but more discerningly hesitated to accept the potentially menacing gospel of industrial efficiency."

Penitentiary at Treaton. New Jersey, in which the new Governor, Walter E. Edge, promises drastic reforms.

TO REFORM NEW JERSEY'S MEDIEVAL PRISONS

OPE FOR PRISON REFORM in New Jersey waited upon the inauguration of the new Governor, Walter E. Edge, of Atlantic City, and his first message to the legislature sounded the eall. Shocking information of prison conditions had been publicly given in the New York Evening Post by Harold A. Littledale, and in the New Republic (New York) by Patrick Quinlan. The latter, as he himself says, speaks "after nearly two years in its cells as an unwilling resident." His conviction, which aroused much controversy, was for speeches in the Paterson silk strike that were held to be incendiary. "If we agree," he says, "that malnutrition, foul air, bad sanitation are evils in a slum, we can not deny they are evils in a State institution." The new Governor states in his message that "conditions in the State prison at Trenton are admittedly unsatisfactory." The ground maintained for prison purposes, he says, is so extensively occupied with buildings that there is no opportunity for sanitation. Certain proposed changes are rejected as mere makeshifts, for the situation would only be temporarily relieved, but not cured. He continues:

"It seems to me that we are far enough advanced in our ideas on prison reform to face this problem and solve it for all time in a big way.

"I believe the door of opportunity for this solution opens to penal farms and road-work. If these well-known ideas are put into greater practical practise in New Jersey, there will be no need for such extensive prisons. Inside industries, which, of course, must be preserved for those prisoners who can not do outside work, will be the easier regulated, because they shall need to be less extensive. The State-use system as a substitute for the contract-labor system, which is unlawful and ought not to be permitted under the subterfuge of the so-called piece-price plan, can be extended on such a comprehensive scale that it may be possible even to solve the prison problem without adding a foot to the grounds of the institution in Trenton.

"I take it that the success at Lecsburg shows the possibilities of the penal-farm system."

The Governor proposes calling together in conference in the near future representatives of the Prison Labor Commission and of the New Jersey State Charities Aid and Prison Reform Association, inspectors of the State prison, the Commissioner of Charities and Corrections, the State Purchasing Agent, and other representative officials, to "tell their stories individually, express their own views, and submit to questions." In brief—

"There is necessity for harmonizing the conflicting opinions and views upon this question and obtaining speedy legislative action for the purpose not only of solving the prison-reform problem, but also of reorganizing and placing on a sound business basis the management and care of public institutions of a charitable and correctional nature. Regarding the latter, there ought to be more centralization of authority, and, in consequence, more workable and reachable concentration of responsibility."

Mr. Littledale, in one of his Evening Post articles, makes out a long indictment on the basis of "facts," which he collates and asserts. Thus:

"It is a fact that two, three, and even four men are confined together in the same cell in violation of the law.

"It is a fact that dungeons exist and that men are incarecrated therein and given only bread and water twice a day.

"It is a fact that men have been chained to the walls of underground dungeons.

"It is a fact that women convicts are confined with men, and that cell 55, wing 4, is kept apart for that purpose.

"It is a fact that women prisoners eat, sleep, and live in their cells and work on sewing-machines in the corridor outside their cells.

"It is a fact that there is no dining-hall and that men are fed in their cells or in the corridor.

"It is a fact that the cries of convicts protesting against their food have been heard by those who passed through the streets outside.

"It is a fact that the men have only half an hour's recreation a week, and that the recreation-yard for fourteen women convicts is larger than the recreation-yard for 1,200 men.

"It is a fact that many cells are dark and ill-ventilated.

"It is a fact that in the newest wing seventy cells are so damp that they can not be used, and that on occasions the corridor is so wet that the keepers have to wear rubbers.

"It is a fact that a cell-building erected in 1835 is in use to-day. "It is a fact that the State's wards were confined up to last Monday in an old wing that the State Board of Health had condemned as unfit for human habitation.

"It is a fact that consumptives circulate with the well, expos-

ing them to contagion.

'It is a fact that the first offender is thrown with the

habitual criminal.

"It is a fact that a youth was released in December who came to the prison a boy of thirteen years, wearing short trousers.

"It is a fact that men are punished by being put face to the wall, and that sometimes they are

kept there all day without food.

"It is a fact that convicts may not receive fruit. "It is a fact that a commodious bath-house, with hot- and cold-water supply, is used only two months in the year.

"It is a fact that for ten months in the year the convicts are given only a bucket of water once a week in which to bathe, that after bathing they must wash their clothes in this water and then wash out their cells."

Mr. Littledale continues with a much longer list of "facts," some of which follow:

"It is a fact that the management of the prison is vested in a Board of Inspectors who meet only once a month, and whose members are from seattered parts of the State.

"It is a fact that paroles can be granted by two independent bodies-the Board of Inspectors and

the Court of Pardons.

"It is a fact that a salaried school-teacher is employed, but that there is no schoolroom or furniture, in violation of the law.

"It is a fact that three chaplains are employed. but that the chapel seats only 350 persons, while the prison population is usually in excess of 1,300.

"It is a fact that the salaried moral instructor is the Rev. Thomas R. Taylor, father of Leon R. Taylor, ex-Speaker of the Assembly, and that he was appointed by his son while Acting Governor of the State.

"It is a fact that the Board of Inspectors turns the convicts over for work on the public reads at the rate of \$1.25 a day, which is paid by the taxpayers, but that the Board turns the convicts over to private contractors at thirty-five cents a day.

"It is a fact that goods made in the prison for private contractors are not marked 'Manufactured in New Jersey State Prison, and that this

is a violation of the law.

It is a fact that while the contract shops are put in operation daily, the shop, equipped at a cost of more than \$12,000, to make socks and underwear for inmates of State institutions is idle and has been idle for some months, and that the salaried instructor has nothing to do.

"It is a fact that convicts are supposed to be paid 215 cents a day for their work in prison and that they do not get it."

The New York World, after commending the enterprise of The Evening Post for making these revelations, says:

"Probably there is not a State in the Union in which the hardships inflicted upon human beings in the New Jersey prison would be tolerated for a day in the case of live stock. It is only when we come to deal arbitrarily with men and women convicted of crime that we forget all our fine principles and set up petty despotisms worse than those whose violent suppression we are in the habit of celebrating.

"A system that breaks or brutalizes its victims, even the they may have been offenders, is more dangerous to society than most of the prisoners whom it tortures. The horrors of the Trenton blackhole are worse than most of the wrongs that peopled it. For these infamies we are indebted to a spirit of tyranny which has persisted in spite of our political ideals and which has obscured even the humanity of a people that is shocked by the sufferings of a dog."

A CATHOLIC VIEW OF THE NEW YUCATAN

OW GOVERNOR SALVADOR ALVARADO, of Yucatan, appears to Catholic eyes is disclosed in a letter from the city of Merida which is quoted in the Catholic Estension Magazine (Chicago, January). That even independent observers in this Mexican State are shocked by certain things the Governor has done to the Catholie Church

EDUCATION AT TRENTON PENITENTIARY.

It is asserted that "a salaried school-teach " is employed, but that there is no schoolroom or furniture, in violation of the law."

> was noted in our issue of January 6, when the many admired reforms in the government of the State were recorded. The Catholic commentator finds little if anything to commend in the Alvarado policies, and one capital charge made against the Governor is that of summarily executing citizens. The date of the letter is September 24, 1916, and it reads in part as follows:

> "Here you can not pray, hear mass, or talk. There is not a priest or an open church in any of the towns of the State. All the churches, except two in this city, were seized and all their furnishings were destroyed. The Church of the Third Order is now a museum; the Church of Jesus-Maria, a Masonic Hall; and several of the others are stores, their balustrades and altars having been sold or destroyed. Other churches have been turned into halls for workmen or dwellings for soldiers' families. There is not one Catholic college or school open. The bishop's residence and the residences of the priests were confiscated by a decree of Alvarado, and as they fear being later obliged to restore them, they are selling everything—the marbles, the doors, and even the plants in the gardens. Meat-markets are not permitted, because Alvarado bought 60,000 barrels of meat from the United States, so only be may sell meat. With this meat he pays many people. Everything is sold for the profit of Alvarado and Carranza. Every mouth we have 10,000 hens, 500 chickens,

and 500 cases of eggs, besides the cereals; all are distributed through all the states, to be sold, and the profits, they say, are to pay the expenses of the revolution. No one can purchase anything but through the Government. We have been obliged to go without needles because the Government does not keep this article. All the traders have to get their goods from the Government. In each town there is a provost who determines the prices of all goods, like pottery, eggs, etc. The provost's salary is paid by the merchants. All this is in the name of liberty. Good-by. I report things which nobody can know there; but many things will always remain unknown, because the official papers state the contrary, and we have a close censorship on all communications."

RUSSIA'S RELIGIOUS IMPOSTOR

NE OF THE MOST EXTRAORDINARY as well as one of the most successful impostors who ever made religion a cloak for ambition, sensuality, and vice was removed from earth in the assassination of the Russian monk,

Gregory Rasputin. This is the striking assertion at the beginning of a most interesting study of the munk in The Outlank (New York), by Mr. George Kennan, the American traveler who some years ago investigated and wrote on the Siberian-exile system. Rasputin's very name, we are told, "means a rake, a dissolute, licentious man," and was assumed by its bearer when, in later life, "he put on a deceptive garb of sanctity"perhaps intending "to suggest the idea that he was a reformed and converted sinner." He was of peasant stock and received the elementary education of the public schools. which enabled him to write his name and read the Bible. "As a youth he was given to drunkenness and dissipation, and lived the life of a common village hoodlum of the pensant class; but in spite of his excesses he developed into a man of powerful physique and not unpleasing appearance, and a man, moreover, who for some reason was particularly attractive to women." His intermediary years, when he took up the guise of religion, are here sketched:

"About the beginning of the present century, when he was approaching middle life, Gregory happened to fall in with an itiner-

ant Siberian preacher, and under the latter's influence he ostensibly reformed, repented, and became converted. Whether there was any sincerity in this profest change of heart or not we have no means of knowing; but for two years or more the repentant sinner studied the Bible, ecclesiastical history, and the writings of the Church fathers, and finally went on a long religious pilgrimage. When he returned to western Siberia he became an itinerant preacher himself, and set up as a starcts, or 'holy one,' under the name of Rasputin. By this time he had become a man of shrewd native ability, had acquired selfconfidence, and had discovered that by means of his personal magnetism, his knowledge of the Scriptures, and his reputed holiness, he could exert a strong influence over both men and women, but particularly women. The idea then apparently occurred to him that he could find a wider field for the exercise of his talents in the capital of the Empire than in western Siberia, and in 1905, armed with letters of introduction from the local ecclesiastical authorities to Bishop Theofan and the famous Father John, of Cronstadt, he started for St. Petersburg.

"The supposition that a middle-aged, profligate Siberian muzhik could make a career for himself in the higher circles of St. Petersburg society would have seemed at that time so improbable as to be almost ridiculous; but the daring, quickwitted, unscrupulous religious impostor was well on the road to success in less than three months. He seems to have been taken up first by the ladies of the higher court circles, who found his religious teachings novel and his personality attractive. The Countess Ignatief, wife of a former Governor-General of

Siberia, is said to have called attention to him first, but he was soon received as a welcome guest in all those salons of the capital where religious and philosophical questions were discust. 'In a few months,' said the St. Petersburg Ryetch, 'the starcts reached the apogee of his influence and success. Religious seekers in the salons regarded him as a sort of apostle, who had come as the bearer of new truth and teaching. His religious and philosophical theories, based on his alleged authority from on high and on the "cleansing" of the world from its sins through him, attracted a throng of disciples—especially female disciples—and opened a wide arena for the gratification of his lascivious propensities.'"

Accounts differ as to the circumstances of his meeting the Czar, but it seems to have occurred about ten years ago, and his influence soon became so great that "even nobles, generals, and high officers of State who desired promotion or increase of salary sought his intercession and support." But by 1909 his loose moral conduct had become a scandal and in 1910 Prime Minister Stolypin ordered him out of the city. He disappeared

for a time, but at the end of 1911 he was back again in St. Petersburg and "became the favorite, if not the adviser, of the Emperor and Empress." During the next two years, so Mr. Kennan quotes from the St. Petersburg Ryctch, "the life and success of the starcts were perhaps without a parallel even in Russian history." Thus:

"To his influence were attributed the resignation of S. M. Lukianof, Procurator of the Holy Synod, the overthrow of Bishop Hermogen and the monk Hiodor, with whom he had quarreled; the promotion of Bishop Barnabas; the campaign against the Metropolitan Antonius; and the wholesale dismissal of professors from the ceclesiastical academics. His activities finally created so much indignation in the Duma that they were made the subject of two interpellations.

"In July, 1914, while Rasputin was making a visit to his native village of Pokrofsky, in the Siberian province of Tobolsk, he was stabbed in the street by a peasant woman named Guseva, who declared, when she was arrested, fillst she 'wished to remove from this world that false, infamous prophet, who has led so many people astray, and who has falsely instructed the Czar on countless questions.' Rasputin, who seemed to be mortally wounded, was taken to a hospital in Tyumen, where he was soon cared for by Prof. Serge Fedorof, the Czar's court physi-

coan, and Mademoiselle Virubova, a lady-in-waiting of the Empress, who had been sent there by Imperial command. Two or three days later a telegram from Tyumen announced that after a surgical operation Rasputin died, without recovering consciousness, at 5 r.m., on the 14th of July. But he was not dead. A subsequent report stated that he had regained consciousness and would probably recover. Three or four months later he was again in St. Petersburg, apparently as popular among the women and as powerful at the court as eyer.

"After the outbreak of the European War Rasputin's influence over the Emperor and the Empress was popularly connected with many important events, notably the removal of the Grand Duke Nicholas from command of the armies. Rasputin, it was said, favored a separate peace with Germany, and the Grand Duke, when he heard of it, declared that if the starets should fall into his hands he would hang him.

"Russian newspapers and speakers in the Duma have never been permitted to criticize, directly or indirectly, the Imperial family; but during the past two years the attentive reader of current Russian history must have noticed, in the press and in parliamentary debates, frequent references to the 'dark forces' that were attempting to control Russia's foreign and domestic policy.

"These 'dark forces' were Rasputin and other adventurers, impostors, or fanatics, who were apparently influencing the character and sometimes inspiring the acts of a religiously inclined but superstitious monarch. The most potent of these sinister influences has finally been removed by assassination."

The recently assistant of Russian monk who wielded a "dark" influence to the Royal Innischold

OVER \$75,000 FOR BELGIAN CHILDREN IN TEN DAYS

MERICANS ARE THE MOST LIBERAL PEOPLE on earth. We have long believed it. We know it now. They are proving it by every mail THE LITER-ABY DIGEST receives. Their letters and remittances, from all parts of the country, are pouring in upon us in generous response to our appeal on behalf of the Belgian children. We close this page necessarily on Wednesday noon, January 24, and up to this hour, in the brief ten days since remittances could begin to reach us, the sum total of returns is over \$75,000. It is a splendid token of human sympathy, of Good Samaritan service. And our Droest donors have only just begun to give! Old and young, rich and poor, their hearts are thrilling to that ery of the children oversea. If but a half of them could read but one-half the letters that have already come to us, there would not be a hungry child in Belgium the remainder of this year. Only a few inadequate quotations can be afforded space, giving mere hints of the wonderful spirit which the great number reveal.

Remember that 100 cents of every dollar contributed goes to Belgian children, under guarantee of The Literary Digist.

"I have some difficulty in supporting and educating my own children," writes a gentleman of Tulsa, Oklahoma, "but not so much that I can not contribute a mite to the aid of four young Belgians"; and his cheek is for \$48. From Atlanta, Ga., comes a remittance of \$36, representing three members of the sender's family. "For my wife and myself and for our three happy and well-nourished children," says a gentleman of Waterloo, Neb., "I beg to enclose you sixty dollars."

"Your appeal should meet with an instantaneous and liberal response," comments a New York gentleman; "your method is the right kind-practical, and will succeed"; and his letter encloses a check for \$600 "to care for fifty Belgian children during the ensuing year."

We do not always feel free to give the names of contributors. so many of them have stipulated that their names be withheld. As, for instance, a manufacturer in Louisville says: "Enclosed find check for \$60, upon the condition that my name is not to be mentioned." Real sacrifice shines through a letter from Ohio, enclosing two checks, from two school-teachers, each for \$12.10, and asking that they be notified if more is needed "by April 1."

Enclosing \$60 in the name of his wife and himself a Missouri teacher says: "This is approximately 1 per cent. of our joint income. I feel that it is reprehensibly small, and I shall want to contribute again as soon as I can catch up on debts."

"I know that I am under a moral obligation to help the

suffering Belgian children," writes an officer in the United States Naval service. "You know, Mr. Editor, that that obligation rests with equal force on every other American citizen whose power to aid is equal to mine." And his check is for \$1,200.

With a brief message from a Pennsylvania college town comes a check for \$1,236, covering one child each for three children in that home-" Eleanor, Bill, and Jim," while " Mother and Dad" add the "\$1,200 for 100 children." From another college town near that home of those Friends who favor peace, another pair send \$100; and a Boston lady remits \$120, "with best wishes for the Fund." which sum is matched by the check of a Delaware reader, while the check of an iron-founder in Tennessee for \$240, covers twenty children's extra ration, and says: "I trust you will have a generous response." Detroit, Mich., is represented by a manufacturer who sends \$200; and from a cotton-mill in New Jersey comes a remittance of \$1.224, covering 102 children.

By telegraph a Philadelphian who had previously sent \$100 pledged a like remittance each month for a year. Remitting \$17, a manufacturer in Milton, Pa., proposes that we print the appeal of January 20, in circular form, and says he will pay for 1,000 copies and place them in homes there.

Says a lawyer in Louisville, Ky., enclosing his first remittance; "I am willing to undertake the extra feeding necessary for twelve children for one year, provided I may be permitted to make the payments monthly." Many other pledges of like nature have come. To accept the thousands of such that we hope will follow must mean large expense for clerical service, ote., but this THE LITERARY DIGEST will cheerfully incur. Send the pledges in!

"My Sunday-school class contributed to the Fund about two years ago," writes a Brooklynite; "I was in hopes you would start another"; and he sends \$24. "The ministers of every denomination and in every church of the United States should voice this appeal from their pulpits," writes a St. Louis lawyer, who encloses \$12.

"Dear Little Belgian Boy": says one letter from Illinois-"Here are \$12 to take care of you this year. I am only four and a half years old, so daddy is holding my hand as I write this letter to you"; and a little older son of the same "daddy" writes for himself to another "dear little Belgian," and "daddy's" check for \$24 is enclosed with both. We wonder if there be not thousands of such nice little fellows as Harris A. Kemp and J. S. Kemp, who would like their fathers to do likewise for them?

Contributions to THE BELGIAN CHILDREN'S FUND-Received from January 18 to January 24 inclusive.

\$6,312.50 Employees of the Publishers of The Literary rigost. (Payable \$520,00 monthly for 22 months; our suployees decided to give monthly on as to give largely.)

A "LITERARY DIGEST" CLASS IN ENGLISH AT THE MOBILE, ALABAMA, RIGH SCHOOL, This is only one of many hundreds of groups of students who use THE DIGIST as an aid in class-work.

WAKING UP THE CLASS

news and discussion-columns of Tue LITERARY DIGEST begins to come home to the editors from the letters which are being received daily from all parts of the country. As a help in the educational field, the use of periodicals seems to be increasing rapidly, and we are glad to share with our readers some of the good news about the way in which teachers are performing what one of them recently called "modern miracles" with classes which were formerly sources almost of discouragement to them.

Among the audience which the editors of The Digest address each week there are thousands of students in high schools and colleges, and in addition to the inspiration derived from the knowledge that they are helping the rising generation toward ideals of citizenship, the editors derive no small amount of pleasure from the experiences of many teachers, as written out in letters of satisfaction. A great many of these accounts are interesting simply as stories, without the added fact that they are true happenings. One of the more fascinating and forcible of these little tales is sent us by an instructor in the High School, at Torrington, Conn.-Miss Bertha

her worst class into one of the best-truly a worth-while accomplishment, of which both Miss Duncan and THE DIGEST may well be proud. She writes:

Of all the classes I ever attempted to teach that was the worst; a Business-English class of thirty pupils, whose character may best be indicated by their names.

There were "Buck" Martin, "Barh' Mitchell, "Rip" Oakley, "Kid" Litzsky. and a dozen others of like distinction. My prize pupil was "Hooligan" Kelly, usually called "Hoolig," a strapping young Irishman with fiery red hair that stood up straight all the way around, and with a temper that matched his hair.

There were a few nice girls in the class, but the boys, with one exception, were the most "arrant knaves" that ever blest the portals of a high school.

They had grubbed through two years of English, had been hauled by a long-suffering teacher through a course in Gray's "Elegy" and Goldsmith's "The Deserted Village," only to feel a general sense of freedom now that they had been able to select Business English, which, to their fertile imaginations, appeared a course designed especially for the lazy and indifferent.

UST how teachers are using the weekly | C. Dunean-who tells us how she turned | boasted course began to seem dull, and one day I was beset by the plea; "We're getting tired of writing letters. Ain't there anything else we can do?" Two years of study had done little to remedy their natural abuse of their mother tongue.

"Well," I asked, "would you like to read something, a novel perhaps?"

"Aw, what's the use of reading things like that? What do we care about such stuff? They haven't anything to do with us," and 'Hoolig's" red hair fairly bristled with disgust.

How to interest a crowd of boys more likely to enjoy an account of a prize-fight than anything else was my problem, and the answer seemed to come from the skies by the Funk & Wagnalls, Limited. That evening I received a pamphlet explaining a plan by which THE LITERARY DIGEST might be introduced into high schools.

"Just the thing! Maybe that would suit Hoolig,' and 'Kid,' and all the rest of those delectable urchins."

The next morning I suggested that we try the plan and see how we liked it. Some of the more demure girls looked doubtful.

"Do you think we can understand it?" ventured the meekest of them all.

But "Rip" would be heard. "Sure we ean! Say we try it for a month."

The first number of the magazine we looked over in class, and I suggested that After a short time even this much- each select his own topic for the first

281 Years Old—and Still a Comfortable Home

For nearly three centuries this unpainted house has stood exposed to the weather. Continuously occupied and still almost perfectly preserved, it offers convincing proof of the enduring qualities of

WHITE PINE

Ever since the Pilgrims landed, White Pine has been universally recognized as the wood preferred above all others in home-building. And figuring value in terms of service, it is the most economical.

White Pine does not shrink, swell, crack, twist, warp or rot; and once in place it "stays put," after years of exposure, even in the closest fitting mitres and in delicate mouldings and carvings. It takes paints and stains perfectly.

Investigation of the merits of White Pine will well repay anyone seeking a wise choice of building materials.

Send today for our free booklet, "WHITE PINE IN HOME-BUILDING." It is beautifully illustrated and full of valuable information and suggestions on home-building. If there are children in your home, send also for "The Helen Speer Book of Children's White Pine Toys and Furniture," a fascinating plan book, from which a child may build its own toys and toy furniture.

> Admittance to our Exhibitions at New York and Grand Rapids, granted only by letter, of introduction or in company of dealer.

I certainly spent a great deal of time preparing my own lesson, for I did not intend to let the plan fail through any neglect on my own part. It was a little difficult to keep 'the discussion of the European War within the bounds of safety, but no very violent ontbursts occurred and the period was safely over. I thought that some were already a little less skeptical of the success of our plan. I had been obliged to explain the cartoons myself, for no one had seemed to think it worth while to choose them.

Gradually the interest of the class was increased, we are told, and with enhanced interest, or perhaps causing it, was the growing understanding of the topics and discussions presented. By this time the teacher no longer had to assume the task of explaining the cartoons, for the choice of them had become a matter of extreme rivalry, and finally they had to agree that "turn about was fair play." Miss Duncan continues:

As the pupils became more interested I gradually placed the responsibility of Literary Dignet Day in their own hands. A committee made out the program, and one of their own number presided at the meeting, while I made myself as unnoticeable as possible. The most peaceful days for me were those on which "Hoolig" presided, for, placed in a position of responsibility, he fairly swelled with dignity and really conducted the class in a most admirable manner.

In direct connection with our Business English we studied the advertisements, and one day wrote a letter to be sent to secondary schools, setting forth the advantages of THE LITERARY DIGEST for classroom use.

By this time the original purpose of the regular course had dropt to secondary importance in their estimation, and they would have liked to use the magazine every day.

I had hardly noticed their changed attitude until, one day, the principal met me in the hall and remarked: "I think those boys must be getting interested in The Literary Digest. They seem to carry it with them wherever they go, and I frequently see them reading it. Your idea of using the magazine was a lucky one."

And now let us visit the class on a LITERARY DIGEST Day after the magazine had been in use for three months.

"Hoolig" occupies the chair, with his list of topics and speakers on the desk before him.

"Will Mr. Mitchell please explain the cartoons?"

"Barb," with a grin of pride, takes his position before the class and, with considerable appreciation of their humorous qualities, explains those he has considered the best.

This done, it is "Hoolig's" opportunity: "Any one anything to say on the subject?"

"Mut" Ryan, who has all this time been shaking his head and with difficulty repressing his desire to speak, is immediately in the aisle. "I do not agree with Mr. Mitchell's explanation of the cartoon on page 678. I think it should be this way," and he proceeds to correct "Barb's" interpretation.

"Hoolig" again rises. "Last week we had a discussion of the negotiations between Germany and America over the submarine question. Mr. Oakley, will you please tell us about the situation as it stands at present?"

The next topic provokes a discussion over the question: "Should a Congressman be more loyal to the country as a whole than to his own particular district when their interests apparently conflict?" Here "Hoolig's" dignity is tested rather severely by the difficulty which arises from the fact that they all wish to speak at once.

This discussion having finally subsided, "Hoolig" asks Miss Baker, rather a shy, bashful girl, to tell the story she has read in the "Personal Glimpses." Miss Baker steps to the front of the room and, with newly acquired self-possession, tells the story in an interesting fashion.

And so the period passes, and "Hoolig" relapses into his own irresponsible, happygo-lucky self.

"How did you measure the success of

your experiment?" do you ask?

Well, I do not suppose that I worked any very great reformation in the character of the boys, nor that the slight effect will necessarily be permanent, but I really felt quite satisfied when I found this paragraph in "Mut" Ryan's examination

"I have studied English for a good many years, and it has always been my most disliked study. I can honestly say that this is the first year that I have enjoyed my English work, and I am sure that it is THE LITERARY DIGEST that has made the difference. I think I have advanced in my ability to write and speak easily, and I know much more about the affairs of my own and foreign countries. It seems as if we ought to be better Americans because we have taken this course."

And then, again, there is the little story of a teacher who took a class consisting mostly of "left-backs," and proceeded to make them keen, responsive, and progressive, just by turning the most attractive sort of light on the class-work. The instructor, who is also the head of the History Department in Erasmus Hall High School, Brooklyn, New York City. is Prof. G. E. Boynton. He tells us how life was infused into a hitherto listless class;

"That class will drive me insane," I said, one day, when the recitation had been particularly dead.

I had had similar experiences, but this Monday seemed the climax of them all, and I felt that something had to be done.

Of course I found it easy to excuse myself. It was the last period of the day and everybody was tired. Most of the class, too, were "left-backs," and so had proved their stupidity, and, besides, I had traveled this same road in much the same way for twenty years.

So why should I worry if they insisted on going to sleep under my leadership.

But I did worry. One day in one of these fits of despondency the thought came to me, "Why not try some current literature like THE LITERARY DIGEST and see if that will arouse them from their stupor?"

A second thought, however, convinced me that it was impracticable, as this was only a beginners' class in ancient history. "Current Topics" would deal with Amer-

Shut yer eyes tight an' I'll rubbit in good!"

-Molly's businesslike order to Brother Bill as she plunges her chubby hands into the rich, sudsy lather of Packer's Tar Soap. Then she proceeds to "rub it in good!"

When Bill's sunny hair is rinsed with warm water and dried carefully with a nice soft towel the result is immediately apparent.

My, but his little head feels fine! separate shining strand of hair stands out clean and glossy—and his scalp is wonderfully refreshed and stimulated by Molly's treatment.

That soothing piney lather, worked into the roots of the hair, at regular intervals, will preserve the natural beauty of the hair in after years.

PACKER'S TAR SOAP

Nothing so good for little boys' and girls' heads as this same Packer's Tar Soap their daddies and mothers use it with the same keen satisfaction.

Send 10c for sample half-cake.

ican and European history, which they had not studied in high school, and so I would be adding to my troubles by entering this new field with no real text-book.

Still the problem prest for solution. I could hear the echoes of my pedagogical studies ringing in my ears from time to time-"Proceed from the known to the unknown." "They must know something about the present," I thought. I wonder if it would help if I should approach my ancient world through the knowledge of the present. I had just been reading Du Bois's "Point of Contact," and the idea would not be dismissed, "Besides," said I, by way of convincing myself that I should make the experiment, "if I wait until they have had American history, there will be few if any of them left, so great is the percentage of those who never reach the senior year.

So one Friday I said to my class: "I've been thinking of you a good deal lately, wondering how I can help you to like your history. Some people say we give too much time to the ancient world and not enough to the one in which we are to spend our lives. If you think you would like to talk over the history we are making from day to day by a study of Tue Digest once a week, I am willing to give my time to it."

Every head shook in the affirmative the first bit of enthusiasm I had seen during the term.

I had anticipated their reply, and had THE DIGESTS on hand. After giving them out with the questions, I took a few minutes to kindle enthusiasm by allowing the class to look over the eartoons.

It was a delight to see the hands come up as one and another thought be could improve on the interpretation given of the cartoon.

The bell rang just as I had exprest the hope that the week-end would give them pleasure in learning the history we are making to-day.

Blue Monday came. I had formed the habit of calling it that, for things seemed

to go a little worse on that day.

"To-day we are a discussion club," I said. "Our topic is this world of ours. What is happening that will some day be written in the book of history? Well, Nicholas! I see your hand is up!"

He was a Russian, and with enthusiasm he started: "The Russians have taken Erzerum and are marching toward Trebizond."

"Where are these places, and why are they important?" My questions were answered without hesitation. Nick's mark had jumped many points.

"What other army in that country is hoping to join with the Russians?" "The English." "What city do they hope to take?" "Bagdad." "For what is it noted?" "A great railroad center." "If the Germans and Turks hold the country, what is a part of their plan?" "To take the Suez Canal." "How would that help?" "Shut off the English trade with India." The answers came promptly. I hardly knew my class. I wondered if the enthusiasm would continue if I switched off on to ancient history.

"Who can tell me what we have called this country in our previous study?" "The Tigris-Euphrates Valley," "The ancient home of the human race," came two quick replies. "How long has civilized man fived there?" "At least six thousand years." "What great cities have fallen there and are being uncovered to-day?" "Babylon, Nineveh." "What leaders do you associate with this country?" "Abraham, Nebuehadrezzar, Hammurabi."

Thus we received our Oriental history in this delightful atmosphere.

John's hand was in motion. "What would you like to tell about, John." "The retreat from Gallipoli," "Go ahead—well done! I wish you would recite like that in history."

"What have we called that narrow strip of water near Gallipoli?" "The Hellespont."

"Who crossed there with armies in the fifth century?" "The Persians," "Where were they going?" "To fight the Greeks," "What Greek city is now being used by the Allies?" "Saloniki,"

"Henry, what have you read?" "About the trouble in Mexico." "Why do we seem to be held responsible?" "The Monroe Doctrine." "Explain." "We have said other nations could not interfere with the North- and South-American countries, and so we are responsible."

"How did the Monroe Doetrine help the Mexicans in 1866?" "The French Army

left,"

"Has any one read of any attempt to make any of our people happier? Well, call it social reform. Well, Helen?" "The New Child-Labor Law." "Right!"

"Why not allow fathers, like the old Greek fathers, to do as they like with their children?" "The children would have to work too hard. They would not get an education."

"Name another social reform in behalf of children recently brought about in our own State." "The pensions for widowed mothers," "Good!"

"Why not send the children to the public institutions?" "The mother can take better care of them."

"Lawrence, don't shake your arm off!

"I read of our freety with Niceragus."
"Tell us about it. Well said!"

"Do you think this will be a help to Nicaragua?" "Yes, we can help them put down revolutions."

Thus the minutes flew rapidly by.

"How many think we'd better try this next week?" Every hand went up and the march out of the class-room, like the recitation, suggested a new class spirit.

Later, at my desk, the day's work done, the recollection of that class came again.

The transformation that had taken place seemed hardly credible, and one could not help wondering if it would last.

Time is making the answer clear, and the conviction grows that this is time well

Linking up the present with the past, throwing the light of to-day upon some of the dark spots of the long ago, is surely worth while. All these things help us to realize The Unity of History.

Expensive.—Seth Woodbury was a tight-fisted, hard-hearted old farmer, his brother William dying, the neighbors said, from lack of proper treatment. Seth hitched up and drove into town to have a notice about his death inserted in the weekly newspaper.

"There ain't no charges, be there?" ise asked, anxiously.

"Oh, yes, indeed," answered the advertisement manager; "our price is one dollar an inch."

"Cracky," muttered the old man, "an' Bill six foot two."-New York Telegraph.

It's a discouraged rat that finds the fine impenetrable mesh of "Kno-Burn" barring his further progress—no choice for him but to move to a house of poorer

wall construction.

Rat proof and rot proof—a barrier to fire—a fabric that absolutely prevents the unsightly cracks that you've come to associate with plaster and stucco—those are a few of the many qualifications that have established Kno-Burn Expanded Metal Lath as the standard wall base.

The cost of a house lathed with "Kno-Burn" is solittle more than that of houses lathed with the cheapest types of wall base that it is not an item to anyone who is building for permanence or re-sale value.

REVIEWS OF NEW BOOKS

ANOTHER LIFE OF "STONEWALL" JACKSON

Arnold, Thomas Jackson. Farly Life and Letters of General Thomas J. Jackson, "Stonewall" Jackson. Illustrated with many portraits. Octave, pp. 379. New York: Fleming H. Revell Company. \$2 net. Postage, 14 cents.

More than one historian of our second epopee, the Civil War, has yielded to the fascination of "Stonewall" Jackson's extraordinary career. The fame of Lee's great licutemant is of the kind that stands well the test of time. To-day, after half a century, in spite of immense changes in the social organization, in face of military events unprecedented in history, his figure stands out as compelling as ever, one of the strongest personalities in American history. "No character," writes his latest biographer, "has appeared upon the world's stage within the past century of whom so much has been written as of 'Stonewall' Jackson." Some twenty formal biographies have been issued, not to speak of innumerable magazine and other articles. Yet Mr. Arnold (who is a nephew of General Jackson) avers that a careful scrutiny of the voluminous matter discloses little information as to a considerable period of Jackson's history. Mr. Arnold, in an Introduction, gives his credentials as biographer.

From earliest childhood, Mr. Arnold tells us, his memory is very clear as to the personal appearance of General Jackson, "and from that time forward I knew him quite well as a boy would know a man." Jackson, when he was professor at the Virginia Military Institute, was accustomed to spend his vacations at the home of his nephew's parents. Later, the nephew was himself a member of General Jackson's family in Lexington, Virginia, for almost a year, associating with the future hero almost daily, always at the same table, and frequently accompanying him in his walks. In later years, Mr. Arnold knew intimately General Jackson's boyhood companions, and from them gathered much unpublished interesting information. In addition, he recently came into possession of more than one hundred letters from General Jackson's private correspondence. Of all this material he has made good, judicious use, producing what seems to the reader to be a new, and certainly a true portrait of the famous Confederate chieftain.

"Stonewall" Jackson intime is, indeed, what the reader finds in Mr. Arnold's interesting volume. It is an extraordinary personality, molded on the antique, heroic and yet lovable, which emerges from this mass of facts, letters, anecdotes, and incidents. Needless to say, Jackson's deeply religious nature is amply illustrated in so personal a parrative. Every one knows that Jackson was accustomed to kneel down in his tent and pray to God on the eve of a battle. But all do not know, what this book makes apparent enough, that Jackson had the natural temperament of a saint. His original intention, frustrated by events, was to enter the ministry. In addition to striking portraits taken at different stages of Jackson's career, the volume contains not a few word-pictures. Here is one by an intimate friend:

"His person was tall, erect, and muscular. His brow was exceedingly fair and expansive; his eyes were blue, large, and expressive, reposing usually in placid calm, but

TIMER BEARINGS

able none the less to flash lightning, nose was Roman and exceedingly chiseled; his cheeks ruddy and sunburnt; his mouth firm and full of meaning; and his chin covered with a beard of comely brown. The remarkable character of his face was the contrast between its sterner and its gentler moods, . . . Hearty laughter [made in him] a complete metamorphosis. His blue eyes then danced and his countenance rippled with a glee and abandon literally infantile. . . . Had there been a painter with genius subtle enough to fix upon his canvas, side by side, the spirit of the countenance with which he caught the sudden jest of a child romping on his knees, and that with which, in the crisis of battle, he gave his generals the sharp and strident command, 'Sweep the field with the bayonet!' he would have accomplished a miracle of art which the spectator could scarcely eredit as true to nature.

Jackson's military reputation has been appraised by no less an authority than Lord Roberts. "America produced some magnificent soldiers in those four years," said Roberts once to Irvin S. Cobb. "and the greatest of them, to my way of thinking, was 'Stonewall' Jackson. Jackson was one of the greatest natural military geniuses the world ever saw. I will go even further than that—as a compaigner in the field he never had a superior. In some respects I doubt whether he ever had an equal." Some one mentioned to Roberts that it had been said of Jackson that in the latter days of his life he read only two books: the Bible and the campaigns of Napoleon. "Not so had a choice, if a man had to confine his library to two books," said Lord Roberts, "an admirable choice for a soldier, at any rate. Any soldier might learn much by studying the campaigns of Napoleon, and Napoleon might have learned a good deal, too, by studying the campaigns of Jackson, had the order of the times in which the two men lived been reversed."

A BOOK ONCE FAMOUS, NOW REVIVED

Smith, John Thomas. Nollekeus and Ris Times, and Memoirs of Contemporary Arilisis from the Time of Roubillar, Hogarth, and Reynnids to That of Fuselt, Flarman, and Riske, Edited and annotated by Wilfred Whitten, with eightyfive illustrations. 2 yels., 8ve., 11-382, 423 pages. London and New York: John Lane Company. \$7,50. Postage, 28 cents.

Joseph Nollekens, portrait-sculptor (and antiquarian), was born August 11, 1737, and died April 23, 1823, having amassed a fortune of two hundred thousand pounds. His biographer and long-time friend was born in 1766 and died in 1833. The book was first published in 1828, and a second edition was issued in 1829. Since then the work has been as forgotten as was "Woolroan's Journal" until rediscovered to form part of a "five-foot shelf." Yet in its first days it was conceded a noteworthy eminence as "the most candid biography in the English language."

The sculptor created busts of some of the most noted men of his day—Laurence Sterne, David Garrick, Dr. Johnson, Charles James Fox, and William Pitt. He also was the maker of a number of ideal works in marble, e.g., "Venus Removing Her Sandal," and "Venus Chiding Cupid." Smith, his biographer, was the son of one of Nollekens's assistants, and himself for a time a pupil, the his taste ran to prints rather than murble, and he subsequently became keeper of prints and drawings in the British Museum. He was a close associate of the sculptor all his life, and the latter promised to remember him handsomely

The still small voice that warns the smoker.

Sometimes, in every smoker's life, a small voice warns: "Don't smoke-fuddle yourself, my friend, you need your working edge. Stick to the mild cigar!"

Yet I doubted mild cigars for a taste like mine keyed up to heavier tobacco.

This was before I smoked ROBERT BURNS.

Non when I sit and blow the smoke wreaths out,
I have to smile. For I feel not alone the keen joys
of a really gratifying smoke— I feel better, too.

Are you one of those who doubt the smoke-satisfying qualities of milder eigen?

THE ROBERT BURNS!

The blend and the curing tell the story. Its Havana niles gives its fine flavor. Our own special curing gives that Havana rare mildness. The neutral Sumatra wrapper helps that mildness.

So ROBERT BURNS, though an ripe and satisfying, is vet a far, far healthier smoke,

And moving forward with the times, it is today a better cigar than ever.

Have you tried one lately?

Remember that Little Bobbie is a pocket edition of ROBERT BURNS himself. Price 5c.

in his will. But increasing miserliness or forgetfulness in the sculptor disappointed this expectation, and it is understood that chagrin and revenge prompted this "most eandid biography.

Curiously, the work receives its principal value not from its subject-Nollekens is now almost forgotten—but for its digression from that subject. It may be characterized as "inconsequent and discursive," since it leaves its theme at the slightest suggestion, wandering off into narrative or anecdote concerning the noted or the ordinary personages of the day, and into description of localities, houses, and institutions about which some theme clung or at which some interesting incident of note had occurred. It is an antiquarian's chatty chronicle of "things picked up" from Nollekens or by his own eurious bent for gossip, or of information gained from the many persons with whom he talked and walked in London's streets or suburbs.

This last is the book's interest for to-day. And service to the antiquarian interested in "Old London" and in the Europe of that age is uniquely rendered by the rich foot-notes of the editor, involving much patient research, which make of the two volumes almost a cyclopedia of personal history of those times in so far as the careers of those named in any way, even the most remote, touched or influenced the capital of Great Britain. The supplementary hiographies of artists contemporary with Nollekens have also this chatty value, while of the illustrations one can say no less than that they are "brilliantly illustrative."

FRENCH HISTORY

Strylenski, Casimir. The Eighteenth Century in France. Translated from the French by II. N. Dickinson. Cloth, pp. 345. New York: G. P. Put-nam's Sons. \$2.50 net. Postage, 17 cents.

Madelin, Louis, The French Bevolution. Translated from the French. Cloth, pp. 662. New York: G. P. Putnam's Sens. \$2.50 net. Postage, 17 cents.

There is an instinctive fascination, a unique qui rive, characteristic of French history-writing which is generally lacking in historical works in other tongues. Few English, American, or German historians possess, to the same degree as the French, the happy faculty of being literal without sacrificing literary value. To use language not simply for the purpose of stating facts clearly, but also to make those facts vivid. is an art greatly needing cultivation among history-writers and, indeed, in the field of science generally. Both of the volumes before us are examples of French success in that art, for the translators have been able to do their work faithfully without greatly disturbing the original "tang" of the author.

These volumes are published in the series entitled "The National History of France," of which one has already been issued, Louis Batiffol's "The Century of the Renaissance in France." Three more are projected by the editor of the series. F. Funck-Brentano, each volume being written by an expert in the particular period it describes, and each being a unit in itself. The two before us are alike in the vividness of their style, in their familiarity with the more intimate and personal source - material recently published, in their assumption that their readers already know not a little of French history, and in the honors which they

bave won.

Residence, Winthrop, Mass.

INTERIOR TILE

Architects and contractors all over America have used Denison Interlocking Tile in thousands of buildings, including every type and every price, from a fourroom bungalow to a thousand-room hotel.

This tile protects against hie—it has snood to the face of flames which destroyed solid brick walls. It also protects against the more common troubles of winter cold, summer heat, damposes and decay.

Look at the drawing at the left—always three (or more) separate layers of air cells between you and the weather out side—no through mortar joints to carry in the maisture or cold.

As for strength-notice that the partitions in every tile come exactly over the par-

titions in the tile below with a full hed of mortar between. Each tile interlocks with at least two others, making the wall stronger against side pressure, than one of solid brick.

And when it comes to appearance—you can have an exterior of stucco, brick, stone or you can leave the tile exposed with no facing whatever.

If you are interested in building at allwhether it is a home, a church, hospital, school or factory—write us for complete information on Denison Interlocking Tile.

Mr. Stryienski's work has been crowned by the Académie des Sciences Morales ot Politiques and Mr. Madelin's has won the Grand Prix Gobert of the French Academy. The the work of the former is entitled "The Eighteenth Century in France," and covers the period from the regency of the Due d'Orléans to the eve of the Revolution, one leaves it with a feeling that in Mr. Stryienski's mind the history of eighteenth-century France is almost wholly the history of the court. While that may be true from the point of view of dramatic vivacity and piquant aneedotes, the result is a history scarcely national in its scope. The common people of France hardly appear, save to express opinions about the court.

With Mr. Stryienski, it may be said further, the Muse of History, as Henry Esmond put it, "busies herself with the affairs only of kings; waiting on them obsequiously and stately, as if she were but a mistress of court ceremonies, and had nothing to do with the registering of the affairs of the common people." As n result of this limited outlook, Mr. Stryienski is unable to make his discussion of the artistic literary movement of the period an integral part of the narrative and has to leave it to an appended eliapter. Yet within the limit of its chosen field the book is an excellent picture of the Government of France as affected by the clash of personalities within the court for favor or control, and to a less degree, its relations with the European courts.

Mr. Madelin's work is the more speciesful. because more broadly conserved. Not only his subject but his own point of view gives to his writing a really national scope. He sees the Revolution as a period of development, swift indeed, but something more than a brief revolt reaching its climax in the Reign of Terror. To be sure, the historical writing of the last thirty years has helped to make familiar this conception. But Mr. Madelin goes on to point out that most of what France wanted in 1789 and in 1794-"equality in matters of justice and taxation, the abolition of the feudal system, a methodical and orderly system of government"-she was still to seek even in 1799, and that it was Napoleon, after all, who, revolutionary, fulfilled the aims of 1789. Just how he did this Mr. Madelin will show as in "The Empire," the succeeding volume in the series. While thus aiding the reader to gain a conception of the Revolution as a whole, the author is particularly successful in swift and vivid characterization, not only of a few of the outstanding leaders, but of many lesser individuals.

With the notable exception of Aulard's four scholarly volumes there has been no translation from the French so good for the general reader since Taine's wellknown work of thirty years ago, and notable advances have been made since his day.

subject of this highly interesting and brilliant piece of classical biography. To most persons the name of Cicero connotes oratory merely, and his supereminence in this respect has partly blinded posterity to other striking features of his manysided genius. The fact that Cicero was the protagonist of a lost cause, that of the Republic, has done much to dim his fame as a statesman. Yet, as Dr. Taylor clearly illustrates in this admirable monograph on the Roman constitution and Roman public life, it is as statesman and patriot that Cicero has made his deepest impression upon history. "Had he stood in the market-place, raised an arm, and frozen into silence," says his biographer, making use of words applied to Webster, "his erect figure would have been accepted as the bronze ideal of a statesman and defender of the constitution." It is, then, as the ideal defender of the Roman constitution and as the embodiment of Roman republicanism that Cicero is here depicted. He is shown as the great civilian in an age of "blood and iron," as the distinguished citizen and leader of the Roman bar, upholding by his unrivaled eloquence and unique powers of reason and persuasion the already fainting ideal of Roman liberty.

Expressing his conviction that in the life and achievements of the incomparable Roman orator and jurist is to be found the best possible commentary on the Roman constitution. Dr. Taylor proceeds to an exhaustive and brilliant analysis of the eritical epoch which constitutes the dividing line between the ancient and the modern world. This epoch, which furnished the stage for men like Casar and Pompey, has never-ending fascination for the historian. Froude found in it startling resemblances to our own era. Ferrero has also felt its dramatic charm, and there is hardly a historian of note whose pages have not been quickened by its inspiration. It is not surprizing, then, if the latest historian has come under its spell. And what lends special and novel interest to the latest account of the dawn of imperial Rome is that the author centers his story, not in a soldier, but in a civilian, taking as a hero a man who represents, and indeed incarnates, the intellectual greatness of "the Mistress of the World.

After estimating every achievement in the brilliant and tragic life of the great Roman, the author insists that the supreme importance of his career to the modern world is embodied in "his intellectual leadership of the spiritual and ethical revolution which prepared the people of the Mediterranean basin for the advent of Christianity." What constitutes the supreme achievement of Cieero, in the author's view, far surpassing in historie importance his forensie triumphs and his democratic propaganda, was the fact that he was able, in the midst of a pagan environment, to arrive at the idea of monotheism, to grasp, as the author expresses it, "the magnificent notion of a single God as the source of natural law." Owing largely to Cicero, the new philosophy, "the earliest offspring of the religious consciousness of the East and the intellectual culture of the West," took sudden possession, as is here pointed out, of the higher classes at Rome, including the jurists. That event, avers the author, became a turning-point in the juristic history of the world because, "just

Time tells the story of your top

Ask the salesman of the car you buy to tell you the story of the top material used on his car. Time will correborate his story if it's

Pantasote

-the top material that stands the test of time

The salesman of the following cars will point to his top with pride and tell that it is genuine Pantasote.

Locomobile Westcott
Hudson Premier
Reo 1917 Six Mercer
Chandler Marmon

Paige-Stratford

White Pierce-Arrow Ben Hur Chalmers

To the top-wise man that is enough. But if you press him further he will tell you that because of its secret rubberless composition, Pantasote is sun-proof, dust-proof, grease-proof, crack-proof, temperature-proof, rain-proof, snow-proof and sleet-proof. He will tell you that it is the only top material that will stand up year after year and look well all the time. To make sure he is right about the top, look for the label shown below.

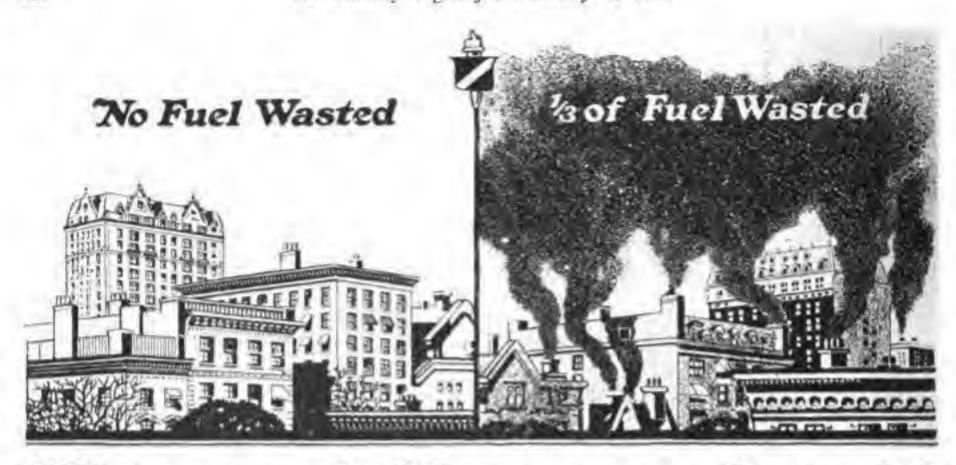

If the car you want does not have a Pantasote top, demand it. It costs the automobile maker a little more than the "no name" top material, but it's worth a lot more to the owner. The makers of several cars which sell for close to \$1000 use Pantasote and they can well afford to do so.

AVOID MISREPRESENTA-TION—oven though it be unintentional. Look for this label on tops represented as PANTASOTE.

Send for a ceft of "What's What in Top Materials." It describes carries materials used for according tops.

THE PANTASOTE COMPANY
1700 Bowling Green Building New York City

What are you building owners going to do?

Unless you want to spend all your profits to heat your buildings you have got to install a boiler that will burn soft coal smokelessly.

The price of hard coal is going up-up-up, and no one knows when the price is going to stop rising. And if you burn soft coal and make smoke you waste not less than one-third of your fuel, and on top of that the Smoke Inspector is going to make life mighty unpleasant for you.

It's a fine mess-isn't it? But here is the solution.

KEWANEE Smokeless Boilers Cut Heating Costs

If you have a Kewanee Smokeless Boiler heating your building you can burn the cheapest soft coal ever mined without wasting any of it—and your stacks will be as clean as a whistle.

There is a two-way saving. First: Your coal costs you less, because you can burn any cheap soft coal without getting into trouble with the Smoke Inspector. And second, you don't waste any of the coal you use.

Will you let our nearest office prove these facts to you?

KEWANEE BOILER COMPANY

KEWANEE, ILLINOIS

Steel Heating Boilers, Radiators, Tanks, Water Heating Garbage Burners Chicago New York St. Louis Kansas City Minneapolis Pittsburgh

Blackstone Apartments, Omaha. Bankers Realty Investment Co. Designers and Owners. Heated with Kewanee Smokeless Boilers.

St. Joseph's Mercy Hospital, Mason City. Iowa. Buethner & Orth, St. Paul, Architects. Heated with Kewanee Smokeless Boilers.

Dyes

SINCE the opening of the Chemical Plants of the Sherwin-Williams Company in March 1916 approximately 250,000 pounds of Beta-Napthol and 200,000 pounds of Paranitraniline have been produced. The quality of these materials has been in every respect equal to the best standards of the world's markets before the war. Additional machinery is now being installed which will greatly increase the daily output of these two important dye materials.

The Company is now manufacturing a number of intermediates and dyes particularly for the manufacture of pigments and lakes. The Company has been highly successful in the commercial production of large quantities of Metanitroparatoluidine and Paranitranilinesulfonic Acid, from which are manufactured Helio Fast Red R and Lake Red P, colors employed in making the finest printing inks.

All organic chemicals are manufactured at the Company's plant from refined coal tar products, Benzol, Toluol, Xylol and Napthalene. The Company operates its own Aniline Plant with a daily capacity of five tons of Aniline Oil; also plants for the manufacture of Glacial Acetic Acid, partly to utilize by-products, and also to follow its well defined policy of logical, efficient and conservative development. The Company is also producing a limited number of dyestuffs for textile and similar uses and is gradually adding to this line.

We invite inquiries from all consumers of Dyes to whom we will gladly send detailed information.

at the moment when it became necessary to extend the local code of a city-state over a growing empire that aspired to universal dominion, the stoic philosophers armed the Roman jurisprudence with their unique invention of a law of nature, which, as the law of the stoic world-state embracing all mankind [Cicero's conception], was necessarily universal."

RECENT NOVELS

McCarthy, Justin Huntley. In Spacious Times. Pp. 238. New York; John Lane Company. \$1.35. Postage, 12 cents.

This is a novel of romance and chivalry concerned with Elizabeth's England, Elizabeth's court, and Elizabeth herself. While the good Queen Bess plays with her maidsof-honor, or "sisterkins," we are introduced to Clarenda Constant, the most beautiful of all, and we meet also my lord of Godalming, her flance, the septuagenarian courtier, altho she has her heart sat on Sir Batty Sellars, whose intentions are not honorable and whose fortune is small. While Clarenda is at "King's Welcome" preparing for her marriage, her life crosses that of Hercules Flood, a retired sea captain and friend of Sir Francis Drake, who is dwelling in his land-ship, The Golden Hart. Its unique construction eatches the fancy of Clarenda, who tries to buy it. Out of this meeting grows a queer compact and out of sport grows a serious situation, involving these two and Sir Batty and his friends. The stalwart Hercules does not fail in either the encounter of wits or of weapons. We admire him and enjoy the discomfiture of the wily courtiers. Things look dubious for a time. and unusual characters dominate unusual experiences, but the love-duel takes a sudden turn just as tragedy seems imminent. We are delighted with the result and with Godalming's part in the denouement.

Steele, L. M. Dr. Nick. Pp. 485. Boston: Small, Maynard & Co. \$1.40. Postage, 12 cents.

Unconventional, original, engrossing, all these things might be said of "Dr. Nick" which leads us to believe that the author has thought deeply, has had strong convictions, and some theories, which he (or she) wishes to express and does so with a wealth of material which sometimes almost clogs the machinery. We are tempted to think the author must be a psychie, or a scientist, Christian or mental, since we openunter that vagueness and incomprehensible elusiveness which characterize much of the talk as in those cults, but it is an exciting story and full of satisfying, inspiring, and edifying material. The background is almost always Hobbe Hospital, Franchey Street, where Dr. Rideau, the great acconcheur, half physician, balf priest, is the pervading spirit. His sensitive hands are pictured as the medium by which be senses much that is mental, physical, and spiritual. Dr. Nick is his protege, whom he had saved from deportation when very young and who finally becomes the wonder physician, the "healer." Naida is the young nurse, whose life runs parallel with that of Dr. Nick. Life on the outside is measured in terms of hospital episodes. Hospital - life experiences are portrayed with brutal frankness and graphic vividness, while a love-story of passionate fire, dramatic incident, and tragic scenes is developed in an entirely original manner. Through and above all is the study of character: first of Dr. Rideau, worshiper of motherhood; then of Dr. Nick, growing

Wasted light and flaking paint. Do you realize how much wasted money it means?

Three thousand of the biggest plants in the country realize it, and they now treat their ceilings and walls with the finish that increases daylight from 19% to 36% and is permanent.

By using this finish, they help their workmen do more and better work; they decrease accidents; they save as much as threequarters of an hour electric lighting every day. They save scaling and re-coating of coldwater mixtures, and flaking of paint into the machinery.

These plants have ceilings and walls that can be washed like a dinner-plate, and are thus kept wonderfully clean and sanitary.

The finish they use is "Barreled Sunlight"
Rice's Gloss Mill White—an oil paint made
by a special process discovered and owned
exclusively by the makers.

Repeated tests have shown, without a single

exception, that Rice's remains white longer than any other gloss paint.

Our guarantee to the engineer and owner covers this claim.

By the Rice Method, it can be applied over old cold-water paint. It does not flake or scale with the jar of machinery; it does not yellow like ordinary oil paints, and saves big money on painting because it does not need renewing for years.

"Barreled Sunlight" is also made as a Flat Wall Paint for office and hotel use. Sold by the barrel and by the gallon.

On Concrete
Surfaces. Rice's
Granolith makes the best
possible primer for "Barreled Sunlight"—retarding
the progress of moisture
is the wall—Rice's
GRANOLITH.

A Really Important Contribution to the Literature of the Stage

Sixty Years of the Theater

By JOHN RANKEN TOWSE, Forty-three Years Dramatic Critic of the "N. Y. Evening Post"

A book which appeals to lovers of the stage and good literature. It covers a wide group of men and women who interpreted the great and popular roles during the past half century. Mr. Towse writes about them with familiar freedom - as a dramatic critic of his age and rank may well claim the right to do. The book contains almost too portraits of stage relebrities including Edwin Rooth, Henry Irving, Ellen Terry, Lawrence Barrett, Adelaide Neilson, Charlotte Cushman, Mary Anderson, Madame Medjeska. Sarab Bernhardt, Ada Rehan, Toromaso Salvini, Fanny Janauschek, Joseph Jefferson, Fanny Daneugurt, Edgat L. Daverpoot, Lester Wallack and many others who are still active or nearly forgotten.

Winthrop Ames says:—"I have read "Sixte Years of the Threstor" with most pictures. He Town has written a look of double value. It will recall deligibilit memories to a whole generation of threater-green, and it remails in a style of charity and distinction, the history of an interesting period in the service transfer.

Otis Skinner says — "We Town his written is of the most salestic trade in the theory of the thesier in New York in our time. I have followed in ourse is incidented to the greatest offerest and it is expectable granifying to have the work in this attractive bank from The partnersport process of the all metropolitan stage have rouse to life in his pares.

Octavo, Cloth. Illustrated, 480 pages. \$2.50 net; by mail, \$2.62. FUNK & WAGNALLS COMPANY, 354-60 Fourth Avenue, New York, N. Y.

more and more like his benefactor; then of good old Sarah, whom the old Doctor had re-scued from a life of shame, and Naida. of the pure heart of gold. There are psychological problems given us for consideration, uplifting thoughts, and always a gripping story.

Thurston, E. Temple. The Five-Barred Gate. Pp. 305. New York: D. Appleton & Co. \$1.40. Festage, 12 cents.

One would hardly suppose that a story with so little action as this could be so exciting and entertaining, but Mr. Thurston has such a keen understanding of human nature and such an appreciation of the daily problems of conventional living that every touch in description or comment stirs something in the heart or mind. Jim Naire and Beatrice had been married five years. The author makes us realize very clearly their great love for each other when they start bravely with aspirations and secret hopes. No less clearly he portrays their gradual slipping into discontent with the successive childless years, while Jim, typically masculine, longs for adventure and Beatrice seeks romance. Their own case is repeated in the lives of their servants, Mr. and Mrs. Beavers. Some of the situations are funny and some nearly tragic in the "five-barred gate period," such as comes into the lives of each couple—the period when they must adjust their differences and go over the gate together if their married life is to be a happy one. Jealousy plays a strong part in the little drama, whose final scenes are satisfactory. The lure of the story is in the author's style, his "beautiful nonsense," and his readjustment of the marital tangle.

Track, Katrina. The Invisible Balance-sheet. Pp. 375. New York: John Lane Company. \$1.40. Pustage, 12 cents.

Love ca, money is not an unusual problem. John Remington Wright had been longing for years to become a worldpower, while necessity held him on the farm which really was run by his manager and friend Eben, when suddenly he was given the choice of accepting sixty million dollars from his uncle's estate, but with the condition that he should never marry nor should be delegate to another any of the executive responsibilities of having the fortune. John had always admired Marion, had shared with her his problems and his pleasures. Spring had stirred their pulses particularly, but John was not sure that she' loved him, nor that he loved her, and be was sure that money spelled "Vast opportunity, larger influence, and great power," so Marion is left with aching heart and John goes to the city and becomes a multimillionaire. From that point in the story, Mrs. Trask has the world for a background. She depicts New York society with vivid pen, while she gives us brilliant conversations and engrossing characters. We seem actually to know lovable Sally. to despise the wily Ameda Winthrop. temptress, and certainly admire Mrs. Barkly and her "Bobbie" for genuineness and frank speech. There are, too, some pertinent and amusing moments with Eben and his comments on city dissipation. When it is too late, John realizes that he has sold his birthright of love and happiness and that Marion had meant more to him than all else, but his vow and his contract held him aside. We see the inevitable disappointed man, with Marion's loving forgiveness his only consolation, as he passes on to where he can carry neither his money nor his power.

Make Your Concrete Waterproof when You Build

Inot enough that the structure be merely permanent. It should be water-proof and damp-proof as well.

The importance of dry, sanitary basements, water-proofed exterior stucco and concrete block houses, and a permanent water-proofing for reservoirs, silos, swimming pools, etc., is generally recognized by architects, engineers, contractors and owners.

Unquestionably, the best time to make your home water-proof and damp-proof is when you build—the scientific way is the integral method. The original and best integral concrete water-proofing material is

Medusa (paste or powder) is not a paint or surface mixture, but a material that becomes an inseparable part of Portland Cement, making a concrete or cement mortar everlastingly watertight and damp-proof.

It prevents efflorescence, the cause of discoloration in cement. It does <u>not</u> affect the strength, setting or color of the cement. It is mexpensive and can be used by inexperienced workmen.

Whether you contemplate building immediately or not, the subject of water-proofing and damp-proofing is of vital interest right now.

Write today for free "Medusa Waterproofing" booklet and information, then you will be prepared to water-proof when you build. The coupon is for your convenience. Fill out and mail today.

CURRENT POETRY

"THERE is no true poetry," said I Florence Earle Coates in a recent interview, "that is not dedicated to the soul and to joy." This has long been the firm conviction of this gifted poet; as is evident to every reader of the Collected Edition of her "Poems," now published in two volumes by Houghton Mifflin Company. The spirit of her work is essentially spiritual and essentially joyous; there is delicate and sure artistry, but the artistry does not obtrude itself; it is the nobility of the idea rather than the deftness of the phrase that commands attention. Many of the poems in these volumes have already appeared on this page; the sonnet, "The Unconquered Air," and the exquisite song that has for its refrain, "I love, and the world is mine," are too well known to be now quoted. As an example of Mrs. Coates's mastery of the "grand manner," of her ability to write beautifully and unfalteringly on the loftiest themes, we reprint her "Ode to Silence."

ODE TO SILENCE

BY FLORENCE EARLE COATES

O Thou, sublime, who on the throne Of cycless Night sat, awful and alone, Before the birth of Kronos-brooding deep Upon the voiceless waters which askeep Held all things circled in their gelid zone; O silince! how approach thy shrine Nor faiter in the listening void to raise A mortal voice in praise, Nor wrong with words such eloquence as thine?

Amid the fragrant forest bush. The nightingale, or solltary thrush, May, on thy quiet breaking, give no wound; For they such beauty bring as all redeems, Nor I ar to interrupt thy dreams Or trouble thy Nirvana with a sound!

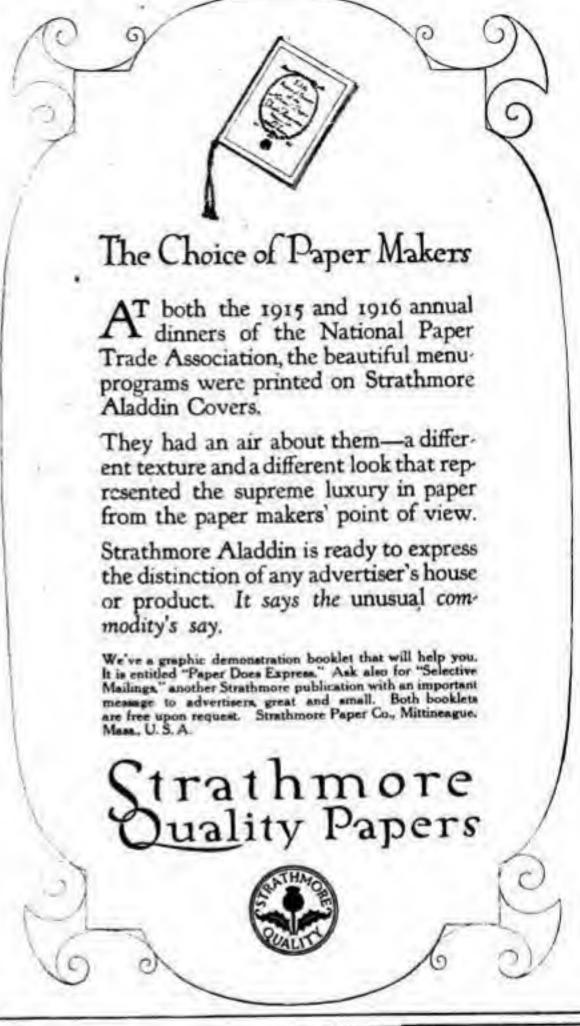

And the more fitting worship seem the breath Of violets in the sequestered wood. The zephyr that low whispereth To the heart of Solitude. The first unfolding of the bashful rose That notseless by the wayside bads and blows:

More fitting worship the far drift of clouds O'er azure floating with a swan-like motion, The Siren-lays faint heard amid the shrouds. The voiceless swell of the unfathomed ocean, The silver Dian pours on the calm stream Where pale the lotus-blossons lie adream-

Yet, mother of all high imaginings, In whom is neither barrenness nor dearth. Wise guardlan of the sarred springs Whose fresh primordial waters heal the earth-O soul of muted fire. Of whom is born the passionate desire That gives to beauty birth-

All music that hath been, howe'er divine. All possibilities of sound are thine! The syrinx-reed, the flute Apollo owns, Symphonic chords, and lyric overtones, First draw their inspiration at thy shrine: There come heartbroken mortal things; There once again they find their wings; There garner dreams benign-O nurse of genius! unto whom belong Beethoven's harmonies and Homer's deathless

Many people have attempted to say what would be the effect of war on litera-

ART AND WAR

BY FLORENCE EARLE COATES

War has its field of blood-heartbreaking War-Wherein to rule with undisputed sway Throughout its own mad, self-exhausting day. There, where it rashly sacrifies map: Than laboring Time may ever quite restore. Shall it amid red welter and decay Strive horribly: but let it not essay To enter where Peace guards the Future's door!

War has nor right, nor privilege, nor part In five high-dedicate the world to bind Through love and hope and the great dream of

All Lands to such are Fatherland they find In alien realms life's grateful, welcoming heart-They, chosen of the Gods to bless mankind!

Here is something on a wholly different theme. There are levely music and high imagination in these lines.

IN THE TOWN A WILD BIRD SINGING

"Hear me. Theresa, Theresa, Theresa!"

BY FLORESCE EARLE COATES

Hark! Do I dream? Nay, even now I heard The white-throat's music, tremulous yet clear The very plaint, O lonely bird, That often midd the greening woods hath stirred My heart; but never here!

This is the City! High above the street. Before my window singing in the dawn. By what imagination doet then cheat Thy hope to utter melody so sweet. Far from thy groves, withdrawn?

Thy tenes transport our wistful, to the North, Seeming to lay a touch upon my brow Cool as the balsam-lader airs that now Through pine-woods blow they won my spirit-

Forth of the town-forth of myself. But thou?

Dost than an exile wander from thy bonne the art thou hast'ning thither? Through what beguilement dost thou, friendless. And goest thou-an, whither?

Day quickly fades. Night may refuse her star. Clouds may arise, and elemental strife-An hapless bird! what Wanderlust of life Hetragod thy wings so far?

Full as my soul of tremulous desires, Thy voice I hear in supplication rise. "Theresa!" dost thou call? Unto the skies The plaint adoring holly aspires: "Theresa!" Is it she keeps watch o'er thee? Homeless but free?

Wise minstrel! Thou dost well to call on her; No saint was ever loveller. Her heart had room for such wide tenderness As his who "Little Sister" called the hirds, And pity deeper than all words, Taught her, like him to bless.

silent? Where are thou? Lo, the City wakes! Toil's round begins, and calm the world forsakes. Then, too, art gone!-nor evermore shall come Without my window here at dawn to sing. Adieu, strange guest! Theresa guide thy wing Safe to the sweet wild woods that are thy home!

There is real Celtie magic in Blanche Mary Kelly's "The Valley of Vision"

Grove Park Ina. Asheville. N. C. Valentine & Company New York Cab. Gentlemen: December 6, 1916. Our confidence in Valapar is almost unbounded When I built Grove Park Inn I specified Valepar than that had to stand hard wear. was expecially particular about the furniture to avoid apots where suems set it wet with either hot were finished with Valaphy four years ago and Grove Park Ing uses Valepar on all casement win-dows and has never had any trouble with swelling or wasping. Inscends had Valepar used on our pipe organ con-sole. I use it on my boat and I have always con-that, when things are properly done with Valepar, charging to much room for complaint. Very truly yours

Varnished with VALSPAR from cellar

to garret!

THERE is more wear and tear in a big hotel than in almost any other institution, and far more than in any home.

People are continually coming and going. Both guests and servants are apt to be more or less careless.

Therefore, woodwork, floors and furniture soon become worn and shabby unless special protection can be given. That is where Valspar steps in, and here follows an interesting story:

Four years ago the Management of Grove Park Inn considered all these facts, and as a result the well-known hotel-and l'alsparred from cellar to garret - floors, doors, woodwork, furniture, bathrooms, balls, bedrooms-everywhere that it could be used to advantage.

Valspar is absolutely waterproof and won't turn white in cold or hot water. It resists hot dishes and spilled liquids; is tough, durable and retains its beauty of finish. Because of Valspar's special features, Mr. Seely made his choice of this varnish. Read his letter above.

Valspar gives unusual service in this big hotel where it receives especially hard wear. In your home, where obviously there is much less wear, it will please even better on your floors, woodwork, furniture, and so on.

There's a Valspar dealer in your city.

Special Offer

If you wish to test Valspar send 20c. in stamps to Valentine & Company, 461 Fourth Ave., New York City, and we will send you a four-punce can, enough to finish a small table or chair.

MILITARISM

"Peace, peace; and there was no peace."

BY BLANCHE M. KELLY

Not at my ease in the tent nor adream in the hall, Not with my sword at my thigh and my lanes

But full in the shock of the fray on the field by

With the Conqueror's voice in my ears, and my eyes on His crest;

Where the borses flounder and plunge and the captains short.

And the Conqueror rides in the van on His stallion white;—

Whether I fall in the breach or go down in the

Let there be neither parley nor truce, let me die in the fight.

Here is a poem so gracious and noble in its glorification and spiritualization of every-day duties that any critical comment would be superfluous.

THE HOUSEWIFE'S PRAYER

By BLANCIE M. KELLY

Lady, who with tender ward Didst keep the house of Christ the Lord. Who didst set forth the bread and win-Hefore the Living Wheat and Vinc. Reverently didst make the bed Whereon was laid the hoty Head That such a cruel pillow prest For our behoof, on Calvary's crest: Be beside me while I go About my labors to and fro-Speed the wheel and speed the loom. Guide the needle and the broom. Make my bread rise sweet and light, Make my cheese come foamy white, Yellow may my butter be As cowstips blowing on the lea-Homely the my task and small, Be beside me at them all. Then when I shall stand to face Jews in the judgment-place, To me thy gracious help afford Who art the Handmald of the Lord

There has already been published an anthology of peace-poems, but there is material for a new one. We take this sincere and seasonable prayer from Francis A. Gaffney's "Sonnets and Other Verses" (P. J. Kenedy & Sons).

PRAYER FOR PEACE

BY FRANCIS A. GAPPNEY

O God of Armies, God Omnipotent,
The widow's wall, the plaint of orphans, hear!
Soothe dying sens, no touch or voice is pear.
Save wing and screech of vulture, all intent.
With low of starving kine the air is rent:
Our hearthstones are hald low; and blessis and

Our hearthstones are laid low: and blossly weir Of man and brute doth poison waters clear; Grain rots, since scythe to murderous sword is bent.

O Thou. Whose birth was told by Angels' song
Proclaiming gift of Peace on earth to men:
Quick, dry our tears; bid clash and clangor cease!
Like Herod, war the innocents doth wrong;
For them and us, the roof-tree lift again:
God, born of woman, give thy women peace!

PERSONAL GLIMPSES

FOUR GLIMPSES AT ADMIRAL DEWEY

WHEN America's only living Admiral of the Navy passed to his last port. the great National hero of twenty years ago received such universal eulogy from press and public, that none could doubt his lasting hold on American hearts and memories. Often it happens that a man who has stood for a while in the public eye, heard the public plaudits, and smelled the fragrance of public wreathes, later slips back into the oblivion whence he came, but such has not been the case with George Dewey. At the hour of his triumph he was the best loved and most widely known of his nation. Later he settled down to quiet, earnest service on naval problems at his home in Washington, but not even the prominence of men who later held the public favor could dim the old senfighter's star.

From the earliest days, when he was with Farragut, say the press, he seemed destined to greatness, and, after the Civil War closed, his path was steadily upward, till he entered the temple of departed heroes, while every flag in the nation flew at half-mast.

Here are four thumb-nail sketches of the Admiral, as given partly in his autobiography, and partly in a diary which he kept. We begin in the Civil-War days, when the sloop of war, Mississippi, had caught fire while the Federal fleet was running the battery of Port Huron. Dewey was an officer of the vessel at that time, and he records the incident in these words:

Captain Smith had given the order to throw the guns of the port battery overboard in the hope that this would lighten the ship enough to float her. But the order was never carried out. He had to face the heartbreaking fact, to any captain of his indomitable courage, of giving up the ship.

"Can we save the crew?" he asked me,
"Yes, sir," I told him.

But there was no time to lose. Delay only meant still more wounded to move, with the danger of the fire in the storeroom reaching the powder-room before they were away.

The three boats on the starboard side toward the enemy's batteries had all been smashed by shells. The three on the port side were still seaworthy.

We got all the wounded in the first boat and started down the river, with directions to go on board one of our ships.

The second and third, which had some of the slightly wounded, as well as members of the crew who were unhurt, were told to make a landing near by on the bank and to send the boats back immediately.

They were slow in returning. The crew, as soon as they were against the ship's sides, began crowding. The officers had difficulty in keeping order. For the moment the bonds of discipline had been broken.

I apprehended the reason why the boats had been slow in returning. There was disinclination on the part of the oarsmen who had reached safety to make the trip

back. What, if the next time the boats did not return at all? It would be a choice of drowning or of burning for those who were caught on board the Mississippi.

I determined to make sure of the boats' return, and on the impulse I swung myself down into one of the boats. . . . We were under fire all the way to the shore, but nobody was hit. As we landed on the shore I said to the men in the boats:

"Now, all of you except four get to cover behind the levee. Those four will stay with me to go back to the ship."

They obeyed one part of my command with great alacrity. That is, all but one scrambled over the levee in a free-for-all rush. The one who remained standing was a big negro, the ship's cook. He evidently understood that I meant him to be one of the four. When I called out, shaming them, in the name of their race, for allowing a negro to be the only one willing to return to save his shipmates. I did not lack volunteers.

Then, in the dim light, I discerned one man standing by the other boat, which had landed some distance up the beach I called:

"Who is that standing by the cutter?" The answer came:

"It is I, sir—Chase." He was one of the acting masters.

"Why don't you go off to the ship and get the rest of the officers and men?" I asked. "I can't get the men to man the best."

When I called out asking them if they meant to desert their shipmates there was no reply. Then I told Chase to use his revolver and make them go, which he did It is my firm belief that neither one of the boats would have returned to the ship if I had not gone asbore in one of them.

I was certainly as relieved to reach the ship as the men had been to reach shore. When I say that I lived five years in an hour, I should include about four and a half of the years in the few minutes that I was absent with the boats.

As soon as I was on deek Captain Smith came to me and said:

"I have been looking all over for you.
I didn't know but you had been killed."

I explained hastily, and added that we had two empty boats alongside, which we might not have had except for my indiscretion. No word of commendation I have received is more precious to me than Captain Smith's report, in which he said:

"I consider that I should be neglecting a most important duty should I neglect to mention the coolness of my executive officer, Mr. George Dewey, and the steady, fearless, and gallant manner in which the officers and men of the Mississippi defended her, and the orderly and quiet manner in which she was abandoned."

The second picture is one of later days, when he was in command of the Colorede during a mutiny of the crew. While it had not been his ship, he had been given full charge by Commodore Thatcher. How he proceeded to deal with the refractory sailors is told in the Admiral's words:

Commodore H. K. Thateher, in command of the Calorada, welcomed me on board heartily, notwithstanding my youth. He said the ship was in a bad state and gave me full authority in the government of the crew of seven hundred men.

Gradually I was able to identify the

Shun Sickness! Save Money!

So long as men lived in the great Out-of-doors, coughs. colds, catarrh, pneumonia and tuberculosis were scarcely

These ugly maladies are due largely to modern indoor life, where grossly unsanitary methods of heating, ventilating, and humidifying prevail-where disease germs run riot in the dirty, dry, breathed-over AIR! Thru this one cause alone, thousands meet disaster.

No longer need any family face such danger.

Some aystems supply heat; others fresh air. But here's a system that operates Nature's own way -a system that supplies not only warmand fresh air, but ever-changing MOIST-AIR-free from dust, gas, smoke and dread disease germs.

ROUND OAK

Moistair Heating System

The Only Heating System that Automatically Ventilates and HUMIDIFIES

Of the 60,000 Round Oak Heating Systems in use today. each, so far as we can learn, is giving unqualified satisfaction. Each is giving its owner a warm, cheery, comfortable home; each is flooding that home with fresh automatically humidified air; and each is proving durable, dependable,

easy to operate, requiring least care.

Makers of Good Goods Only

FIND a man who has experienced the luxury of a Franklin Enclosed Car for summer use.

Ask him what he thinks of the Enclosed Car idea for summer.

He will tell you that he has made a discovery in motoring: that he will never use any other type of care that all the objections you can think of are not true or do not apply to the Franklin.

He will tell you that the lightness and resilience of the Franklin make it practical for any kind of driving, on any sort of road, any time, anywhere,

That he gets all the free-bloseing air there is - as much or as little as he wants.

That he can regulate the amount of ventilation. That he can instantly adjust the windows for any sort of weather shut out dust or rain; drive for fifty miles on a hot summer afternoon and step out of the car clean and cool.

Then be will tell you what it means to his wife and family. The comfort of wearing what they please vu tour; the freedom from grimy, parched skins and enveloping veils; the joy of stepping onto a hotel veranda without looking like the rescued survivors of a wrecked Cook's Tour.

Then he will come back to the specific features of Franklin construction its flexibility, the lightness of its unsprung weight. He will tell you of easy riding over rough roads, its liveliness on the hills, its maximum speed from place to place, its economy in gasoline, its remarkable tire mileage.

Features that apply equally to Enclosed or Open models—the features that make the Franklin so definitely an all-round efficient car.

Beautiful Floors and Woodwork

When you buy a fine piece of furniture or piano for your home, you are satisfied with nothing short of the finest finish.

Your interior woodwork and your floors are as much a part of your furnishings as your piano and other furniture. Should they not be beautiful, too?

The secret of fine floors and woodwork is good varnish-that beautifies and protects—good varnish that lasts.

Manufacturers of fine pianos and furniture are experts on varnishing most of them use Murphy Varnish. Hadn't you better use Murphy Varnish for your floors and woodwork?

Murphy Transparent Floor Varnish

is the fine transparent varnish which brings out the subtle beauties of the wood and produces a surface that protects against wear, moisture and time. It gives you a floor that is smooth, clean and beautiful; it wears and lasts and always looks well.

Good dealers and good painters will supply you with Murphy Transparent Floor Varnish and other Murphy Varnishes and Enamel.

The Temperature Test

Through the long night, the cold has been conselend; working to put shuckles on your oughts.

It has thickened the labricating oil, made a verticable refrigerator of the gas passages and sent the temperature of the gasoline plunging downwards.

In short, it has done almost everything possible to make the engine "stiff" and the fact slow to vaporize.

Yet when you take the wheel of your car these winter mornings and press your foot on the starting button, it is up to your electrical system to undo all this in a moment.

Such mornings as these provide a severe test of your car's electrical equipment. And on such mornings as these you appreciate the exceptional engineering ability and the extra care that go into Westinghouse Equipment.

A quick start in cold weather requires a starter with capacity to whirl the flywheel of a "stiff" engine at high speed. This, in turn, demands a generator that does its part in keeping the storage battery fully charged. And, of course, there must be a "fat" spark in the combustion chambers.

Westinghouse Starting Motors are built to turn over the flywheel of a cold engine at from 150 to 175 revolutions a minute, insuring rapid vaporizing of the gas, and to do it with the least current, so as not ro drain the battery.

Westinghouse Generators begin charging the battery at low enginespeed, but are so regulated that then do not overcharge at at high speed. Westinghouse Ignition Units can be counted upon to put the spark where it's needed when it's needed.

These are some of the reasons the makers of the lift; three automobiles here named are willing to pay the higher price for Westinghouse Equipment.

worst characters. They were the ones I had to tame. The ringleader was a giant red-headed Englishman named Webster. Many of his mates were in bodily fear of this great brute. The prison being full, I had him put down in the hold in irons.

One day I heard a breaking of glass, and the orderly told me that Webster had broken free of his irons, had driven the sentry out of the hold, and, in a blind rage, was breaking up stone bottles of soda and ale that were stored there.

I sent the master-at-arms to arrest him, and the master-at-arms came back to report that Webster had sworn he would kill the first man that tried to come down the ladder into the hold.

Such a situation was not to be endured. I took my revolver and started for the hold. When I came to the ladder, Webster yelled up the threat which had made the others hesitate in view of his known ferocity. Of course, any one going down the ladder would expose his whole body to an attack before his head was below the deck level and he could see his adversary. But any temporizing with the fellow meant a bad effect on the whole ship's company.

"Webster, this is the executive officer.
Mr. Dewey," I called to him, "I am coming down and, Webster, you may be sure
of this—if you raise a finger against me
I shall kill you,"

I stept down the ladder quickly, to see Webster standing with a stone ale-bottle in his hand ready to throw. But he did not throw it, and submitted to arrest peaceably.

A similar account of the Admiral in handling mutiny, and one perhaps more dramatic, is given by the Chattanooga News. It happened in 1886, when Dewey commanded the old Kearsarge. We are told:

Dewey was a stern disciplinarian. Arming himself with twelve revolvers, it is recorded that he ordered the ship's writer in front of him and entered the hatch where the crew was assembled.

"Call the roll," Dewey ordered the writer, a pistol in each hand and the rest in the breast of his coat. The writer called; "John Jones."

"Here," was the mechanical reply.

Dewey picked out Jones and said; "John Jones, I see you. I am going to have your name called once more, and if you do not answer and immediately go up on deck you are a dead man. Call the roll!"

"John Jones," called the writer.

No answer.

Dewey fired, and John Jones dropt.

"Now, men," continued Dewey, cocking his pistols, "the roll will be continued. As each man's name is called he will answer and go up on deck. Call the roll!"

The mutiny was ended. But the Kearsarge incident was, to Dewey, the most disheartening in his entire career, because his iron discipline had to be enforced by the shedding of American blood.

In the third side-light on the great Admiral is explained the much-talked-of affair with Vice-Admiral Diedrichs at the time of the battle at Manila Bay. Dewey describes this in his autobiography, writing:

At a dinner given me at the White House upon my return home, President McKinley mentioned repeated statements

Why a BLEND of good tobaccos is better than any ONE tobacco

Some day the scientist who grew a fruit which was half pear and half apple may be able to "cross" rich tobacco with mild tobacco and grow a new, unheard-of leaf having the qualities of several tobaccos. But until he does, no one kind of tobacco can ever be both rich and yet delicately mild at the same time.

It requires a blend of good tobaccos. Harmony Pipe Blend gives you this desirable flavor "rich-mildness" because its rich and mild tobaccos are exactly suited to one another and exactly proportioned.

Let your mellowest old pipe show you how much more delicious a blend is than any one tubacco by itself.

THE STANDARD DICTIONARY IS possible of court

in the press about the friction in my relations with Vice-Admiral von Diedrichs, in command of the German squadron.

There is no record of it at all on the files," he said.

"No, Mr. President," I-answered. "As I was on the spot and familiar with the situation from day to day, it seemed best that I look after it myself at a time when you had worries enough of your own."

On the twelfth, Vice-Admiral von Diedrichs arrived on his flag-ship, the Kaiserin Augusta, This made three German cruisers in the harbor. I learned that another was expected. Already, on the sixth, a German transport, the Darmstadt, bringing 1,400 men as relief crews for the German vessels, had appeared. Such a transfer, for which I readily gave permission, while it might have been unusual in a blockaded harbor, might at the same time be easily explained as a matter of convenience for the German squadron, which was absent from its regular base at Kinochow. The Darmstadt, however, with her force of men nearly equal to the total number of my own crews, remained at anchor for four weeks.

As my rank was inferior to Vice-Admiral von Diedrichs's, I made the first call in the usual exchange of visits. In the course of conversation I referred to the presence of the large German force and to the limited German interests in the Philippines (there was only one German commercial house in Manila), and this in a courteous manner amounting to a polite inquiry, which, I thought, was warranted, particularly in view of the fact that six days had elapsed without the Darmstadt transferring her men. To this the Vice-Admiral answered:

"I am here by order of the Kaiser, sir," from which I could only infer that I had exprest myself in a way that excited his displeasure.

And then, the greatest hours - those of the Sunday morning at Manila. The story of the battle is too well-known to require minutely detailed description, but we may read of it, in the words of Admiral Dewey, as he wrote them in his diary_ and in his autobiography:

It was my fortune to be in command on May 1, 1898, of an American squadron in the first important naval action against a foreign foe since the War of 1812. The morning that we steamed into Manila Bay marked an epoch in the history of our Navy and our country in its relations with other great nations.

A battle in a harbor whose name was unknown to our average citizen made us a world Power, with a resultant impetus to the national imagination and a new entail of national responsibilities.

My orders were to capture or destroy the enemy's force and to conduct offensive operations in the Philippine Islands. These orders I endeavored to obey with all possible expedition, in keeping with the traditions of our Navy.

Somehow, as we read the Admiral's commentaries on the event, we feel that he must have sighted the Spanish fleet with some relief, for there is a touch of a fighting man's emotion on the eve of triumph in the following entry:

Before me now was the object for

Wanted-A \$50,000 Man

THE response to this advertisement, run by a big Boston corporation, was enormous. Hundreds of applicants presented themselves, but one by one they were turned down. Their training and knowledge of business principles were not broad enough to fit them for the position. What was wanted was a man with a trained mind—a man who knew the great fundamental principles upon which all busines; is built.

There are many big positions waiting, right now, for men who are prepared to fill them. Yet qualified men are seldom found. There is a dearth of good material, a famine in the market. In almost every big business there are \$10,000—and even \$15,000—positions open, waiting for the right man to step in.

The big fundamental principles behind your work

You feel and know that you have the capacity for greater success. But conscientious work alone will not fit you to get ahead. You must be prepared before you can hope to rise much above your present position. You must master the fundamental principles behind the work you are now doing and which underlie the job ahead of you.

It is this broad grasp of the fundamentals of business that the Alexander Hamilton Institute is teaching to more than 50,000 men in America today.

Based upon the actual experience of thousands of successful business men

The Institute collects, classifies, and transmits to you thru the Modern Business Course and Service the best thought and practice in modern business. It will give you a thoro and sound training in the fundamental principles underlying all departments of business—it will give you a knowledge that could otherwise be obtained only by years of bitter experience—if at all.

Advisory Council

Business and educational authority of the highest standing are represented in the Advisory Council of the Alexander Hamilton Institute. This Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, Head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Joseph French Johnson, Dean of the New York University School of Commerce; and Jeremiah W. Jenks, the statistician and economist.

The kind of men enrolled

Among the 50,000 subscribers are such men as H. C. Osborn, President, American Multigraph Sales Co.; Melville W. Mix, President of the Dodge Mfg. Co.; Geo. M. Verity, President of the American Rolling Mills; William H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Co., and scores of others equally prominent.

In the Standard Oil Co., 242 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation, 450; in the National Cash Register Co., 194; in the General Electric Co., 282; in the Pennsylvania Railroad, 87—and so on down the list of the biggest concerns in America.

Helps men succeed in a big way

Daily there filter into headquarters in New York many intensely human stories, showing what the Modern Business Course and Service has done for its subscribers.

One day you hear of a brilliant lad of twenty-two, in a big New York bank, rising to a \$9,500 job, and giving credit to the Institute for his success. The next day a factory manager writes that the Course has just helped him save his firm \$7,000 a year. And that a "fair slice" of this went to increase his salary.

The next day a man in a wester, concern tells how he saved the firm \$37,000 a year by one suggestion, and what happened then to his salary. These are only typical cases. There are literally hundreds of them. Such remarkable cases are cited by the score in "Forging Ahead in Business" a 135-page book which will be sent free to you on request.

"Forging Ahead in Business"

A careful reading of this 135-page book, "Forging Abend in Business," copy of which we will send you free, will repay you many times over. It will help measure what you know—what you don't know, and what you should know—to make success sure. This Course and Service will fit you to grasp the opportunities that are bound to come to those who are prepared.

which I had made the month's preparations and which, indeed, must ever be the supreme test of a naval officer's career. I felt confident of the outcome, the I had no thought that victory would be won at so slight a cost to our own side.

Confidence was exprest in the very precision with which the dun, war-colored hulls of the squadron followed in column behind the flag-ship, keeping their intervals excellently. All the guns were pointed constantly at the enemy, while the men were at their stations waiting the word. There was no break in the monotones of the engines save the mechanical voice of the leadsman, or an occasional lowtoned command by the quartermaster at the "coun," or the roar of a Spanish shell. The Manila batteries continued their inaccurate fire, to which we paid no attention.

The misty haze of the tropical dawn had hardly risen when, at 5:15, at long range, the Cavite forces and Spanish squadron opened fire. Our course was not one leading directly toward the enemy, but a converging one keeping him on our starboard bow. Our speed was eight knots, and our converging course and ever-varying position must have confused the Spanish gunners. My assumption that the Spanish fire would be hasty and inaccurate proved

So far as I could see none of our ships was suffering any damage, while in view of my limited ammunition-supply it was my plan not to open fire until we were within effective range, and then to fire as rapidly as possible with all our guns.

And then we come to the quiet and contained order which caught the car and fancy of the nation-the one to Gridley. The Admiral leads up to it in a manner which is simplicity itself:

At 5:40, when we were within a distance of 5,000 yards, I turned to Captain Gridley and said:

"You may fire when you are ready,

While I remained on the bridge with Lamberton, Brumby, and Stickney, Gridley took his station in the conning-tower and gave the order to the battery. The very first gan to speak was an eight-inch from the forward turret of the Olympia, and this was the signal for all the other ships to join the action.

At about the time that the Spanish ships were first sighted, two submarine mines were exploded between our squadron. and Cavite, some two miles ahead of our column. On account of the distance, I remarked to Lamberton:

"Evidently the Spaniards are already

However, they explained afterward that the premature explosions were due to a desire to clear a space in which their ships might maneuver.

When the flag-ship reached the fivefathom curve off Cavite she turned to the westward, and at the nearest point to the enemy our range was only two thousand

There had been no cessation in the rapidity of fire maintained by our whole squadron and the effect of its concentration, owing to the fact that our ships were kept so close together, was smothering, particularly upon the two largest ships, the Reina Cristina and Castilla.

The Don Juan de Austria first, and then

the Reina Cristina, made brave and desperate attempts to charge the Olympia, but becoming the target for all our batteries they turned and ran back.

The Castilla fared little better than the Reina Cristina. All except one of her guns were disabled; she was set on fire by our shells, and finally abandoned by her crew after they had sustained a loss of twentythree killed and eighty wounded.

The Don Juan de Austria was badly damaged and on fire; the Isla de Luzon had three guns dismounted, and the Marques del Duero was also in a bad way. Admiral Montojo, finding his flag-ship no longer manageable, half her people dead or wounded, her guns useless, and the ship on fire, gave the order to abandon and sink her, and transferred his flag to the Isla de Cuba shortly after seven o'clock.

Victory was already ours, tho we did not know it. Owing to the smoke over the Spanish squadron there were no visible signs of the execution wrought by our guns when we started upon our fifth run past the enemy.

We were keeping up our rapid fire, and the flag-ship was opposite the center of the Spanish line, when the captain of the Olympia made a report to me which was as startling as it was unexpected. This was to the effect that on board the Olympia there remained only fifteen rounds per gun for the five-inch battery.

It was a most anxious moment for me. So far as I could see, the Spanish squadron was as intact as ours. I had reason to believe that their supply of ammunition was as ample as ours was limited. Nelson once feelingly said that, if he were killed, the want of frigates would be found written on his heart. In my case it would have been the want of ammunition.

I decided to withdraw temporarily from action for a redistribution of ammunition if necessary. For I knew that fifteen rounds of five-inch ammunition would be shot away in five minutes. But even us we were steaming out of range the distress of the Spanish ships became evident. Some of them were perceived to be on fire, and others were seeking probeetion behind Cavite Point.

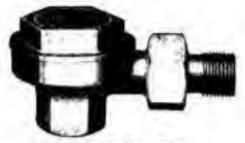

The Don Antonio de Ullou, however, still retained her position at Stangley Point, where she had been moored. Moreover, the Spanish fire, with the exception of the Manila batteries, had ecased entirely. It was clear that we did not need a very large supply of ammunition to finish our morning's task. And, happily, it was found that the report about the Olympia's five-inch ammunition had been incorrectly transmitted—it was that fifteen rounds had been fired per gun, not that only fifteen rounds remained.

Then we reach his description of the concluding fighting. In the Admiral's words the narrative runs:

Feeling confident of the outcome, I now signaled that the crews, who had had only a cup of coffee at 4 A.M., should have their The public at home, on breakfast. account of this signal, to which was attributed a nonchalance that had never occurred to me, reasoned that breakfast was the real reason for our withdrawing from action. Meanwhile, I improved the opportunity to have the commanding officers report on board the flag-ship.

There had been such a heavy flight of shells over us that each captain when he

What was Good Enough for Your Father Will not Suffice for You.

Dunham Radiator Trap

GENERATION ago tin bathtuba were a luxury. Today even the most modest home is equipped with shining porcelain.

Our grandmothers boasted of their wood ranges, but only because they knew naught of the gas stove and the electric

New standards of living and of com-fort have supplanted the old. The presentday world demands much-gets muchand when all is said and done, gets it economically.

Yet you-the luxury and comfort of whose homes would astound a past generation-you voluntarily undergo the uncertainties and the veritable hardships that are characteristic of every method of domestic heating but the Dunham Vapor Heating System. In this particular, you are content with what sufficed your father.

You who would squirm at the thought of a tin bathtub, who would scorn a coal range, in whose homes machine-work has largely supplanted hand-work

-knocking, histing, pounding radiators disturb your days and your nights the winter long, just as they did your father.

unceliable dampers harass you. They require your constant attention, cause you trip after trip to the cellar. So, too, your father was embarrassed.

you rise early of a winter morning in what is really an unheated room, or else you get up unrefreshed. For the night long you've breathed stale, vitiated air. In this you have not advanced beyoud your father's standard.

And all this hardship !- all this discomfort is entirely unnecessary! Has been for years past-since the advent of the Dunham Vapor Heating System.

For the Dunham Vapor Heating System assures to every home in which it is installed an abundant comfort, an unprecedented convenience, and fuel economy.

Where there is Dunham Heating, radiators cannot knock or hiss, for the Dunham Radiator Trap (a device exclusive to the Dunham System) forces all the air and water from out the radiator, but it retains every atom of the

heat-giving costly vapor. Air and water are responsible for noisy radiators.

It is this appliance, too, that is in part responsible for the economy of the Dunham System. For it conserves heat; and the price of heat is high.

The Dunham Inlet Valve is a refinement of pronounced value. It is located at the top of the radiator, eliminating the necessity of stooping to turn the heat on or off. One sin-

gle turn suffices to admit a full volume of heat-giving vapor. There is no wristtiring, back-racking twisting.

And the Dunham Vapor Heating System permits of perfect heat control. Damper doors are mechanically opened and shut-thus the temperature of each room in the home is automatically kept at one of two predetermined temperatures.

There is comfort in going to bed cozy warm, with the certainty of rising at any meviously decided hour in equal comburt. And knowing, positively, that all during the long hours of the night, onwatched, the heat of the fire has mechanically been tempered, and so the temperature has been automatically

Dunham Heating assures positive pressure control, with absolutely no attention s(for the controlling device has been set,

A world of winter comfort awaits you who install a Dunham Vapor Heating System-a comfort that is in keeping with the times-that is yours by right.

Dunham Heating can be applied with equal success to homes in the building and to homes already built. A steam fiver can Dunhamize your old-fashioned but-water or steam heating equipment.

A Dunham Vapor Heating System is not cheap-neither is it costly. But it represents the utmost possible in material value. It will render a service far in ex-

arrived was convinced that no other ship had such good luck as his own in being missed by the enemy's fire, and expected the others to have both casualties and damages to their ships to submit. But fortune was as pronouncedly in our favor at Manila as it was later at Santiago. To my gratification, not a single life had been lost; and, considering that we would rather measure the importance of an action by the scale of its conduct than by the number of casualties, we were immensely happy.

The concentration of our fire at once when we were within telling range had given us an early advantage in demoralizing the enemy, which has ever been the prime factor in naval battle.

After a characteristically brief review of the slight injusies to the American squadron, Dewey passes on to the conclusion of the morning, when, after the crew bad breakfasted, they proceeded to finish up what Spanish vessels remained to threaten them. He tells us.

At 11:16 a.m. we stood in to complete our work. There remained to oppose us, however, only the batteries and the gallant little Ullon. Both opened fire as we advanced. But the contest was too unequal to last more than a few minutes. Soon the Ullon under our concentrated fire went down valiantly with her colors flying.

And that night be wrote in his diary (not to be confounded with his autobiography, which has been quoted heretofore):

Reached Manila at daylight. Immediately engaged the Spanish ships and batterns at Cavite. Destroyed eight of the former, including the Rema Cristina and Custilla. Anchored at noon off Manila.

And that was all.

And after the triumphal return of the Admiral, when he marched down Fifth Avenue in New York through the great arch that had been erected in his honor, the municians and song-writers of the nation took up the popular idol, and wrote countless songs on the Battle, the marines, and on the hero himself. Music-halls rang for months with the songs of the victory—for all that a show had to include, to be a success, was a diminutive and attractive maiden who might lift up her thin voice to include with such words as "Down at Manila," The piece was sure of a run.

And the comic papers, which see humor in everything, even in the downfall of the proud old Spanish Bourbons, wrote squibs about it all. For instance, a writer on the Topeka Capital dashed off a half-dozen lines which traveled the length and breadth of newspaperdom within a week or two. They run:

O dewy was the morning
Upon the first of May,
And Dewey was the admiral,
Down in Manita Bay.
And dewy were the Regent's eyes,
Those orbs of royal blue,
And dew we feel discouraged?
I dew not think we dew!

POINTS FROM PARIS

WHEN good Americans die, it is said. they all go to Paris; but in these war-times, more than one American goesto Paris first, and then dies afterwardof the struggle to adjust himself to strange conditions which the war has brought to that once guy city. We constantly receive letters from the French capital telling of the hostilities and their effect on the people, but seldom do we get such a cluster of thumb-nail sketches as a contributor has recently forwarded to the New York Tribune, telling of such little details as often escape the eye of the seasoned traveler, and which are usually adjudged too triffing for the professional correspondent.

We read with no slight interest, for instance, that:

Parisians must have had a lot of fun naming things—their streets, for example: "The Street of the Four Sons"; "The Street of the Free Bourgeois"; "The Street of Good Children." Then there's a millinery shop in the Rue de Rennes— "To the Happiness of the Ladies." Two restaurants in the Montparnasse quarter are "The Faithful Coachman" and "The Enclosure of Lilaes." Or, if you want to economize, you dine at the "Rendezyous of Coachmen and Chauffeurs."

One might do some judicious renaming in New York along these lines, changing Broadway into, say, "The Street of the Free Spenders."

Sign upon the awning of a café in the Rue du Cloitre, de Notre Dame, just opposite the Morgue:

"Whatever you be, however you fare, You're better off here than over there,"

Oddly enough, French windows—the long kind, that reach to the floor and open in like doors—are what the French use. There isn't a window-sill in Paris. That's why you never see people leaning out of windows here; it's too much trouble getting up again.

And why didn't somebody tell me that French door-knobs are in the middle of the doors? and that they don't turn? You can't shut a door without slamming it, and after you have slammed it you can't open it again unless you have a key. The key, by the way, is likely to be slightly larger than the key of the Bastille. This fact obviates to a great extent the danger of your forgetting it; for when you have it in your pocket you can't sit down.

The effects of the press censorship are astonishing, until you get used to them. Often you'll see an interesting-looking headline on the front page of a Paris newspaper, and beneath it a column of nice white paper quite blank except for the word "Censucé" in the center.

In Le Matin the other morning there was a drawing of a tramp standing on a street corner. The caption ran: "They say there is a coal famine—" and then half an inch of white space. The censor had cut the rest oot. . . . And now I'll never know how it ended. Sometimes I he awake nights wondering what that joke was.

On nights when insomnia threatens to persist beyond endurance I hunt up a

Save Shoe Leather!

Conserve America's Dwindling Supply for Its Most Valuable Use!

The world faces a leather famine.

Tremendous war demand, diminished imports, and decreasing supply of cattle have combined to make leather of all grades scarce and precious.

Shoe manufacturers predict that without quick relief, 1917 leather shoes of good grade will retail at \$15.00 to \$20.00 a pair; already prices are up 50% to 100%. Sole leather has already sold for more than one dollar a pound.

The Government is supplying our Navy with shoes having soles made of a leather substitute, and is experimenting with the tanning of sharks' hides to help relieve the leather situation.

How Motorists Can Help a Lot

The largest leather consuming industry is the shoe business. The second largest is the automobile business. The leather required to upholster the average touring car is enough to make the uppers of three dozen pairs of shoes. The grain leather used on expensive cars makes the best shoe leather. Its increasing scarcity has necessitated large use of split leather in shoe making. The latter is the grade most used in the automobile industry.

The motor-car buyers of America must decide which they will do without-leather in shoes or leather in automobiles.

Du Pont Fabrikoid, Motor Quality offers the best solution of the problem.

This remarkably successful substitute for leather is already used for automobile upholstery more than all other materials combined. While not yet equal to grain leather, it surpasses split leather for upholstery purposes.

Those automobile makers still using split leather admit, to us, that it is inferior to Motor Quality Fabrikoid, but hesitate to adopt it for fear some buyers may still think split leather (commonly advertised "genuine leather") is better. They will gladly adopt Motor Quality Fabrikoid, and thereby greatly conserve the dwindling supply of shoe leather, if you will help.

When buying an automobile tell the dealer you prefer Du Pont Fabrikoid, Motor Quality upholstery. Many dealers in popular makes can and will tell you their cars are so upholstered. Dealers in other cars can get Fabrikoid upholstery if buyers ask for it.

Write us for names of makers now using it.

Du Pont Fabrikoid Company, Wilmington, Del.

Works at Newburgh, N. Y., and Toronto, Ont.

State

back issue of *The Tribune* and read that coal is—or was—\$12 a ton in New York, Coal is \$26.36 a ton in Paris—when you can get it—not counting value of time spent converting kilograms into tons.

After all, travel does broaden one. I had to come three thousand miles to find out that Les Pompiers d'Incendie de Paris—slang for Paris Fire Department—holds an annual exhibition of paintings by its members.

But the worst insult you can offer a French painter is to call him a pumpier.

Oversleeping, always a favorite pastime of mine, has become especially dear in Paris: it is so easily attained. At four in the morning some one goes out into the courtyard of my apartment and throws asheans; at five the army camions from the barracks up the street start racing their motors, and at six all the neighbors beat rugs. A few sing. By rising at eight one can achieve as satisfactory a sense of slothfulness as if one had slept till noon in New York. The man who first mentioned "the night-life of Paris" has been wofully misinterpreted. He was referring to the time they get up.

Every Saturday one goes down to Brentano's and gets the New York papers to see what has been going on abroad. One makes illuminating discoveries; for one thing, that news two weeks old is more interesting than news transmitted overnight. It possesses some of the suspense of a serial story. The papers of November 25 were full of the Yale-Harvard and Army-Navy games, but I had to wait another week before I knew how they came out.

One reads in the same papers that St. Paul's is now one hundred and fifty years old; and on the way home one passes Notre Dame, which was two hundred years old when Columbus discovered America. After all, the Land of the Free and the Home of Preparedness hasn't done so rotten, considering the late start it got.

But America is a long way off. One forgets. This head-line came as a reminder: "ONE HUNDRED PLATTSBURG VETERANS BRAVE COLD FOR DRILL—Blue Noses and Tingling Fingers Mark Saturday Turnout at Governors Island." One had forgotten that there really is a country left where braving cold for a drill is a news item.

Then, too, so many men's fingers have tingled here. A bullet so often comes in through the square hole in a trench out of which a man has been poking a rifle. After he gets out of the hospital he comes to Paris on leave. And so you see him—no index finger on the right hand, no second finger, no thumb. Sometimes the whole hand is gone. That usually means, tho, that he was a bomber and didn't throw his grenade quickly enough.

As for blue noses . . . So often on the streets here you see men who have no noses at all. You don't mind quite so much after a while. But you never really get used to seeing them; for a man without a nose looks exactly like a death's head. It's rather horrible. You find yourself wondering what his wife thinks, or the girls be used to know, . . . The English call it "shrappel face."

What makes it worse is the fact that most of them are blind, . . . It's pretty hard on a man.

Somehow, when you think of the words

COUGHING spells eased, throat soothed, voice helped by

BROWN'S TROCHES

LIBRARIAN WANTED

in sanitarium, medical experience preferred, age and sex immaterial. State full particulars to Box J. K., care of Literary Digest.

"wounded soldier," you don't think of things like that at all. You see a picture of a lad lying upon a hospital-cot with a clean white bandage around his head, or lying upon the battle-field, near a broken cannon, with a neat little hole through one shoulder, or coming back to the old homestead, with one sleeve empty—always the left sleeve.

The trouble is, if a man is wounded by a rifle-bullet, it probably hits him in the chest—through the lungs—or in the abdomen; or it blows out his eyes, or tears away his lower jaw, or one side of his fare, or does something to his brain that makes him paralyzed or an idiot for the rest of his life.

The shells are worse. A good-size shellfragment is as likely as not to take off both legs as one, or to blow off both hands, or all of the right arm and shoulder.

Or a man may be gased, and so have to be careful never to run again, so as not to drop dead.

That is why the people in Europe are not more grateful than they might be when Americans begin to talk about making peace now. They think we don't know anything about this war. They know so much about it that they think they'd better see it through, as long as they're in it, and so perhaps have done with it for good.

They're all conscripts, now, in Europe; and some of them rather hope America will have conscription before long.

BATTLING GERMANY OUTSIDE, THE TRENCHES

A LL of France is arrayed against Ger-many; all means are sought, tried, and pursued toward the end of saving the nation from the conqueror, and yet all of the battling is not taking place in the muddy trenches of the Somme or along the arid dores of Flanders. We have it on the testimony of Barton Blake in the New York Tribune that France is just as deeply concerned in beating Germany in trade, during and after military activities, as she is in driving the invaders from the hills of Verdon. And cities like Lyons, great manufacturing centers, are even now throwing up commercial bulwarks which are hoped will prove as effectual us the great forts of Verdun.

The one man behind the Lyons activity, the man who is teaching the city efficiency, is Senator-Mayor Edouard Herriot. It is he, and he alone, who is the soul and motive power of the new movements at Lyons, and for him, as Mr. Blake puts it, the entire city has changed in a thousand ways, introduced endless innovations and rendjustments, to express one man. What American city, he asks, ever meant, in the last analysis, one man? Mr. Blake reports concerning an interview with this organizer:

I had asked the Senator-Mayor of Lyons how much longer the war would last.

He did not strike me. He did not even ring his bell and ask Mr. Cuvex-Combex, sous-chef de bureau, to throw me out of the Town Hall.

He merely pushed paper and pencil toward me and said somewhat grimiy; "Here are paper and pencil. Write a letter to God. He alone can tell. All a Frenchman can say is: 'It must last till the Germans are beaten.'

"But beating the Germans in battle is not all. Already we have changed the lack of organization on the part of the Allies into an active and effective cooperation. We buy together, as we fight together. We pool resources, men, ideas. But, I repeat, military victory is not all. Nor is our moral victory everything.

"Granted that we, the Entente Allies, will conclude the actual war by a peace modeled after our hearts' desire and all we think righteous in boundaries, guaranties, and restorations—even that is not enough. If, day by day, we do not establish a vigorous plan for the increase of France's national production, and, above all, for the better organization of our production and distribution, the most favorable peace-treaty that a friendly neutral can wish for us will bring us only theoretical gratifications. Generals bring about victories; it takes statesmen to derive lasting benefits from those victories."

And with this idea in mind, Mr. Herriot went ahead organizing the Lyons Fair. He is most in his element when organizing things, we understand. Had he been, says the account, born in America, he might have become President, but, adds Mr. Blake:

Why, after all, should Mr. Herriot regret not having been born in America? If, indeed, there is small chance that he will be the next President or the next Prime Minister of France, it is as likely as not that he will be Prime Minister some day. Which reminds me of my latest conversation with Monsieur le Maire.

"They tell me in Paris," I said, just as we were parting in the courtyard of the Hôtel de Ville, "they tell me that the Reconstruction Ministry which will follow the War Ministry into office is sure to include you. Is it too indiscreet on my part to ask which portfolio in that ministry you would choose to hold?"

Herriot smiled a mocking sort of smilehalf malice, half good nature.

"I don't want any portfolio," he said, in French, as always. "I don't want to be a minister at all. I want to be mayor of Lyons, and senator, as I am now. That is work enough for one man now, and will continue to be work enough after the war."

Then breaking into English for the first

"Here, see! I am the only; in Paris, in a ministry, I should be just—oh, just one more minister. (Et puis, je casserai tous!) No, I don't want to be a minister. But if I were to be, then it would be the Ministry of Commerce which would interest me

The Mayor made a comic gesture to show that all this talk was about remote matters, indeed—and hopped into his automobile.

Since I wrote the preceding paragraphs, a smaller French Cabinet has been organized by Mr. Briand, and of the new names included in it men in France are acclaiming two: General Lyantey, till now Governor-General of Morocco, and now named War Minister, and Edouard Herriot, "Minister of National Subsistence and Labor." The Ministry of National Subsistence is a new creation in the French Government.

WHY

Every Home Owner and Builder should consider

The Trenton Potteries Company

Bathrooms of Character

In the first place, we want you to appreciate that our products are American Premier Products in their line. The matter of cost is unimportant compared with the ultimate satisfaction to you from the possession of superior material. Always remember the labor charge, a big item of the entire cost, is the same it cheap, useless material as upon the best.

To the uninitiated, plumbing fixtures all look alikethe difference is one of years. Almost any fixture is good for a year or two, but after that you will conclude that the best is none too good.

All fixtures are white. The surface glazed? Yes. But, The Trenton Potteries Company China Fixtures have the enamel baked on a clay body-very different from what you may get on a cheaper fixture (very little cheaper).

Clay products differ. A manufacturer who skimps the baking has a glaze that is soft. We guarantee our ware is subjected to heat of not

less than 2400 degrees, often more. face and the hardest possible ware

Naturally, you pay a little more for such fixtures. They cost more to produce; but your bathroom and kitchen look so much better.

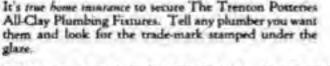

It means the hardest possible surbeneath the surface. It means years of service after poorer made plumbing fixtures are defaced and hammered beyond recognition.

Seal and Water Trap-way (Represented by solid black)

The Silent Si-wel-clo has other advantages besides its quiet operation. It has a much deeper water seal guard against sewer gas; a much larger trap-way, preventing stoppage; and a syphon auxiliary, which causes the closet to flush more tapidly and positively.

and corresponds in some sort, I take it, to Lord Devonport's food-controllership in the Lloyd-George Cabinet.

The Senator-Mayor of Lyons spoke in his office in the seventeenth-century Hôtel de Ville, whence for nearly a dozen years be has been directing the civic life, and, less directly, perhaps, much of the industrial life, of one of Europe's greatest industrial centers. With the capture of Lille by the Germans, Lyons became a producer of large quantities of commodities formerly turned out in the north of France. It is doubtful whether France will ever again trust to the north so great a proportion of her industry as was centered there, close to coal and iron, in 1914. It is too near Germany! Lyons has a safer position-Lyons, whose neighbor is Switzerland. And Lyons has a past as well as wealth and numbers.

' Has any American city ever meant, in the last analysis, one man? Has it exprest him in a hundred innovations or readjustments, while keeping intact its original stamp of character? New towns often express some one man or group-Dayton. Ohio, has exprest John H. Patterson, and Gary, Ind., has exprest the Steel Trust, and a certain powder town has exprest the du Ponts of Delaware.

But Lyons is now new and easily impressible. After all, it was not Herriot who ereated the place, as the Pullman Company, or the Steel Corporation, or the Powder Works have created their towns, Lyons has a great deal of tradition.

There are, we are told, not only social and political traditions, traditions which are violated when the women, as under the administration of Mr. Herriot, have been put even to street-cleaning; but also traditions concerning everything from rare eookery to radical workingman's ideas, such as are fostered by the silk-mill conditions, much like those of our American Paterson and Passaie. All these traditions are unbelievably strong, yet Mr. Herriot has overcome them. We read:

Imagine an American city of traditionsay Boston-growing and prospering in the light of one energy-radiating personalitythe personality of its Mayor! Philadelphia, however, has had its Herriot; tho that was long ago. In Philadelphia one may ask who started any of the institutions your true Philadelphian is proudest of-the University of Pennsylvania, or the Library Company in Locust Street, or the American Philosophical Society, or almost anything else except the Republican machine and the firm of Vare Brothers, monicipal contractors-and the answer is: Benjamin Franklin.

So it is in Lyons. It is Herriot who founded all the civic assets and betterments except the Roman wall and the silk industry. It is Herriot who conjured up all the local advantages except the joining of the rivers Rhône and Saône. Also, but unlike Franklin, Herriot is Mayor of his city. And, unlike the way of American cities, it is the Lyons way to reelect Herriot every four years.

Like Franklin, Herriot was born elsewhere and came in quest of his fortunes. to the town he was to make his own. He did not buy a roll near the water-front (Lyous is proud of its quays) and walk up some Chestnut Street munching it and staring at the fine buildings, but he did

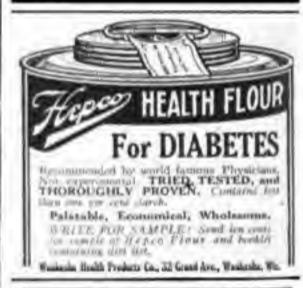

Sound Reason Pays in Infant Feeding

If your lasty for any reason cannot be breast fed, you me to the infant his right to a fair chance in life. If is food, to be most efficient and nourishing, must be as nearly as you stille like homan milk. You may be obliged to think for sible like human milk. You may be obliged to think for yourself, as some physicians are not experts in the science article tal feeding of infants. Secure at the start purebed Helstein cows' milk and modify it according to the directions of a competent physician. Holstein cows' milk is endotted by the highest medical authorities and food chemics as the best adapted for infant feeding, because of its low in percentage and its greater quantity of proteins, the best adapted for infant feeding, because of its low in percentage and its greater quantity of proteins, the highest of Helstein milk are much smaller than those in ordinary chast milk; they form soft doculient curds, which meanly dispected and remote assimilation natural. Infant thrive on Holstein cows' milk. Ask your notk man for the string on Holstein cows' milk. Ask your notk man for the string on Holstein cows' milk. Send for our booklet. The Edwards Manufacturing Company 1357-87 Eggleston Ave. Cincinnati, Obs come as a poor school-teacher, appointed to a professorship in the high school—the chair of rhetoric. (Later he taught philosophy.) Already he was Bachelor of Arts, Licentiate, Agrégé, and Doctor of Letters.

"I had fifty francs in my pocket and a hat that was worse even than the one I'm wearing now," is the way Mr. Herriot tells you about that arrival.

But the chief activity of Mr. Herriot in teaching new methods to the Lyonnais is the great Lyons Sample Fair, an industrial exposition which grows year by year, realizing the best hopes of its fostering Mayor. Of this, Mr. Blake writes:

The details of the Lyons Sample Fair can not be ignored in any account of the man Herriot, Mayor of Lyons, Senator of the Rhône; and naturally it must figure in any account of Lyons in 1917. The Lyons Sample Fair is intended to take the place of that of Leipzig. The Leipzig Fair used to be an annual reunion of German and foreign manufacturers. This meeting gave its exhibitors a chance to show their produets to buyers from all over the world and to book orders from the samples on show. The Lyons Sample Fair is its successor.

Such a fair was announced soon after the first economic conference of the Entente Powers at Paris, toward the end of 1915. It was held at Lyons in March, 1916, and the the time for preparation and publicity was too limited to admit of superlative results, 1,200 French firms exhibited, and a certain number of Swiss, Italian, British, Canadian, and Spanish firms; also one firm each from Russia, the Netherlands, and the United States.

That three hundred applications by would-be exhibitors had to be rejected because filed too late, and that eight million dollars of orders had to be refused, chiefly by French exhibitors, because the orders could not be filled under war-conditions, are facts showing under what a handicap Lyons worked in 1916; even so, ten million dollars' worth of goods were ordered at the fair and duly delivered. The Sample Fair of 1916 and the triumphant defense of Verdun went forward together; both of them parts of the Allies' war upon the Central Empires. Who can say which of the two great undertakings promises most for the future?

The Lyons Fair of 1917 will dwarf that of 1916. Indications are that it will transact about five times as much business, There has been time to pave the way, to make known its objects, to arrange exhibits. Even more than that of 1916, it will be one of the proudest children of Mr. Herriot's mind. This time, at least, the United States will be represented by something more than one brand of fountain pens. American manufacturers of automobiles, machine-tools, concrete, hardware, and agricultural machines have reserved varying quantities of space for exhibition. All the same, there ought to be still fuller representation of our industries. Mr. Herriot especially desires a full showing on the part of American industrialists, and his zeal in this matter ought to be especially appreciated in view of the fact that Herriot was influential in procuring an appropriation from the French Government for our own Panama-Pacific Fair at San Francisco.

"Yours is the opportunity to gain Germany's business," he explains, "not from

It is not European buyers only who will turn out in force at Lyons. South America, too, will be on the job. This is not a "World's Fair," however. There is no Midway Plaisance. There are no hurdygurdies, and merry-go-rounds, and electric fountains, and Sousa's Band. This is a business proposition. It will be repeated year after year, ad infinitum. And it is a part of what Mr. Herriot had in mind in saying: "Generals bring about victories. It takes statesmen to derive lasting benefits from these victories.

THE MINISTER'S SON

N o matter where we travel, we find the general sentiment that ministers' sons are fated for a had end. Perhaps this is due to the desire of humanity to see all things assume a final balance, and when the minister is so worthy and immaculate of conduct, it is probably natural that his son should fall correspondingly below the standard. Yet if one cares to go into the history of the affairs of this country, says the Philadelphia Ledger, one will unearth a vast array of individuals who were ministers' sons, but nevertheless made a mark of considerable brightness in the world. Instead of furnishing the nation with a galaxy of scalawags, if we are to credit the account, the clergy have made of their sons men of distinction and no small prestige. We are told:

"Who's Who" shows that one-twelfth of all the men whose biographies appear there are sons of clergymen. England's 'Dictionary of Biography' reveals an even greater preponderance of clerical forebears of noted men.

Sons of elergymen are nearly double the number of sons of lawyers and physicians combined.

Who in American history were the sons of preachers?

Of famous writers there stand Emerson, Holmes, Lowell, Baneroft, Parkman, Sloan, Gilder, and Henry James.

In polities the answer to the roll-call is equally impressive. Sons of ministers include Henry Clay, President Buchanan. President Arthur, Senator Quay, Senator Beveridge, Senator Dolliver, President Wilson, and Justice Hughes.

Then there is the immortal Field family. embracing Cyrus W., who laid the first Atlantic cable; David Dudley, the renowned lawyer, and Stephen J., the United States Supreme Court justice.

And equally renowned is the Beecher family, which includes Henry Ward Beecher and Mrs. Stowe, author of "Uncle Tom's Cabin." The father was a preacher.

Agassiz, and Samuel F. Morse, inventor of the telegraph, and Mergenthaler, inventor of the linotype machine, were sons of elergymen.

The list is inexhaustible, and in it blaze such names as Oliver Goldsmith, Linnæus, the naturalist; Jenner, the father of vaccination for smallpox: Ben Jonson, the poet Cowper, Sir Joshua Reynolds, Charles Spurgeon, Lyman Abbott, Addison, and President Grover Cleveland.

Instead of being amiable vagabonds, the sons of elergymen come pretty close to the rank of top-notchers in every field of human progress.

Docton- I ask him if he has a car," FRIESD-"What do you learn from

Docron-" If he has one, I know he is wealthy—and if he hasn't, I know he is healthy."—Boffele Courier.

Astute.- 'I found such a wonderful bargain," said Mrs. Flatter.

"What was it?" asked her husband, a resident of Back Bay.

"You know I went down-town to buy a hat. Well, just as I got in the store, they put up a sign, 'All hats at half-price.'

" So you only had to spend half of the money you intended."

"Oh, no, I bought two hats instead of one."-Chicago Herald.

True Pleasure.—" Major Rasher, I saw a man to-day who would like the pleasure of kicking you," said a friend.
"Kicking me!" exploded the Major.

"Kieking me! Give me his name at once!"

"I hardly like to tell you," said the other. "I insist upon knowing," said the

"Ah, well, I'll tell you," said the other. "It's a soldier who's in the hospital with both legs off."-Tit-Bits.

Exceptional Circumstances.-The symathetic prison visitor went from cell to eell interviewing the inmates. To one penitent-looking individual she put the usual question: "What brought you here?"

"Borrowing money, lady?" was the reply.

"But, good gracious!" she exclaimed, "they don't put people in prison for borrowing money?"

"Not ordinarily," said the man, "but I had to knock a man down three or four times before he would lend it to me."-Exchange.

Originality.-KIND FRIEND (to composer who has just played his newly written revue masterpiece) - "Yes, I've always liked that little thing. Now play one of your own, won't you? "-Landon Opinion.

Hollow Hopes.- " Never despair. Somewhere beyond the clouds the sun is shining."

"Yes, and somewhere below the sea there's solid bottom. But that doesn't help a man when he falls overboard."-Baltimore American.

Costly Error.-" Hey, what did you go and sell them apples fer?

" Ain't they fer sale? "

" No. Them was the samples we take out to our automobile customers."-Lovisville Courier-Journal.

Modern Thrift.-" Are you saving up anything for a rainy day?" asked the thrifty citizen.

"Yes," replied Mr. Chuggins. "In a little while I expect to have enough to buy a brand-new top for my automobile."-Chicago Herald.

He Learned.-" So you were invited to participate in a profit-sharing scheme."

"Yea.

" How did you come out?"

"I discovered that the purpose of the scheme was not sharing but shearing."-Birmingham Age Herald.

The Right Note.—" I haven't been home for two days. Got into a poker-game.

"Your wife will fix you.

"I hope this note will pacify her." "I haven't much confidence in notes."

"I have in this one. It is a twentydollar note."-Louisville Courier-Journal.

In the Past Tense,-" When I die," said the husband, " I want you to have this sentence placed on my monument: 'There is peace and quiet in beaven."

"I think," rejoined the wife, "it would be more appropriate to say: 'There we peace and quiet in heaven." -- Indianap-

olis Star.

Making It All Right,-An old lady who had been introduced to a doctor who was also a professor in a university, felt somewhat puzzled as to how she would address the great man.

"Shall I call you 'doctor' or 'professor'?" she asked.

"Oh! just as you wish," was the reply: "as a matter of fact, some people call me an old idiot."

"Indeed," she said, sweetly, "but then, they are people that know you."-Tit-Bitu.

Free Advice. - A man with the croup halted a doctor on a quiet street-corner.

" Doctor," he said, coughing violently. " what ought a chap to do when he's got the group? '

The doctor's eye emitted a steely light at the thought of being buncoed out of a free prescription, and he said:

" Such a man, my friend, ought to con-

sult a good physician."

"Thanks, doctor," said the sufferer, as he took his leave. "That's what I'll do. then."-Baltemore American.

Every day brings 24 hours nearer the time when you must pay more for the Chalmers. \$160 more for the 5-passenger 6-30 touring car. \$180 more for the 2-passenger roadster. March 1, the new price of \$1250, for either car, goes into effect. Today the prices are—for the roadster, \$1070; for the 5-passenger touring, \$1090.

Both cars are remarkable in many ways. Remarkable for style. For fineness of finish. For depth and softness of upholstery. For easiness of driving. For control. For surplus power and responsiveness.

JOHNS-MANVILLE Service in Fire Prevention How safe is your town above the cornice line?

ROM the sidewalk, most towns look satisfyingly safe. On every hand we see evidences of it, in regulated traffic, police on duty, adequate street lighting, fire hydrants and fire stations that house modern extinguishing apparatus.

But a balloon view of that town might look different-less safe. And this is the point of vision that fire takes when it looks over a town and figures out a raid. Fire sees the town above the cornice line and plots its course from one inflammable roof to the other.

So it is the community's roof that determines its safety from fire and it is largely the individual's choice of a roofing that determines the fate of his property in a community fire.

All over the country people are using J-M Asbestos in Roofing form. As indi-viduals they realize the grave danger of the community fire—that every house is a menace to every other house.

Selfishly, if you please, they cover their own roof with J-M Asbestos, but collectively and in effect they do so for the common good-for public safety. There is a Johns-Manville Asbestos Roofing for every type of building as the list below will show.

For flat roofs, J-M Asbestos Built-Up Roofing: for sloping roofs, J-M Flexstone Asbestos Roofing; for skeleton framing, J-M Corrugated Asbestos Roofing; for homes, J-M Transite Asbestos Shingles.

J. M Asbestos Ruofings are examined, approved and labeled by the Underwriters' Laboratories, Inc., under the direction of the National Board of Fire Underwriters.

H·W·JOHNS-MANVILL NEW YORK CITY Branches in 54 Large Cities VILLE CO

CURRENT EVENTS

EUROPEAN WAR

WESTERN FRONT

January 18.—The Germans admit evacuating positions near Serre, but state that it was done several days ago and that the recent British firing was directed against untenanted trenches. A series of German attacks in Chevaliers Woods is repulsed decisively, according to Paris.

Swiss newspapers assert that great numbers of German troops are mobilizing as near the frontier as Basel, and that the Swiss general staff believes that a violation of Swiss neutrality is threatened.

January 19.—Heavy artillery dueling is reported from the banks of the Meuse, but no other activity is announced along the Western front, with the exception of scattered raids in Belgium.

January 21.—That the British have taken over a part of the French front in the Somme sector, to the extent of about twelve miles, is announced by London. No activity other than artillery bombardment is reported from that front,

January 22.—The French repulse two German attacks at Verdun, as the artillery duel continues. Raids on the British and Belgian sectors of the line are also reported, but described as "without result."

January 23.—A raid northeast of Neuville-St. Vaast in which a number of German prisoners are taken by the French is the report from Paris. The failure of two German raids near Armentières and Ploegsteert is also announced.

January 24.—Aerial fighting is resumed on a large scale by the Allies in France. In the day's activity, twelve German fliers are brought down, and Lieutenant Guynemer brings down his twentysixth aeroplane, near the village of Maurepas.

IN THE BALKANS

January 18.—Unofficial reports from Petrograd aver that the German forces have left Braila, having been seriously defeated on both wings, altho the battle in the center is still reported as in progress.

Dispatches from Athens state that the Allies are rushing men to Greece, which activity, together with the text of the latest ultimatum to the Greek Government, is taken by some to forecast a drive on the Berlin-Constantinople railroad.

January 19.—In Roumania German guns shell Tergu Oena, the main center of the Trotus Valley railway, while in Galicia the Teutons penetrate some Russian trenches in the Zhorow sector, and are driven out again.

January 20.—German troops force the Russians out of Nanesti, on the Screth, after a fierce fight in a snow-storm. Petrograd admits that the Russian detachments "fell back before superior forces"

January 21.—According to announcements from the German War Office, the Russian defeat at Nanesti was in the nature of a rout. The Germans took 556 prisoners, cutting the retreating Russian lines to pieces as they withdrew.

January 22.—Nearly 200,000 Roumanians have been taken as prisoners thus far in the war, says a Berlin report. Teuton advances in the Oitzu Valley are reported stopt by Russian fire,

but on the remainder of the Russian front all appears quiet.

January 23.—The Bulgars cross the southern estuary of the Danube at Tuitchs, near Braila, gaining one of the large islands, and carrying the offensive nearer the Bessarabian boundary. Further north, according to reports from Petrograd, the German attacks near Riga are renewed, but are repulsed with severe losses to the attacking party.

GENERAL

January 18.—The first victims of the unknown German sea-raider land at Pernambuco, Brazil, and state that they believe the raider is the steamship Move, famous as a raider in the early days of the war, but later reported docked in the Kiel Canal. It is surmised that the raider left the Canal disguised as a Danish hay-ship.

M. A. Beliaeff is appointed Russian Minister of War, to succeed General Chouvaieff. He is the fourth Minister of War since the outbreak of hostilities.

January 20.—In a memorial presented to the State Department by the German Embassy, the Belgian deportations are defended as a social need, and a service to the conquered population. Unemployment and crippled industries are laid to the British blockade which prevents imports.

January 21.—Paris announces that sugarcards are to be instituted in France, as well as a two-day French candy ban per week, which will also be accompanied by two cakeless days.

A summary of the German decision to hold all Americans seized on captured vessels by the South-Atlantic raiders, is cabled to Washington. The text is not made public but rumor has it that the Americans are to be held to make a test case on the status of armed merchantmen.

London announces a victory in Mesopotamia, as the British drive the Turks out of positions on the right bank of the Tigris, near Kut, completing the occupation of the entire trench system on a 2,500-yard front, with a depth of 1,100 yards.

January 22.—Dispatches from Ottawa state that Canada has recruited 120.-000 more troops than were asked for by the War Office in London, having sent, to date, 434,539 men to the front.

The Portuguese "White Book" appears, giving the reasons why that country went to war against Germany. A long series of German offenses is cited, among which is an attack in Africa without declaration of hostilities.

January 23.—Reports from Ymuiden, Holiand, state that in a sea-battle off Zeebrugge, fourteen German torpedoboat destroyers, attempting to leave port, were attacked by a British flotilla, and seven of them are reported sunk. The commander of the flotilla was killed in action, adds London.

In an interview with the Lokal Anzeiger, of Berlin, the President of the Bulgarian Parliament states that the peace-price to Bulgaria must include the cession of the entire Dobrudia, Monastir, the Morava River (Servia), and a part of Macedonia.

January 24.—In response to a suggestion contained in the recent German note. Ambassador Gerard is reported to be about to begin an investigation of the Belgian deportations: German authorities continue to deport Belgians, to the number of 125,000 to date.

FIRE CHIEF CROKER built himself a house down on Long Island.

When his guests were assembled at dinner, he told them the next room was afire.

"But don't worry," said Croker. "I shut the door."

It was a test to prove the absolute safety of the fireproof house-built of

NATCO HOLLOW TILE

A VETERAN FIREMAN knows houses as a doctor knows anatomy. You can't fool him on construction. He has had to rip it apart too often in the search for the hidden spark.

GROSVENOR ATTERBURY, the fa-mous architect, says: "Natco is an ideal construction material.'

WHY? BECAUSE NATCO construction means permanent, strong, solid walls, partitions and floors, everlastingly fireproof.

BECAUSE NATCO CON-STRUCTION is cheaper than other forms of masonry construction, and, while more expensive than frame, the resulting

Want to know more about Natco? Ask your architect he knows. Or send us ten cents for 32-page handbook, "Fireproof Houses," with 25 illustrations of modern and artistic homes, combining economy, comfort and safety.

economies in maintenance and insurance will in the course of a few years offset this initial increased outlay.

BECAUSE THE NATCO wall means lower coal bills, more comfort, no vermin, no dampness - a single thickness of the big hollow tile units with stucco outside and plaster inside, and your modern and efficient wall is complete.

This is a Natco XXX Hollow Tile, of the type used for residence wall construction. These big units mean quick and strong construction and everlasting safety against fire. Note the air cells which make the Natco wall temperature and damp proof, and the pat-ented dovetail scoring on the surface for a strong mechanical bond with decorative outside stucco and inside plaster. No studding or lath is required. Then is a Natco tile for every building purpose, from smallest residence to largest skyscraper. It is the most modem building material made.

Ocean Steamship Compuny's Warehouses at Savannah, Ga., I. G. Rassinger of New York City, Engineer. 125 tons of Armoo Iron sinployed for Sidings, Cornices and Flashings by the Sheet Metal Contractors, The Downan-Dozier Mig. Co.

The Victor Safe & Leek-Co, of Chreimmati, leading manufacturers of attes, locks and bonk roults, adopted Armon from for the succet and place portions of their products after a rigid inresignation and satisfied them that it was the roost durable metal available.

The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Co. with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possessin the highest degree the merit claimed for it.

Fire is a risk, Rust is a certainty; both are resisted by Armco Iron

Armco Iron is used in tremendous quantities in fire-proof buildings that are built for permanency.

To insure against such fires as pictured above, great dock warehouses have been built, at many Atlantic and Pacific ports, largely or wholly of Armco Iron. These warehouses will resist rust, too, as no other sheet metal construction can.

ARMCO IRON

is firmly established in the building world. A rust-resisting sky line seems a thing of the near future.

Roofing, coping, pent houses, skylights, water tanks, ventilators of Armco (American Ingot) Iron are already common specifications.

Window frames and sash, Armco Iron Lath, doors and heating ducts are a few more places where Armco Iron is used in rust-resisting construction.

Armco Iron resists rust because it is pure iron—the purest made. Every phase of its manufacture, from the furnace to the shipping platform, is the object of scientific and conscientious care. Armco Iron is, therefore, the most nearly perfect in respect to evenness and all the other qualities that form the basis of rust resistance.

If you do not know of a building supply manufacturer or dealer who furnishes Armoo Iron products, write to us and we will put you in touch with one who can supply you.

Lasting Grave Vaults and Caskets are made from Armco Iron by the Galion Metallic Vault Co., Galion, O.; The Springfield Metallic Casket Co. of Springfield, O.; The National Casket Co. (branch offices in principal cities), and (caskets only) by the Cincinnati Coffin Co. of Cincinnati, O.

If you do not know the whole story of Armco Iron, send for

Book-"The Story of Armco Iron"-Free

It points the way to eventual economy. It tells the story of the struggle to produce pure iron—rust-resisting iron. Pay the rust-tax no longer—send for the book today.

FOREIGN

January 18 .- A fleet of thirty American war-ships visit the newly acquired West Indies, and engage in maneuvers off St. Thomas. A proposal to change the name of the lately acquired Danish West Indies to "Dewey Islands" is introduced into Congress.

Prince Vaclaw von Niemoyovski, grandson of the President of the last Polish National Government of 1830, is appointed Viceroy of Poland by the Kaiser. He has recently been Crown Marshal of Poland.

January 19.—The British Ministry of Munitions announces an explosion in a powder works near London. The cause of the disaster is unknown.

It is unofficially reported that actual operations are under way to withdraw the Pershing expedition from El Valle. Mexico, as all supplies bifled to the troops at Casas Grandes and Colonia Dublan are being shipped instead to

January 23,—The casualties in the recent London explosion as officially announced include 69 killed, 72 severely injured, and 328 slightly injured, according to the complete estimate sent out by the authorities.

It is authoritatively announced in Washington that General Pershing has at last been ordered officially to withdraw from Mexico, thus marking the end of the recent campaign in the neighbor Republic.

DOMESTIC

January 18 .- The Department of Agriculture estimates the American farm-products for 1916 to be worth \$13,-449,000,000, making a new record for agricultural prosperity.

Philip Boileau, widely known as a portrayer of American-girl types, dies in New York, aged fifty-four.

January 19.—The House of Representatives of Tennessee passes a bill allowing the women of the State to vote in city and Presidential elections.

January 22.—In a message to the Senate, President Wilson outlines his peaceplans, including peace without victory, government of all peoples by their own consent, limited armament, neutral-ized outlets to the sea for all peoples, and a world application of the Monroe Doctrine.

The Supreme Court sustains the constitutionality of the so-called "blue-sky" laws of Ohio, Michigan, and South Dakota, designed to regulate the sale of securities and to bar get-rich-quick schemes. Other decisions are also announced, upholding similar laws in twenty-six other States.

For the first time in American history, a foreign Consul-General, Franz Bopp. German envoy at San Francisco, is sentenced to prison and payment of a fine for violation of United States neu-trality. His fine is \$10,000 and sentence two years.

January 23.—The first day of the "leak" inquiry in New York results in the Stock Exchange agreeing to call on all brokers to lay bare their books, to avoid subpenas.

Governor Frazier, of North Dakota, signs the bills giving limited suffrage to the women of the State after July 1.

The Bethlehem Steel Company announces one of the largest dividends in history, as a 200 per cent. stock dividend is reported for stockholders, together with a raise of the annual rate.

Why Live An Inferior Life?

I know that I can easily, quickly and positively prove to you that you are only half as alive as you must be to realize the joys and benefits of living in full; and that you are only half as well as you should be, half as vigorous as you can be, half as ambitious as you may be, and only half as well developed as you ought to be.

My Free Book Will Add to Your Self-Understanding

THE fact is that no matter who you are, whether you are young or old, weak or strong, rich or poor, I can prove to you readily by demonstration that you are leading an inferior life, and I want the opportunity to show you the way in which you may completely and easily, without inconvenience or loss of time, come in possession of new life, vigor, energy, development and a higher realization of life and success.

Become Superior to Other Men

The Swoboda System can make a better human being of you physically, mentally and in every way. The Swoboda System can do more for you than you can imagine. It can so vitalize every organ, tissue and cell of your body as to make the mere act of living a joy. It can give you an intense, thrilling and pulsating nature. It can increase your very life. I not only promise it. I guarantee it. My guarantee is unusual, startling, specific, positive and absolutely traud proof.

Why Take Less Than Your Full Share of Life and Pleasure?

Are you living a full and successful life? Why not always be at your best—thoroughly well, virile, energetic? Why not invest in yourself and make the most of your every opportunity? It is easy when you know how. The Swoboda System points the way. It requires no drugs, no appliances, no dieting, no study, no loss of time, no special bathing; there is nothing to worry you. It gives ideal mental and physical conditions without inconvenience or trouble.

Your Earning Power

your success, depend entirely upon your energy, health, vitality, memory and will power. Without these, all knowledge becomes of small value, for it cannot be put into active use. The Swoboda System can make you tireless, improve your memory, intensity your will power, and make you physically just as you ought to be.

Send for My Book-FREE

It explains the SWOBODA SYSTEM OF CON-SCIOUS EVOLUTION and the human body as it has never been explained before. It will startle, educate and enlighten you.

My book explains my new theory of the mind and body. It tells, in a highly interesting and simple manner, just what, no doubt, you, as an intelligent being, have always wanted to know about yourself.

You will cherish this book for having given you the first real understanding of your body and mind. It shows how you may be able to obtain a superior life; it explains how you may make use of natural laws to your own advantage.

My book will give you a better understanding of yourself than you could obtain from a college course. The information which it imparts cannot be obtained elsewhere at any price. It shows the unlimited possibilities for you through conscious evolution of your cells; it explains my discoveries and what they are doing for men and women. Thousands have advanced themselves in every way through a better realization and conscious use of the principles which I have discovered and which I disclose with my book. It also explains the dangers and after-effects of exercise and excessively deep breathing.

Preferred Stocks

Industrial Corporations

In times of great Industrial prosperity the best grade of such shares attract investment funds because of-

- Safety of the principal involved.
- Widemargin of excess profits over dividend requirements.
- Practical certainty of continuous dividend payments.
- Liberal yield on the investment.

First consideration should be given to the stocks of corporations whose future will be favorably influenced by Peace, rather than War. An analysis of attrac-tive shares in this group sent by request-ing Circular "P-1".

Diversification in Odd Lots

1917 should be a year in which to place your investments on a sound and permanent plane.

Whatever may be the amount you have to invest, the elasticity of Odd Lots of stock commends them as a means of securing liberal investment return with distributed risk.

> Send for Booklet D-o. "Odd Lot Investment."

PRICES AND YIELDS FOR SOME OF THE BEST HIGH-GRADE BONDS

ITH the turn of the year, it was noted that most high-grade bonds had risen slightly in price. Forty representative ones having been chosen, it was found that the average price for them was the highest known since before the war began. During the past year railroads have advanced most from the low level reached in September, 1915. Since then the average advance for the highest grade railroad bonds was 7.34 points, and for second grade 8.29 points. For public-utility bonds the advance was 5.50 points, for industrials 3.55. The advance was greatest in the highest grade railroad bonds. Following is a table in which a writer in The Wall Street Journal compares the prices early in January of each group of bonds used in making up the average with the low prices of 1916. and the low of 1915:

Jan. 10.	Aug. 5),	Ade	Sept. 16.	344		
Highest grade rails 96, 10	192, 36	3 52	39 76	7.34		
Lower grade rails, 92 20	86 9E	0.33	AG 91	8.29		
Public-utility bds . 96.35	96.10	1.30	90.83	5.50		
Industrial bends. 96.31	(66, 410)	-46	36.06	B 35		
Combined average 95.76	93.56	3.15	NO. 04	6.14		

The writer then presented a list of the bonds used in making up the averages, with their closing prices early in January of this year, the low levels last August, the low levels of September, 1915, and the present yields. All are long-term bonds, none maturing before 1931.

record and were gratified over the continued urgent demand for all grades of securities." As compared with a month before, quotations for most issues ranged from 1 to 3 points higher. In the trade the statement was made that "to secure any substantial amount of bonds it would be necessary to bid well above the mar-The demand was of an investment character. Railroad issues were well sought for, and there was "an urgent call for the better class of industrials." The writer added:

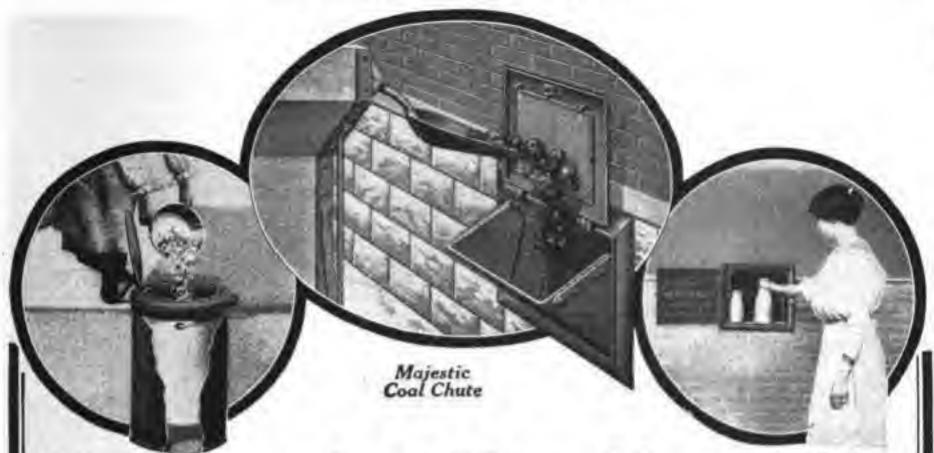

"Ordinarily there is a good demand for bonds after the first of the year, representing the January 1 investment buying, but this usually spends its force within a week or ten days after the first calls have been supplied. This year, however, the demand has continued with the result that bond men entertain a high degree of confidence over the outlook. For the past three weeks there has been no let-up in purchases, and some large dealers have found themselves actually short of bonds.
"In the municipal market there was

less activity than a week ago, altho the volume of business was said to have been substantial. New York State bonds were in favor with a fairly substantial turnover and considerable interest was evinced in the forthcoming offering of the \$25,000,000 new State 4s. It is believed that these bonds will bring a price in the neighborhood of 106 or better.

"Among the important events of the week was the official announcement of the closing of another \$250,000,000 loan to Great Britain, which is to be publicly offered on a basis showing a return of exactly 6 per cent, for both maturities. This new issue is regarded as more attractive than any foreign bond or note yet put out in this country, the convertible feature having met with hearty approval from American investors and institutions alike. The fact that the Federal Reserve Board at Washington is not adverse to the offering also is a factor to its credit.

"During the present year expectations are that there will be a considerable amount of railroad financing, it being recognized that carriers must necessarily enter the market for various products, while it is not unlikely that improvements on a scale more extensive than during the past few years will be undertaken by many of the important systems. One of the restraining influences in this respect during the past year has been the unprecedentedly high prices for all materials incident to railroad operations, as well as wages, which have exceeded any previously paid by the carriers. At the same time many of the important systems have declared bonuses to their employees to offset the high cost of living which has proved burdensome to many of the low-salaried workers.

"Anglo-French bonds sold during the week at low levels, the closing quotations on Friday being under 93, while the prevailing level during that session of business was 92% to 93; American Foreign Securities 5s are quoted at 971/2 to 971/2; City of Paris 6s, 95 % to 961/2; United Kingdom of Great Britain and Ireland 5s, 96% to 97% and so on. There was less activity in Russian Government 51%, which sold from 91 to 89% during Friday's trading, but subsequently touched 90. The new United Kingdom one- and two-year notes were traded in over the counter, and at the close Friday were 99% bid for the one-year and 98% for the two-year maturity."

Garbage Receiver

Complete Your Home

Package Receiver

Your home is not complete without these modern building necessities, designed to protect the good looks of your home and grounds from the careless coal man—to provide for the most sanitary method of garbage disposal and for the safest and cleanest delivery of your milk and packages.

Majestic Building Specialties

not only make every home complete, but they save work and steps for every housewife, making up for their small cost in a very short time.

Majestic Coal Chute keeps your house, lawns and grounds clean, because every piece of coal falls into the bin. The door locks open automatically, protecting the building above the opening just where the damage always occurs. When shut it can be opened only from the inside and is absolutely burglar-proof. Easily installed in old buildings or built into new ones.

Majestic Underground Garbage Receiver protects the health of your family because it keeps your garbage buried. The deadly fly has no greater breeding spot than the old-fashioned exposed garbage can. Bury your garbage can the Majestic way and drive the flies away. Sanitary, emits no odors and keeps the contents safe from dogs and vermin. Always convenient, never unsightly.

Majestic Package Receiver is placed in the kitchen wall for receiving milk bottles and packages from the outside, insuring them against theft and keeping them clean and in sanitary condition. The door locks automatically after packages are put in from outside and can be opened only from the kitchen. Makes an excellent winter refrigerator.

Other Majestic Specialties

The Majestic line is complete, including Coal Chutes, Underground and Built-in Garbage Receivers, Milk and Package Receivers, Rubbish Burners, Duplex One-Register Store-Heating Systems, Metal Plant Boxes, Pipe and Pipeless Furnaces, etc.

These are completely described and illustrated in our new catalog. Send coupon for your copy today.

A Book That Helps Fit Men and Women For Leadurabio

Personal

By Keith J. Thomas

Here is a book that clearly points out ways to develop will-power, mental concentration, and wirming personality. A careful reading of it will increasely increase the capacity for achieving bigger financial and intellectual success. There are practical directions for strengthening the faculty for reading men and understanding human nature, and the busic impulses that move men to definite action.

Judge Einers H. Gary myst "This is a well written, strongly expressed look, and there a good influence upon all who read it, particularly young men. More books life at chould be published and road."

Cloth, Over 300 pages. \$1.75 net; average carriage charges \$2s. FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., N.Y.

for-yours on a silver platter! Can't any more stop you having the pipe sessions of your life with P. A. than you can put thirty days in February! And that's because you get quality when you buy P. A.

Coupons or premiums have never been given as an inducement to smoke Prince Albert. We prefer to offer smokers quality!

No matter how long you've been on the trail of tobacco-that-hits-the-spot, you quit now while the year's young! For with Prince Albert for a smoke-pal you've landed right, at last! You've hit ore! You've uncorked a mine of quality-smokings that'll keep you pleasure-puf-f-f-ing as long as the flowers bloom in springtime!

Your taste will flash a speed-o. k. that Prince Albert's flavor beats all-hollow your

tongue will signal "go-ahead-tobeat-the-band"

because P. A. won't bite it any more than a wax doll! Bite and parch are cut out of Prince Albert by our exclusive patented process!

Prince Albert lets you drill-mighty-deep into smoke-smiles, it's so friendly and cheery in a jimmy pipe! P. A. is your certain-sure-proof of the bang-up-happiness and content that can come via tobacco quality! For, Prince Albert hands you nothing but quality! We prefer to give you tobacco that smashes all smoke-rulesand-records and let you take-a-smoke without a comeback fast as your smoke-appetite shoots in a demand.

PRINCE ALBERT the national joy smoke

Prince Albert is to be had everywhere tobacco is sold. Toppy red bags, 5c; tidy red tins, 10c; handsome pound and half-pound tin humidors—and—that clever, practical pound crystal-glass humidor with apongamoistener top that keeps the tobacco in such perfect

Safety for Over Half a Billion Passengers

The Steel Car Route

For years the Pennsylvania Railroad System has been conducting an energetic campaign of safety.

Only all-steel cars have been built. Efficiency tests have been established; safety-first expositions have been held for the education and instruction of trainmen; safety committees have been organized; and over 120,000 safety text-books have been distributed to employees.

It is the logical result of this safety movement that during the past three years over half a billion passengers—553,-890,063—more than five times the total population of the United States—have been carried over the lines of the Pennsylvania Railroad System without the loss of the life of a single passenger in a train accident. On the Pennsylvania Railroad east of Pittsburgh a perfect record for four years has been made, during which a total of 616,626,957 passengers were safely carried.

With the continued co-operation of our faithful employees, to whom great credit is due, we hope to maintain the record we have established.

His Policy.—Perhaps the best story told about the Bishop of Peterborough is that concerning a benevolent millionaire who once boasted to his lordship of the amount he gave annually to charity. He talked as the certain of securing one of the best seats in Paradise.

"Well," remarked the bishop, on hearing the amount, "that is the largest insurance against fire that I ever heard of."-Tit-Bite.

House number one -nine rooms, coal bill reduced 50%. House number two \$37 heats 8 rooms. House number three o tooms heated for \$36. Read the letters to the left. Then remember that we have thousands of others just as interesting-telling of coal bills cut 15 to 13, guaranteed with the UNDERFEED!

And all this guaranteed money-saving has a real meaning for you. The UNDERFEED saves because, first of all, it burns the cheaper grades of coal without dirt or waste. It saves because of its scientific principle by which coal is fed from below the hot, clean fire always on top in direct contact with the most effective radiating surfaces. It saves because smoke, soot and gas are consumed as they pass up through the fire. It saves because there no clinkers or partly burned coals everything reduced to a clean white ash.

And the UNDERFEED saves time and labor, because it is operated from a standing position. No stooping. No grubbing. A boy of 12 can easily do it all with "expert" results!

WILLIAMSON UNDERFEED Burnaces

Cut Coal Bills 1/2 to 2/3 Guaranteed

Besides all this, the UNDERFEED insures the same guaranteed 1/2 to 3/3 saving whether you heat with warm air, hot water, steam or vapor. No house too large or too small for the UNDERFEED-just the right heat always, no matter how variable the weather.

Get This Book Now-FREE

It is called "From Overfed to UNDERFEED." Tells the interesting UNDERFEED story by word and picture. You may not be thinking of in-stalling a new heating system now, but get the book NOW. It will save you many a dollar later where your coal cost is concerned-to say nothing of cleaner, better and more uniform heat. Free for the asking-no obligation, Send the coupon NOW.

Bay State Coating is Protection

Here's a parallel: A woman is making jelly. Infinite care is taken in its preparation. At last, steaming, it is poured into the sparkling jelly glasses. There they stand to cool, jar after jar, clear as crystal. It has turned out right and she is pleased. Will she put it away as it is—exposed to dust and dirt?

No, indeed! Each jar is first carefully covered with paraffin. Absolutely protected. Then she knows it will be just as clear and clean months from now.

Listen: Your house is built carefully. The brick, concrete or stucco walls look just right. Are you going to leave them exposed to wet weather without protection?

Bay State Coating is made in white and a variety of tints. It will rejuvenate the oldest walls and give back to your house its original newness.

But don't wait till your walls are old-protect them now.

Remember, even jelly is protected the day it is made. If you let us know what tint you prefer, we'll send you a sample; then you'll know how it works. Our interesting Booklet No. 41 will also be gladly sent if you'll give us your address.

> Bay State Cement Crack Filler in for use around window frames and other places where settling causes cracks. It is easily applied and not detectable. In cases of cracks in coment "a stitch in time" saves much money. Keep a can on hand.

WADSWORTH, HOWLAND & CO., Inc. Paint and Varnish Makers New York Office: Architects' Building Boston, Mass.

Bay State Brick and Cement Coating protects concrete, brick or stucco walls and beautifies them, too. Two coats completely cover these porous walls and make them waterproof, cover the blotchy appearance of concrete and take away its ugly, blue-gray color.

OUR BREAK WITH GERMANY

DECLARATION OF WAR against the United States" was Germany's answer to President Wilson's address to the Senate on world-pence, remarks the semiofficial New York World. And the accuracy of this interpretation of the German note of January 31 announcing a campaign

of ruthless submarine warfare against neutral as well as belligerent ships seems to have some confirmation from the German Embassy itself. For when Count von Bernstorff was informed of the severance of diplomatic relations between his country and ours he made this remarkable admission, according to a correspondent of the Associated Press: "I am not surprized. My Government will not be surprized, either. The people in Berlin knew what was bound to happen if they took the action they have taken. There was nothing else left for the United States to do."

And President Wilson agrees that there was nothing else for this country to do consistent with its "dignity and honor," as he told Congress on February 3. The United States Government, he recalled, had announced after the sinking of the Sumez that it would break off diplomatic relations. with Germany unless she abandoned ber methods of submarine warfare. She has declared her purpose to resume these methods; and the withdrawal of our Ambassador at Berlin

and the handing of his passports to the German Ambassador at Washington necessarily followed. Nevertheless, President Wilson declared that he refused "to believe that it is the intention of the German authorities to do in fact what they have warned us they will feel at liberty to do"; that they will actually "destroy American ships and take the lives of American citizens in the wilful prosecution of the ruthless naval program they have announced their intention to adopt." And, he said, "only actual overt acts can make me believe it even now." But-

"If this inveterate confidence on my part in the sobriety and prudent foresight of their purpose should unhappily prove

> unfounded, if American ships and American lives should in fact be sacriliced by their naval commanders in heedless contravention of the just and reasonable understandings of international law and the obvious dictates of humanity, I shall take the liberty of coming again before the Congress to ask that authority be given me to use any means that may be necessary for the protection of our seamen and our people in the prosecution of their peaceful and legitimate errands on the high seas. I can do nothing less. I take it for granted that all neutral Governments will take the same

The first neutral approval of the President's course came from Brazil, where there are large German interests. Now, said the Epoco, of Rio de Janeiro, "there are to be no more neutrals"; "let us defend ourselves against the German pirates," was the call of La Razon, of the same city.

"Piracy" and "a return to murder " were also favorite expressions of the American press in describing Germany's move. The world can but conclude, so it seemed to the Boston News Bureau, "that Prussianism. desperate lest it have to hoist the

white flag, chooses to flaunt the black flag upon the seas." A daily like the New York Evening Mail, often spoken of as friendly to the German cause, reminded its readers that "there are worse things than war," and that "a war in a just cause fuses nations into that unity which America, too, must know." And in the support of the President, it added, "are our united

THE COUNTRY STANDS BY HIM.

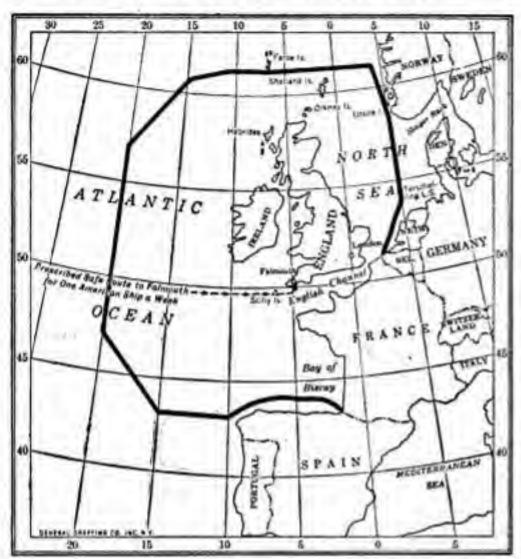

WHY MR. HOOVER WAS ASHAMED

Can you rest easy when one of the noblest of Americans, one who has brought honor and love to the American flag,-confesses that when he heard "The Star-Spangled Banner" sung by 1,500 weak, hungry children in Belgium, he "could feel nothing but shame"?

Turn now to page 345 and read a very stirring chapter of the story which was begun in THE DIGEST of January 20th.

minds and hearts." America, declared the New York Globe, at the "call of duty and necessity," will "resist to the uttermost the criminal acts of the world's great disturber." It continued:

"Are you pacifist and sincerely devoted to bringing an end to war? Then you must see that the only hope of destroying this artificial plague of man is in making a record that will forever halt the hand of the warlike when they meditate unsheathing the sword. Are you an internationalist, in favor of a new and better organization of the world? Then you must see that the principle must be vindicated that no nation is a law to itself or

"ALL SHIPS MET WITHIN THAT ZONE WILL BE SUNK."

This German decree, which ended friendly relations with the United States, also applies to the Mediterranean, with the exception of waters bounding the Spanish coast and a safety zone extending along the African coast and thence to Gresco.

may be permitted to follow the promptings of its own wicked will.

"It is happily unnecessary at this time to ask for national unity by invoking the principle that a country must be supported whether right or wrong. All that is to be demanded is that all shall support a President and a Government plainly in the right. If war comes it will be a holy and righteous one—a war on war, a war for peace, a war for a better world."

The German note which precipitated the crisis was handed to the Secretary of State on January 31 and was devoted largely to praise of President Wilson's ideals, and to denunciation of England's "war of starvation," and "the lust of conquest" exhibited by Germany's foes. The British blockade, it is explained, "does not at all affect the military power" of Germany, "but compels women and children, the sick and the aged, to suffer for their country pains and privations which endanger the vitality of the nation." Then follows the sentence setting forth Germany's new purpose:

"After the attempts to come to an understanding with the Entente Powers have been answered by the latter with the announcement of an intensified continuation of the war, the Imperial Government—in order to serve the welfare of mankind in a higher sense and not to wrong its own people—is now compelled to continue the fight for existence again forced upon it, with the full employment of all the weapons which are at its disposal."

A supplementary memorandum explained that while "Germany has not so far made unrestricted use of the weapon which she possesses in her submarines," she is, because of the Entente's rejection of any possible peace-understanding, "unable further to forego the full use of her submarines," "The now openly disclosed intention of the Entente Allies," it is asserted, "gives back to Germany the freedom of action which she reserved in her note addrest to the Government of the United States on May 4, 1916." Under these circumstances, the note continues,

"Germany will meet the illegal measures of her enemies by forcibly preventing, after February 1, 1917, in a zone around Great Britain, France, Italy, and in the eastern Mediterranean,

> all navigation, that of neutrals included, from and to England and from and to France, etc., etc. All ships met within that zone will be sunk.

> "The Imperial Government is confident that this measure will result in a speedy termination of the war and in the restoration of peace, which the Government of the United States has so much at heart."

Another memorandum names the boundaries of the two zones (the one surrounding England is outlined on the map on this page), and gives permission to one American passenger-ship to visit England each week, on the condition that it make Falmouth its port of destination, use a certain route, arrive and depart on a certain day, and carry certain specified markings in addition to the American flag.

Thus, apparently, would Germany bring peace by more intensified war. But few of our editors, save those speaking for German-Americans, believe it can succeed, either as a threat or as an actual blockade of England. "Germany's Worst Blunder" was the title of one of the most thoughtful and vigorous editorials treating the new German policy. It appeared in a daily with decided pacifistic leanings, a friendliness for the Wilson foreign policies, and a willingness to see reason in any quarter. Said the New York Evening Post:

"Having begun the European War by an act of perfldy, the German Government now seeks to end it by an act of criminal insanity. In a mad lurch away from the efforts to bring about peace by reason and negotiation, the German authorities announce that they will begin this day to run amuck on the high seas. A Malay pirate could not have made the acnouncement more brutally.

"Not only is the indiscriminate sinking of passenger-vessels on the ocean, with reckless disregard of the loss of life among non-combatants, a deflant violation of international law and a crime in the eyes of man and God, but it is the most insolent attack upon the peace and security of the whole world ever made. Upon neutral rights Germany would wipe her feet as upon a door-mat. Her own professions and her pledges to the United States she would make appear only a blackmailing attempt to force us to do her will.

"We firmly believe that this is the greatest blunder made by the German rulers in their two years of heaping blunder upon blunder."

A reference in the note to the "warm and cordial sympathy" for Belgium "felt in the United States," seemed to The Evening Post only matched for "utter Dummheit" by "the German proposal graciously to permit one American passenger-steamer a week to sail for Europe without being sunk on sight. Such intolerable dictation, under the guise of a friendly concession, could not have been conceived or phrased anywhere but in the German Foreign Office—or an insane asylum." The American answer had been given in advance—

"Such methods of warfare on non-combatants at sea as Germany now purposes to renew in an intensified form, she has already been officially informed that she can not persist in and expect to remain in friendly relations with this country. On that point our Government is fully committed and the German authorities know it. With their eyes open, they took the risk of a breach with the Units d States. This does not mean that the President should meet headlong folly with rashness. Having

condemned Germany for engulfing Europe in war by a precipitate ultimatum, it is not for Americans to clamor for instant hostilities. There need be no loss of time in making our position absolutely clear; and, then, on the first overt act we can proceed to the step of which the President gave warning less than a year ago—namely, to 'sever diplomatic relations with the German Empire altogether.'

"About all this there is every reason for the American Government and the American public to try to keep a cool head. And there is no need for the world to be dismayed by the new German threats. They are not yet put into execution. In their en-

tirety, we do not for a moment believe that they can be. German submarines may run a terrible course of destruction and slaughter. But that they can come anywhere near fulfilling the proud boast that England and France will be absolutely cut off from the ocean, and that the foreign commerce of the United States will be dwarfed to the pitiful measure indicated by the German note, is to our mind wholly incredible. The Allies and neutrals are not reduced to helplessness. And even if they have to suffer unutterable things at the hands of German submarines, let not the German Government imagine that in any such way can the high spirit of freemen be broken. It were better to starve and sink into misery and die a thousand deaths than submit to a tyranny based on organized murder."

The German proclamation, as the New York Tribune was by no means the only newspaper to observe, threw "a new light on the recalled Lansing explanation of President Wilson's recent peace-note. Mr. Lansing told the truth. All the President's recent peace-maneuverings have apparently been for the purpose of staving off a break with Germany—of securing peace in Europe in order to forestall the disagreeable necessity of facing trouble between the United States and Germany." "Woodrow Wilson's peace-movements were what they purported to be," says the more friendly Macon Telegraph, "the last attempt to keep America out of war. Seemingly the attempt has failed."

A new light is also east upon the German peaceovertures of December 12, the New York Eneming Sun purceives. They were "not really a peace-offer, but a war-move."

They were designed for no purpose under heaven save to prepare the way for the announcement made yesterday of a return to a policy of wholesale atrocity on the high seas. They were carefully framed and worded so as to elicit replies from the Entente Powers of such a kind as might serve in the German mind for an argument to justify a new campaign in violation of the laws of war."

Yet the New York Sun observes that Germany "can not be accused of breaking faith with the United States." The facts are thus stated:

"On April 20, 1916, after the attack on the Sussex, President Wilson through Ambassador Gerard notified the Imperial Government at Berlin that unless it should immediately declare and effect an abandonment of its then avowed methods of submarine warfare against passenger- and freight-carrying vessels the United States could 'have no choice but to sever diplomatic relations with the German Empire altogether.'

"To this Germany replied on May 5, in a note from Dr. von Jagow to Mr. Gerard, that the United States ought to insist equally upon the observance by Great Britain of the recognized rules of international law; that pending an effort on the part of the United States to bring Great Britain to a sense of her obligations in this respect Germany would suspend her attacks on merchant vessels without warning and without saving human lives; but that if the United States did not succeed in having the laws of humanity followed by all belligerents (meaning England) 'the German Government would then be facing a new situation in which it must reserve to itself complete liberty of decision.'

"It is only fair to remember that Germany is now exercising, for reasons satisfactory to herself if not to us, that reserved right to withdraw her promise of which she notified us at the time."

The two possible explanations of Germany's decision "to

return to the atrocities and barbarities of submarine warfare," according to The Sun, are, first, that she really believes it to be within her power to starve England into submission, and, secondly, that being "conscious of imminent exhaustion and defeat," she is willing to draw other neutrals into the fight against her in order to "yield at last to the inevitable with better grace." The Sun's Washington correspondent hears that the Teutons have accumulated from 300 to 500 submarines, which are expected to cut off all supplies from England and bring

WAR AGAINST EVERYBODY

-Kirby in the New York World

that nation to its knees inside of two months. To the German Reichstag the Imperial Chancellor explained that he had been opposing an unrestricted submarine warfare because the time was not ripe. But this winter it is. In the first place:

"The most important fact of all is that the number of our submarines has been very considerably increased as compared with last spring, and thereby a firm basis for success has been established. The second codecisive reason is the bad cereal harvest of the world. This fact already confronts England. France, and Italy with serious difficulties which by means of unrestricted U-boat war will be brought to a point of unbearableness. . . . If we may now venture to estimate the positive advantages of unrestricted U-boat war at a very much higher value than last spring, the dangers which arise for us from U-boat war have correspondingly decreased since that time. . . . The military situation as a whole permits us to accept all the consequences which unrestricted U-boat war may bring, and as this U-boat war is the means of injuring our enemies the most grievously, it must be begun."

Yet the New York Globe doubts whether Germany's submarines can injure her enemies much more grievously than they have been doing. Germany, it says, may have many new, large, and effective U-boats, and may even "increase the number of vessels sent to the bottom." But "what is doubtful is that disregard of the principles of international law, adoption of even greater ruthlessness than ever, will enable her seriously to diminish the number of boats using enemy ports." The Globe believes "that the Entente navies and merchant marine will find a way to limit their losses whatever desperate measures Germany adopts."

SHALL AMERICA JOIN A PEACE-LEAGUE?

S THE PRESIDENT'S DREAM of our future membership in a great league of nations to enforce peace perilous, "immoral," and "full of madness," as Senators Borah and Cummins declare; or does it, as the New York World affirms, represent the only possible avenue of escape from a future staggering under the burden of militarism and dominated by the doctrine that might is right? This question, predicts the Baltimore Sun, "may be the paramount issue of the next four years, the issue on which the next Presidential election

NEEDLESS APPREHENSION.

-Barnett in the Los Angeles Examiner,

will be fought." In his historic address to the Senate on January 22, the President assumed that "every lover of mankind, every sane and thoughtful man, must take for granted" that when this war ends there must be established "some definite concert of power which will make it virtually impossible that any such catastrophe should ever overwhelm us again." He dismissed as "inconceivable" the idea that "the people of the United States should take no part in that great enterprise," because "no covenant of cooperative peace that does not include the peoples of the New World can suffice to keep the future safe against war." And in the following words he further declared his allegiance to the idea of some sort of league to enforce peace when it is once secured:

"It will be absolutely necessary that a force be created as a guarantor of the permanency of the settlement so much greater than the force of any nation now engaged or any alliance hitherto formed or projected, that no nation, no probable combination of nations, could face or withstand it. If the peace presently to be made is to endure, it must be a peace made secure by the organized major force of mankind. . . . I am proposing that all nations henceforth avoid entangling alliances which would draw them into competition of power, catch them in a net of intrigue and selfish rivalry, and disturb their own affairs with influences intruded from without. There is no entangling alliance in a concert of power. When all unite to act in the same sense and with the same purpose, all act in the common interest and are free to live their own lives under a common protection."

Nevertheless, opponents of the President's plan argue that it represents a revolutionary departure from our traditional policy of "no entangling alliances" and of aloofness from European quarrels. "Such a league is but another name for an offensive and defensive alliance—such as Washington warned us against, and such as our whole national history and policy runs counter to," declares Mr. George W. Wickersham, who was Attorney-General in President Taft's Cabinet. "The President proposes a tremendous departure from the cardinal policies of this Republic," remarks the Milwaukee Sentinel, which adds: "It is incredible that any such treaty arrangement would come within gunshot of ratification by a two-thirds vote of the Senate." And in another Milwaukee paper, Victor L. Berger's Leader, we read:

"To be frank, we doubt very much if the American people could be induced to assume the responsibility. Their mood is to shirk the responsibilities that they now have rather than to assume new and greater obligations. We may misjudge the popular mind, but the very sentiment which contributed to Mr. Wilson's election—the sentiment of gratitude because we have escaped from the war, even at the repeated sacrifice of our neutral rights to both groups of belligerents—is a sentiment that shirks rather than invites responsibility."

Any arrangement which gives us a voice in foreign affairs must necessarily give foreign governments a voice in ours, thereby involving a surrender of the Monroe Doctrine, argues the Philadelphia North American. Moreover, continues the same paper—

"When all else has been taken into account, there remains the certainty that a world league would be an incitement to alliances more secret and more selfish than any that have hitherto afflicted mankind. Every issue arising would be made the subject of desperate intrigue by the nations directly concerned to enlist support for their respective contentions, and the certain result would be rivalries and animosities worse than before."

To all who are "carried away by the scraphic beauty of President Wilson's 'concert of power," the Washington Times recommends a study of the history of the Holy Alliance, "which was used in the course of a few years to crush the people of Naples, Piedmont, and Spain." The President's plan, thinks the Cincinnati Times-Star, "might obviate the little wars," but could not prevent another world-war. Mr. Bryan thinks it "inconceivable" that the American people "should be willing to put the American Army and Navy at the command of an international council, which would necessarily be controlled by European nations." To Semator Borah "the singular and startling viciousness of this whole proposition is this":

"We enter the league, we contribute our portion of ships and soldiers for a police force of the world, a force large enough and strong enough to crush those who do not submit their vital interests to arbitration or conciliation. Then some question arises as to immigration, citizenship, or of territorial propinquity to which we decline as a people to submit, especially to a tribunal so preponderatingly in numbers against us. Then we have agreed in advance that this force which we have helped to create shall attack and assail us as a people."

Senator Cummins, who believes that membership in such a league would lead us "straight to the hell of war," defines his position in these words:

"The movement to organize a world court and to broaden to its extreme limit the field of arbitration has always had my cordial approval, and I have never ceased to hope that in the progress of time war would become infrequent, if not impossible, and it is only when it is attempted to confer upon such a tribunal, or league, or sovereignty, it matters not how it is described, the power to use armies and navies to enforce its decrees, or to make contracts to fight in a quarrel not our own, that my opposition begins."

In the paragraph last quoted the Senator states the issue on which our two leading peace-organizations—the League to Enforce Peace and the World's Court League—part company. The latter organization believes in a world-court, modeled after the Supreme Court of the United States, "whose decisions will be supported and carried out by the single greatest force in existence—the sheer force of public opinion." This moves the Chicago Evening Post to point out that the decrees of the United States Supreme Court do not rest solely upon public opinion for enforcement, but have behind them "the police power of the United States, represented by its militia and regular Army." "If there is to be a league to enforce peace, America must certainly be in it," declares the Syracuse Post-Standard, and the Columbus Dispatch agrees that some form of international police force is desirable. "There is nothing to be afraid of in the President's plan," insists the Brooklyn Citizen, and in the Atlanta Journal we read:

"There is no merit and really no point to the contention that the United States should take no part in a future league of nations for preserving peace because to do so would be a breach of our traditional policy against 'entangling alliances' and a menace to the Monroe Doctrine. Between the international concert which President Wilson advocates and the 'entangling alliances' which President Washington feared, there is as wide and as vital a difference as between the world of 1917 and the world of 1796. Then the United States, a young, weak republic, was called upon to choose between the web of Europe's war-diplomacy and peaceful isolation. Now the United States, a great Power, the greatest of neutrals, is called upon either to bear its part in a brave new effort of world-diplomacy for just and durable peace, or, shirking responsibility, cling to a moral isolation which will become more and more perilous."

There are only two sides to this question, declares the New York World:

"Either the world is coming to a plan such as the President has proposed or it will remain substantially as it was before the beginning of this war, with the peace and welfare of all the peoples at the mercy of any nation that chooses from self-interest to exalt the dectrine of domination by force of arms. Those, like Senator Commins, who oppose the President's plan are in favor of the reestablishment of the old order, of which Germany was the most powerful exponent. They may profess abhorrence of militarism and of Prussianism, but militarism and Prussianism are the very institutions that they are maintaining, and their lip-service to world-peace is as hollow as all other lip-service."

THE "BLUE-SKY" LAWS UPHELD

ME HORIZON OF GET-RICH-QUICK MEN darkens with clouds promptly with the decision of the United States Supreme Court that "blue-sky" laws in Obio, Michigan, and South Dakota are constitutional, remarks the Louisville Post, which is among the journals that welcome the ruling cordially. Such laws are so called, the press remind us, because their purpose is to make impossible the operations of promoters whose promises are "as limitless as the blue sky" and about as tangible. They have been enacted in twenty-six States, and altho not all exactly alike, observes the Newark News, are very similar. From year to year, as imperfections appeared, adds this journal, they have been amended "so that what originally appeared likely to be an onerous discrimination or burden upon interstate dealers in, or buyers of, securities has, in nearly all cases, been done away with." The New York Journal of Commerce explains that, to prevent the sale of fraudulent or deceptive issues of stock, security commissioners or other public officials are authorized to examine securities, prospectuses, and such information, and to license dealers to trade in issues considered lawful. Generally, certain sceurities are exempt, we are told, such as those listed on regular exchanges, those of banks, trust-companies, building and loan companies, those relating to real-estate transactions, and some others. Dealings in promissory notes and commercial paper or mere buying and selling between individuals are not included in the provisions of the law.

The point made against the "blue-sky" laws was that "corporate securities are instrumentalities of commerce and subject only to national regulation," but Mr. Justice McKenna, handing down the decision, took the ground that the States are empowered to deal with the question of fraudulent transactions within their jurisdiction. And The Journal of Commerce goes on to say that the "danger is that the exercise of State authority may be carried too far or made discriminating in what is regarded as the interest of the State taking action." In the opinion of the Supreme Court, to which Mr. Justice McReynolds alone dissented, according to Washington dispatches, we read the following:

"Prevention of deception is within the competency of Government. The integrity of securities representative of property in distant States can only be assured by the probity of the dealers in them and the information they are required to give. This assurance the States deemed necessary for their welfare to require and that requirement is not unreasonable or inappropriate.

"We can not stay the hands of Government upon a consideration of the impolicy of its legislation. Every new regulation of business neets challenge. But the policy of a State and its expression in laws must vary with circumstances.

"The statutes burden honest business, it is true, but burden it only that under its forms dishonest business may not be done. Expense may thereby be caused and inconvenience, but to arrest the power of the State by such considerations would make it impotent to discharge its functions. It costs something to be governed."

Of course, "blue-sky" laws in Ohio have naturally not been popular with "certain kinds of men and organizations, because they interfere with their kind of business," observes the Cleveland Plain Dealer, but now that their objections have been swept away by the highest judicial authority, as soon as the laws can again be put in complete operation there may be expected "a renewed popular confidence in the securities which the market offers." And the Cleveland Leader points out that the action of the Supreme Court will avert many losses to possible victims of deception, and thus leave more money for use in legitimate business and securities. Moreover, the decision is "an affirmation of the right of law-making bodies to protect individuals against their own folly or carelessness when they are exposed to temptation of a fraudulent or dubious nature." The Toledo Blade recalls that the "blue-sky" laws of Ohio, Michigan, and South Dakota had all been held unconstitutional by lower Federal courts, and thinks that most people are agreed that the Supreme Court has ruled on the side of right, and that "incidentally they are probably agreed it is more progressive than the inferior Federal courts." Similarly, the Columbus Ohio State Journal says that the "legal technicalities set up by the defeated interest have been swept aside by a forward-looking court, and the hard-fought case has been decided by its merits, as the honest layman sees them." The Detroit Free Press believes the upholding of the "blue-sky" law will be extremely welcome to Michigan, if for nothing more than its effect in elearing up a situation of uncertainty in which everybody concerned in transferring securities found himself inextricably ensuarled, and this journal adds:

"There is much difference of opinion as to the merits of the legislation covered by the law, but the opinion of The Free Press has been that it is one of the so-called progressive policies which is beneficent in promise. Much depends on its administration, of course: in the hands of a wise official it should operate to prevent a great deal of avoidable pecuniary loss among those who can least afford to lose money and who are most apt to lose it—the untrained in finance's ways, always the easiest victims of unserupulous and irresponsible promoters."

The Detroit Journal considers it fortunate for Michigan at large and for the newspapers in particular that a decision has been finally reached in the vexed question, for "up to now the responsibility of judging the merits of stock issues has virtually been placed upon the newspapers by those concerns which disputed the right of the commission to pass upon their issues." Now the State's power is affirmed, its responsibility fixt, and the commission has "no small task if justice is to be done both to enterprise and to capital."

MR. KITCHIN REDRAWS AN OLD LINE

"Is the Honorable Claude Kitchin an American citizen or only Representative in Congress from North Carolina?" sharply asks the New York Evening Sun (Ind.), which is among the newspapers that resent his argument in caucus in favor of the Administration's Emergency Revenue Bill. The utterance of the majority leader of the House, which has stirred opposition to "taxation according to location." was addrest to a group of insurgent Southern Democrats and pub-

Experience by the New York Bernit Company

"THE NEW PREEDOM "-FROM TAXATION.

-Rogers in the New York Herald.

lished in a Washington dispatch to the New York Times as follows:

"You can tell your people that practically all of this tax will go north of Mason and Dixon's line. The preparedness agitation has its hotbed in such cities as New York. This hill levies a tax on those who have been clamoring for preparedness and are benefiting because of preparedness appropriations."

A later dispatch to The Times relates that when confronted on the floor of the House with this report of his statement, Mr. Kitchin declared: "I did not say that, but I will say here that I think I said something like this: 'That these taxes will go to pay appropriations, practically all, or most of which will go north of Mason and Dixon's line'; and I will say that now: that is, appropriations for preparedness, shipvards, munitionsmakers, etc., will go to the benefit of those classes who happen to live north of Mason and Dixon's line, altho I did not use in my speech last night the term, 'Mason and Dixon's line." In the debate as recorded by the Times correspondent, Mr. Kitchin suggested, moreover, that "all these fellows who live in the localities which will pay the large part of this tax can get rid of it by moving down to my town of Scotland Neek and spending a little bit of it there." In the absence of Southern comment we must content ourselves with seeing what the North has to say. The Boston Journal (Ind.), published in a city which once resented oversea taxation rather violently, considers Mr. Kitchin's stand as showing "sectionalism in its ugliest colors," and adds:

"The North must pay for national preparedness because the North believes in national defense, while the South is indifferent. The North is also buying some handsome marble post-offices for Southern villages, and is dredging some forgotten Southern ereeks; but the South is exempt from paying for anything. Sectionalism works only in one direction lately. The North, chiefly, has paid for the war between the States, and paid willingly, with no thought of sectionalism. But the country is not united and it never will be united while such sectionalists as Kitchin hold positions as superintendents and foremen of the national destiny."

So far as "pecuniary injustice" is concerned, remarks the Boston Transcript (Ind. Rep.), the North is able to stand it, and "if Southern politicians are so mean-spirited that they want to be treated as paupers and have the North pay the cost of the Government and of governmental protection of them, well and good, but we prefer to believe that they misrepresent their constituencies." The North is sufficiently energetic and prosperous to bear the burden, but the "moral injustice of the thing should not be and will not be permanently endured." The Indianapolis News (Ind.) thinks that no one who studies the Revenue Bill can doubt that Mr. Kitchin's remark to the insurgent Southern Democrats is true in fact. As he sees preparedness it is a "sectional question," but the people of New York believed that the nation should be better prepared against a foreign foe, and also thought that New York was really a part of the country that was to be defended, and The News proceeds:

"That, we think, is the feeling of the American people, broadly speaking. They believe that American soil everywhere ought to be made as safe as possible against an invader. But New-Yorkers 'have been elamoring for preparedness,' and, therefore, such is the argument, they ought to pay the bill. Whether they are to be taxed for preparedness, or fined for 'clamoring' for it, is a question. Doubtless both ideas were present in Mr. Kitchin's mind.

"The House leader condemns his own bill when he admits, or, rather, proudly avows that it is sectional. If this theory were carried to its legitimate and logical conclusion, the people south of Mason and Dixon's line would be exempt from taxation altogether. On the theory that only those who wanted certain things should be taxed for them, the cost of public buildings and river and harbor improvement would be paid only by those of the localities who got the buildings or improvements. It is a fine sort of nationalism that is exhibited by Mr. Kitchin."

A mocking critic of Mr. Kitchin is the New York Times (Ind. Dem.), which says that according to his "new principle of political economy" those who "clamor for" legislation and get it "should foot the appropriation bills passed for it." In the view of this daily the Kitchin doctrine of taxation is "beautiful, simple, great," and it can not be "confined to preparedness" because "its majestic scope embraces more matters than even Mr. Kitchin in the throes of his creative impulse can have foreseen." Nevertheless the Representative from North Carolina has a stanch defender in the New York World (Dem.), which admits that when he spoke as he did in caucus he said a "foolish thing" but one "exactly as foolish as the old Republican complaint against the individual income tax that it would be borne chiefly by the people of New York," and this journal adds:

"That the Republicans of Congress should fall back upon this remark in their fight against the new Revenue Bill reveals the poverty of their case. Such a tax is being levied by the leading belligerents in the European War for war-purposes and against excessive corporate profits made possible by war. It can as warrantably and justly be levied in this country for preparedness purposes against war, on excessive profits made possible by actual war abroad.

"The tax is paid by those who have the excess profits, as the income tax is paid by those who have the excess incomes. But the profits, as the income, are contributed by the whole country and its business abroad, and not by any one section in proportion to its tax payments, and if there is any way to levy a tax on wealth which must not largely be paid where wealth is mostly domiciled, we should like to know what that way is.

"As represented by reactionary Republicans in Congress, American wealth is still possest of the sniveling and privileged spirit which possest English wealth in the earlier days of Lloyd-George. Now English wealth is hailing Lloyd-George as the savior of the nation. What American wealth seems to need most is a dose of Lloyd-George."

THREE MEN WHO SPOKE WITH AUTHORITY AT PITTSHURG.

HOW TO WIN TRADE AFTER THE WAR

RACE for the trade of the world, we have been told, "will start the minute peace is declared." And our chances of winning it do not seem to be considered any too brilliant. Hence the demand voiced at the recent Foreign Trade Convention in Pittsburg, and summarized by the Chicago Herold, "that American business be put on an equality with the European competition which is certain to be even stronger than ever before." Our President, it is true, has held that when peace comes the United States will be in a better position to compete in the world's markets than any other country. But the editor of The North American Review is one of those who hold an opposite idea. Our European competitors, he says, rely first upon their own greatly increased efficiency, and secondly, "upon the poverty of constructive thought at Washington to harass and impede the enterprise of the rest of the country." The central fact in all the European preparations for trade after the war, says the Chicago paper already quoted, "is government. That will be an integral part of the great machinery of business. For Washington to stand apart and not afford American enterprise the aid and comfort it needs will be to impose a handicap which hardly any effort can overcome." The Federal Government, demands the New York Herald, must act at once to "remove those disadvantages imposed by domestic legislation and foreign discrimination which now hamper our overseas traders." And the two chief purposes of the Pittsburg convention, as evinced by the reports and addresses presented, were to widen popular interest in our foreign trade and to point out just what the Government can do to help.

The first demand on the Government was, as stated in the press, "a bargaining tariff which will permit retaliation for unjust discrimination and concession for valuable concession." As Mr. Straight observed on the first day of the convention, "our present tariff laws are inadequate from both points of view."

Then there is the Webb Bill to permit cooperation in foreign trade. It has already passed the House of Representatives. The National Foreign Trade Council, in their report to the Pittsburg convention, urged its passage by the Senate before the adjournment of Congress on March 3, as necessary to avert a disastrous condition of "European cooperation es. American compelled competition" after the war: . Quoting further from the report, as reprinted in the press dispatches:

"The doubt, amounting to prohibition, of the right to cooperate, enables foreign buyers, playing American producers one against another, to obtain American raw materials cheaper than American buyers, which, with the lower European labor cost, gives the European merchandise fabricated therefrom an added advantage in competition with American goods. Inability to cooperate thus confers upon our competitors a practical subsidy. Cooperation in export selling is imperative to meet the proposed post-bellum cooperative buying, not only by groups of European industries, but even by governments, with the object of controlling prices."

In the creation of the Federal Reserve system, the Government has already done something for foreign trade, said Mr. Festus J. Wade, the St. Louis banker, and while under it "we may not wrest the financial supremacy of the world from Europe, we will be a potent factor in it." Mr. Wade told his hearers not to be afraid of investing in belligerent Government bonds, For stupendous as is the present debt of the warring nations, it must be remembered that they "have at this time only borrowed three-fourths of 1 per cent. of their national wealth." Mr. Lewis E. Pierson, a New York banker, asserted that after the war banking in foreign trade will be more competitive and European bankers more dangerous competitors. For one thing, said Mr. Pierson, "we are without a national theory concerning the relation of government to business," and "this will give European banking a distinct advantage over us in the foreign field." But Mr. Pierson knows of "no legislative panacea" for these ills. The remedy must be applied by business men and bankers; "of Government we ask only a sympathetic understanding of our troubles and freedom from unreasonable restrictions." Mr. W. B. Fleming, an adviser of the Department of State at Washington, told the Pittsburg convention that American foreign investment must not only be financed by America, but must be taken care of by proper commercial treaties.

When Mr. Alba B. Johnson, president of the Baldwin Locomotive Works of Philadelphia, took the chair to preside over the convention, he referred feelingly to the need of restoring "the American flag to its once proud position on the seven seas." At the session devoted to shipping the La Follette Seamen's Law was denounced with characteristic vigor by Capt. Robert Dollar,

the San Francisco shipowner. President J. W. Powell, of the Fore River Shipbuilding Company, also paid his respects to this law, but spoke more favorably of the more recent Ship-Purchase Act. By the appointment of the Shipping Board, he said, shipping is "for the first time elevated to a position of prime importance."

So much for what the Government should do. It is no less necessary, in the opinion of the men conspicuous at the Pittsburg convention, that all of us should realize the importance of foreign trade. The steady and rapid growth of our foreign trade during the past quarter-century, as shown by figures presented at Pittsburg, impresses the New York Commercial:

"In the decade ended in 1894 exports of domestic merchandise averaged \$800,000,000 a year, in the following iten years they averaged \$1,210,000,000, and in the decade preceding the war they averaged \$1,920,000,000. In the last fiscal year of that decade ended June 30, 1914, they reached a total of \$2,340,-000,000. At the end of the calendar year 1916 our exports rose to a scale of six billion dollars a year and our exports of munitions of war alone exceeded the average yearly exports of the decade preceding the war."

Since normally half our exports are agricultural products. the farmer ought to be the citizen most interested in foreign trade, yet he knows and cares less about the underlying forces in foreign trade than any other, said Mr. B. F. Harris, an Illinois banker who described himself as a "corn-belt farmer." This has been due, he thinks, largely to the fact that farmproducts "have practically sold themselves." But in the conditions soon to confront us farm-products may meet diseriminatory tariffs and cooperative buying, and the farmer should be prepared for the emergency.

Ways and means of earrying on the actual business of exporting were of course discust and demonstrated at Pittsburg. It was explained that specific derelictions on the part of American

exporters have been used in foreign countries as the basis for generalizations highly discreditable to all American trade. The foreign press in South America, said an Associated Press representative fresh from a trip there, is making the utmost use of these things, of the Monroe Doctrine, of our "imperialistic attitude," and of the treatment of pegroes in our Southern States. This, he said, must be met by the right sort of publicity. And a report read by President Farrell, of the United States Steel Corporation, in his capacity as Chairman of the Trade Council, asserted that the high percentage of repeat orders is proof enough of the excellence of our merchandise.

With many other papers, the New York Evening Post welcomes the awakening to the importance of our foreign trade, but it warns us to "keep our heads level," and in particular not to become possest with the idea of "commercial supremacy." We should proceed to get our fair share of trade after the war. says the Pittsburg Leader, but "in a spirit of sympathy and real helpfulness to the victims of the war." This radical Pittsburg daily joins the conservative New York Journal of Commerce in commendation of Mr. Farrell for his words at the convention banquet when he said, as quoted in the Pittsburg Dispatch:

"In presence of the gigantic needs of the war-swept territories in Europe and of their poverty-stricken populations, any application of the old-time methods of competition sounds trivial.

"Cooperation on the broadest and most generous scale, and in the most sympathetic spirit, must be the rule, if economic recovery is to be quick and thorough. We shall greatly facilitate international cooperation for the general welfare of the world by establishing a cooperative system of selling in foreign trade among ourselves. We shall greatly lessen the possibility of perpetuating in the domain of commerce the bitterness and hatred engendered by the war if we refuse to be drawn into any convention, agreement, or understanding that would make us parties to a boyeout of the commerce of any of the nations now arrayed against each other."

FOREIGN - COMMENT

BURYING THE MONROE DOCTRINE

"HE FUNERAL ORATION of the Monroe Doctrine was contained in President Wilson's peace-address to the Senate," says the Madrid Epoca, and in offering to guarantee peace based upon the terms he then outlined, he also jettisoned Washington's policy of avoiding "entangling alliances." The message, continues the Epoca, "is at once an expression of its author's idealistic sentiments."

and an announcement of greater intervention by the United States in European politics." This view also obtains in Russia, where, despite the cordial indorsement of the Foreign Office, the President's views have received a somewhat hostile commentary in the press. The Petrograd Navoye Vremya says that Mr. Wilson has cast away the security of the Monroe Doctrine for a dream. It writes:

"Apparently President Wilson repudiates the principle of the balance of power and seeks to establish some kind of international authority. Does President Wilson admit that the system should also operate in America? What becomes of the Monroe Doetrine?"

But perhaps the severest critic of the President hails from neutral Switzerland, where the Zurich Nachrichten takes him roundly to task for "meddling in affairs in which be has no concern," and it proceeds to say of the former professor of history:

SWORD AND PEN

Wuson (to Humanity)—"Madam, I can't find my sword, but did you ever see a finer pen?"

-Cape Times (Cape Town, South Africa).

"President Wilson violates the spirit of the Monroe Doctrine in pretending to meddle with European concerns, the more so as he is totally ignorant of the principles and basis of European states, their history and their development."

In Paris we find the same disposition to think that the Monroe Doctrine is a thing of the past. L'Œure is quite excited about it and politely hints that America should not interfere in European affairs. The phrase, "peace without victory," stirs its ire and it heads its columns with two squibs which read:

"'Peace must be a peace without victory,' says President Wilson. And underneath: 'Let Europeans not mix themselves up in our affairs,' said President Monroe."

The Journal des Débats remarks that the Monroe Doctrine implies reciprocity and that if America "insists on entering European politics," then she gives Europe a similar right to intervene in American affairs. It continues:

"This move is just as extraordinary in form as in its basic conception. Wilson insists on the rôle which is incumbent upon the American nation in the conclusion of peace and the establishment of a world status. But peace without victory would be a peace in which the aggressors would be treated on the same footing as the victims. President Wilson's principles of justice and morality ought to prevent a wish of this sort."

The London Daily Mail pours seorn on the President's new

"Monroe Doetrine for the World," which it characterizes as "hopelessly visionary." It asserts that "the old Monroe Doetrine was maintained by the aid of the British Navy," and sareastically inquires, "Is there to be anything so brutal behind the new version?" The three European organs that have given the President enthusiastic and unqualified support are all of a peculiarly idealistic type. The Berlin Zukunft, the organ of the

brilliant and radical Maximilian Harden, deplores the German habit "of judging all things by such catchwords as 'money trust,' 'electioneering tactics,' or 'the Monroe Doctrine,'" and thus culogizes the President and his ideals:

"Whether this path be trodden sooner or later, gladly or timidly, or whether his counsel be treated scornfully and rejected to-morrow, we can not to-day foretell, but it is certain that no storms of time can ever carry away this message. It will continue to work in the secret depths of men's souls and must gradually so increase the numbers of those longing for a righteons peace that in countries with selfreliant peoples no power can long resist it."

Turning to the President himself, the Zukunft writes:

"A man of this type will smile at the nursery-stories about German vengeance, German struggle for world-dominion, and German yearning for South America. He will feel himself even in the most difficult undertaking the

servant of humanity, and will seek the point where he can combine this service with that due his own country.

"Only one more ambition can still entice him, namely, to reach the never-clouded summits from which the figures of the benefactors of humanity illumine the history of the world."

Only one English daily of the first rank has cordially indorsed the President, and that is the Manchester Guardian, long the exponent of a certain sort of pacifism. The Guardian says:

"It is a splendid policy, nobly exprest. How will it be received? By the peoples everywhere we can not doubt joyfully; by men of good-will and enlightenment everywhere not less joyfully and with a clear perception that this is no vision of Utopia, but a well thought-out and justly framed scheme of a man in a great position and versed in great affairs."

The London Daily News, which alone among the London dailies violently protested against England's entry into the war, is the organ of the left wing of the Radical party and the apostle of antivaccination, antiviviscetion, and many other similar ideas. It is enthusiastic in support of any antiwar proposal, and is the only journal which attempts to excuse the President's phrase "peace without victory," It says:

"It is open to the purists to seize on the assertion that the statements from both groups of belligerents have implied that the coming peace must be a peace without victory. Extracted from the context, that phrase might seem to invite comparison with one or two unfortunately ambiguous passages in previous speeches and notes emanating from the White House; but observation of the sentences immediately following makes it clear that President Wilson is laying down a principle that goes little, if at all, beyond the declaration made to him by the Allies a fortnight ago, that they never contemplated the extermination or political disappearance of the German people and that the peace they seek is based on liberty, justice, and fidelity to international engagements. On that declaration President Wilson's address is a comprehensive and illuminating commentary."

The predominant opinion in Germany is that our Monroe Doctrine places us in the position of an "eternal onlooker," while

the Berlin Lokal Anzeiger describes the President as "the animated theorist," The Essen General Anzeiger warns us that we had better keep out of the negotiations, and proceeds:

"Germany regards sympathetically the ideal of a restoration of a balance of power, but the balance must not be maintained only to the advantage of England. Germany demands a place in the sun. She can not, moreover, share Mr. Wilson's optimism regarding the nondestructive intentions of the Entente. Mr. Wilson's principles are those of an onlooker, not of a participant in the struggle, and in any case his present views are very different from those held previously by America in her OWD Wars.

"On two points at least Germany's reply must be definite. Our way to peace can not be taken via an American revision of peace-conditions. Also President Wilson's plan to constitute a force capable of assuring the genuineness of the agreements strikes us as being quite beyond the bounds of practicability. The preliminary conditions for

such an establishment would be a dissolution of world-Powers, and this could not be achieved without the abandonment of alliances, but of such abandonment we can not dream at present."

ENGLAND AS THE BAR TO PEACE—Some sections of German opinion incline to the idea that the Powers of the Entente would gladly entertain peace-propositions did not England constantly force them into a bellicose position. The countries cited as being eminently desirous of peace are Russia and Italy, where financial conditions are represented as critical and entirely controlled by England. This view is set forth by the Berlin Tagliche Rundschau when it writes:

"We have asked for the peaceful termination of this war, which we have not desired, and for which we made no preparations. After the refusal which we have experienced we must, to adopt Clausewitz's warning, sunder ourselves from the childish hope that we can exercise the rage of a tyrant by voluntary disarmament.

"England can only be conquered by might, never by arrangement or negotiation. England is the world-tyrant, which has led the nations into this war, and which alone maintains the continuance of the war until she has accomplished her object—the final removal of a dangerous competitor. It is England we must make to suffer if we are to have peace. But in order to do this, to again adopt a scatence of Clausewitz, we must liberate ourselves from an unreasoning want of confidence in the powers which God has given us. Hitherto we have stood up against a world of enemies. Whether they will or not, we shall compel them to reason. And God will continue to be with us."

INTER-ALLY FRICTION

A SHARP SPUR, continually applied by France and England, is necessary to keep Russia in the war, say the German publicists, and we are told that the cordial reception given to President Wilson's peace-efforts by official Russia is due to the bureaueracy's desperate need of peace. Dr. N. Risow, the Bulgarian Minister at the Court of Berlin, whose acquaintance with Russia is long and close, tells us that the Czar's Empire is on the verge of an internal cataclysm. He states his views at length in the Berliner Tageblatt, and says:

"That country of 'possible impossibilities and irreconcilable

contradictions,' as Russia is characterized by her great satirical writers, is like a volcano on the eve of eruption. This is shown by Russian press reports and by other accounts of the proceedings of the Duma, despite obliteration by the Russian censor of some of the truth. Apparently the Entente decided to attempt directly to influence Russian public opinion. The British Ambassador, Sir George Buchanan, delivered public speeches in order to revive Russian confidence in victory and in Eugland. These speeches remaining without effect, England, France, and Italy felt obliged to allow Premier Trepoff to make the solema declaration that the Dardanelles definitely had been promised to Russia. This maneaver having made no impression, the Entente donned the lion's garb, assumed the attitude of victors, and sent the answer to President Wilson because it was afraid of a general paralysis in Russia."

Dr. Risow passes on to explain why the Russian nation, as a whole, exhibits only a lukewarm interest in the war:

AN ITALIAN VIEW.

The motive force that pulls the wires.

-Numero (Turin).

"Contemporary Russia is divided into three parts. The first is the Emperor's Russia, that is, the present régime, at the head of which is the Emperor, who, despite all his bellicose proclamations, is much more interested in maintaining the rule of his house and the present régime than in the war.

"The second is liberal Russia, represented by the 'progressive bloc,' which forms a majority of the Duma and advocates war until victory is attained, not because it believes in victory or because it believes the continuation of the war to be necessary, but because it hopes to obtain a constitutional and parliamentary Government by French and English aid.

"The third is the Russia of the laboring classes, the workingmen, farmers, socialists, and others, represented in the Duma by the parties of the Extreme Left, who want peace, liberty, and land for agricultural work. Their ideas are proclaimed by Maxim Gorky, who demands peace because he does not believe in victory.

"A compromise of these three Russian divisions is improbable, if not impossible. Only a miracle could reconcile these irreconcilable contradictions."

These views receive a certain support even in Russia itself, where, despite the strict press censorship, it is possible to read between the lines. For example, the Petrograd Novoye Vremya accuses Germany and her agents in Russia of attempting to cause dissensions between Russia and ber allies. It writes:

"By means of dark rumors, ridicule, and even open perversion, they have spread the thought that our Allies are prosecuting not a real but a sham war; they let it be understood that the war is being protracted on purpose; that the object of that deliberate slowness is the exhaustion not only of Germany but of Russia as well; that we are left without help at most critical moments; that after reducing us to complete exhaustion our allies, on the day of the conclusion of peace, will refuse us our legitimate claims; that the only way out of such a situation is the conclusion of a separate peace with Germany.

"The war at the present time is prosecuted not alone by the Government and its permanent organs. It is prosecuted by the whole nation. Its mood and views have, therefore, no less significance for success than the intentions of the Government. Rumors and tales, if they fall upon receptive soil, become . . . a real weapon. The best, and perhaps the only, reliable means of combating their pernicious influence is their open and unrestricted discussion in the press. Unfortunately, the Russian press do not have the possibilities necessary for that, and the rumors, which all the nine censorships are powerless to check.

have spread and bred like toadstools in a dark and marshy

place."

The Allied press return the compliment, and we hear stories of dissensions between the Kaiser and the new Emperor of Austria, and are told how Bulgaria is on the verge of deserting the Central Powers. Such tales have to be received with caution, but some light on Bulgaria is afforded by statements of the press and correspondents in its capital. Following the recent visit of Czar Ferdinand of Bulgaria to the German General Headquarters, the Berlin Vossische Zeitung thought it opportune to publish a dispatch from its Sofia correspondent in which he stated with some emphasis that "Bulgaria cares nothing about a policy of sentiment and is only willing to make sacrifices for a practical policy." That Bulgaria is not prepared to do more than her share can be seen from the latest sitting of the Sobranje, where six

deputies attacked Premier Radoslavoff for what they termed "excessive subservience to Germany." The tone of the debate can be gathered from the remarks of Deputy Stanchoff, who, according to the Sofia Utro, said:

"The Bulgarian Army has completed its task, and Bulgarian troops must not be sent out of Bulgaria. It was a needless sacrifice of Bulgarian lives to send Bulgarian troops against Roumania. The Bulgarian Government has presented the Bulgarian Army to Germany. The Germans can send our brave sons hither and thither. German generals actually exercise supreme power here in our own country.

"We did not enter the war to fight for Germany, but for ourselves. What is Germany giving us in exchange? I warn the Bulgarian Government that there will be trouble if the Bulgarian Army is exploited purely to achieve German ambitions."

SOARING FOOD - PRICES—The London Board of Trade Labor Gazette, an official publication, discusses the rise in the price of foodstuffs since the war began, and says:

"The retail price of food on January 1 showed an increase of 87 per cent. over July, 1914. The corresponding increase in Germany was 111 per cent., and in Vienna no less than 177 per cent. The prices in Norway in the same period are up by 82 per cent., in Canada by 35.4, and in the United States by 18 per cent."

Taking the rise of prices in England during one year, it remarks:

"The total increase during 1916 was about 42 per cent, on the prices of July, 1914, or 29 per cent, on those of January, 1916. Of the total increase of 87 per cent, 6 per cent, is due to additional taxation on tea and sugar imposed since the beginning of the war, but only 1 per cent, is due to such additional taxation in 1916."

SWITZERLAND TREMBLING

Where apprehension is exprest lest the Teutonic armies might seek to turn the flank of their French adversaries by making a sudden dash through Switzerland and a descent upon the fortress of Belfort, one of the French strongholds, which would give an invader a key to Paris. The Journal de Genère says:

"Rumors are in circulation in Switzerland concerning the eventuality of a brutal blow to be struck by Germany in the most rapid manner possible against the Swiss territory, for the purpose

of obtaining a military success over the Allies, which would force them to make peace."

The whole question of a threatened invasion of Switzerland and all that it implies is excellently summarized, from the Allied viewpoint, by the Montreal Weekly Witness, which writes:

"There is an active mobilization of the Swiss Army, and there is a story that the Germans are massing off the Swiss boundary at Basel, which is within a mile or two of the boundary of Alsace, held by the Germans and claimed by the French. It was in Abacco that the French made their first unsuccessful forward movement. The Germans may expect to meet the French there again, or they may mean to attack them there. But the Swiss, after the experience of Belgium, evidently do not feel safe with a German army The Germans look on there. German Switzerland as a bit of unredeemed Germany. Possibly some of the German Swiss feel so too, as the Germans have long been using their processes of

Passing Show (London) been using their processes of peaceable penetration to lead them that way. The Germans have to keep up among their own people the theory that they are still conquering and spreading the realms of the eagle. They want to have as much in possession as possible when it comes to dickering for a settlement. Possession of German Switzerland would complete their belt of fire, which would then have no end from the North Sea at Zeebrugge to Trieste on the Adriatic, from Trieste to Kavalla on the Ægean, and from Kavalla to Riga on the Baltic."

The Weekly Witness thinks that unless the Swiss actually cooperated, the possession of German Switzerland would be an incubus to the Central Powers:

"Unless the Swiss ran to welcome them, the idea of assailing those mountains in winter, impregnable since the days of William Tell, would be preposterous. Success would add a hundred miles to the front they would have to defend, which, with heavier battalions against them than they could bring to bear, would, unless the Swiss did it for them, be a strategic loss. If the Germans want to attack Italy the way to do it is where the fighting now is, on the Isonzo."

One of the most distinguished publicists in France, Mr. Marcel Hutin, believes that before the war ends the neutrality of Holland, as well as that of Switzerland, will have vanished. In the Echo de Paris he writes:

"I have already considered the eventuality of a violation of the Swiss frontier by German troops in an effort to turn Belfort or operate toward Besançon. Parisian military critics and the Swiss press have been discussing the question and passed differing opinions on it. I am assured that the German Government has since given a formal assurance that it would not violate Swiss neutrality—an act which would compromise the German

GAS-MASKS FOR WAR-DOGS.

BOW THE GAS-MASK SAVES LIVES.

This photograph, actually taken in the trenches during a gas-attack, shows the Czar's Lettish troops firing away quite undisturbed by the noxious fumes.

cause and pit against Germany the Swiss Army, which would certainly resist any attempt of that kind.

"But it is not said that Germany, who is seeking, above all, to strike England, is not meditating, under the same pretexts which last year underlay her blackmailing of the Hague Government, a violation of Dutch neutrality, in order to endeavor to secure solid bases on the North Sea—Flushing, for example, England, however, is on the watch in this quarter."

In the Bern Bund the German Legation in Switzerland officially brands all these stories as absurd, but still the Journal de Genère is not satisfied, and remarks:

"This statement will be read with satisfaction throughout Switzerland. It is, however, the duty of the nation never to forget the example of Belgium and of Luxemburg, and to continue to observe the utmost vigilance."

A RUSSO-SWEDISH HAND-CLASP

Sweden has diminished enough to permit an agreement between the two countries to link up their railroads for the first time. Up to this moment nervous apprehension had prevented the consummation of this step, which will be of great economic advantage to both countries. From The Westminster Gazette we glean the details of the agreement to join the Swedish system to the Finnish railroads by a bridge from Haparanda to Tornea across the Russian frontier. The Westminster Gazette proceeds:

"The plan is of great practical importance for Anglo-Russian intercommunication, as at present traffic has to go by sledge in winter and ferry in summer.

"The Russo-Swedish agreement provides for continuous work on the bridge till its completion. The Swedish State Railway Department will build the whole bridge, charging Russia the cost of the work and material on Russian soil or in Russian waters. The Swedish Government is thus placed in the unusual position of bridge-builder in a foreign State.

"The whole area of the works, both on the Russian and Swedish sides, will be fenced off, and no one admitted except with permits from the Russian Frontier Guard. For the winter a wire fence will be run across the river. The bridge over the Tornea River will be for a single track, which will be of both Russian and Swedish gage, so that trains of either country can pass, the not together. The bridge will be 350 yards long.

"The present provisional estimate of the total cost is 2,000,000

Swedish crowns (about \$720,000). Provisionally a cable railway, with a capacity of 100 tons daily, is being built between Tornea and Haparanda, chiefly for use by the post and parcel-post services."

The Stockholms Tidningen publishes a sharp protest against the "fixt idea" which seems to exist in the minds of French and British editors that Sweden is necessarily antagonistic to Russia. It says:

"We should like to convince those in Great Britain and in France who retain a sympathetic interest in Sweden of the misunderstanding involved in the words 'Swedish suspicions of Russia,' which are so often reiterated in the countries of the Entente."

The Tidningen says that no hatred exists between the two peoples, and the only serious difference is that involved in their radically opposite conceptions of government. In Sweden, it continues—

"There is no suspicion that Russia contemplates attacking Sweden, or any doubt in the good faith of the Russian statesmen who from time to time have disavowed such intentions, but at the same time it is not a mere condition of nervous mistrust which prevents Swedes from envisaging the possibilities of Russian policy through the spectacles that Great Britain and France would like to provide them with for this purpose."

The changed relations between the two peoples is vividly reflected in the Russian press, where a belief was once confidently exprest that Sweden was certain to join the Central Powers. To-day the Russian editors are equally assured that, come what may, Swedish neutrality will never be disturbed. For example, the Petrograd Ryetch writes:

"It would be naive to deny that the influence of Germany is very strong not only among the comparatively small number of 'activists,' but also in the wide circles of the Swedish population. The presence in Sweden of a definite cultural and economic gravitation toward Germany is indubitable. To this must be added the great advantage of Sweden's geographical position. . . . During the first two years of war the Swedes have learned to value the advantages of neutrality to a country which lies at the crossroads between warring Powers, and the leaders of the Swedish toiling masses are firmly standing on their guard. They know full well that if Sweden preserves her neutrality to the end she will reap such a rich harvest, that all her war-time profits will pale into insignificance."

SCIENCE - AND - INVENTION

PAIN: A FRIEND IN DISGUISE

F ALL ORGANIZED BEINGS, man possesses the greatest capacity for suffering pain. This is the price he pays for the superiority of organization that makes him the king of nature. Dr. Lawrence Irwell, of Buffalo, N. Y., who writes in The Medical Times (New York) on "The Meaning and Use of Pain," bids us regard all this suscoptibility to suffering, and even the suffering itself, as a blessing in disguise. It is pain, he assures us, that enables us to maintain our proud position at the top of creation. It keeps us alive, signals the approach of countless dangers, thus enabling us to avoid them, and is a "spur to wise action in the process of human adjustment," helping to endow us with courage, devotion, sympathy, and countless other virtues. It is kindness in a mask, and its abolition might mean the loss not only of that suffering which has ever been the nursery of virtue-but even of life itself. Writes Dr. Irwell:

"If the touch of a red-hot body did not cause instant pain, any one might be fatally burned before he was aware of his danger. If hunger produced no pain, one might not care to cat. If it were not painful to look directly at the sun at noon, blindness would afflict those who examined it with the naked eye at that time. Serving as it does the self-conservation of the organism, pain is a most useful danger-signal—the outery of injured and life-threatened organic element which has no language apart from that cry. That may be the reason why pain has a short and bad memory; it indicates disorganization, imminent or actual, while conscious memory implies functioning organization—definitely organized associations whose dissociations are dismemberments, and therefore not rememberable.

"No one has ever recalled a pain as he actually feit it; he can, of course, recollect that he suffered it, that it was excruciating at the time, and all the circumstances of his suffering, but to remember it as it was in feeling would be to revive it so vividly as to refeel it-to have it again. Being disorganized, there is nothing with which it is connected with organized associations, and, therefore, when it has passed, its pang is lost to memory. In this respect pain resembles other simple sensations of the special senses, which are not actually remembered as such unless they are so vividly revived as to be virtually refelt; but in the case of pain there is temporary dissolution of function, whereas in the case of sensations there is a natural lack of associations on their low nervous plane, their associations being organized on the higher nervous plane of ideas. It is not an unreasonable surmise, then, that the lowest organisms do not remember that they have suffered pain, but that they feel and instantly forget it, living from sensation to sensation without sense of connection or succession. Their condition probably resembles to some extent that of a person who, during a surgical operation, under anesthesia, shouts, groans, and struggles -and shows all signs of suffering terribly, but is quite unaware when he comes out of the anesthetic that he made any noise or felt any pain."

If the function of pain is self-conservation by giving warning of menace to life, Dr. Irwell next asks, why does it not cease its function when the warning is futile? Death takes many forms, and almost all of them are painful. Why might not matters have been so benevolently ordained that when the inevitable end began the unavailing pain always ended. The writer replies:

"The obvious answer is that by that method the function of pain would have been annulled. It signals danger and destruction, and what greater danger and destruction to an organism can there be than its decay and death? That the organism no longer does anything to preserve its existence when warned is not the monitor's affair; its work is done when it has given the warning, which is a warning to prepare to go out of existence. The warning becomes in most instances less urgent,

duller, more faint as gradually increasing decay feels neither desire nor power to attend to its call.

"Is it the seeking of pleasure or the avoidance of pain which is the true organic motive and, therefore, ultimately the conscious aim of life? When we reach down to the fundamentals of motive, it is very difficult to distinguish between the avoidance of what is painful and the endeavor for what is easing or pleasing, for the one seems to involve the other. It is quite as difficult to distinguish between pleasure and pain where they meet and merge, for there are pains which in their beginning and ending are almost pleasant, and there are pleasures which in some circumstances are almost pains. All organic life in its normal state evinces an affinity, elective or not, for the stimulus which is profitable for self-preservation and growth, pursuing and embracing it, altho it may not differ materially from the affinity which one chemical element shows for another, This is true, not only as a general motive of human conduct, but true also in a degree of the inclinations or properties of every individual mind. For when any one injures himself by pursuing that which is not his true good-as it is his privilege and habit as the most rational being consciously to do-he does so not because he thinks evil is good, but as the result of the temporary domination of some passion or mood in the mental confederation which strives naturally to maintain and increase its being by selecting and feeding on that which, suited to nourish it, is good to it, altho such egoism is to the detriment of the whole which it has captured and leads to triumph. Then comes in the use of pain, whether of body or mind, which, signaling danger to the whole, is a warning and at the same time a motive to check and rule the culpably egoistic and therefore unruly action of the part. It is an appeal to the unity of the whole to regain its ease by stopping the disruption threatened by an overgrown egoism and self-seeking action of the part which, as a consequence of unease or pain, may otherwise develop into disease.

"Considering what pain has done as a spur to wise action in the process of human adjustment to surrounding men and things, how it has helped to ingraft courage, patience, selfsacrifice, devotion, sympathy, and charity upon human nature, its seeming cruelty being, in reality, masked kindness, it is impossible to assert that its abolition would be a benefit, and that men could be strong and thrive without it. Sorrows and sufferings have been the nurseries of virtue-affliction's good teachers-minds have been chastened, disciplined, purified, and more or less perfected by trials and pains. Nevertheless, signs are not lacking that as man attains to a more complex social organization in the course of his civilization he is getting out of harmony with the fundamental natural law, and so, as a result of growing too tender and losing the flerce energy of organic evolution, retrogression seems to have begun to take the place of progress."

ENERGY WASTED IN COUGHING—The amount of energy expended in coughing is very considerable, we are told by The Medical Critic and Guide (New York, January):

"A patient German statistician has calculated that a patient who coughs once every quarter of an hour for ten hours expends energy equivalent to two hundred and fifty units of heat, which may be translated as equivalent to the nourishment contained in three eggs or two glasses of milk. In normal respiration the air is expelled from the chest at the rate of four feet per second, whereas in violent coughing it may attain a velocity of three hundred feet. This waste of energy is especially important, because it occurs, for the most part, in persons whose assimilative functions are already working under difficulties; cousequently the ingestion of the corresponding quantity of nourishment by no means compensates for the exertion. It follows that persistent cough is per se a cause of emaciation, tho there are many other factors which tend in the same direction; hence the desirability of restraining cough within safe limits, especially when it is due to irritative reflexes, such as are excited by laryngitis and pharyngitis."

THE ANSWER TO THE "ZEPPELIN"

A COMPLETE DEFENSE against the Zeppelin has been found in the new quick-climbing aeroplanes now constructed by the British, if we are to believe an editorial writer in The Scientific American (New York, January 20). Despite the tendency to exaggeration in the reports of new war material in Europe, it is possible, this writer thinks, to sift out the true from the false, and he sees reason to believe that the British in their latest neroplanes have, at last, really found an effective answer to the great German air-ships. He writes:

"When the first raids on London were made, the British possest neither the guns nor the aircraft in sufficient numbers or quality to meet, destroy, or drive back the latest Zeppelina.

THE NIGHTMARK.

Zerrenx—"Oh, those wicked English, they have overcooked my sansages!"

—Echo de Paris.

The anti-aircraft guns could not reach effectively the great heights to which the Zeppelius could rise, nor could the aircraft rise in time to attack. Since that time both guns and aircraft have become thoroughly efficient for the work. Just in what numbers and of what caliber are the anti-aircraft batteries with which London is now so well defended is not known; but because of the great value of high velocity and a straight trajectory for anti-aircraft gunfire, it is a pretty safe guess that there are many batteries of guns larger than the 3-inch. The 50-caliber 4.7- and 6-inch guns, if fired at high angles of elevation, have a trajectory of slight curvature and the time of flight is small, elements which simplify the task of the gunner in finding and keeping on a moving target.

"Information is now available as to the new anti-Zeppelia aeroplanes, and Lieutenant Faulkner, of the Royal Flying Corps, who recently landed in New York on furlough, has given some details which agree with information we have received from

"The problem has been to build an aeroplane with elimbing powers sufficient to enable it to reach Zeppelia altitudes in time to meet the raiders and bring them down. The latest machines are of comparatively small wing surface and are driven by unusually powerful engines, capable of making speeds of one hundred and twenty to one hundred and forty miles per hour. The increase in climbing speed in the past few months has been truly astonishing, having progressed from an ascent of ten thousand feet in six minutes to fifteen thousand feet in seven and one-half minutes.

"The scouting service, both on the North Sea and along the East coast, is now so effective that London is warned of the approach of the Zeppelius in time to permit the Zeppelius chasers to take the air and be in position for an attack before the raiders reach their objective. Various means are used by the airmen to bring down the enemy, the most effective of which is the incendiary bullet."

TEACHING EUROPE TO BATHE

INTIL a comparatively few years ago, even modern apartment-houses in continental Europe lacked the most approved type of bathtub, the zinc or tin tub being still in full sway. In many pretentious houses it was customary to provide a bathroom, but no tub, the tenant being expected to install his own fixtures. Even to-day stationary wash-stands are rare. Within the last decade or so Europe has learned from America how to bathe, if we are to believe John J. Laferme, who contributes to Domestic Engineering (Chicago) "Some Reminiscences of a Salesman Who Sold American Sanitary Ware in Foreign Countries." According to Mr. Laferme it was the Paris Exposition of 1900, where American sanitary plumbers made a fine display, that really stimulated the effective demand for such fixtures. He says:

"The great influx of American visitors to the Exposition also served to further this demand for better bath accommodations at the hotels, as all Americans would demand rooms with a bath, which hotel-managers were unable to provide to any adequate extent.

"The hotels, finally realizing the need of more and better bath facilities, soon took up the question of remodeling the rooms.

"In the United States, where the power of advertising is tremendous, we are able to educate the people to the use of the things we wish to sell them. In Europe, the power of advertising is less persuasive, the result being that you have to sell the people what they have been accustomed to and what they know by practical experience is best for them.

American manufacturers have had to overcome many projudices against their patterns, shapes, fittings, as well as the existing sanitary regulations, so different from those in the United States.

"When I had made up my mind to go into the propaganda of selling American sanitary ware in Europe, I considered it a lucky omen and 'a case of good judgment,' when, upon arriving in Paris, I was greeted with the welcome and familiar sight of the old-time bath-house man, pulling his eart of hot water and tin tub ready to deliver a bath to somebody's house, for which luxury his customers paid about twenty cents, and for which sum he might have to carry the five-foot tin tub up six flights of stairs, and then draw the hot water from the eart tank into a bucket, and climb up those stairs as often as necessary to fill the tub. This exercise might be considered a joke. but if so it was on the bathman. The system still prevails in many parts of Paris where modern sanitary methods have not yet been installed. Strange as it may appear to Americans, there is practically no hot-water distribution in even the up-todate French, English, and continental apartment-houses, but those which are provided with bathrooms have gas waterheaters.

"Not only the present King of England, but also other erowned heads and Presidents abroad have purchased bathtubs made in America; for instance, the King of Italy for his palace in Turin; King Albert of Belgium; the Empress of Russia, and other royal personages.

"I renember a humorous incident in connection with the sale of a number of bathtubs to the late King Edward, which were installed in Buckingham Palace.

"One of the tubs, in which the King was in the habit of disporting himself daily, was ordered by the latter to be encased in mahogany, covering the rim of the tub. The physician to the King summoned me to the palace one day on 'important business.' When I arrived there, he told me that the King was very well satisfied with the tub he was using, but that he had decided to have it eased in. 'You see, his Majesty is very foud of sitting on the rim of the tub when he takes his ha-ath, but he found it so infernally cold that he thought it a jolly good idea to have it eased in, so that he might sit on wood instead of cold porcelain.' When the physician had delivered himself of this solemn statement I breathed a sigh of relief, for I had expected that something far more serious than the casing on the rim of the tub had transpired.

"The American traveling in European countries, be he salesman or tourist, is certain to happen upon many peculiar cus-

toms, some of which are both humorous and vexing.

"I remember that while touring on the continent I arrived in a small town where the leading hostelry proudly announced in the office that 'baths were to be found on each floor.' These baths I discovered were very old-fashioned, copper-fined tubs, much the worse for wear, but to my intense horror and astonishment, I learned that owing to the scarcity of water, I would be obliged to immerse myself in the water that had already been used to excellent advantage by another guest. I absolutely declined the invitation (and without thanks) notwithstanding the hotel-manager's kind offer to have the water in the tub skimmed for me,

"It is well known that no civilized nations bathe as much as the American and English, and in France one often hears Frenchmen expressing their surprize to the effect that we

must be very dirty people since we have to bathe every day.

"Perhaps, however, one of the persons most opposed to bathing is the Russian peasant, of whom it is said he only bathes three times—at birth, before his wedding, and before being put to rest in the grave.

"It is not surprizing that dealers are sometimes asked by visitors from rural districts what bathtubs are for, obviously not having seen such

fixtures before.

"The present war and its path of destruction have been largely responsible for the withdrawal of various American concerns, who used to export large shipments of sanitary supplies. The war has operated not only to destroy residential and public buildings in different parts of Europe, but has also destroyed the best sanitary-ware factories of France, the districts in which these were situated having been the first scene of hostilities."

ASKING THE DOCTOR— "Ask paps," replies the blushing

maiden in the early Victorian stories, when her equally bashful swain pops the question. We are substituting the rejoinder, "Ask the doctor," says American Medicine (New York), quoting a writer in The American Journal of Clinical Medicine:

"In former years nobody thought of asking a physician for permission to get married. . . . The parents would investigate the young man's social standing, his ability to make a living, his habits perhaps, whether he was a drinking man or not, but to ask the physician's expert advice—why, as said, nobody thought of it. And how much sorrow and unhappiness, how many tragedies the doctor could have averted, if he had been asked in time! Fortunately, in the last few years, a great change has taken place in this respect. It is now a very common occurrence for the intelligent layman and laywoman, imbued with a sense of responsibility for the welfare of their presumptive future off-spring and actuated, perhaps, also by some fear of infection, to consult a physician as to the advisability of the marriage, leaving it to him to make the decision and abiding by that decision."

A VERY NARROW SPECIALTY

If ANY GROUP OF MEN is entitled to write the word "limited" after its name, it is surely the American Association of Variable-Star Observers, whose fourth annual meeting, held at the Harvard Observatory, is chronicled in Popular Astronomy (Northfield, Minn., January). The existence of this body bears testimony both to our close modern specialization and our love for gathering into associations groups of workers on similar problems. As will be seen from the picture, two of the observers present were women. One of them, Miss A, J, Cannon (the rear one of the pair), is the greatest living expert in stellar photography. Says the reporter:

"Before dining, the members gathered to observe with the 12-inch Coudé [elbowed equatorial], selecting the celebrated Variable SS Cygni, and thereupon establishing a new astronomical record: for the first time in history, nineteen astronomers experienced in variable-star observing, estimated the brilliancy

A GROUP OF ASTRONOMICAL SPECIALISTS.

The American Association of Variable-Star Observers at their recent meeting at the Harvard Observatory,

of the same star, with the same telescope within the same hour; the most remarkable of all, the mean difference of their estimates showed a deviation of only 0.14 of a magnitude.

"At dinner the guests found place-eards, bearing a golden five-pointed star and the words 'Position,' 'Motion,' 'Spectrum,' 'Color,' and 'Brightness,' the five stellar conditions desired to be ascertained. Great interest was shown in the director's anecdotes of his early experiences and in the very substantial manner in which he showed his appreciation of the work of the Association and his desire for closer cooperation between this work and that of the larger observatories.

"After dinner all repaired to the dome of the 15-inch Refractor—the first telescope in the world to be used for celestial photography—and that historic instrument was set in turn upon Jupiter, the Orion Nebula, and Saturn, during which fourteen observers made naked-eye estimates of Mira, with an average deviation of only 0.16 magnitude.

"It was close upon 2 a.m. when the members finally reached their quarters in Boston."

GOVERNMENT CONTROL OF WIRELESS

THE INDICATIONS ARE that a war will soon be on between the military and "preparedness" forces, on one side, advocating more stringent government control of radio-communication, and the commercial and scientific interests on the other, that believe even the present measure of control to be unduly repressive. In The Electrical World (New York, January 20), John L. Hogan, Jr., chief research engineer of the National Electric Signaling Co., presents an article on "Electric Transmission of Intelligence in 1916-1917," and has this to say about the situation:

"Ship-and-shore communication has had a hard struggle against restrictive legislation of a most unintelligent sort, but has grown and improved despite the handicaps imposed by the Berlin and London International Radio Conventions. The military interests of the Federal Government, acting in the name of 'preparedness,' are now urging further and stricter laws to govern the commercial operation of radio-telegraphy. It is admitted that the proposed legislation is intended to make possible, if not inevitable, the naval ownership of coast radio-stations involved in ship-to-shore signaling. Commercial, scientific, and non-military interests are opposing the Navy Department's campaign. The outcome is not yet in sight, but the conflict promises to be memorable. Its result will determine

whether radio-signaling in the United States will continue to hold its present position of preeminence, or whether the art will be subject to the initiative - killing, suppressive policies of military ownership and domination."

Apparently the editor of The Electrical World sympathizes with Mr. Hogan in his attitude. He says, in comment:

"American progress in radio-communication has been particularly rapid; because the art has not been a government monopoly here, but has been open to free competition from all parts of the country. In Europe, also, the progress has come from those individuals and organizations unham-

pered by governmental restrictions, and in those places where intellectual liberty and initiative have had sway.

"The London International Radio Convention, having been subscribed to by the United States, has already hampered industrial radio-development here. It has laid severe and unnecessary restrictions on the use of a large range of wave-lengths. The air we breathe is no longer free, in the sense that all electric waves in it may be utilized for the transmission of intelligence by those who undertake to serve the public by sending their radio-messages. Only a relatively small range is permitted to civilian use, the greater share being reserved to military service, where it is but little needed in time of peace. Moreover, the military authorities of the United States are given arbitrary powers in time of peace for the suppression of all use by civilian telegraphists of the preempted range.

"As the this unnecessary invasion of the rights of public service radio-telegraphers in the use of the circumambient ether were not enough, a bill is now proposed for enaction by Congress, which will not only give to the military authorities of the United States a free entrance into commercial radio-communication, but also increase their powers of regulation and restriction. In view of the freedom which governments affect toward patented inventions, and the length of an arm of interference which extends over the entire country, it is manifest that such legislation is likely to mean the speedy regulation

of all commercial competitors out of existence, leaving the military in complete economic control.

"Because all good citizens should loyally aid and support the military forces in time of war is no reason for sacrificing the interests of radio-communication in times of peace. The military profession is so exacting in its duties and requirements that military men can not properly attend to the invention and designing necessary for keeping American radio-communication in the front rank of preparedness. . . . If war does come, it is just as likely to come very suddenly, and much will then depend upon the state of development of the art of radio-communication in this country. The right way to be prepared is to leave the development of the art to radio-engineers and inventors, and then to commandeer their services for military use. The wrong way, and the one which legislation is designed to bring about, is to leave it exclusively to the military departments of the Government."

IS SPACE AGLOW?

AN INTERESTING THEORY advanced by Professor Barnard, of the Yerkes Observatory, to account for the black spaces in the sky, is noted in *The Popular Science Monthly* (New York, February). These spaces have usually been regarded as "holes," through which the astronomer sees the blackness of space; but Professor Barnard suggests that

they may be non-luminous bodies whose silhouettes show up clearly against a luminous glow in space itself. We read:

"The nebulæ of the sky have generally been considered to be intense-These huge ly hot. masses of luminous gas would cool and contract until, after millions of years, the more compact stars were formed. The stars might cool further until no light could be seen coming from them; but it was not generally believed that the gases of the nebulae themselves could cool and still remain in the gaseous state. One of the first results of Professor Barnard's work, however, was to lead him to believe differently. Let us follow him through his reasoning.

By markey of "The Popular Science Monthle," New York.

ARE BOTH NERULE?

At the left is a luminous nebula which is a mass of gas. Spots like the one photographed at the right have commonly been considered as mere boles in star regions looking out into space. But Professor Barnard thinks the supposed holes are cooled, non-luminous nebulae, outlined against faintly luminous space.

"He says that in photographing the sky large dark markings have often been noticed in the photographs. At first blush they seem merely huge openings in the rich region of stars through which one looks out into the blackness of the space beyond. Altho there are undoubtedly such vacancies, the more one becomes familiar with others of them, the less this explanation appeals.

"To suggest the true explanation, Professor Barnard has prepared the pair of photographs appearing on this page. These, he explains, have been made exactly to the same scale, and a striking resemblance is seen between the two objects that stand out in them. But one is an ordinary luminous nebula, and the other is a dark—what? His observations induce him to believe that it, too, is a nebula, but one in which the great mass of gas has finally cooled and lost its light. The gas of the nebula, like many others that Professor Barnard has studied, is still dense enough to take definite outline and to stand out against the luminous background behind.

"But right at this point we would be led to still another conclusion. There are dark spots having very definite outlines to be seen in the heavens, where, there is every evidence to believe, there are neither luminous stars nor luminous nebulae to light up a background for them. What, then, is the cause for the luminous background in such cases? There seems to be but one possible explanation, and that is that space itself is luminous. Space itself might be filled with the feeblest luminosity, so feeble, indeed, that at the tremendous distances to the fixed stars it is not even perceptible to sight. Then, as space is supposed to be of infinite extent, this luminosity will increase in apparent density until, finally, it would become dense enough to affect a sensitive photographic plate. Only in this way would it be possible to explain how non-luminous objects could be brought out in relief in these parts of the sky."

THE POWER OF THE PEANUT

THE BOLL-WEEVIL—as a blessing in disguise—has redeemed the South from the disgrace of being a one-erop country. Cotton is no longer autocrat. He has been dethroned by the weevil and must now take his place as merely one of a democracy, or perhaps an oligarchy, of crops, among which the once humble peanut is rising to unwonted

prominence, according to F. S. Tisdale, who writes in The Nation's Business (Washington, January). In 1908, Mr. Tisdale tells us, we raised twelve million dollars' worth of peanuts. A conservative valuation of the 1916 erop is fifty-six million dollars. Texas alone has two hundred thousand acres. What is to be done with these millions of bushels? Surely they are not all to be sold on the street-corners to our boys for five cents a bag! By no means, says Mr. Tisdale. In the first place, the product is of high food value-higher even than wheat. The oil is a better lard substitute than cottonseed-oil. brings a higher price per gallon and can be made in the very same mills by the same machinery that used to turn out cottonseed-oil. Says Mr. Tisdale:

"In addition to the direct profits, the peanuts leave the land better off than when they were planted. For, like many of their cousins in the bean family, they gather and deposit nitrogen in the soil. All of which was mighty nice for the farmer—but it didn't help the mill men face their famine of cottonseed.

"Well,' said the farmers, 'why don't you crush our peanuts?'
"The mill men laughed at first. Then they began to investigate, and the things they discovered about the peanut took the smiles from their faces. In 1914 the United States imported 44,549,789 pounds of nuts and 1,332,108 gallons of peanut-oil from Marseilles, Delft, Hamburg, and other ports. The nuts brought \$1,899,237, and the oil, which was valued at \$915,939, went mostly into the manufacture of butterine and other lard substitutes. The war killed this trade deader than a doornail, but the demand for it was open-mouthed and bungry as a nest full of jay-birds.

"By slight readjustments of their machinery that cost very little, the cottonseed plants could be turned into peanut-oil plants as they stood. The superiority of peanut-oil over the old product was emphasized by the willingness of the trade to pay sixty-seven cents for a gallon of peanut-oil when they would pay but sixty-five cents for the same measure of cotton-seed-oil. On the strength of these things the mill men experimented cautiously with peanuts.

"The results were so successful that the acreage in Texas

increased more then 1,000 per cent. from 1915 to 1916. Fully three-quarters of the vast county of Comanche were taken from cotton and given over to the goober. History was repeating itself in Georgia, Alabama, Louisiana, and in the other cotton States. In Georgia, Calhoun and Randolph counties had been cotton-fields. The boll-weevil regarded these fair acres and acted as if they had been planted for his especial benefit.

"'Peanuts,' murmured the Calboun and Randolph men in their sorrow.

"They are shouting the word now at the top of their voices. Their lands are turned into peannt plantations. They have built mills and warehouses at Coleman, Arlington, and Edison to take care of the yield from 15,000 acres. Cotton-oil mills throughout the South are making the necessary changes in their machinery and are preaching the renaissance of the goober to the planters about them.

"At Houston, Tex., three large mills have taken up the manufacture of peanut-oil and cake. They and others about the State have guaranteed a ready market for the entire Texas

> erop, and the outlook for next year is for a far greater acreage than this year.

> "So surprizing has been the success of the experiments that the planters have begun to look for the dark side of the silver lining. The price of peanut products has gone up with all its companion foodstuffs — will it come crashing down at the end of the war? How much danger is there from over-production?"

The author quotes D. S. Cage, of Houston, Texas, an advocate of the manufacture of these products, as saying that there is little danger of surfeiting the world with peanut-oil and cake, because the food value is such that there is a universal market for it. He points out this other virtue:

"The South abounds in sandy soil that will produce little cotton or grain. If the peanut could submit specifications it would

ask for just such soil. Vast tracts where pine forests have stood may be made useful and valuable by planting them with peanuts.

"The cottonseed mills have a capacity far beyond the available supply of their raw material, and have therefore lain with cold furnaces for a large part of the year. They will naturally welcome a new industry that will extend the yearly period of operation and at the same time extend the figures on the credit side of the ledger."

Mr. Tisdale concludes:

"Down in the cotton country they say that we are soon to see the rise of peanut barons, to take their place in our aristocracy of production beside the wheat, corn, and prune kings. And we may prepare ourselves for the listing of the goober on stock exchanges where it will thrill us with corners, panies, and clashes.

"Verily, the peanut, butt of a century's jokes, has come into its own."

By raising peanuts and other crops instead of cotton, farmers in parts of the South are so much better off as to prove to the Atlanta Constitution that they have not only beaten the bollweevil, "but have converted its advent into an absolute blessing."

LETTERS - AND - ART

DOING LINCOLN JUSTICE

I'm MAY BE that we owe Mr. Barnard, Abraham Lincoln, and our readers an apology all around. We had no desire to do an injustice to the distinguished sculptor or to the memory of the Emancipator. So we hasten to substitute another photographic reproduction of the Lincoln statue for

the one in our issue of January 6. It seems that the photographer's inability to get a proper focus on the statue, owing to its temporary position while on exhibition in New York, caused a distortion, particularly of the upper part. The result was a grief to the sculptor as well as the Milwaukee Sentinel, which takes to heart our report that the people of New York are "somewhat startled at the stark realism" of the representation. We give in full its further comment, which they may see cause to amend after scrutinizing the present picture, which meets Mr. Barnard's approval:

"The question arises, Is it realism at all?" Is it a faithful presentment in bronze of the real Lincoln? That question is still fairly capable of settlement. There are entirely credible and competent witnesses now living who knew Lincoln in the flesh and remember perfectly well how he looked—no difficult thing, for 'Old Abe' was a striking figure that, once seen, was never forgotten.

"We have tried this test by submitting to some who knew Lincoln in life the appalling photographic cut of the production, which is supposed to perpetuate for Cincinnations the appearance of Lincoln. The consensus of usually indignant testimony is that it is fearfully and wonderfully unlike Lincoln as they knew him.

"The sculptor seems to have evolved his conception of Lincoln out of his inner consciousness, tho he states that he was greatly assisted by contemplating a man he met in Louisville, who was six feet four and one-half inches tall, who was born not far from Lincoln's birthplace, and who had been splitting rails all his life.

"The finished artistic result of these processes is one that, so far as our own inquiries go, is calculated to stir to wrath and resentment those who knew Mr. Lincoln in life and must be admitted to be competent witnesses as to his personal appearance.

"It is perfectly possible to combine good art with a respectable degree of verisimilitude in these productions. If we are going to have statues of Lincoln, a decent respect for the memory of 'Old Abe' seems to require that they resemble him, and are not freaks of fancy that with a few alterations

might do duty as figures of Ichabod Crane, or Dominio Sampson, or St. Simeon Stylites on his penitential pillar."

In conceiving his statue, so Mr. Barnard told us in the previous article, he found little help in the photographs which had been "retouched so that all form had been obliterated." This is especially true of representations of Lincoln's face where most of the criticism of the new statue is directed. Sculpture, says Mr. Barnard, "being a science to interpret living forms, hidden secrets of nature are revealed by it." Perhaps he sees the real Lincoln better than those who saw him in the flesh.

WHO KILLED IBSEN?

MR. JAMES HUNEKER thinks it is "the fatal amateur" who is guilty of killing Ibsen for our local stage. By amateurs he means "as pernicious a tribe as the Browning societies," the Ibsenites, who, Mrs. Fiske aside, have been the principal agents in bringing the great

Norwegian before us. As a consolation for our loss, however, he points to "Rudolph Christians and the superlatively excellent performance of his company" at the Irving Place Theater, where, so long after the play was written in 1884, New York sees in a German version probably its first performance of "The Wild Duck." Perhaps it is because of Ibsen's irony, Mr. Huneker suggests, that we see and hear him so seldom. "The world forgives much," he observes, "irony never; for irony is the ivory tower of the intellectual, their last refuge." The history of Hisen on our local stage shows, be continues, that "instead of whetting our wits," his irony "chills them." "In theatrical art we are still naive," he avers, and the same assertion is made by almost all our dramatic critics after witnessing the recent performance arranged by the Drama League to present a historical survey of American plays from Royal Taylor's "The Contrast" (1787) to Clyde Fitch's "The Girl with the Green Eyes." The matinee. according to the reviewers, illustrated Mr. Huneker's words about our preferences in the face of Ibsen and his like: "Put the eards on the table face up. Write the plot on the screen. Let there be no underlying meaning. Call a spade a spade. Give us externals-money, motor-cars, and chewing-gum; but do not unveil the depths of the soul. There is too much that is disconcerting below, as the Master Showman, Thackeray, has pointed out."

Mr. Huneker analyzes for us in the New York Son the unfamiliar "Wild Duck," a play about "an idealist who is a dangerous man because he tells the truth." The query whether it is "well to blurt out the truth on all occasions" forms the thesis of "one of the most cutertaining, one of the most tragic plays of the prose series."

"Each character speaks, nothing sounds written. The glory of 'The Wild Duck' is its characterization. It has kept vital the play which is in the repertory of every trans-

pontine theater. Gina Ekdal could have stept from the sunny pages of Shakespeare. She reminds one of a female Sancho Pauza. Her husband, Hjalmar, is a burlesque Don Quixote, a Quixote of shreds and patches, a weak, vain, boastful, gluttonous, shiftless fellow, and an idealist. He raves over the ideal, and is kept to an insane pitch of cloudy self-exaltation by Gregers Werle, who, discovering that Gina was a former mistress of his father, relates the facts to Ekdal and with dire results. Immediately the melodramatic character of the man reveals itself. With a brave gesture be denounces his wife's perfidy—tho her

MB. BARNARD'S "LINCOLN."
ANOTHER VIEW.

With the camera full before the figure and at a proper distance to avoid an upward tilt of the chin with consequent fore-hortening of the face. little ready money has set up his photograph-gallery—and leaves the house, never to return. Next morning he returns, hongry and with a headache, for he has made a night of it. Instead of playing in the key of mock tragedy, his wife sensibly suggests breakfast. And he cats, grumbling all the while about his shattered ideals.

"The woman's homely wit, solid horse sense, and hig heart are delineated with satisfying verisimilitude. Gregers's father and his housekeeper, Mrs. Sörby; the garret of the photographer.

Ekdal, where his old, drunken, and disgraced father has rigged up a mock forest in which he hunts 'the wild duck' and other tame fowl; the character of Relling-Ibsen himself in a new mask - whose sardonic humor, eruel on the surface, is in reality prompted by a kind heart—he makes people believe they are grand, mysterious, inexplicable, therefore making them happy; the little Hedwig Ekdal, the most touching of all the children in Ibsen's gallery, is so worked upon by Gregers that she kills herself in a mistaken spirit of self-sacrifice, more of Werle's idealism-all the figures in this amazing 'Vanity Fair' are masterfully handled. The world lie is in microcosmic proportions. Every one, except the stolid, unimaginative Gina, swaggers about in a sordid atmosphere of deception. always makes matters worse, and on a painful, tragic note the curtain falls. You have assisted at a most human, most touching play."

Ibsen was a mystery to friends and foes alike, says this writer. And hence he sees "the avidity with which he is elaimed by idealists, realists, socialists, anarchists, symbolists, evangelical folk, and agnostics." Mr. Huncker reviews his contradictory elements:

"Denounced as a pessimist, all his great plays contain an unmistakable message of hope, from 'Brand' to 'When We Dead Awake.' An idealist he is, but one who has realized the futility of dreams. Like all world-satirists he castigates to purify. His realism is largely a matter of surface, and if we care to search for it we may find the symbol lodged in the most prosaic of his pieces. His anarchy consists in a firm adherence to the doctrine of individualism. Emerson and Thoreau are of his spiritual kin. In him as in them there is the contempt for mob rule, mob opinion; the minority is the rational unit. There is in all three thinkers a certain aloofness from mankind. Yet we do not denounce Emerson and Thoreau as enemies of the people, To be candid, Ibsen's belief in the rights of the individual is rather naive and antiquated, belonging as it does to the tempestuous period of '48. .

"His is not the playful irony of Meredith or Anatole France, but a veiled, corrosive irony that causes one to tread with suspicion every inch of his dramatic domain. The 'second intention,' the secondary intention described by Macterlinek, is disconcerting for those who prefer their drama free from enigma. Otherwise Ibsen's dialog is a model. It is clarity itself, and, closely woven, it has the characteristic accents of nature. Read, we feel its gripping logic; spoken, it tingles with vitality.

"For the student there is fascination in the cohesiveness of these dramas. Ibsen's mind was like a lens: it focused the refracted, scattered, and broken lights of opinions and theories of his day upon the contracted space of his stage. In a fluid state the ideas that crystallized in his prose plays may be found in his early poetic plays. There is a remorseless linking in the marchlike movement of his dramas. Yet their author seems to delight in battering down in 'Ghosts' what he had preached in 'A Doll's House,' 'The Enemy of the Prople' exalted the individual man, the 'Ghosts' taught that a certain sort of personal liberty is deadly. 'The Wild Duck' is another stumbling-block; in it the misguided idealist is pilloried for destroy-

ing the happiness of the home by his truth-telling and dangerous tongue. But how the piece plays! The symbol is not so
remote that an average audience need miss it. The end is cruel.
Ibsen is often eruel with the passionless indifference of a serene
Brahma; tho he is ever logical. Nova must leave her doll's
house—here a 'happy ending' would be absurd, witness the
lamentable concession to popular demand once made by Dusé,
and Hobeig Ekdal must be sacrificed instead of the 'wild duck,'
or her fool father. We refuse to believe in the alleged indiffer-

We refuse to believe in the alleged indifference of New York audiences in the matter of Ibsen. Hitherto, the misfortune has been that the Ibsen plays have been given here under the auspices of the Ibsenites, as pernicious a tribe as the Browning societies. The matchless Hermione and her poet have marked Ibsen with their deadly worship. The fatal amateur has almost killed him. With the abiding memories of Mrs. Fiske as Rebekka West, and, once in Stockholm, of Gina Ekdal, interpreted by the many-sided Fru Betty Hennings, we feel assured that the mightiest modern dramatist would appeal to cultivated audiences here if artistically interpreted,"

From a consecutories photograph which shows the forward slope of the body when to stood update.

NEGLECTED RHODES SCHOLARSHIPS

XFORD'S appeal to American students shows a startling decline. In six of the States this fall there were no candidates for the Rhodes scholarships, and in two others no one was well-enough equipped to pass the examinations. This fact might afford us ground for heartsearchings on our attitude toward the European conflict. "War-time Oxford, of course, is not a normal Oxford," comments the Boston Transcript, "but it gives its students, particularly those from America. an opportunity to study at first hand the greatest conflict between nations in history." It has been well known that some of the most efficient workers for Belgian relief have been the American Rhodes scholars who have spent their vacations in that stricken country. The situation, as set forth by The American Oxonian, the magazine which purveys to us information about the American Rhodes scholars. is this:

"It is perhaps not surprizing that there should this year be even less competition than usual for the Rhodes scholarships. The results of the fall examinations show that in six of the States electing scholars this year—Maryland, Montana, North Da-

kota, South Dakota, Utah, and West Virginia—there were no candidates, while in two—Tennessee and Arizona—no one passed. Doubtless this is due in large measure to the war. Men feel that the resources of Oxford are crippled by the war (as they are), and that this is not a time to go to England for an education.

"While it is not surprizing that some men should feel this, it is surprizing that there should not be some men in each State who feel exactly the opposite. The opportunity of coming into close, human, personal touch with the greatest event in history is perhaps the greatest educational opportunity imaginable, and it is a curious commentary on American insularity and lack of international imagination that in a number of States the scholar-ship should go begging.

"It seems to us, as we have said often, that the lack of competition for the scholarships, in normal times as well as now, is peculiarly a matter for the ex-Rhodes scholars to remedy. Our gratitude to the scheme should extend at least as far as making its advantages effectively known to others. We must take better means to that end if we are not to leave our duty unfulfilled."

The Transcript refrains from invidious reflection, but there are certain plain implications in these words:

"It is perhaps too early to say that Ceeil Rhodes's great project is a dismal failure, but it is undoubtedly true that as long as the chances of immediate employment in this country are as good as they are to-day and as they have been for the past few years, our college men will not feel inclined to make any unusual efforts to gain the privilege of spending three additional years at Oxford."

ANOTHER SCULPTOR'S CONCEPTION OF LINCOLN.

From the statue executed by Guszon Borglum for the city of Newark.

The New York Evening Post, stirred by the Ozonian's revelations, reviews the present situation at Oxford, intimating also a tone of regret that our young students should seek ease and safety at the expense of larger opportunities opened up by the trend of life in warring England:

"Of the old amenities of Oxford life few remain. The oldtime stimulating intercourse with a whole generation of young men has gone, for few Englishmen are left-only a few who have good reason not to be in war-service. The pinch of economy is felt at the University, for colleges have lost so much in tuition fees that they must make drastic cuts. In many the pleasant custom of serving breakfast and lunch in the students' rooms is surrendered. Large parts of other colleges are occupied by cadet battalions in training for the front, so that the undergraduate seems out of place. The keen competition for schools and the enlivening contact with other minds set at the same problem are described as gone; while the excitement of war-conditions is inimical to study. On the other hand, the University circle has been greatly unified by the breaking down of the barriers of the colleges. The men look more and more for friends and acquaintances outside college, and meet more of the dons from other divisions. Moreover, with 'the warinterest came a galvanizing into renewed activity of the political clubs, and of those informal intercollegiate societies which spring up with such facility in Oxford,' while a new review. The Palatine, has been founded. It seems, unfortunately, to be the fact that there has been less interest in competitions for Rhodes scholarships in America since the impression has spread that the war has made the University a dead place."

HOW TAGORE FOUND US

It is called a "Parthian arrow" that Sir Rabindranath Tagore let fly over his shoulder as he sailed out of the Golden Gate. What had he seen here? "Much impotence and crudeness." The best we could show was but a promise left for the future to fulfil. American women ought to use their leisure for "study and improvement," he said, and we recall one newspaper's report of an eager woman passing out from a Tagore lecture and painfully repeating as in a daze the mystical formula the Eastern Sage had delivered. This he advised, because he had "noticed that American women have more leisure than any other women in the world." The Newark News does not bristle with an injured sense of chivalry, but after remarking that Tagore's lecture-tour here was singularly successful, adds:

"Americans, who have received from first to last their full share of sharp criticism uttered by visitors, and who, indeed, have an Olicer Twist appetite for this sort of thing, may take Tagore's observations to themselves with such measure of application as circumstances demand. If he speaks truth, ungraciousness is a minor affair. The poet's individual point of view is, naturally, to be considered. But the gist of his indictment, the lack of appreciation of spirituality, certainly bears no relation to the interest manifested by Americans in Tagore himself. This should give the Hindu seer hope."

The New York Sun does not take the stricture quite so mildly, but is led into something of a tu quoque, in addition to a certain skepticism about Sir Rabindranath as a good observer anyway:

"Great treasures have come out of the East, spices and silks and jewels and things rare and precious, even to the barbarians of the unspiritual West, but nothing so rich as the sirupy concoctions of this simple-minded Indian, the melted pearls of his gentle philosophy. America was discovered by European explorers looking for a short cut to the East Indies; they might have stayed at home in comfort, for surely would the East have found us, when we were ripe. The mystic Orient appraises correctly the obvious Occident.

"Whether Sir Rabindranath intended reprehension of our present, or meant to praise and help our future, his reported words are east in the mold of most delicate consideration, and do not compliment with embarrassing excess. They do not paint the composite American check with the blushes of deprecatory modesty.

"Mr. Tagore has seen many Americans. Does he know America? Have his audiences been composed of typical representatives of this great democracy? It does not seem to be an affirmative answer that flashes to us from the Golden Gate."

Then there is Dana Burnet, the G. K. Chesterton of the New York Evening Sun, who sees that Sir Rabindranath has "made the mistake of his predecessors," "He has looked only at our newness—and he has said that we are 'crude,'" But, "alas," what Mr. Burnet finds to be the trouble with us is "that we are not crude. We are not raw. We are not unpolished." We—

"are the most mechanically finished people on earth. Our apparent roughness is merely a cloak, a deception, a pose. Beneath it we are smug, self-satisfied, smoothed and molded by a tremendous provincialism that we have adopted in place of education. As a result of this provincialism not a youth emerges from our schools and colleges but who believes with all the firmness of ignorance that the United States of America is the only nation on the face of the globe worth living in. As a result of this provincialism we believe that the United States of America is the especial ward of Providence; that our prosperity and happiness are the chief concerns of heaven. There is no use pointing out that this belief is absurd. There is no use denying it. It is as definitely, as firmly fixt in the American mind as the legend of our military invincibility. It is the rock of our faith and the foundation of our foreign policy. And probably no one in America believes it more strongly than that interesting Presbyterian, Mr. Woodrow Wilson.

"Observe, again, the high mechanical perfection of American art and literature. Nothing could be more perfectly developed, more utterly conventional, more thoroughly turned upon the lathe of fashion than our magazine covers. One simpering female suffices to introduce the entire onslaught of successful American fiction. The importance of the individual publication is clearly indicated by the state of nudity to which the simpering female attains. The spectacle is made all the more amusing by certain Puritan proviers who go about seeking whom they may indict for indecency and who never by any chance think to hale this obvious vulgarity to court.

"Our successful fiction, too, is anything but crude. It is remarkably finished, expertly east and assembled. It has a definite, uniform chassis; it moves on machine-made rollerbearings; it is equipped with self-starter, electric lights, and automatic horn. And it is polished to a wondrous mechanical brilliance. Surely, Sir Rabindranath could not have looked very carefully at our fiction to have called us crude!

"Yet there is an art and a literature in America that would

well justify Sir Rabindranath's accusation. We have, in fact, certain painters, poets, prose writers who are doing crude work; that is to say, work which is hewn out of raw truth, work which disdains the smug refinements of commercial expediency, work which is quite unadulterated by cheap efforts to lure the public taste. Possibly it is this work that Sir Rabindranath meant when he delivered his parting shot. But if so, he ought not to have been sorrowful about it. He ought to have rejoiced as one rejoices who perceives the sign of health in his fellow man."

RUNNING DOWN PLAGIARISTS

L'ARCENY OF THE MIND" is no new offense, but it has rarely been fitted with so good a phrase as Robert H. Davis, editor of the Munsey publications, gives it. The offenders have usually been called "plagiarists," and Mr. Davis calls up the aid of all fellow workers to check this brotherhood whose depredations, according to him, are reaching "alarming proportions." The demand for fiction, he points out, coincident with the profits,

"has attracted the disreputables; and to-day it is no uncommon thing for editors to receive manuscripts that are palpable plagiarisms, filched from the past and brought up to date by adroit manipulation of theme and dialog, so that in its new garb the contribution stands an excellent chance of running the gantlet of editorial scrutiny." Mr. Davis utters his protests in the pages of The Bulletin of the Authors' League of America (New York), and shows how it is to the interest of both the author and the editor, as well as the reading public, that plagiarism in all its forms be stamped out. For—

"It ramifies into every avenue of literature—into books, into magazines, drama, and motion-pictures. An army of mercenaries, fattening upon the thoughts of other men, is in the saddle. They apply to the business of plagiarism the same kind of intelligence and cunning, and even art, that a forger or a check-lifter brings to his unholy calling. By divers and sundry tricks they absorb the idea, if not in letter, in spirit—breathe into it an unwholesome vitality, christen it with a new name, and thrust it out into the world as a legitimate offspring. Its acceptance is regarded as a triumph on the part of the scalawag parent, whose intellectual communion is held solely with the devil.

"The arguments of defense put forth by these most pernicious of all thieves are characteristic of sinners. Confronted by the evidence of their guilt, they take refuge behind any one of the following excuses:

"(a) I had no idea it had ever been printed before. It was

told me as an original story by a friend.

"(b) A gentleman whose whereabouts at the present moment are unknown gave me the story in the form of a manuscript and asked me to touch it up a bit.

"(c) I can't understand it at all. Probably I read it some-

where when I was a child and it clung to my memory. This is a surprize!

"There are a number of other equally vapid and ridiculous explanations that come glibly from the liar's lips, but the samples cited will suffice.

"They seldom make it clear how such vacillating memories and deficient intellectual mechanism as they appear to possess are able to absorb and hold details, dialog, situations, etc., ad infinitum. Of course, you can't expect a pickpocket to announce in advance that he is about to go through your clothes. And so, therefore, these belated explanations awaken irritation instead of satisfaction.

"The most profound and noble countenance I ever saw, upon which were written reflection, wisdom, and serenity, belonged to a man who had spent thirty years of his life in an insane asylum, under the impression that he was the lost Dauphin.

"The kindest and most benignant individual I ever met—one whom I would have felt secure in naming as my executor—was in a penitentiary, where he had been thrust as a youth of eighteen for assassinating his father.

"If you want to pick out a nice, quietlooking boy to sing in the church-choir, step anto any reform-school.

"But for pure, undefiled innocence, a face earrying the expression of an archangel, a pair of eyes that can brew tears against accusation, I commend you to a plagiarist."

Mr. Davis avers that if these same plagiarists exercised their gifts on any legitimato calling, they would succeed beyond calculation, for they "possess subtle intelligence and great powers of conversion." Indeed, he finds it "difficult to place one's finger on the spot where their art begins and the author's art terminates." Further:

"It is seldom that plagiarists are actually convicted beyond the peradventure of a doubt. They possess the delicate sensibilities of a vitrified brick. An accusation pointed and proved has about as much weight with them as would have an autumn leaf falling upon the bosom of Lake Superior.

"It is the business of the Authors' League of America to set its traps for these varmint

and exterminate them. There are bundreds of cases known to every editor, and perhaps half of them are known to every author. Should we not make it our business to define plagiarism so that it can not be reafter be misinterpreted?

"I would recommend that a committee be appointed to examine into all charges of plagiarism; to read both the original and so-called plagiarized version of any story out of which charges of plagiarism grow; to make a report to the League and to publish a verdict in The Bulletin; and that all book publishers, magazine editors, dramatic producers, and motion-picture scenario editors be notified of such verdict."

Mr. Davis sees the plagiarist not only "a fee to the editor and the reading public, but also to new authors," because "an editor whose fingers have been burned by stolen manuscripts finds himself unavoidably prejudiced against writers whom he does not know." We read:

"Ten years ago contributions from strangers were accepted on their merit and printed under the assumption that the writers were honest men. It is now regarded as a necessary precaution to write a new author, whose manuscript has attracted attention, and ask for references. Even these precautions do not always succeed. One must wait for the publication of the plagiarism before a comparison with the original can be made. In the interval the fraud is accomplished. A comparison of the two stories supplies the evidence of guilt.

"It is the opinion of the writer that unwarranted leniency has been shown these offenders. The usual penalty is a severance of connections, followed occasionally by the return of the money dishonestly collected. A period of agreeable silence follows, after which the malefactor sits down with a ream of white paper, selects another alias, and continues in the business of selling old tales for new."

LINCOLN IN 1857.

From a rare photograph showing the face unlined with the cares of later life.

RELIGION-AND-SOCIAL-SERVICE

A BILLY SUNDAY AUDIENCE IN BOSTON.

Psychologists may amuse themselves by reading in the faces here exposed the particular kind of "Sundaylons" being induized in by the speaker.

BILLY SUNDAY IN BOSTON

BILLY SUNDAY in Boston seems to have broken most previous records. The Congregationalist, representing an evangelical Church, speaks of "the greatest, hest-advertised, most discust, most comprehensive, and the costlicat campaign which New England has ever known." And it has no hesitation in adding that "the results already attained more than justify the time, energy, and money expended." This paper is willing to stand on the results even after making such abatements as are usually urged against the Sunday campaigns. "Discount liberally the figures given, allow—as in all revivals since Pentecost—for many backsliders, regret as you may and as we do, certain platform utterances and methods employed, and there remains a substantial body of results, deep and farreaching, to gladden the heart of every one who longs to have Christ's kingdom triumph over all its foes."

Zion's Herald (Methodist, Boston) gives some comparative figures, the pointing out that it is too early to give in any detail the results of the campaign:

"A few figures tell the story in the large. The attendance during the ten weeks was 1,478,000. The responses to the invitation totaled 63,716. The offering for Mr. Sunday on the last day of the campaign figured \$50,828. When taken in comparison with other cities, these figures are even more interesting. The six cities that come next in order after Boston as to responses to the invitation and offerings are as follows:

City	Inclinion	Offerings
Bostou Philadelphia Detroit Pittsburg Baltimore	63,716 41,724 27,192 25,797 23,085	\$50.828, 64 51.136, 85 46.007, 38 46.000, 00 40.274, 44
Syracuse	21,155 20,646	23,358.03 32,000.00

It will be seen by these that Philadelphia, which is next to Boston, had 22,000 fewer responses. Its total offering compared with the offering received on Sunday is about \$300 ahead of that of Boston, but the Boston offering, in the nature of the case, will go much ahead of the Philadelphia when it is all collected, which it is not at this writing.

"While these figures are to a certain extent a criterion by

which to estimate the results of this campaign, they are by no means its final measure. That 60,000 persons should have responded to the invitation as extended by Mr. Sunday is something not lightly to be passed over, even if in that number there were many whose names were already on the church roll, and many others went forward more to take Mr. Sunday by the hand than because of depth of conviction. The names themselves handed to the pastors and active workers in the churches are an opportunity, secured in an unusual way, for religious conversation with those who have for the first time taken their stand for Christian things, and an opportunity for the intensifieation of religious life and activity on the part of those who already as church members have signed these eards. Moreover, the whole campaign has served to draw particular attention to the church and its place in the community and to lay emphasis upon the things for which the Church stands."

The final scene of the last service, described by Dr. J. K. Wilson, of The Watchman-Examiner (Boston), gives an aspect of things not usually associated with Boston;

"After the sermon, and after the last 'trail-hitter' had reached the platform, the immense congregation held its place, singing over and over again the familiar songs, unwilling to say the final word of farewell. The least hint or incident was sufficient to start the singing off on a new line. 'The old-time religion,' was sung with gusto through its almost interminable applications. 'It was good enough for mother,' 'father,' and all the rest; when some bright genius interjected the name of Billy. 'It is good enough for Billy,' and off it went again; then 'Rody,' and 'Ma,' and 'Brewster,' and so on. And there's no telling but the crowd would be there yet and still singing had not Mr. Sunday lifted his hand for silence, offered a brief prayer, dived into his big coat and with Ma 'beat it' for the door of his automobile. A few hours later, at 12:30 a.m., they left the South Station, and the great Sunday campaign in Boston was a matter of history."

In a symposium of personal impressions contributed by Boston pastors to *The Watchman-Examiner*, the Rev. Nathan R. Wood, Dean of the Gordon Bible College, writes:

"Infinite variety, first of all! He is many evangelists in one. The militant fervor of Peter the Hermit, the hypnotic influence of Bernard, all the white-hot indignation of Savonarola against the sins of the day, the broad Scriptural, emotional power of Moody, a touch of the scraphic appeal of Whitefield or Gipsy Smith, the 'chain-lightning' of Finney's logic, the slang, the humor, the 'straight from the shoulder' of Sam Jones, all by turns in different scrmons, or even in one scrmon. Billy Sunday and his message are one. . . . One likes Billy Sunday. I think, unless one is a saloon-keeper, a Christian Scientist, or a drifter from the Cross and the Word, one can not help loving him. For many years we shall seem to see and hear him, shouting titanically from the top of his pulpit like a Roman captain to his legions, or wrestling all over his platform in desperate conflict with sin, or talking in easy good-fellowship with 17,000 people, or pleading, tears in his eyes and in his voice, with sinners to come to Christ."

The Christian Endeavor World (Boston) sees "a Sunday campaign as a magnificent justification of the Christian Endeavor Committee system"—

"A Chinese worker once said to a friend whom he was inviting to the society gathering, 'You've got to come, for we have a committee to fetch you.' Billy Sunday has committees to fetch people. He believes in hard committee work. His associates are organizers of committees to reach all classes, business men, business women, nurses, servant-maids, students, boys, and girls. The committees, each under a local church-worker, cover the whole city, and through the committees the leaders are able to accomplish an amazing amount of work."

Opposition was voiced against Sunday by Roman Catholies of Boston, the resident Cardinal issuing a mandate forbidding attendance at the meetings. The Pilot, the Catholie paper, echoes Cardinal O'Connell in declaring that "Catholies are not allowed to take part in these revival meetings, and if they do they commit sin." The Rev. Joseph H. McMahon, speaking before the Catholie Library Association in New York, brings forward a criticism that the Brooklyn Eagle recommends to the attention of Protestants. Thus:

"There is strong evidence that Sunday deliberately makes himself an instrument of capitalists for the purpose of keeping working people contented and submissive under injustice. There was never a word of comfort or encouragement for the workingman in his struggle for fair treatment."

At the same time the priest points out that prototypes of Sunday's sensationalism are to be found in the history of his own Church. As The Eagle reports and comments on Father McMahon:

"Most of us did not recall that about five hundred years ago St. Vincent Ferrer, born in Valencia, evangelized Provence and then Lombardy, speaking in squares and open places, and followed from town to town by hundreds of penitents; or that Bernardino, of Sienna, of a little later period, the born only thirty years after St. Vincent, preached through the rich and luxurious cities of north Italy in public market-places, that penitents 'flocked to confession like ants,' and that bonfires were started into which the rich flung the vanities of life. And, as Rector McMahon said, the Jesuits 'were glad to be considered fools and jesters that, by their play, they could attract crowds to whom they could then speak their hearts upon religion.' The elergyman added:

"Nay, right down to the beginning of the present war, Catholic priests in England rang bells on the street, carried banners, and did sensational things in Hyde Park in order to

gather audiences.'

"Waiving, then, the issue about sensationalism, the priest was free to compliment Sunday on his knowledge of the psychology of a crowd, on his business management, on his system, at the same time that he declared him to be primarily the spokesman of the rich, accused him of denying the teaching of Christ, and said, 'the suspicions that gather round him of being a mere money-gatherer impair the usefulness of this man, who assuredly is a phenomenon.'

"We are glad to see criticism taking such a form. Primarily, Billy Sunday is not using his movement as a propaganda to convert, or pervert, Roman Catholics. We doubt whether the movement has had such an effect in its working out anywhere. Hence the view of a broad Roman Catholic thinker is not affected by apprehension and is more or less free from prejudice for or against Sundayism. Such a view is well worth Protestant consideration. It compels the attention of thinking people."

WHAT THE "WHITE LIST" DOES FOR CATHOLICS

THE CATHOLIC THEATER MOVEMENT is not primarily interested in the theater. Its first interest is the spiritual welfare of Catholics. So declares Father John J. Burke, chairman of the Bulletin Committee of this organization. The action of this "Movement" and its "White List" has come before the public in relation to particular plays, and so The Theater Magazine (February) presents a definite statement from Father Burke as to its function. At the outset, then, he makes it clear that this is not a "theater movement": it initiates nothing, but stands as a check for Catholics on what the theaters present. It aims "to enable Catholics to apply those moral principles which their faith teaches to theatrical performances of the present day." Its "White List" gives the names of the plays that the committee approves. Its limitations and its special application have to do with the following principles: "A play must not with regard to morals occupy debatable ground." "There should be a general agreement that a play is clean and wholesome." "The appeal should be simple and universal." "The play should be fit for theatergoers of all ages and suited to various tastes." Because the White List is definite, says Father Burke, "it has been the object of more discussion than any other work of the Theater Movement." and he proceeds to clucidate;

"Just as the public Commissioner of Licenses may demand the taking out of a sentence or a seene before he gives a movie his official approval, so the Committee may decide it necessary to refuse admission to the White List of a play, otherwise good and wholesome, because of an objectionable scene. But it may be said that the Committee never asks the impossible. It does not judge by a standard fitted for those who are following the more perfect way. The Christian counsel is not its guide: but the Christian law. And as our civilization, and consequently our public morality, was born of that law, it feels justified in asking for the support and approval of all right-minded men and women.

"The Committee considers in its work that 'certain truths are self-evident.' Marriage, for example, is an institution decreed by God for the dignity of husband and wife, the welfare of the family, the stability of the nation. A play that attacks marriage as an institution would never meet with our approval.

"The dignity of the family itself; respect of children for parents; the obligations of parents toward their children—a play that would hold these truths up to odium would put itself

outside the pale of our favorable judgment,

"The approval of sex relationship outside of marriage; the defeuse of birth-control, which directly violates the commandment, 'Thou shalt not kill'; the free discussing of it; the tolerance of adultery in the exploitation of the 'triangle'; the defense of the criminal as being without personal responsibility; the justification of lying, or of theft, or of forgery or murder; the morbid sympathy with the innocent 'Magdalene'—against all these the Catholic Theater Movement uncompromisingly wages war.

"They are all part of the drama of life,' some one will object.

Of course they are; and they may legitimately enter into the
drama of the stage. But it makes all the difference of life and
death as to which spirit presides at their introduction: the spirit
of pessimism, of determinism, of sin, or the spirit of hope, of

liberty, and of virtue.

"The Committee tries not to take itself too seriously. The primary aim of the theater is to amuse and entertain. No objection may be registered against the presentation of a marriage disastrous in its consequences; nor of the ill-fated maiden who loved not wisely but too well; nor of the difficulties of lovers and of the married; nor of the lying and thieving villain, the described lawyer or judge; nor even at the display of such vulgarity of action and language as we might well wish changed. The playgoer knows the stage villains are stage villains, nor is the lesson of any tragedy lost upon him.

"It is not against the portrayal of life that the Catholic Theater Movement protests. It is against the preaching of principles in words and actions that would destroy all wholesome life. Its protest is aimed against a distorted view of life which, in turn, will teach vicious principles to both old and young. and spell falsehood and hopelessness where inspiration and the courage of uprightness are needed. Particular movements of protest and betterment are always called forth by particular needs."

The Catholic Theater Movement arose, we are told, to combat "a particular evil" which besets the stage to-day. That evil Father Burke states to be "the dry rot of sex." He continues:

"Write sex in capital letters, and like the huge electric signs on Broadway it will show you the entrance through which much of our modern drama gains access to the stage. In every form, suggestive word or act or silence, subtle innuendo, outspoken indecency, flagrant nakedness, the atmosphere of sex obsesses the stage to-day. There is hardly a play free from it; and by sex we mean not the legitimate appeal or office that this strongest of human instincts has in the drama, but the appeal of lust, of the excitement of the merely animal passion,

"Every plea that can be made has been made in its defense, Liberty of thought and speech and action has been invoked until liberty has shut her ears in utter disgust at the hypoerisy of men. Persons of influence and standing in the community have lent the weight of their name in approval to these plays

that have neither moral nor dramatic worth.

"It can not be that they see the inevitable consequences of

their tolerance and cooperation.

"Managers apologize by saying they must give the public what the public wants. We believe that the public is sound at heart; the great success of clean plays is the best proof of this, and a further proof is that as a rule the indecent play has not a very long run.

"Nevertheless, it is true that the license of indecency is extending wider and wider. The indecent suggestion is deliberately introduced into plays that of themselves give no reason for the introduction. It has become almost impossible for a man to

he has first become acquainted with the play—without fear of having her womanhood insulted."

MR. WELLS "SEES IT THROUGH"

take a woman whom he respects to a play in New York—unless

M. H. G. WELLS has not been associated in the popular mind heretofore with religion. But the war has changed all that, Not only does he write in The New Republic on the religious revival due to the war, but his novel, "Mr. Britling Sees It Through," is taken almost as his confession of faith, and as Mr. Britling, after the death of his son on the battle-field, "finds God," so writers are pointing out that Mr. Wells also has found him. "It is not the God of orthodoxy, and it may well be that his theology is hasty and ill-considered," says The Christian Guardian (Toronto). But he seems to see that "the old deixtic conception of God as a remote, unmoved Being living an untroubled existence apart from the world, still persists," and, we are assured, "it is against this that Mr. Wells, in the person of Mr. Britling, really directs his attack." The Guardian continues:

"Such a conception was felt to be intolerable in the face of such an infinitude of human misery. Mr. Brilling, in his despairing grief, needed the thought of a loving, struggling, suffering God who works with and through men, and it is precisely in this conception of God as immanent in the whole process of life that present-day theology finds its most fruitful line of development. The setting is far different, and there are balancing ideas which are absent here; but it is more important for the purpose of this review to see the points of agreement than the divergences. And it is a truth which needs emphasis, that during the times of great spiritual crisis, when the fountains of the great deep are broken up, God is not an 'absentee landlord,' but a close and vivid Presence, 'closer to us than breathing, nearer than hands and feet.'

"Platitudes and worn-out eant phrases are of no use to a broken heart. Mr. Britling somehow, some way, makes that great discovery. God becomes the great Reality, not an intellectual idea reached by a syllogism, and with this the old pessimism vanishes. The world - process is no longer a silly futility or a cruel joke. It is no longer a dreary cycle of meaningless changes. With God beside him, Mr. Britling can hope. His own problem is really a cosmic problem, and the only satisfying answer he can find to both is the religious one. In this intense and vital book God is not a stage property, but the only Reality which can satisfy the passionate quest of a sincere soul faced by a problem which is more than personal. It is significant that this book, which interprets with such supreme skill the emotions called forth by the war, has this as its motif and unifying core. It is the most deeply religious of books."

In The New Republic (New York), Mr. Wells himself emphasizes this view, pointing to the "multitude of people chastened by losses, ennobled by a common effort, needing support in that effort, perplexed by the reality of evil and cruelty, questioning and seeking after God." His reference is mainly to England and France, where he sees in progress a movement "toward the realization of the Kingdom of God." But what he conceives to be "the reality of the religious revival is to be found in quarters quite remote from the religious professionals." He speaks of—

"The other day I was talking with an eminent Anglican among various other people, and some one with an eye to him propounded this remarkable view. 'There are four stages between belief and utter unbelief,' he said. 'There are those who believe in God, those who doubt him, like Huxley, the agnostie; those who deny him, like the atheists but do at least keep the site vacant, and lastly those who have set up a Church

in his place. That is the last outrage of unbelief."

Mr. Victor S. Yarros, however, tells us in Reedy's Mirror (St. Louis) that he has passed in review several of Mr. Wells's articles "about the religious effects of the great war," but sees it "impossible to find a grain of serious thought in this stuff." Obviously of a rationalistic turn of mind, Mr. Yarros challenges Mr. Wells on several "points," but we select his concluding one:

"Finally, what reason or rime is there in the notion that God, the all-wise and all-powerful, had to adopt the singular course of making us bumans perfect by means of horrors, cruelties, and tragedies? What would we think of a man whose course toward his children and friends indicated a policy of 'improving' them by physical and mental torture? Why could not God create the perfect man in the first place? And, if man is never to attain perfection, then where is the value of the discipline of evil? Why travel when there is no goal to reach?

"Of course, the truth is, as Mr. Wells ought to know, that evil and good are buman terms, and that 'human, all-too-human,' as Nietzsche said, are all our ideas, codes, institutions, social and religious arrangements. We have slowly emerged from savagery—haven't fully emerged yet, in fact. We are seeking to profit by the painful experience of the race, and are forbidding or tabuing the things which, on the whole, spell waste, misery, and suffering. By 'good' we mean the socially useful, the humanly desirable, and our ideas change and grow with economic

and scientific progress.

"There are agnosties who say that the war has given the coup de grace to Christianity and religion generally. They are mistaken. Even this terrible war will not destroy superstition and superstitious forms of religion. Millions will continue to believe without evidence, or against all the available evidence. On the other hand, to say that the war has made believers of agnostics, has given the idea of God a stronger and firmer hold on educated and thoughtful persons, is to imagine a vain thing. It has had no such effect. The teachings of the Darwins, Spencers, Huxleys, Tyndalls, Comtes, Arnolds, Haeckels have not been, could not be, disturbed by the war. The pretense that so futile and senseless a tragedy has revealed God and men of culture and native intellectual force who had previously denied his existence is utterly hollow."

WHY MR. HERBERT C. HOOVER WAS ASHAMED

HE BELGIANS HAVE COME to look upon Americans as their sole saviors," was asserted the other day by Mr. Herbert C. Hoover, head of the American Commission for the Relief of Belgium; and then he added:

"Within six weeks I have visited a station in the slums of Brussels where 1,500 children are fed daily. The children were sitting down to their meal, and when they saw me they rose and feebly sang the first stanza of 'The Star-Spangled Banner.' Now, knowing that the food-supply was not American, I could feel nothing but shame."

Mr. Hoover is now in this country, seeking to arouse such a sentiment and inspire such a purpose as will make America's bounty match her boasted munifleence and worthy Belgian belief in it. Quoting him, the New York Times well says, and asks:

"If Mr. Hoover, whose administration of the Commission for the Relief of Belgium has been, perhaps, the most splendid American achievement of the last two years, 'could feel nothing but shame' when that American song was sung by Belgian children whom the Commission has fed, what should the rest of us feel?"

"This relief," says Mr. Hoover, "has come to be America's greatest exhibit in Europe. We want to give a demonstration of that great humanity which we know runs through our people."

THE LITERARY DIGEST'S readers have responded nobly—so far as they have responded at all; but we have heard from less than one-tenth of 1 per cent, of them. In one week the Belgian Children's Fund has jumped from \$75,000 to \$150,000, and this is encouraging-yes, inspiring. But even at this rate it will take three months or more to get that million dollars. And millions more will be needed.

Concert of action must win the goal. It should begin at once, in a way to let whole communities have share in the benefaction. Why may not the people of your town undertake a proposition and make a pledge to care for the hungry children of some town in Belgium especially designated? That would give your entire townspeople a local interest in one particular neighborhood. It would almost personalize their gifts.

The people of Lancaster, Pa., under leadership of the enterprising publishers of The New Era, undertook to do this very thing just one week before this item is written. They said to us: "Yes, we will with pleasure take eare of St. Croix and its eight hundred needy little ones, and we will gladly raise \$9,600 for this purpose." And to show that they meant business, they went right to work with determination of doing it, as evidenced by the announcement in the tabulation of each below, showing a remittance of \$4,000 already, or nearly one-half the amount they are to raise. And the New Era's managing editor wrote:

"Never in the history of charity movements in this community have the people responded more promptly and generously than to this Belgian appeal, first presented to our readers through the courtesy of The LITERARY DIGEST. The first day's appeal brought us considerably over \$1,500. The New Era has in the last two years aided in raising several different warsufferers' funds, but from none of them have we had such magnificent results as from the present one. It seems to have struck deep into the hearts of our people—the tots dragged from the bread-line because they looked too well fed, the children forced to sleep at the tables where they are served with their poorhouse rations, and the piteous pl as for food from the emsciated children, have touched them deeply, and it would not be surprizing to see the Laneaster fund grow to at least \$10,000. One of the most remarkable features of the movement is the very large number of new names found on our contribution list-persons who have not been in the habit of giving to these war-charities—and they come from all walks of life.'

There are hundreds of such communities in the United States, and all that is necessary in each one is a leader. There must be among the people in your rown many men and women of spirit akin to that of one woman who signed herself "A Widow with a small income," who wrote:

"I had said to myself, 'I will give \$5 a month for Belgian relief, if I can.' I send it now, for fear sickness or some other need might get it"; and her remittance of \$60 was enclosed, while she added: "Surely at least a million Americans will give \$5 a month or more, as they can. I would like to be one of a million so to pledge myself."

A traveling man sends his check for \$12, reminds us that there are several hundred thousand like him in this country, and says that if they can be reached "not one will turn down" our appeal. Can you reach one?

The Mountain States Lumber Dealers' Association, in convention assembled at Denver, unanimously resolved that each member on the first Monday in the months of Februa y, March, April, May, and June, will contribute to the Belgian Children's Fund 5 per cent, of his gross sales of merchandise for that day, and will use his best efforts to secure like action from every non-member lumber dealer in his respective State. A long telegram told of this action, so characteristic of the generous West.

Contributions to THE BELGIAN CHILDREN'S FUND-Received from January 24 to January 31 inclusive.

\$4,000.00 - From the People of Lancaster, Pa., through the spicually effects of THE NEW ERA.

\$2.000.00-W. A. Clack, Jr.

\$1,200.00-Wm. W. Essiek,

\$1,000.00 -Mr. and Mrs. T. E. Polleck.

\$500.00 Each—In Memory of Emma K. Luders, In Mem-

\$2.12.50 -St. Mary's-on-the-Hill (Protestant Episcopal). Buffalo, N. Y.: \$200.00, W. E. Townsend; \$144.00 David Ferguson, \$48.00, James B. Stafford; \$24.00, Neithe P. Williams; \$12.00 each, Harlan P. Hosworth, Leulas B. Bowerth, Edia Gibsen, Mrs. Sproat, Mrs. Mary H. Wells and Anonymous; and \$24.00 smaller partial subscriptions.

\$500.00—B.S.L., R.M.L., M.C.L., A Friend of Chibbres, Mrs. Mary L. Brown, Mrs. Ernest R. Williard.

\$319.63 -J. H. Cole and Friends.

\$300.00 - Elmer E. Hubbard, for the American Relief Committee of Cardenas, Cuba; Mrs. John S. Newberry, Mrs. H. F. Whitney, M. B. Haseltine, Margaret P. Hunner, Mrs. L. Warr, J. Edgar Rhonels, R. B. Wartley, Seth E Hannard, F. E. Eckhart, Memorial Lutheron Bible School, Shippensburg, Pa.

\$250.00 Each-Clifford E. Pierce, A. B. Betz, Charles

\$240.00 Each Mr. and Mrs. R. Q. Asten, M. T. Conk-lin. Mr. and Mrs. O. H. Bleks. From Friends of the Beigian Chibiren in Salt Lake City.

\$204.00 Each .. Swope,

\$200,00 Each - Elizabeth and Peter Rutter, S. V. Stra-ler, W. A. Campbell, "Friend," Nemah, Wis. \$180.00 -J. M. For.

\$178.62-A. R. Printyterian Church, Due West, S. C. \$150.00 Each-J. II. Hettz, "Two Friends."

\$144.00 Anna S. Hosg.

\$124.70 The Protectant Churches of the Village of Homatoula, Mr.

Hematonia, Mo.

\$120.00 Each B. C. Lingle, A Priscol, C. Q. Chandler, A. Y. Peterson, R. C. Bagler, W. W. Mills, Exan Johnson, William A. Maithand, T. R. Poulde, E. E. Bates, W. W. Brown, Georgetta Harrer, T.T.S., Dr. J. C. Haffestan, Mrs. B. L. Hawkton, Rose Photps, Mrs. O. H. Antio, J. L. Kirkpartick, Alex Prov. A Publishelphia Mother, S. H. Fullerton, Galf. Londor E. W. Chengo Lomber & Coal Co., Mr. and Mrs. E. M. Freeze, The Mounteille National Bank, Goulde M. Maiher, C. C. Williaker and Family, Joseph Rathborne, M. J. Persons, J. F. Frecht, Miss M. T. Hinkle, Dr. A. J. Houmer, S.L.B., H. L. Thylmann, Augelus, Josephine, Dagmer W. and Basil Wise Stripen, Billy, Tenn and Jack Ince, H.F., Frank F. Latedia, A. B. Matherson, Mat T. Smith, Austrances.

\$114.10-E. T. Junes.

\$112.80-Anneymon.

Why does the doctor recommend these broths?

Because he has learned from experience that they are pure, wholesome, and beneficial to his patients. Because he knows that they are safe (sterilized). Because he finds it so difficult to obtain good meat broths from homekitchens.

Franco-American Broths (Streetland) for Invalids and (hildren

The fact that these broths stand so high in the regard of the medical profession is the strongest and plainest indication to the mother that they are splendid diet for her children, sick or well. We children, sick or well. search the market patiently and thoroughly to obtain the very finest meats. Only the choice cuts are used. The rich appetizing juices are clarified to a sparkling purity. The seasoning is slight; the variety welcome. Order a supply today.

Clliott-Fisher Bookkeeping Machine Gets Statements Out On Time

Old Style Bookkeeping Statements Five Days Late Books Not Balanced

"How can we get those statements out on time?" Four years ago that was the question in the Bookkeeping Department of Gillette Safety Razor Co. They found a way of speeding up this department to make it work as quickly and smoothly as their well-tempered razors. Mr. F. J. Sullivan, Auditor, tells how they did it:

"Prior to our using Elliott-Fisher Bookkeeping Machines, the last of our statements were usually sent out about the 5th of the month. Now they are always out by noon of the 1st. In addition to this saving of time, at a period of the month when time is very precious, there is the ease of taking off a trial balance of the different ledgers due to every account showing the balance. These two features, combined with the satisfaction of working with figures that have been proved from day to day, sum up the difference between machine ledger posting and the pen-and-ink method."

Elliott-Fisher can save days for you and insure accurate figures promptly. Let us explain how, without obligation to you. Telephone the local Elliott-Fisher Office or write to ELLIOTT-FISHER CO., 232 Elliott Parkway, Harrisburg, Pa.

THE SUPERLATIVE TRIBUTE

Down here in Akron our files are stuffed with enthusiastic letters from users of Goodyear Cord Tires.

There are thousands of these letters, each conveying its separate and particular note of approval. Some of them are brisk, brief, factful; some fairly glow with admiration for the tires they praise.

The experiences they detail, and the mileages they recount, are little short of astounding. Records of 10,000, 15,000 and even 20,000 miles of service from a single set of Goodyear Cord Tires are not uncommon.

But there is one letter here transcending all the others in importance—we call it the superlative tribute.

It was written by Mr. Alvan Macauley, President of the Packard Motor Car Company, of Detroit, on his own impulse. It is expert testimony, voluntarily given.

"We have just ended the first year's use of your tires as standard Packard equipment," this letter reads - "and have renewed with you for a second year.

"Your tires have been so exceedingly satisfactory to us and to the owners of our cars that a word of appreciation from us is deserving. Our owners have found your tires exceedingly satisfactory in the following important qualities:

 Easy riding, comfort, resiliency and ability to absorb road-shocks.

(2)—"Durability and high mileage secured.

(3)—"Economy in gasoline consumption.

"In every respect in which a tire should be good, we have found your tires fully measuring up to expectations. We have never had a more successful or satisfactory tire equipment."

This letter is signed by President Macauley. It is, in many respects, the most remarkable indorsement of a product we have ever seen.

There can be no higher praise. There can be no surer guide for you in the selection of superior tires for your car than this.

Chosen for the Packard Twin Six—Good year Cords are standard equipment on the Franklin, the Locomobile, the Peerless, the White, the Haynes Twelve, the Stutz, the McFarlan, the Roamer, the Lexington "Thoroughbred Six," the Daniels Eight, the Owen Magnetic, the Milburn Electric, the Detroit Electric, the Baker Electric, and the Rauch & Lang Electric as well.

They will be underwheel three out of every four cars starting their careers on Cord Tires in 1917.

Their quality makes them higherpriced—and better.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

The Goodyear Tire & Rubber Co., Akron, O.

GOODINEAR CORDTIRES

I his in the mostle-puckage. In it are pucked in rings— each ring in its com-realed confainer (see point s).

This angle-to-angle interlocking con-struction is the dis-

of the genuine

of the genuine McQuayl- Norris

LEANTROOP Ring.

This Package Covers Five Points of Protection

- It is your protection against substitution when you buy _em\modelsoo Piston Rings.
 The genuine—the McQuay-Norris manufacture—are packed, individually, in these plainly labeled, sealed parchment containers.
- It protects the garage and repair man from having palmed off on him inefficient, imitation rings which are substituted when (acceptance is asked for, with the purpose of deceiving him into thinking he is getting the genuine—substitute rings which, should be sell them to you, would but his reputation for fair dealing and mechanical knowledge and skill.
- The package protects the rings themselves from rust and the effects of rough handling while in stock. Delivers them to you just as they left the factory—perfect in fit and finish, accurate to 1/1000 of an inch. This micro-metric care in manufacture is the McQuay-Norris method of ensuring 100% efficiency; its preservation is your protection.
- This package covers the one piston ring that protects motor efficiency. Protects motor life because its light, equal trasion minimizes wear of cylinder walls. Protects power because it prevents power leakage and ensures minimum carbonization.
- Protects you in the matter of price. Every McQuay-Norms Land Moor Piston Ring is sold at a definite price. Imitations get the price of the genuine, or more if possible—otherwise they'll take less. Their prices are no more standard than their quality. Whatever you pay for them you pay too much.

Take Full Advantage of this Protection

As an assurance of getting the gennine, have your garage or repair man send you the empty containers—one container for each ring—with his bill.

Send for Free Booklet

CURRENT POETRY

ROM The Atlantic Monthly we quote lines that are of interest for monthan one reason. In the first place, they seem to be a true picture of the difference between the attitude of the civilian and the attitude of the soldier. It is the stay-athome who writes the hymn of hate; the fighting man has little bitterness in his heart. And if the continuance of the war depended on the wishes of the soldiersthen it seems likely that peace would be found much more quickly and easily. Mr. Hall is an American who served in the British Army, helping to hold the trenches between Messines in Belgium and Loos in France, and he has told a good story and taught a good lesson.

OUT OF FLANDERS

BY JAMES NORMAN HALL

Three of us sat on the firing-bench Watching the clouds sail by-Watching the gray dawn blowing up Like smoke across the sky. And I thought, as I listened to London Joe. Teli of his leave in town. That's good ters libre with a Cockney twang: I'll resember, and write it down.

W'en I went 'ome on furlough, My missus says to me, "Joe, Ow many 'Uns 'ave you killed?" An' I says to 'er, "'Une?' Not tlinkin' just wot she meant. "Yes, 'Uns!" she says, "them sneakin', lowlived 'Cost" Bitter? Not 'art, she ain't! An' they're all the same w'y in Lumma.

My old mate Bill, who's lame An' couldn't enlist on that secount E staked me to a pint of ale At the Red Lion. Proper stuff it was Arter this flat French beer. "Well, 'ere's to old times!" says Uiii. Rabin' 'is glass. "An' had luck to the 'Une you've sent below! 'Ow many you think you did for, Joe?' 'E arsked if I'd shot an' seen 'em fall, Wanted the de-tails and wanted 'em all'!

An' there was my old boss in Balhant. Gave me a guld w'ich I took, willin' enough. Altho I made a stall at refusin' That's all right, Joe, boy! Glad to do it! It ain't much, but it'll 'elp you to 'ave a pleasant week.

But w'en you goes back to the trencies. I wants you to take a crack at the 'I'm fer me! Get me a German fer every penny in that soyereign!" 'e says,

Smashin' 'is fist on the table An' upsettin' a bottle o' ink, "Lay 'em out!" 'e says: "Now tell me, 'ow many you killed, about?"

Speakin' o' 'ymns o' 'ate:

They sings 'em in Lumnon, I'm tellin' you straight! You ought to see their faces w'en they arsks you about the 'Uns! Lor' lummy! They ain't or/ a bloodthirsty for!

An' the wimmen as bad as the men. I was glad to get back to the trenches again W'ere there's more of a 'uman feelin'

Now, us blokes out 'ere, We knows old Fritzie aln't so bad as 'c's painted (An' likely, they knows the same about us); Wot I mean is, 'e ain't no worse than wot we are Take 'Im man fer man. There's good an' bad on both sides But do you think you can s'y anything good About a German, w'en yer in Lunnon? Strike me pink! They won't believe you! E's a 'Un, wotever that is, Some kind o' wild beast, I reckon-A cross between a snake An' one o' them boars with 'orns on their noses: Out at Regent's Park Zoo

The Development of the Dictionary A historical account of the evolution of English and American Lexicography. Large quarto, cloth, \$1.00;

354-60 Fourth Avenue, New York

One night at the Red Lion. I was talkin' about the time Nobby Clark got 'it out in front of our barbed wire.

Remember 'ow we didn't find 'im till mornin'. An' the stretcher-bearers brought 'im in:

Broad daylight it was, An' not a German firin' a shot Till we got 'im back in the trench? Well, there was fifteen or twenty in the pub. An' not one of 'em was glad old Fritzle acted w'ite! Wouldn't that give you the camel's 'ump?

They'd sooner 'ad Nobby an' stretcher-bearers killed.

If only the 'Uns, as they call 'em. 'Ad played dirty an' fired w'lle they was bringin'

'Im In.

Another time I was a-tellin' 'em, 'Ow we shout back and forth acrost the trenches W'en the lines is close together, An' we get fed up with pluggin' at each other. An' I told 'em about the place

This side of Meesines, w'ere we was only twenty yards apart. An' 'ow they chucked us over some o' their black

bread, Arter we'd thrown 'em 'arf dozen tins o' bully. Some of 'em didn't believe me an' some did. But sour? S'yl 'Ere! They was ready to kill me Fer tryin' to make out that Fritzle's a 'uman bein'I

It's a funny thing. The farther you get from the trenches

The more 'ate you finds; An' by the time you gets to Lumnon-Blimy! They could bite the 'eads offen nalls If they was made in Germany. I reckon they're just as cheerful an' lovin'-like

in Berlin. tilve us a fag. son. I'm clean out.

From "City Dust" (Frank Shay) we take this charming little spring song. It is gay and—unlike many lyrical celebrations of the youth of the year-it is convincing.

SPRING

BY JANE BURR

I piped when I opened my eyes to the day, And the inner me murmured, "How can you be gay?

You've fluttered too high and you've broken your wing-

There's never a reason why cripples should sing!"

"But it's Spring!" I said, "It's Spring!" And I called it a garden-my shabby old room-And I danced to the wall-paper roses in bloom: And the laner me murmured, "What does it all bring?

You're a sparrow, a cricket, a stilly young thing! I answered, "I know, but it's Spring!"

In the second and third stanzas of this poem (which we take from The International) the effect would be better if the rimes contrasted more strikingly. But the lines present an interesting pieture of a life which deserves more study from the poets.

DELANCEY STREET

BY MORRIS AREL BEER

Up and down the streets they trod. Bearded schnorrers blessing God, For clinking coins and silken sunshine Sabbath loaves and hallowed wine.

Chanting solemn Old-World strains, Slowly as the sunset wanes. Withered branches of the vine, Nursed in ancient Palestine.

In the moonlight and the rain, E'er they wander, little gain. Plying in the Ghetto's pales, Dreaming on of Zion's vales . .

The modesty of certain English poets is almost beyond belief. How could any one write such rich and dramatic verses as

these and then affix to them an absurd pseudonym instead of his own signature? We find this ballad in The Westminster Gazette.

MAGPIES IN PICARDY

By "TIPCUCA"

The magples in Picardy Are more than I can tell. They flicker down the dusty roads And cast a magic spell On the men who march through Picardy, Through Picardy to hell.

The blackbird files with panic. The swallow goes like light, The finches move like ladies, The owl floats by at night; But the great and flashing magpie He files as artists might.)

A magple in Plcardy Told me secret things-Of the music in white feathers, And the sunlight that sings And dances in deep shadows-He told me with his wings.

(The hawk is cruel and rigid, He watches from a height; The rook is slow and somber, The robin loves to fight; But the great and flashing magple He flies as lovers might.)

He told me that in Picardy, An age ugo or more, While all his fathers still were eggs. These dusty highways bore Brown, singing soldiers marching out Through Picardy to war.

He said that still through chaos Works on the ancient plan, And two things have altered not Since first the world began-The beauty of the wild green earth And the bravery of man.

(For the sparrow Ries unthinking And quarrels in his flight. The heron trails his legs behind, The lark goes out of sight: But the great and flashing magple He flies as poets might.)

From the London New Witness (edited by Gilbert K. Chesterton since Ceeil Chesterton took up his military duties) we take this delightful bit of whimsicality. Mr. Drinkwater has filled his three stanzas with the veritable atmosphere of an oldtime English countryside.

ANTHONY CRUNDLE

BY JOHN DRINGWATER

Here lies the body of Anthony Crundle, Farmer, of this Parish, Who died in 1849 at the age of 52. "He delighted in music," R.I.P. And of

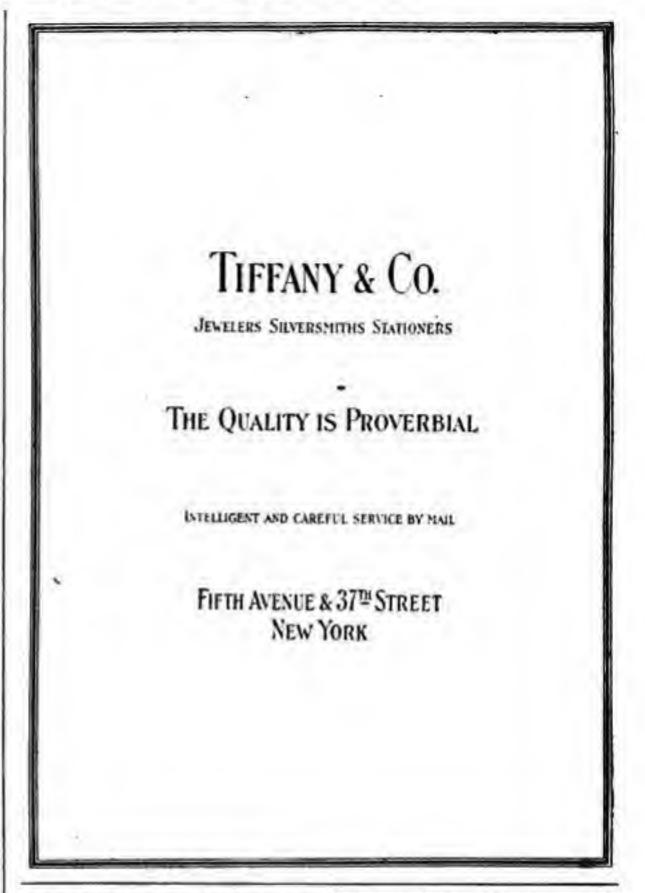

Susan.

For lifty-three years his wife, Who died in 1860, aged 86.

Anthony Crundle, of Dorrington Wood, Played on a piecolo. Lord was he, For seventy years, of sheaves that stood Under the perry and cider tree; Anthony Crundle, R.I.P.

And because he prospered with sickle and scythe. With cattle affeld and laboring ewe, Anthony was uncommonly blithe, And played of a night to himself and Sue; Anthony Crundle, eighty-two.

The earth to till, and a tune to play. And Susan for fifty years and three. And Dorrington Wood at the end of day May providence do no worse by me; Anthony Crundle, R.I.P.

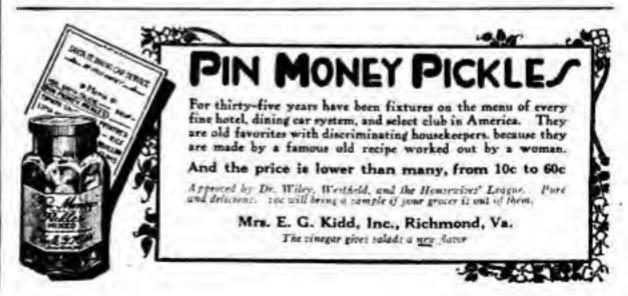

With Jellicoe in the North Sea

A thrifting story for boys by Capt. Frank H. Slaw. Describes the life of a suidshipman in the British navy from the opening of the present war to the great naval battle of Dogger Bank. Fell of adventure and heroisto. Large, Josh-bound book with fine coter plate; WAGNALLS COMPANY N

PERSONAL GLIMPSES

THE REAL "ALLAN QUATERMAIN"

ALLAN QUATERMAIN was not a fiction of Rider Haggard's brain; he was a true flesh-and-blood hunter and adventurer, whose many adventures were used in the novel. For instance, what tale of fiction is stranger than this? It is told of the original Allan Quatermain that once when hunting in Africa he was pursued and thrown off his horse by an enraged elephant. When he fell, everything faded, and it was apparently some minutes before he recovered his senses. Then-the first thing he saw was a huge pillar-like object before him, and he realized that he was lying beside the hind leg of the animal, which was kneeling and searching around for its victim. He lost no time in getting out of this disturbing attitude, and made his escape.

Such adventures may be common in fiction, but rarely are they the lot of real men. Now, a cluster of press clippings recalls to mind that the original Allan Quatermain is dead in London, Of course, his name was not the one given in the Rider Haggard novels, but the character of that dashing adventurer-himter was drawn directly from the sportsman who has recently gone to other and better hunting-grounds, Capt. Frederick Courtency Sclous.

Adventure stories, such as the ones in which he appeared, have since gone out of fashion; nowadays the youth of the world are more interested in tales of a different sort. Yet it may call back the old remances to the mind of many a reader to peruse some of the memories culled out of the numerous press notices which appeared at the death of Captain Selous. For instance, in the London Daily Telegraph we read:

Rider Haggard's portrait of Allan Quatermain is no unfair likeness of the mighty hunter who has just lost his life for his country in East Africa. It was such a death as his friends coveted for him; such a death as must make the writer of romance feel the timidity of fiction compared with fact. In his sixty-sixth year, a life devoted to the jungle and scrub of South Africa, to the intense observation of wild life, and to the service of the many empire-builders who were his friends, has been cut short on active service against his country's enemy. Only in September last did he receive the D.S.O. for "his conspicuous gallantry, resource, and enand now those services which "can not be overestimated" have ended as Selous would have wished them ended.

The story of his life is short, so far as mile-stones are concerned. Immediately after his school-days at Rugby he went to South Africa, and plunged at once into the great life of nature that he could study nowhere so well as along those everexpanding frontiers of civilization which, almost as much as any man, he brought within the Empire. He is the last of the great generation of African hunters, and the opportunities he enjoyed until the formal partition of Africa are not likely to be offered to another man. Great-game hunting was meat and drink to him; he elaimed it as his profession; hundreds and thousands of heads, skins, and teeth rewarded his vigilance and his isolation. Still, as guide, naturalist, and adviser, he acted in connection with several expeditions into Mashonaland and Matabeleland between 1890 and 1897, and the erown of his life must have been the services he alone could render in German East Africa when the great war broke out.

Half a dozen records of his sporting adventures have been published by him, all, except one, dealing with his African experiences. He wrote for magazines with facility and absolute knowledge. "What Selons says is good enough for me," was a well-known judgment half a dozen years

Then we have a picture of the characteristic wit of the hunter as seen in a speech at a banquet of the Authors' Club. It is an admirably detailed and sharp sketch of the man's personality. The themewas the adventures of a missionary in Africa, and the address forms a thumb-nail movel of what life in the Dark Continent meant to this proselytizer. It runs:

He was often told that missionaries had done more pioneer work for the Empire than big-game hunters. Far be it from him to say one single word of disparagement of those splendid pioneer missionaries of Africa-(cheers)-but what he would say was that all the best missionaries, from Moffat and Livingstone downward, were great hig-game hunters. He was once acquainted with a very fine old pioneer missionary, who was not only, to use the picturesone phraseology of young England, a top-hole proselytizer-(laughter) but a most energetic and active biggame hunter. This good man was acenstomed to inspan his yoke of bullocks every Monday morning early, and trek away to the haunts of big game, which at that time were not far from his station. He spent the week in shooting game, partially drying the meat in the sun. On the Saturday evening late this good man returned to his station, and on the following morning all the meat was hung over the beams of the great shed which served him as a church—in his reports it was called a eathedral, (Laughter.) When it was time for service the natives of the district were notified by three shots from a big elephant gun, and they then commenced to concentrate upon the cathedral from every point. It was really perfectly wonderful to see the enormous congregations which this good man brought together, and the number of converts that he was able to make, especially when it was remembered that he spoke in an African native dialect, which he only understood very imperfectly. (Laughter.) When the service was over every one of his congregation was presented with a large piece of meat. Ever since that time Mr. Selons had believed that there was something in a meat diet which stimulated the perceptive faculties and possibly increased the power of faith, because these natives, with this mixed diet of meat and spiritual doctrine, accepted all the most abstruse and difficult doctrines and dogmas of the Christian

Church without the slightest difficulty, and there were even some among them who were able to swallow the Athanasian Creed without a smile. (Laughter.)

Tales of Selous's hairbreadth escapes when on hunting expeditions might be multiplied ad infinitum, for it was a time when men did not hunt in the leisurely fashion that attends the pursuit of game now, but were as liable to die from want of supplies as from the tusks or claws of wild animals. In fact, The Telegraph remarks:

The deep sear in the middle of his right cheek, which he bore to the end of his life, was caused by an accident such as modern hunters could not experience. He had in his early days a 4-bore elephant rifle-a terrific weapon at both ends, even when properly charged-and at a desperate erisis this gun was given to him by his native servant doubly charged. He discharged it, was blown head over heels for yards, and escaped with a lifelong scar, a cruelly maimed shoulder, and a terrific shock that a moment later he had to master to save his life for a second time.

In the same paper we find a lengthy editorial comment on his career. Out of the maze of narration and eulogy, we cull:

His life had been spent in travel and adventure. He was less than twenty years old when he began his career as a big-game hunter-it became his profession and livelihood-and in 1909, when Mr. Roosevelt undertook his hunting expedition in East Africa, Captain Selous accompanied him, thus confessing that he still heard in maturer years the call which had lured him as a youth away from this country into the wilds.

In some respects the career of the sportsman who has now given his life for his country was probably unique. It is said that in his many wanderings on the African Continent he had shot nearly a thousand head of big game; bis gun had brought to his feet specimens of practically all the animal families indigenous to that part of the world. A man of retiring disposition in ordinary life, he courted danger, but except for a bullet in the ribs during the Matabele campaign he never came by serious harm, tho he experienced many narrow escapes.

Will there be opportunities a few years hence for men such as Scious to gratify their instinct for big-game hunting? The world is growing smaller. The railway is making its way into the densest forests and across the great inaccessible plains. North America has been almost shot clear of its aboriginal animals; the South-African veldt no longer offers any temptation: East Africa is being subdued; sport in India is not what it was once; the whole of Europe will soon be-if it is not already

-a "story that is told."

But vast regions, fortunately, are still unexplored. It will be many years before parts of central and western Africa, Borneo, Sumatra, the Dutch East Indies, and the more remote territories in the vast Chinese Empire will cease to attract the hunter. And it is well for us that it is so. Big-game shooting is an education-a pursuit which trains the ear, the eye, the nerve, and the endurance of those who follow it. The fascination is summed up in the phrase, "a sporting chance."

3,000,000 LETTERS

Butterick receives 1,000,000 letters a year.

That means to,000 letters every working day. This very hour a thousand people are writing to Butterick.

This is our American mail alone and does not take into account our vast foreign correspondence handled by our branch establishments in foreign capitals.

Thousands of letters reach us each month from the readers of our three women's publications-The Delineator, The Woman's Magazine and The Designer. They ask advice on all the important problems of the home. Each letter receives a personal reply from one of the expert editors in charge of the fifty practical departments of these magazines.

The confidence of our readers and the variety of subjects on which they seek our help is impressive evidence of the influence of Butterick magazines with the women of a million and a half American homes.

The Superlative Degree in Motoring Luxury

THOSE whose social prestige suggests that their mode of motoring be in keeping with their position, will recognize in the Cadillac Landaulet a car whose grace of contour and richness of design and appointments, stamp it as a creation of dignity and distinction.

It is a car for 365 days in the year.

With the passenger compartment closed, it is an ideal equipage for inclement weather. With the rear section laid back, the unusually spacious opening provides the advantages of an open car. With the super-smoothness of Cadillac mechanism, the deep soft upholstery and scientific spring suspension, its riding qualities are truly a revelation; there is experienced a delightful sense of ease and relaxation impossible of description.

It would be difficult for you to suggest to yourself any qualities which could contribute more thoroughly to your comfort and your enjoyment.

It is the very risks, uncertainties, and dramatic strokes of fortune which attract. It is impossible to foresee what will happen in given circumstances. Animals conform to no rules; they act on sudden instinct, sometimes with curious and expected results, or are seized with panic.

During the operations in East Africa lions have fled from a motor-bicycle piloted by a defenseless man; on the other hand, they have stood up to the gun, revealing cunning which has tested the sportsmanship of pursuers. Readers of "The Man-Eaters of Tsavo" will recall one strange incident illustrating the force of hunger. A group of lions seized one of three Europeans out of a railway-earriage in Ugunda, the all of the men were armed, and then got away. On another occasion some coolies in Uganda, living in a closed track with iron bars, were attacked. The beasts prowled round them, and one day one of them managed to get in, and the coolies, with intuitive quickness born of fear, escaped, closing a trap-door behind them. They had seemingly eaught the man-eater, and forthwith proceeded to shoot him, but, aiming badly, broke the trap-door and gave the lion his liberty once more. Or again, there is the story of the naval officer who brought down a Grantii buck-his first kill. He went forward to secure it, when first one and then four other lions, in spite of the noise he had made, crept forward to seize the careass. The sportsman had with him only a little magazine rifle and not many eartridges. Deeming discretion the better part of valor, be mounted a neighboring tree, remained there until the lions, their hunger satisfied, slunk away. It is such experiences of illfortune and good, of the unaccountable behavior of animals under seemingly similar conditions, which constitute the allurement of big-game shooting.

With the brevity of a moving-picture scenario, the Manchester Guardian tells the story of Selous's first hunting-trip into Mriea. He was hardly grown, only nineteen, yet he launched on a venture which would have made many an older man hesitate and take thought. It was in 1860, when, according to the account—

Selous commenced his famous career as hunter, explorer, and naturalist, landing at Algoa Bay, with a capital of £400. He lost no time in penetrating into the interior, and during one of his early expeditions in Griqualand came very near to losing his life. While hunting giraffeswhich he then saw for the first time-he became lost, and for nearly four days and as many nights was entirely without food and water. A strong constitution enabled him to throw off the effects of this trying experience, and soon afterward he entered Matabeleland and sought King Lobengula's permission to shoot elephants, Lobengula laughed at him, saying he was "only a boy," but the desired authority being obtained the "boy" justified himself by killing on foot, in the course of his first three seasons, no fewer than seventy-eight elephants. A Hottentot hunter named "Cigar" initiated him in the perils of elephant-hunting, and seems to have been a reliable and considerate companion.

The outfit which satisfied young Selous would scarcely be deemed adequate by modern hunters of big game. He was accompanied by a solitary Kafir "boy,"

The Guarantee Formula printed on every can of DEVOE Marble Floor Finish, DEVOE Pale Interior and DEVOE Vernosite is your assurance that these varnishes are free from all adulterants.

Fossil Gum

is a sap that coved out of certain trees thousands of years ago and has since been bosied in the soil, gradually maturing and fossilizing. Ages of seasoning under ground have given it a wearing quality not possessed by new groun. Therefore, it will not scratch white as will rosin, its common substitute.

Pure Linseed Oil

gives to DEVOE Varnishes a durability no other oil can equal. China wased oil used in many varnishes as a substitute for lineed oil, produces a sarnish that will not wear as long as a limeed oil varnish.

Pure Manganese Dryer

is used in DEVOE Varnishes because it doies from the bottom ear to the surface. Varnishes made with cheaper dryers, dry from the surface in. They appear to be dry when they are still maint beneath the surface.

Pure Turpentine

Years of experience has proven turpentine to be unequalled as a varnish thinner. In many varnishes benzine is used as a thinner. But benzine is highly combustible and its only advantage is to cheapen the cost to the manufacturer. There is no benzine in any DEVOE factory.

AND NOTHING ELSE

is the most important line in the DEVOE Varnish Formula Guarantee. This statement is our assurance to architects, decorators, dealers and property owners that no benzine, rosin, naphtha, lime, hardening powders or any other adulterants are used in these DEVOE Varnishes.

We can help you decorate —it's part of our business

Tell us your problems, and our Home Decoration Baseau will give you personal advice as to finishes and colors.

who carried his blankets and spare ammunition, Selous himself taking along a four-bore muzzle-loading rifle, a bag of powder, and twenty bullets of four ounces each. For food he and Cigar depended on their rifles and what Kafir-corn they could procure. These so-called rifles were in reality smooth-bore duck guns of the cheapest description, earrying round bullets, but, altho they "kicked" terribly, Selous found them as well suited for killing elephants as the best express rifles.

Selous made a trip home in 1875, but the spring of the following year found him once again hunting in Matabeleland. Later on he crossed the Zambezi into the Batonga country. An expedition to Mashonaland followed, and during it Selous experienced some of the narrowest of his many escapes from dangerous big game. During this trip he nearly lost oxen, horses, and everything he possest from thirst, no water being obtainable for a period of about four days. Selous's "bag" of big game from 1877 to 1880, inclusive, consisted of 548 head, among them being 20 elephants, 2 white and 10 black rhinoceroses, 100 buffaloes, 13 lions, and 18 giraffes. In the spring of 1881 he went home. His fame as hupter and naturalist was now well established, and papers on different species of African mammals which he read before the Zeological and other scientific societies attracted much attention. Selous was recognized as an exceptionally careful and reliable observer-a faculty in which some of the greatest African hunters have been singularly deficient—and his investigations set at rest sundry disputed points regarding the species and habits of certain of the African big game.

About this time Selous entertained thoughts of settling to more peaceful avocations, but the call of the wild was too strong, and for many years after 1882 his life as hunter and explorer was only varied by occasional visits to the old country. During an expedition undertaken in 1888 he was treacherously attacked by natives of the Mashukulumbwi tribe. From his safari of twenty-five only seven escaped unhurt; twelve were killed outright, and Selous found himself stranded with only the clothes he wore, a rifle, and four eartridges. It was indeed a terrible situation in which he was then placedalone in the heart of savage Africa, surrounded by hostile natives, and separated by a wide expanse of difficult country from friendly ones. For three weeks he struggled pluckily along, sleeping on the bare ground without blankets, enduring all kinds of privation and hardship. He was providentially saved to reach the country of Sikahenga, a Batonga chief who protected him.

Nor are the American journals totally uninterested in the career and passing of this noteworthy character, for, among many comments, we read in the Detroit Free Press the following tribute to that modern Nimrod, with a closing mention of him reprinted in the Chicago Evening Post and taken from the autobiography of Colonel Roosevelt:

He was probably the best known of all the modern big-game hunters; he was an explorer, an opener of new lands, a fearless soldier, and a writer of prominence. It may be a matter of gratification to millions of people, young and old, who have reveled

There's a GMC for every need

The home of GMC trucks has long been known as "TRUCK HEADQUARTERS." And each year experienced buyers in increasing numbers turn to our factories to supply trucks of the proper size and type to meet their particular needs.

GMC trucks are practical Trucks—they are right in design, right in construction and reasonable in price.

Because of their utter simplicity and easy accessibility, they are readily understood and cared for by the average driver and when given reasonable attention render consistent, dependable service and operate profitably. GMC trucks are unexcelled to pulling power, dependability, low operating and maintenance cost. Repeat orders from the abrewdest buyers is prouf of their quality.

Any husiness—large or small—requiring uniter trucks, can come with confidence to TRUCK HEADQUARTERS. The GMC line is complete, there are all practical sizes, from 1, ton to 3 ton capacity—six sizes in all. There's a GMC for every need.

See the GMC dealer in your locality, or write TRUCK HEADQUARTERS.

Let your next truck be a GMC.

Write today for a copy of interesting booklet entitled "Old Sam's Experience." -Old Sam had the right idea.

American Supremacy In Machinery

This supremacy has been gained and held by quantity production, enabling American manufacturers to dominate the world-market in spite of paying the high-est wages. It is the toolmaker that has made this quantity production possible.

In the constant search for better tools, a most noteworthy advance is made in the design of the Gun Tap shown below. Here is a tap in which breakage is almost entirely eliminated. Think of that for a numste, remembering that the breakage of ordinary taps runs about 90%.

The Gun Tap cuts with a shearing ac-The Gun Tap cuts with a snearing action, the only true cutting, and a new feature in taps. This makes it the easiest cutting tap on the market. It shouls the chips ahead—whence the name "Gun" Tap—instead of jamming them into the flutes. Thus the flutes can be shallow, and this, with the easy cutting, makes it almost unbreakable.

For further information as to these de-tails, its unequalled accuracy, and the pos-sibilities of increasing production, send for Bulletin entitled "The Gun' Tap."

in the adventures of hunter Quatermain and admired his virtues, to know that their hero was very like his original.

Yet he was the gentlest and straightest of men, a description which tallies closely with Mr. Haggard's fictional delineation, Captain Selous also was known as a dead Like Quatermain he first tried diamond-mining in South Africa-this was back in '71, but after a time he turned from this to elephant-bunting and early trekked to Mashonaland, in the settlement of which he was largely instrumental. For twenty years he was active in the troubles among the British, the Boers, and the natives, and saw a good deal of fighting. In 1890, he guided the expedition of the British South-African Company into Mashonaland across four hundred miles of desert waste, a feat comparable with anything in Haggard. Altogether, Selous's life was every bit as exciting and adventurous as the life of bunter Quatermain, even if not quite so punctuated with the marvelous and the uneanny.

Allan Quatermain died many years ago in a mysterious white empire beyond Mt. Kenia, to which he had trekked in the company of his friends, Sir Henry Curtis and Capt. John Good and Umslopogans. In the manner of his taking off and in the matter of his age at the time of his death, Haggard curiously foreshadowed the demise of Captain Selous. Quatermain died from a wound received in action while fighting against treason and rebellion; Selous was killed while leading his soldiers against the enemies of his country.

In his recently published autobiography Colonel Roosevelt says of him:

"When Selous, the African hunter, visited us I had to get him to tell to the younger children two or three of the stories with which they were already familiar from my reading; and as Selous is a most graphic narrator, and always enters thoroughly into the feeling not only of himself but of the opposing lion or buffalo, my own rendering of the incidents was cast entirely into the shade."

This from the man who thunderbolted the nature-fakers is praise, indeed.

THE LAST AMERICAN QUEEN

WHEN the United States annexed Hawaii in 1898, it is to be assumed that all the natives of those islands became Americans. If such was the ease, then the ex-queen who had been dethroned by her own subjects, became America's only queen. But she was a captive queen, for all that, as the New York Evening Mail puts it. Recent cable dispatches report that she is near death, after more than twenty years of exile. She is the counterpart of the ancient queens whom rulers used to fetter to their chariot-wheels, to add glory to a triumph. As The Mail

Captive kings, queens, and potentates, tied to the chariot-wheels of Roman consuls, furnished spectacles to the Roman mob in its heyday.

Uncle Sam has bad his dattor, his sultans of Sulu, his Sitting Bulls, and his Geronimos. He also has his captive queen. She never was tied to a chariotwheel, because Uncle Sam does not ride in chariots. But she has had a very hard

time since she surrendered her sovereignty under the folds of the Stars and Stripes. Her name is Liliuokalani. She used to be queen of Hawaii.

When the sons of the missionaries who had taught Christianity to the heathen Kanakas decided that the time was ripe, they stept in and took her throne and her country away from her. That was 'way back in 1893. When the sons of the missionaries took her throne away from her, somebody made her a promise that her property would be respected. With childlike faith this swarthy queen, who is a poet and a musician, took the promise seriously. The property consisted of about a million acres of good Hawaiian land.

Ever since 1893 Liliuokalani has been trying to get hold of somebody who would carry out the promise made to her. She even came to Washington to remind Uncle Sam of that promise. She wandered from department to department, entreating, imploring, begging, arguing, quoting the

law and the prophets.

But all her pleadings have been of no avail. She has spent her last cent in her quest for her rights. She has become a pathetic figure before all the world. But the million acres of good Hawaiian land are too good to be returned to her. Uncle Sam needs them in his business. Such a treasure could not been trusted to a queen who happened to have a swarthy skin.

Ex-Queen Liliuokalani now lies gravely ill in Honolulu. Doubtless she has not yet abandoned hope that somebody will do her justice. And doubtless she will go

to her grave with this hope.

And yet, the New York Sun shows another side to the story. She never really grasped the importance of her position as ruler of the mid-ocean realm. The events which led to her abdication, and the Hawaiian annexation, were always incomprehensible to her; she could not understand the ideas of international politics which revolved about her islands, nor did she ever realize that her loss of them was inevitable. Says The Sun:

Her insipid autobiography, published in 1898, reveals not the slightest comprehension of the forces that were at play, not so much in the island paradise of which she was ruler as in the larger world on the shores of the Pacific and beyond. Had the rise of Japan among the nations preceded the extension of the United States to the western seaboard, Hawaii might to-day be a Japanese province; it could not have retained its independence.

It is interesting to speculate on the twists and turns of history. Perry did not visit Japan until 1853. Gold had been discovered in California four years earlier. What a difference we should see in the Pacific to-day had communication between Japan and the Western world been established a half-century earlier. After getting along very comfortably with no laws other than the ten commandments, Hawaii received a constitution in 1840. Three years later one Captain Paulet demanded that the islands declare their allegiance to Great Britain, and this was done. But the British claim was abandoned in a few months. What if it had been upheld? We can only say that the Japanese task at Kiaochow would have been easier. But how about our control of the Panama Canal?

If Books Could Speak

What stories books could tell if they could only talk, bow they could recall the many pleasant hours spent in the company of the people who march through

their pages.

There is nothing that we buy for our homes that we prize any higher than we do our books and they should be properly housed.

Burroughs Direct-to-Ledger Posting Fits Munsingwear Figures as Perfectly as Munsingwear Fits Human Figures

The Northwestern Knitting Company, of Minneapolis, has become a national institution by making Munsingwear—union suits that fit.

Its problem, however, has not alone been the manufacture of union suits that fit, but the creation of an accounting department that would fit its business of ten million garments a year, and an annual increase of another million.

Adding and computing machines, card ledgers, and other improvements did their part to create a system that fitted—for a while.

Unfortunately for the system, the business grew, and just when it seemed as though the business was going to burst the seams of its bookkeeping jacket, the directors of the company turned to mechanical posting for relief.

Something was needed to give the bookkeeping department elasticity enough to cover the growth of the lusty young business, and Burroughs Direct-to-Ledger Posting filled the bill.

Taking Their Cue from the Factory

They saw a parallel between the work in the factory and the work in the accounting department.

Munsingwear is made by machinery that takes 70,000,000,000 stitches a day and each of these stitches must be mechanically perfect.

In pen-and-ink bookkeeping there are millions of stitches—dipping the pen in ink, blotting, adding, subtracting, checking, looking for errors, and so forth. And when it is done by hand, there are always "dropped stitches"—errors, omissions, and unevenness in the quality of the work.

The Transfer Made Without Dropping a Stitch

Few better pieces of work were ever done in the Northwestern Knitting mill than when Burroughs Direct-to-Ledger Posting was knitted into the business.

Two Burroughs Bookkeeping Machines took up their work right in the middle of the month without causing the least disturbance.

The bookkeepers simply laid aside their pens and began posting mechanically. Even the ledger cards weren't changed—and now on thousands of them are first, pen-andink entries and later, machine-made postings.

The effect of the change in methods was felt immediately. Posting is done in less time. The work is neater, the ledger cards are perfectly legible, and the figuring automatically accurate.

The Burroughs Machines that post the ledgers, make out the statements with the same neatness, speed and precision.

The bookkeeping department, far from being overworked, is now equipped to take care of a considerable increase of business. In short—the Munsingwear bookkeeping department is going to fit, no matter how fast the business grows.

98 Burroughs Models

Ninety-eight Burroughs models make it possible for any business to adopt machine figuring and machine bookkeeping. Either card or loose leaf ledgers can be used.

Consult your banker or telephone book for the address of the nearest of the 170 offices of the Burroughs Adding Machine Company in the United States and Canada.
